## COSOP consultation process

### Introduction

1. IFAD-supported operations in India were initiated in 1978. Prior to 1999 the country strategy was not a formal document and was reflected in the design of the program and projects supported by IFAD. The first country strategy was developed in 1999, presented to IFAD's Board in December 2001 and gave direction to the program during 2002-2004. The second country strategy was presented to IFAD's Board in December 2005 and covered the program cycle from 2005 to 2009. In early 2009 a country program evaluation was conducted, for the first time in India, since the start of operations in 1978. In anticipation of the country program evaluation's report the consultation process of this, the third country strategy for the period 2010-2015 began. The Department of Economic Affairs (DEA) of the Ministry of Finance of the Government of India and IFAD's nodal partner in India took clear ownership of the COSOP development process from the beginning, gave direction to it and led it with assistance and support from IFAD.

### Preparatory Studies

2. A series of background papers were prepared by experts to provide a foundation and inputs for the COSOP, between July 2009 and January 2010. The background papers prepared were:
  - 1) *Poverty and Targeting* by Tara Nair, Gujarat Institute of Development Research
  - 2) *Strategy & Opportunities for Tribal Development in India in Fifth Schedule Areas* by Achyut Das, AGRAGAMEE, Orissa
  - 3) *Tribal Development in India in the Sixth Schedule Areas* by A. K. Nongkynrih, North Eastern Hill University
  - 4) *Creating Value for Rural Produce: Emerging Trends, Challenges and Future Prospects* by Sanjay Gupta, MART, Noida, UP
  - 5) *Fair Trade: Creating Value for Rural Produce – Emerging Trends, Challenges and Future Prospects* by Harish Chotani, Consultant
  - 6) *Assisting Smallholder Farmers to Improve their Livelihoods and Address the Challenges of Climate Change* by Virendra Pal Singh, ICRAF – South Asia, New Delhi
  - 7) *Sustainable Agricultural: A Framework for Sustainable Local Nutritional Security* by David Hogg, Naandi Foundation, Hyderabad and Ajit Mathai, Consultant
  - 8) *Knowledge Management in IFAD's Rural Poverty Alleviation Programme in India* by Pankaj H. Gupta, Consultant
  - 9) *Project Management: Current Analysis and the Way Forward* by C. K. Ramachandran, Consultant

### Country Programme Evaluation

3. IFAD's Independent Evaluation Office (IEO) in early 2009 conducted a country program evaluation (CPE), the first of its kind since the start of IFAD operations in India in 1978. At the conclusion of the evaluation's fieldwork a meeting was held in New Delhi with the Government of India and an Aide Memoire was presented, capturing the key elements and recommendations of the evaluation. A draft of the CPE was submitted to the Government of India in October 2009 and discussed at a National Roundtable Workshop organized by IFAD's IEO and the Government of India on 7-8 December 2009 in New Delhi. The purpose of the workshop was to discuss the findings and recommendations of the CPE and brought together representatives of Government of India, partner central government line ministries, state governments with IFAD-supported activities, project staff, IFAD headquarters,

civil society, partner knowledge institutions, the India Country Office of IFAD and the CPE team. The discussions and recommendations of this workshop played an important and seminal role in the preparation of the new COSOP and gave direction to it. Structured around four Issues Paper prepared by the IEO the participants at the workshop discussed 1) the value of IFAD-GOI partnership in supporting smallholder agriculture, 2) priorities for knowledge sharing and promoting innovations, 3) social empowerment and institutional architecture, and 4) economic empowerment. The CPE provides guidance in the preferred areas of engagement, targeting and on factors to enhance the effectiveness and efficiency of the country program during the new COSOP period. A synthesis of the CPE process, its findings and recommendations is presented in Annex IV in the form of an Agreement at Completion Point that constitutes an agreement between IFAD and the Government of India on the way forward.

### **Consultations with Stakeholders**

4. Consultations with stakeholders were conducted in parallel to the evolution of the country program evaluation and the preparation of the background papers and consisted of meetings, workshops and one-on-one consultations with key partners. The Country Program Manager supported by a consultant appointed by IFAD to coordinate, synthesize and develop the document and the India Country Office team used a variety of platforms and occasions to consult with stakeholders and review the draft document as it evolved over almost a one year period starting in September 2009 and ending in September 2010.
5. The India Country Programme Management Team (CPMT), which brings together IFAD staff, the India country office, project staff, consultants and leading development thinkers met in all six times. CPMT members in India met in October 2009, December 2009 and April 2010, in New Delhi and the meetings discussed the COSOP using a series of presentations by CPMT members to structure the discussion. The CPMT member based at IFAD headquarters met in February, March and July 2010. The CPMT meetings discussed needs, approaches, strategies, targets and the COSOP document as it evolved and provided valuable advice and direction.
6. The India country programme has bi-annual (and since July 2010, quarterly) portfolio review meetings led jointly by the DEA and IFAD and brings together project managers, representatives of key participating state government and central government line ministries. The portfolio review meetings held in New Delhi in October 2009, in Bhopal Madhya Pradesh in April 2010 and again in New Delhi in July 2010 and January 2011 also deliberated on the COSOP and gave valuable inputs.
7. The DEA convened a dedicated consultation, involving representatives of participating state and central government partners in New Delhi on July 12, 2010 to discuss a 'zero' draft of the COSOP. The meeting provided comments and detailed guidance on targeting, strategy, ideas for investment projects to be included as an indicative pipeline in the COSOP, and on the way forward. The DEA clarified that while the COSOP included an indicative list, based on poverty analysis, where IFAD supported projects could be considered, the list should be seen as indicative and should not preclude requests from other geographical areas, provided they met the criteria established by DEA. It clearly pointed out that given the situation in the country and the policies of government, IFAD should not consider getting involved in supporting rural finance and microfinance activities except in facilitating financial inclusion and access to such services. It also clarified that the new COSOP should focus on adaptation to climate variability rather than

attempt mitigation of the impacts of climate change. Most importantly, DEA clarified where the government saw IFAD adding real value with its loans and grants. DEA requested state governments and central line ministries to come up with project concepts and ideas to be considered for inclusion in the pipeline, with the understanding that these requests will be routed through the DEA, will have to meet criteria and terms set by DEA and that inclusion in the pipeline is merely indicative and illustrative of the types of projects that may be considered for IFAD support; inclusion in the pipeline did not ensure consideration nor did it preclude other projects from being considered.

8. Regular consultations were held with key central government ministries and agencies such as the Ministry of Rural Development, The Ministry of Agriculture and Cooperation, the Ministry of Tribal Affairs, the Planning Commission of India, and the National Rainfed Area Authority, with key donors and partner aid agencies like the World Bank, the Asian Development Bank, the Food and Agriculture Organization, the World Food Program, the United Nations Development Program, DFID (UK), USAID, and GTZ and with important knowledge centres like ICRAF, ICRISAT, ILRI and the M S Swaminathan Research Foundation.

### **Pipeline of Projects**

9. The DEA set a 25 July 2010 deadline for receipt of project ideas from state governments and line ministries. Two project concepts have been tentatively put forward for IFAD financing, one in Uttarakhand and one in Jharkhand.

### **Peer Review Comments on Review Draft**

10. In line with standard procedure for approval of new COSOPs, an in-house peer review process was conducted in February 2011, prior to an Operational and Strategy Committee Meeting on the COSOP on 3 March 2011. The text of the COSOP was amended to take into account the comments provided.

### **Wrap-up Meetings for Validation of Draft COSOP**

11. A meeting was held with DEA in Delhi on 31 January 2011, where agreement was reached on the how to integrate comments received from DEA on the draft COSOP.
12. A final wrap-up meeting with DEA took place on 10 March 2011, to review the final text prior to submission to the IFAD Executive Board for review. DEA approved the final text at the meeting.

| <b>Overall IFAD-Government partnership</b> | 5      |

## CPE agreement at completion point

### A. Background

1. India is the largest borrower from IFAD, both in terms of number of projects financed and resources invested. The Fund has provided loans for 24 agriculture and rural development projects at highly concessional terms since 1979. The total cost of the project portfolio is US\$1.9 billion, including US\$656 million in loans from IFAD and US\$877 million in counterpart funds from the Government. Currently, 9 out of the 24 projects are under implementation. A large majority of loan-funded projects aimed to promote tribal development, women's empowerment and development, and establish sustainable rural financial services. IFAD has also provided grant funding for capacity building, electronic networking among projects to enhance communication and knowledge sharing, agriculture research and other areas. At the same time, India is the largest contributor to IFAD from developing countries, and therefore all this makes for a special relationship between India and IFAD.

2. The Office of Evaluation (IOE) undertook a country programme evaluation (CPE) in India in 2009. This was the first CPE done by IFAD in India since the Fund started its operations in 1978. The main objective of the CPE was to assess the performance and impact of IFAD operations, and to generate building blocks that would serve as inputs for the preparation of the new India country strategic opportunities programme (COSOP), which will be prepared by the Fund's Asia and Pacific Division and the Government of India following the completion of the CPE.

3. This Agreement at Completion Point (ACP) contains a summary of the main findings and recommendations from the CPE. It benefits from the main points emerging from the CPE national roundtable workshop held in New Delhi on 7-8 December 2009. As per the decision of the Executive Board, the ACP will be attached as an Annex to the new India COSOP, which is expected to be presented for Board consideration during 2010.

4. The ACP has been reached between the IFAD Management (represented by the Programme Management Department) and the Government of India (represented by the Department of Economic Affairs, Ministry of Finance), and reflects their understanding of the main findings from the CPE (see Section B below) as well as their commitment to adopt and implement the recommendations contained in section C of the ACP within specified timeframes.

### B. Main Evaluation Findings

5. The CPE affirms the value of IFAD's contribution to addressing rural poverty in India. The Fund has particularly contributed to promoting pro-poor innovations, and served as a 'demonstrator' of how to methodically design, implement, supervise, monitor and evaluate pro-poor agriculture and rural development projects. These two characteristics make IFAD different from other donor organizations operating in India, and can serve to generate lessons and good practices that can be replicated and scaled up by Government and other partners to achieve wider developmental impact on rural poverty.

6. The projects funded by IFAD have achieved satisfactory results, especially in terms of livelihoods promotion among tribal people, women's development, and the promotion of rural finance systems. In particular, women are more empowered and have generally a greater voice in decision making and resource allocation of development projects and programmes. Efforts to promote tribal development have been good, for example in terms of promoting greater access to natural resources, including land and non-timber

forest products which are central to their livelihoods. There is evidence that some of the IFAD-funded projects contributed to peace-building and reducing conflict (e.g., Andhra Pradesh and the North East). However, given the vast numbers of tribal people (more than 80 million) in the country and their very low economic and social status, the agenda remains incomplete and more efforts and resources are required to ensure their full integration into the economy, while at the same time preserving their cultural heritage. IFAD-funded operations have contributed significantly to developing new and successful models for the provision of micro-finance to the rural poor, and for linking them and their organizations to commercial banks. There are however areas in which micro-finance activities can be further developed to ensure an even wider impact on poverty, for example, by supporting microfinance institutions to build rural money transfer systems and networks for effectively and efficiently channelling remittances to and within rural areas. The CPE also found evidence of policy impact, for example, in terms of ensuring secure land titles for tribal people and inclusion of NGOs in development activities.

7. In general, the overall IFAD loan-funded project portfolio achievement in India is satisfactory, and better than the results of IFAD-funded projects in all regions - as reported in the 2008 Annual Report on Results and Impact of IFAD Operations. Performance has been particularly good in terms of relevance of operations and in the impact domains of natural resources management and environment, followed by household income and assets, food security and agricultural productivity, institutions and policies, as well as innovations, replication and upscaling. The area of relative weak performance is the efficiency of operations, where there is room for improvement.

8. The CPE found that frequent rotation of project directors is a cause for concern, and a solution needs to be found for better impact. Another issue is the rather wide geographic coverage of the country programme, with numerous relatively small projects dispersed throughout the country in 17 states. Five projects were designed to cover two or three states, which in some cases are not even contiguous. A wide and fragmented programme coverage poses deep challenges to country programme management, for example, in terms of co-ordination, monitoring, supervision, efficiency and sustainability of benefits.

9. Various innovations have been successfully tested on the ground through IFAD-funded projects and programme, several of which have been replicated and upscaled by the Government and other donors. This is a remarkable achievement. In spite of that, however, the CPE did not discern a systematic or strategic approach by IFAD to replication and upscaling, and the Fund's grants programme has not been used to its potential for promoting pro-poor innovations.

10. The evaluation found however insufficient attention until the most recent operations to agriculture, which is extremely important given that around 600 million people in the country derive their livelihoods from agriculture-related activities. Selected crop development and research activities were funded through IFAD's grants but had limited linkages with loan-funded projects. The establishment of market-linkages, engagement with the private sector and involvement of *panchayati raj* institutions has been limited. One recent interesting feature however is the US\$20 million funding raised from the Sir Ratan Tata Trust and other private sector operators in the context of the most recent programme in Maharashtra for, *inter-alia*, bio-fuels development, promotion of organic cotton, and dairy development including milk collection centres.

11. Project monitoring and evaluation systems have mainly focused on input-output measurements, and evaluation capacity especially in the agriculture and rural sector focusing on results and impact is generally insufficient. There is a proposal currently under consideration of the Planning Commission to establish an independent evaluation outfit in India, which would be responsible for undertaking rigorous and useful evaluations of development projects and programmes.

12. The CPE underlines that the convergence of IFAD assistance with government schemes is extremely important, especially at the district level. The absence of convergence has contributed in the past to poor utilization and results, as there has been duplication of efforts between departments (e.g., in terms of capacity building of communities), overlapping development activities, and multiple reporting requirements. The newest programme in Maharashtra however is a good example of efforts by IFAD to ensure convergence with Government's own initiatives.

13. Performance of non-lending activities (knowledge management, policy dialogue and partnership building) has been moderately satisfactory. IFAD has made important contributions in few policy areas, but resources and capacities for analytic work and knowledge management have been few. In recent years, there are some interesting knowledge management initiatives, but these have not spanned throughout the period covered by the CPE. As mentioned above, there have been some important achievements in policy dialogue (e.g., institutionalising the self-help groups as an instrument for poverty reduction in national policies and programme, the provision of land titles to tribal people, the wide spread involvement of NGOs in development initiatives), but these have not been systematic and largely confined within project-related processes. Engagement in agriculture and rural development national policy formulation has been limited, partly due to inadequate resources. Partnership with government in general is very good, as it is with civil society and the NGO community, but partnership with the private sector and other multilateral organizations working in agriculture in India has not been vibrant, even though there are signs of improvement in the recent past. Partnership in the central government is particularly strong with the Ministry of Finance, and somewhat limited with other key agriculture and rural development-related ministries, and other central agencies. Even though project execution is the responsibility of state authorities, central government agencies have an important role, not least because they are responsible for formulation of national policies and acts, establishing nation-wide priorities and targets for poverty reduction. They also finance large centrally sponsored schemes for agriculture and rural development.

14. A number of grants have been provided in support of the country programme, both from IFAD's global/regional and country-specific grant windows. Apart from some global/regional grants (e.g., for ENRAP), the evaluation found little evidence that they have much of an impact on the loan funded activities in the country. Country-specific grants tied within selected projects and programmes more directly support project activities, but their total volume has been very small. This is partly due to the fact that the country-specific window only became available following the approval of the IFAD grants policy in 2003.

15. The evaluation concurs with the recent move to direct supervision and implementation, even though there are resource issues that need consideration, especially given the size of the ongoing portfolio in the country. Similarly, good efforts have been made to establish a country presence in India since 2001, which is growing and involved in a range of activities related to the country strategy and programme management. There are challenges however in the current arrangements and the impact it can truly have especially in terms of implementation support, partnership building, policy dialogue, knowledge management, and donor co-ordination is limited - given the level of delegation of authority as well as the size and complexity of the country programme. According to the CPE, a strengthened country office in India would not only contribute to achieving better results in the country, but it could also possibly play a wider role in the sub-continent in terms of enhancing efficiency and improving performance in selected countries in the region as well. The evaluation also concludes that overall the hosting arrangements by WFP may no longer be the most attractive option moving forward for IFAD country presence, partly due to the forthcoming cost increases for services rendered by WFP as well as the limited space available. The

temporary nature of staff contracts does not provide required job security and incentives for further enhancing performance.

16. Maybe the most important message from the CPE is that the context has changed significantly in India since the beginning of the IFAD-Government partnership in 1979. The emerging middle income status of India will have important implications for IFAD's role and focus in the country in the coming decade and beyond, even though the Fund's lending terms to the country may not change in the next three year (2010-2012) Performance Based Allocation System cycle. Together with the vast amount of national technical expertise and funds available both through centrally sponsored schemes and state financed initiatives, this will pose a major challenge for IFAD in articulating its objectives and priorities moving forward, also in light of the relatively high transaction costs for the government in nurturing and expanding its partnership with IFAD. All in all, the implications are far-reaching, and after 30 years of co-operation, IFAD and the Government are at a cross-road. They will need to carefully and jointly reflect on the alternative options, directions and approaches to pursue, in order to ensure the continued high relevance of their important partnership for the future. But one thing is clear: the transfer of financial resources will not be the main focus of the partnership in the future.

### C. Recommendations

17. In light of the above, what role could a relatively small organization such as IFAD play in India, especially taking into account that in the near future the Fund may no longer be able to lend to the country on highly concessional terms? The CPE offers the below broad recommendations that the Government of India and IFAD agree to adopt and implement within specific timeframes.. The recommendations are clustered in two broad categories: strategic and operational issues.

#### Strategic Issues

##### 18. Recommendation 1:

- a. **Give more priority to smallholder agriculture.** Sustainable smallholder agriculture should be included as a thrust area in the new COSOP, as an engine for promoting pro-poor growth and reducing hunger and rural poverty. Among other issues, this would include an emphasis on promoting the viability and risk-management of farming activities by smallholder farmers, with specific attention to rainfed areas with emphasis also on in-situ water conservation, livestock development, and crop production, including staple cereal and pulse productivity.
- b. **Deadline: COSOP period 2011-2015**
- c. **Responsible Entity: IFAD and GOI**

19. **Recommendation 2:**

- a. **Targeting and reduced geographic coverage.** In terms of targeting, it is recommended that in future greater emphasis be devoted to smallholder farmers, but also continue to support rural women and tribals. The geographic focus should in principle be narrowed to a smaller group of states, and not expanded beyond the 11 states covered by ongoing operations. Also, two-state projects through one loan and one supervision budget should be avoided in the future. Given IFAD's positive experiences in India and other countries (e.g., the Philippines), opportunities to work in conflict areas could be pursued in consultation with Government. This will however require projects to include in crisis prevention measures (e.g., flexibility in terms of project area coverage), and adequate expertise will need to be mobilised for supervision and implementation support purposes.
- b. **Deadline:** COSOP period, 2011-2015
- c. **Responsible Entity: IFAD and GOI**

20. **Recommendation 3:**

- a. **Enhance private sector engagement in line with corporate social responsibility principles.** The partnership with the private sector should be enhanced further, to deliver rural finance and extension services to the rural poor, provide input supply and access to agroprocessing infrastructure, facilitate transport of agricultural produce to market points, promote innovations and up-scaling, make information and communication technology more widely available in rural areas, and so on.
- b. **Deadline:** COSOP period, 2011-2015
- c. **Responsible Entity: IFAD and GOI**

21. **Recommendation 4:**

- a. **Innovation with deeper attention to replication and upscaling.** The main aim of IFAD-funded projects and programme in India in the future should be to promote pro-poor innovations that can be replicated and upscaled by government, other donors, the private sector, and others. It is therefore recommended that the new COSOP include a well-defined innovations agenda, which would outline the areas that merit to be prioritised. Some examples of the agenda include promoting innovations in micro-finance (e.g., to enable crop insurance, transfer of remittances to the poorest), pro-poor drought and pest resistant agriculture technology, and use of information and telecommunications to link the poor to markets. Moreover, the country strategy should make explicit the approach that will be pursued for replication and upscaling, as this is the ultimate aim of IFAD's capability to promote innovative approaches. Opportunities for developing and strengthening partnerships with national institutions, such as the Indian Council for Agricultural Research, but also the private sector including foundations, for the implementation of this recommendation should be actively explored. Similarly, partnership with NGOs and other rural institutions need to be further expanded in order to scout for, develop, pilot test and assess innovations emerging from the grassroots level
- b. **Deadline:** COSOP period, 2011-2015
- c. **Responsible Entity: IFAD and GOI**

22. **Recommendation 5:**

- a. **Launch a coherent knowledge programme.** The new COSOP should include a distinct and clearly resourced knowledge programme. One of the key aims of the programme would be to fill any knowledge gaps on agriculture and rural development and more generally in rural poverty

reduction in the country. It could be funded by grants, but also supported by individual operations financed through loans. This programme could contribute to a wider PI initiative together with other IFAD regional divisions to systematically exchange knowledge on rural poverty reduction drawing upon the experiences, lessons learned, and good practices from the Fund's operations in other countries and regions, especially in other middle income countries (e.g., Brazil, China, Argentina and Morocco). The programme could include, *inter-alia*, activities to document and share both IFAD's own experience in India, and experiences from IFAD operations in other countries that may be of relevance to the India country programme; and promotion of exchange visits by government officials project staff and members of civil society and NGOs to IFAD-financed projects within and outside India. Another option could be the organization of thematic workshops in India with prominent guest speakers and other resource persons from other countries with international expertise and reputation in agriculture and rural development issues, focusing on those areas that may be constraining rural poverty reduction in the country at any particular juncture.

- b. **Deadline:** COSOP period, 2011-2015
- c. **Responsible Entity:** IFAD and GOI

23. **Recommendation 6:**

- a. **Seek deeper convergence with government.** A very large amount of resources are allocated by the Central and State governments for agriculture and rural development activities. If this funding is to be efficiently used, there must be greater convergence within government-funded programmes, and between operations and other donor-funded activities and Government-assisted programmes. Among other issues, this will require in-depth analysis during project design of other ongoing or planned development initiatives in the districts to be covered by IFAD-supported projects. The aim would be to ensure complementarities in objectives and activities between IFAD-funded and government-financed agriculture and rural development projects and programmes. One way of ensuring convergence is to link project management units more directly with state and district administrations, so convergence can be facilitated during project execution. Further, IFAD-supported projects should build and strengthen the communities' capacity to access the available schemes of different Government's departments.
- b. **Deadline:** COSOP period, 2011-2015
- c. **Responsible Entity:** IFAD and GOI

24. **Recommendation 7:**

- a. **Widen partnership with central government.** The Department of Economic Affairs (DEA) in the Ministry of Finance is the nodal entity responsible for external assistance to India including funding provided by IFAD. In coordination with DEA, IFAD needs to engage more proactively with the central Ministries, especially Ministry of Agriculture and Ministry of Rural Development, to leverage their expertise and experience to focus on some of the important areas that help achieve sustainable livelihoods in the agricultural sector. These agencies also play an important role in national policy formulation and legislation, coordination and monitoring and evaluation, as well as in financing large and important centrally sponsored schemes. Among other issues, a wider partnership with key central Ministries can provide an opportunity for the Fund to contribute towards shaping the design of centrally sponsored schemes and national policies and acts, building on IFAD's own priorities and experiences in the country.

Further, IFAD should encourage exposure visits of central government officials to project areas.

- b. **Deadline:** COSOP period, 2011-2015
- c. **Responsible Entity:** IFAD and GOI

25. **Recommendation 8:**

- a. **Ensure ownership and commitment with State Governments.** State Governments need to be involved from the very beginning of project design to ensure that they take full responsibility of the activities and act on the issues that IFAD-supported operations are recurrently facing. In particular, State Government should ensure: (i) smooth flow of funds; (ii) timely provision of counterpart funds; (iii) their direct participation in Joint Review Missions; (iv) timely follow-up on agreed recommendations; (v) ensure competitive and attractive salaries and allowances, including their timely adjustments, so as to recruit and retain highly qualified project staff, including NGO staff; and (vi) and last but not least, continuity of tenure of Project Directors and key-management staff.
- b. **Deadline:** COSOP period, 2011-2015
- c. **Responsible Entity:** IFAD and GOI

26. **Recommendation 9:**

- a. **Increase loan size.** IFAD should consider increasing the average loan size of the operations in the country and undertaking fewer projects in the next COSOP cycle. This would contribute to lowering transaction and administrative costs for both Government and IFAD, while allowing greater attention to implementation support, learning, and impact achievement in general. Such a shift is expected to improve the overall quality of the country programme, and also free up time and resources for greater attention to non-lending activities. Acknowledging the difficulties being occasionally faced in loan disbursements, larger loan size will have implications for targeting and absorptive capacities, and ways will need to be found in future projects to address the corresponding implications. Few examples should be considered: (i) greater investments may be made in rural infrastructure including, *inter alia*, renewable energy technologies, communications and small scale irrigation, which is essential for agriculture and rural development in line with IFAD's targeting policy of 2006; (ii) adoption of a saturation approach in targeting of the poorest families at village and block level; and (iii) ensuring provision for an adequate project implementation period of around 8 years. Given the size of the programme, the country and the number of rural poor, it is recommended that financing larger projects should not result in a commensurate cut in IFAD's administrative budget allocated towards country programme management.
- b. **Deadline:** COSOP period, 2011-2015
- c. **Responsible Entity:** IFAD and GOI

27. **Implementation responsibilities and timeframes.** Both IFAD and the Government of India would be responsible for the implementation of the above-mentioned strategic recommendations. They will be appropriately reflected in the new India COSOP, as well as in all the new projects and programmes funded by IFAD following the adoption of the COSOP.

## Operational Issues

28. **Recommendation 10:**

- a. **Strengthen the India country office.** There is a need to further strengthen the IFAD country office in India, including the out posting of the

country programme manager (CPM) to Delhi and appointment of a full-time coordinator. In general, a strengthened country office is required to enhance project supervision and implementation support, improve policy dialogue, strengthen cooperation and harmonization with other donors, and further facilitate follow-up on supervision and mid-term review decisions. This would also contribute towards implementation of the CPE recommendations related to the knowledge programme, as discussed above. The role, priorities and organization of the India country office will need to be reconsidered in developing the new COSOP and implementing the CPE recommendations. This is because the new COSOP is expected to introduce additional priorities and activities, such as a wider focus on smallholder agriculture, a more coherent knowledge programme and systematic engagement in policy dialogue. In this regard, the opportunities, challenges and budgetary implications of out posting the India CPM should be examined in order to bring full decision making and follow-up actions related to IFAD operations closer to the country level. Country office staff should be provided with fixed-term contracts and better mainstreamed into IFAD's overall work force, to provide greater job security and incentives and improve performance. The current hosting arrangements with WFP should be reconsidered, especially in light of the cost escalation in services charged by WFP, and the merits of hiring alternative premises analysed. For example, the possibility of finding premises within the UN complex, World Bank office or other partner institutions would facilitate dialogue and co-operation with other donors. The office infrastructure also needs upgrading, for example, in terms of space and information technology facilities, which are currently constraining the work of the office, inter alia, such as the access to IFAD databases and reports at headquarters. The strengthening of the country office will have important resource implications that would need to be considered to ensure the office's effectiveness and its ability to contribute to the achievement of COSOP objectives.

- b. **Deadline:** COSOP period, 2011-2015
- c. **Responsible Entity:** IFAD

29. **Recommendation 11:**

- a. Recommendation 11: Ensure greater continuity in project directors. Rapid turn over of some Project Directors remains a critical issue in IFAD- funded projects and programme, particularly in the early phases of implementation. This is a systemic concern for IFAD and other multi-lateral development organizations in India. While Central Government and State Government shall endeavour to ensure continuity in project directors to the extent possible, IFAD and the Government could consider alternatives including, inter alia, recruiting from the open market or deputing senior level staff from established civil society organizations."
- b. **Deadline:** COSOP period, 2011-2015
- c. **Responsible Entity:** GOI

30. **Recommendation 12:**

- a. **The need to improve project efficiency.** There is scope for improving the efficiency of IFAD-funded projects and programmes in the country. Some of the measures recommended above are expected to ensuring better efficiency, such as limiting the coverage of projects to one state, and by ensuring deeper convergence between the IFAD and government programmes. However, there are other measures that should be deployed to improve efficiency, including streamlining the flow of funds to limit

implementation delays, strengthen the capacity in the project management unit but also state governments in procurement and other loan administration issues, and ensuring the assignment and continuity of staff to the project with adequate expertise and experience in project management.

- b. **Deadline:** COSOP period, 2011-2015
- c. **Responsible Entity:** IFAD and GOI

31. **Recommendation 13:**

- a. **Resource issues.** Among other issues, greater attention in the future to non-lending activities, implementation support, mobilization of expertise in conflict-resolution, upscaling of innovations, deeper engagement with the central government and the private sector, and the strengthening of the existing country office are likely to have additional recurrent administrative resource implications to IFAD, both in terms of staff time and finances. It is therefore recommended that the management conduct a detailed cost analysis during the formulation of the next COSOP and make the necessary allocations commensurate with the size, focus and coverage of IFAD-supported activities in the country. The additional resources are critical if the CPE recommendations are to be fully implemented, in order to achieve more far-reaching development results on the ground.
- b. **Deadline:** COSOP period, 2011-2015
- c. **Responsible Entity:** IFAD

32. **Recommendation 14:**

- a. **Evaluation capacity development.** In close collaboration with the Asia and the Pacific Division, IOE will explore opportunities for supporting the Planning Commission's efforts to establish an independent evaluation outfit in India. Given its mandate and specialization, IFAD's contribution will be restricted to evaluation capacity development in the agriculture and rural sectors. This will include initiatives to further enhance project-level monitoring and evaluation systems, so that they are also equipped to effectively collect, analyse and report on results and impact in addition to the achievement of physical and financial targets.
- b. **Deadline:** COSOP period, 2011-2015
- c. **Responsible Entity:** IFAD

#### D. Comments by the IFAD Management and the Government of India

33. **IFAD Management.** With reference to Recommendation 10 and the original proposal to establish a Sub-Regional office, IFAD Management highlights that to date it has no mandate to establish additional country or regional office. This recommendation can only be addressed upon the IFAD Executive Board's decision on the new country presence strategy, scheduled for May 2011.

34. **Government of India.** The ACP text was discussed with the Joint Secretary and Director of the Department of Economic Affairs (DEA) of the Ministry of Finance in Delhi on 31 January 2011. DEA proposed a revised text for recommendation 11. This new text was accepted and inserted in the ACP.

#### E. Comments by the Office of Evaluation

35. As per the process for preparing the Agreement at Completion Point, the Office of Evaluation has this opportunity to express its views on any recommendation contained in the India country programme evaluation report that the IFAD management and/or Government of India disagrees with, either fully or partially.

36. As such, the Office of Evaluation has two comments on: (i) recommendation 10 in paragraph 28 above, related to strengthening of the IFAD country office in India; and (ii) the establishment of an IFAD sub-regional office in New Delhi, recommendation contained in the final India CPE report (see paragraph 34 above containing the IFAD Management comments on this point).

37. **IFAD country office in India.** As agreed by the IFAD management and the Government of India, there is need to further strengthen the IFAD country office in India, including the out posting of the country programme manager (CPM) to Delhi. However, the proposed deadline for the implementation of the recommendation is stated as '2011-2015' in this Agreement at Completion Point (see paragraph 28 (b) above).

38. The Office of Evaluation believes it is important to determine an earlier and specific timeframe for the out posting of the India CPM to Delhi. This is important to ensure the permanent physical presence of the CPM in India, which has received historically the largest amount of IFAD assistance, both in terms of number of projects and loan amounts provided. The Government of India has also requested for an early out posting of the India CPM to Delhi for quite some time.

39. **The establishment of a sub-regional office in Delhi.** Based on the analysis in the final India CPE report<sup>2</sup>, the Office of Evaluation recommends that the IFAD Management explore the opportunities for establishing a sub-regional office in Delhi in the near future. As mentioned in the India CPE report, such a sub-regional office would contribute to improving institutional and project efficiency including the overall quality of results on rural poverty in South Asia region. The Office of Evaluation agrees with the IFAD management comment in paragraph 33 above, and the possibility of establishing a sub-regional office in India should therefore be included as an explicit provision within the corporate country presence strategy, to be presented by the Management for approval to the Board in May 2011.

## INDICATIVE PROJECT PIPELINE DURING COSOP PERIOD

1. Two tentative project concepts have been suggested by DEA to be included in the pipeline for consideration in this COSOP. Other projects to be included in the pipeline under the new COSOP, will need to emerge from state governments and/or line ministries, and must meet the requirements and criteria of DEA, prior to forwarding to IFAD for consideration. The two project concepts most likely to be presented to IFAD's Executive Board before the end of 2012 are as follows:

- A project in the state of Uttarakhand proposes to benefit from the learning and institutional capital of the ongoing IFAD-supported ULIPH project.
- A project in the state of Jharkhand proposes to build on the learning from the ongoing Jharkhand Tribal Development Project

2. To ensure a more effective linkage between grant-funded activities and IFAD's lending program IFAD will only support grant-funded operations in line with the objectives of the COSOP and ICO will be responsible for supervision of all grants.

3. Some activities that could be supported with grants are:

- Strengthening of existing efforts to leverage social capital, best practices and learning of IFAD's tribal development experience and supplement it with that of others, nationally and globally and, in order to facilitate and give direction to tribal development efforts such as those of the Ministry of Tribal Affairs, the Ministry of PRI, the Ministry for the Development of the North Eastern Region and the Ministry of Rural Development's flagship National Rural Livelihoods Mission.
- Strengthening of existing efforts to gather (and, where necessary, facilitate the generation of), validate, synthesize and disseminate knowledge, best practices and learning related to sustainable and climate-resilient small-holder rain-fed agriculture, agro-forestry, livestock rearing and fisheries. IFAD in this regard would consider partnering with the World Agroforestry Centre in India whose new initiative, Evergreen Agriculture: Farming Sustainably under Climate Change, has a similar thrust and with that of the National Rainfed Area Authority's to facilitate demand-driven and proactive knowledge management.
- The establishment of a challenge prize program that periodically invites innovative solutions to some of the challenges faced by rural poor and tribal communities and rewards the winners with funds and mentoring-support for incubation and scaling up.
- Testing, validating and facilitating the mainstreaming of innovative ICT solutions, including, for instance, mobile telephony systems in rural areas that enable interactive voice and text based awareness building, crowd sourcing, market information and extension advisory services and payment and remittance services to give people voice and empower them to hold services and institutions accountable.
- Introduction of and training of project management personnel in the use of ERP (enterprise resource planning) systems in order to increase effectiveness and efficiency which could be undertaken within the purview of an existing IFAD regional grant program called APMAS.

## 1. INTEGRATED LIVELIHOOD SUPPORT PROJECT – State of Uttarakhand

4. **Project Brief:** The proposed project expects to benefit from the learning and institutional capital of the ongoing IFAD-supported ULIPH project and leverage the social capital of the communities to accelerate the process in the new target areas. The project expects to build a strong foundation through strengthening and enabling the empowerment of communities and service providing institutions. The focus would be to promote sustainable and climate resilient agriculture and livelihoods for nutritional and income security and wellbeing. The project will enable communities and households to access markets, service providing institutions, financial services and their rightful entitlements from other government schemes. Most importantly, the project will attempt to build up the collective and entrepreneurial capacity of the household to enable them leverage at least five times what the project invests in each household to give them a leg- up to overcome their poverty.

5. **Possible Geographic Area of Intervention and Target Group:** The state of Uttarakhand, India; approximately 100,000 households in the poorest blocks of Uttarakhand, on a saturation basis, overlapping the existing target areas of IFAD-supported ULIPH project. The target groups shall be smallholder farmers in marginal rainfed lands, in this case, uplands, with particular focus on women and unemployed youth.

6. **Justification and Rationale:** (i) Upland smallholder agriculture faces severe soil depletion and erosion, water shortages, limited access to services and markets and very limited access to non-farm employment. (ii) The region faces extreme vulnerability to climate variability with probable downstream impacts on the Gangetic plains. (iii) Considerable investments have been made by the IFAD-supported ULIPH project creating valuable social capital and learning, which can be drawn upon. (iv) The possibility of building the capacities of communities and institutions to benefit from and access their entitlements through convergence with central and state programs, for improvement in overall well being. (v) Best practices evolved in the project could be replicated and scaled up in other mountainous states.

7. IFAD's comparative advantage is in building on the strengths of an existing good project in the region, which has developed the skills of building the capacities of people's and service providing institutions, has the ability to bring together and coordinate partners to provide holistic programming, and in utilizing the social capital already built up through community level cross learning.

8. **Key Project Objectives** (i) To strengthen and enable empowerment of institutions of the poor and service providing organisations. (ii) To promote sustainable and climate adaptive livelihoods particularly in agriculture but not limited to it. (iii) To provide and facilitate access to financial services and inputs so as to leverage at least 5 times the project's investment in each household. (iv) To promote holistic development through facilitating convergence with state and central programs.

9. **Ownership, Harmonisation and Alignment:** The project proposal is aligned to the state government's policies and programmes and comes with the support of the highest levels. It is also aligned with the current thinking on poverty reduction of the central government and will benefit from convergence with the flagship poverty reduction program of the GOI, the National Rural Livelihoods Mission. There is a strong possibility of cooperation and a possible partnership with the World Bank and with the GTZ, which are already working on related areas in Uttarakhand, with private and public financial institutions, and with knowledge centres like the National Rainfed Area Authority, World Agroforestry Centre, ICIMOD and others. The Government of Uttarakhand has demonstrated its commitment and ownership in the IFAD-supported ULIPH project and has submitted a draft concept note through DEA, supported by concerned line ministries.

**10. Components and Activities:** 1. Strengthening and capacity building of community and service providing organisations. 2. Livelihoods enhancement and development through knowledge transfer, demonstration and support for sustainable and resilient agriculture, horticulture, natural resources management, livestock rearing, community driven biodiversity and forest conservation, eco-tourism, non-farm enterprises, collective infrastructure development and favourable market integration. 3. Development of livelihood support systems, including rural financial services and financial inclusion, provision of business development and incubation services; facilitating convergence with national and state programs. 4. Proactive capture and generation of knowledge through monitoring, evaluation and learning to facilitate replication, scaling up and utilization of social capital.

**11. Costs and Financing:** Preliminary estimates included in the concept proposal received from the Government of Uttarakhand suggest a project cost of Rs. 376 crores or approx \$84 million (@\$1.00=Rs.45.00), which is 60 per cent of the current PBAS funding available to India for 1010-2012 period, of \$141 million. Government contribution can be expected, based on past experience, not only for the project but also through convergence and improved access of a variety of state and central government programmes. Partnerships with World Bank and GTZ may provide further access to funds and benefits.

**12. Organisation and Management:** The project will be implemented by a registered society, AJEEVIKA, established by the Government of Uttarakhand, dedicated to village development. The dedicated project management unit shall include deputed government staff and specialist staff drawn from the open market through competitive hiring. The project's management shall use the services of resource and facilitating NGOs and participating private sector organizations to implement the project. The project will receive implementation and knowledge management support, as necessary, from the India Country Office of IFAD. The project will be jointly reviewed by the Government of India, the Government of Uttarakhand and IFAD, on a periodic basis.

**13. Monitoring and Evaluation Indicators:** The impact of the project will be measured and evaluated against the following indicators: changes in income levels, number of livelihoods, nutrition and anaemia status, extent of scheme and linkage convergence achieved and representativeness and robustness of local governance institutions. These indicators are aligned with the Results, Impact and Management System (RIMS) of IFAD.

**14. Risks:** (i) Changes in mountain agro-meteorology and ecology due to climate variability.

(ii) Delays in funds release from the state to the project

(iii) Not being able to secure the services of competent NGOs and service providers who have and are able to attract and retain competent and motivated personnel

(iv) Difficulty in attracting and retaining competent and motivated government officers to head and manage the project especially in remote areas for the project period.

(v) Appropriation of SHGs/ Federations by other government programs which could overtax and stress their capabilities resulting in sub-optimal performance, social and institutional erosion and even dissolution.

(vi) Changes in policy or delays in the implementation of central and state poverty reduction programmes, reducing the impact of convergence.

**15. Timing:** The project is expected to run from 2013 to 2020 (8 years).

## 2. INTEGRATED TRIBAL COMMUNITY DEVELOPMENT PROJECT in the State of Jharkhand

16. **Brief Description:** The proposed project expects to benefit from the learning, experience and social capital of IFAD's tribal development efforts in the state of Jharkhand. The project will be implemented by registered societies or agencies established by the state government dedicated to village development.

17. The project proposes to adopt a saturation approach in covering all eligible families in such blocks (geographical spread) as well as in providing optimum resources (widening and deepening the suite of interventions) needed to enable such households to help themselves out of poverty on a sustained basis. The project will mobilize, strengthen and build the capacity of community and traditional organizations, local government bodies and service providing institutions to help them manage their affairs, protect and conserve the environment and biodiversity and ensure access to rightful entitlements of tribal peoples. It will promote nutritional security and wellbeing through sustainable and climate resilient agriculture practices that promote local, traditional foods. It will also promote income generation and enterprises based on common property resources and NTFP, especially traditional medicinal and cosmetic products.

18. The project hopes to generate learning, come up with best practices and effective delivery mechanisms which other agencies can leverage to take tribal development forward. An important element of the project is building the capacity of people and their institutions to drive development and gain access to what is rightfully theirs. The project intends to reach approximately 80000 households in 6-8 blocks of one state and is expected to require \$70 million over seven years to implement.

19. **Possible Geographic Area of intervention and target group:** The project is conceptualized for implementation in selected tribal or predominantly tribal blocks in Jharkhand. The target groups shall be tribal communities and Primitive Tribal Groups with a focus on small holder farmers, women and unemployed youth.

20. **Justification and Rationale:** (i) The India Country Program of IFAD has acquired considerable experience working in varied tribal areas of India, in which it has learned about strengthening institutions, building institutional relationships, enabling social capital, and has generated knowledge and best practices which can be leveraged to support tribal community development. (ii) One in eleven Indians are tribals and they are amongst the poorest and most marginalized groups in the country, often living in remote areas. (iii) Tribal areas seem to be susceptible to left wing extremist actions. (iv) Tribal communities depend heavily on bio-diversity and nature based resources (CPRs, forests, agriculture, etc) for their livelihood and these resources are extremely vulnerable to exploitation and climate variability. (v) Tribal communities have greatly restricted access to technology, knowledge, services and markets. (vi) The cultural integrity and indigenous knowledge of tribal communities seem to be at particular risk. (vii) Development efforts in tribal areas may not succeed unless they are integrated and holistic, where mainstream efforts like livelihoods are complemented with natural resources management, tenure security and access entitlements guaranteed by policies and laws specifically targeted at tribal communities. (viii) Tribal communities live in scattered, often remote areas that pose a major challenge to delivering development interventions and services.

21. **Key Project Objectives:** (i) To strengthen and build the capacities of traditional community organizations, local government (PESA) bodies and related service providing organizations to better manage their affairs, to ensure tribal communities their rights and access to entitlements and help resolve conflict and build peace. (ii) To ensure that development efforts are community driven with prior informed consent and are sensitive to the culture, identity and indigenous knowledge of tribal communities. (iii) To enable and facilitate sustainable use of natural resources while protecting ecosystems, preserving biodiversity and securing community-vested intellectual property rights to

indigenous knowledge and local biotic resources. (iv) To promote livelihoods in sustainable and climate resilient agriculture, NTFP, farm and off-farm enterprises and skills-based avocations with fair and favourable market access, while being sensitive to tribal landscapes, lifescapes and foodways. (v) To facilitate financial inclusion and access to financial services, so as to leverage at least 5 times the project's investment in each household. (vi) To ensure convergence with and entitlement to existing state and national programs.

22. **Ownership, Harmonisation and Alignment:** The Project is aligned with the National Tribal Policy (under process) as well as the National Biodiversity Act, National Forest Policy 1988, Protection of Plant Varieties and Farmers Right's Act, Biological Diversity Act of 2002, Forest Rights Act of 2006, and PESA (1996). The learning from the project, the best practices developed and the social capital generated would be of particular use and could be leveraged by other agencies working in tribal areas. The ownership of this project will be with the concerned state government and will be implemented by registered societies or agencies established by the state government, dedicated to tribal development and rural development, cooperating with resource and facilitating NGOs and related knowledge centres.

23. **Components and Activities:** (i) Strengthening and building up capacities of traditional and community based organisations (CBOs), local governance bodies and service providing agencies. (ii) Mobilising and strengthening community action for natural resources management along watershed lines to enable sustainable livelihood activities at the community and household level. (iii) Facilitating access to entitlements of all relevant Acts specific to biodiversity protection, forest rights and tribal concerns. (iv) Promoting sustainable agriculture, horticulture and livestock practices, especially growing of traditional foods through knowledge transfer, learning from indigenous knowledge, skill development, demonstration, facilitation, resource and infrastructure provisioning for nutritional security and increased productivity. (v) Promoting income generation and farm and off-farm enterprises based on improved and sustainable management of common property resources and non-timber forest products, especially traditional medicinal and cosmetic products, in the context of biodiversity and forest conservation, through knowledge transfer, learning from indigenous knowledge, skill development, demonstration, facilitation, resource and infrastructure provisioning. (v). Providing support systems for livelihoods including facilitation of financial inclusion, access to financial services, business development services, aggregation of production surpluses, access to markets, innovation incubation services and convergence with national and state programs. (vi) Documentation of biodiversity (flora and fauna) and indigenous knowledge and facilitation to secure community vested intellectual property (IP) and commercial rights and, in particular, to learn and share traditional adaptation processes to climate variability.

24. **Costs and Financing:** Based on the experience gained so far, it is estimated that the project as proposed, would have to spend around Rs. 37,600/ HH to cover capacity building (Rs. 10,000) and inputs and services (Rs. 25,600) (excluding loans leveraged from FIs and convergence entitlements). Since the program is structured around the idea of resource saturating target blocks, a sum of \$70 million would enable the project to cover approx. 80000 HH in 6-8 target blocks and provide a buffer to help the project work in remote and difficult situations (assuming 115 villages/block; 100 eligible HHs/village; 5 persons/HH; \$1.00=Rs.45). The project aspires to enable eligible households to leverage financial resources from financial institutions and convergence entitlements equivalent at least 5 times what the project invests per HH.

25. **Organisation and Management:** The project will be implemented by the concerned state government in selected tribal blocks through the state government apparatus tasked with tribal, forest and rural development, using the services of NGOs as required and with implementation support from the India Country Office of IFAD.

26. **Monitoring and Evaluation Indicators:** The impact of the project will be measured and evaluated against the following indicators: changes in income levels, number of livelihoods, nutrition and anaemia status, extent of scheme and linkage convergence achieved and representativeness and robustness of local governance institutions. These indicators are aligned with the Results, Impact and Management System (RIMS) of IFAD.

27. **Risks:** (i) Changes in local ecology, agro-meteorology, hydrology and biodiversity due to climate variability and change. (ii) Delays in funds release from the state governments to the project; from the project to partners and service providers and non-financing or inadequate financing of project beneficiaries by FIs. (iii) Social unrest and extremist violence. (iv) Access to market and technology on fair terms is not secured to the desired extent. (v) Availability of competent and committed persons involved in implementing the project, in all sectors (public and civil society), who will stay for the course of the project. (v) Appropriation of SHGs/ Federations by other government programs which could overtax and stress their capabilities resulting in sub-optimal performance, social and institutional erosion and even dissolution. (vi) Macro-economic shocks such as food price inflation, economic uncertainty and downturns.

**Timing: The project is expected to run from 2012 to 2017 (7 years).**

## Key file 1: Rural poverty and agricultural/rural sector issues

| Priority Areas           | Affected Groups  | Major Issues   | Actions Needed  |
|--------------------------|--|--|---|
| Rural Poverty in General | <ul style="list-style-type: none"> <li>-Poor smallholder farming households</li> <li>-Landless labour</li> <li>-Agricultural &amp; seasonally migrant labour</li> <li>-Tribal communities</li> <li>-Women</li> <li>-Youth</li> </ul> | <ul style="list-style-type: none"> <li>-Limited land in fragmented holdings</li> <li>-Limited productive assets and poor technology</li> <li>-Very limited access to markets, technology and -financial services and institutions.</li> <li>-Irregular and unstable income flows</li> <li>-Low productivity, limited use of available technology and unsustainable production practices.</li> <li>-Limited opportunities for livelihoods and employment opportunities</li> <li>-Seasonal migration of households</li> <li>-Seasonal migration in search of livelihoods</li> <li>-High level of geographical dispersion in tribal areas</li> <li>-Limited access to cultivable land and secure tenure particularly among tribals.</li> <li>-Low access to basic infrastructure like roads, water supply, irrigation, electricity, post harvest facilities and technology</li> <li>-Nutritional, food and water insecurity</li> <li>-Poor health especially of women, girls and infants (anemia, malnourishment, infant mortality)</li> <li>-Limited access to quality health care</li> <li>-Poor access to sanitation, hygiene and water facilities</li> <li>-Gender Discrimination</li> <li>-Limited access to quality education and vocational training</li> <li>-Social, economic, political, financial exclusion and discrimination.</li> <li>-Low levels of social and institutional capital</li> <li>-Low ability to secure entitlements and hold accountable public services and functionaries.</li> </ul> | <ul style="list-style-type: none"> <li>-Provisioning of livelihoods, business development and employment enhancing services</li> <li>-Investment in rural infrastructure</li> <li>-Improving incomes and surpluses from agriculture and farm based livelihoods</li> <li>-Promotion of viable and sustainable farm and off farm income generating activities including micro, small and skill based enterprises.</li> <li>-Enabling inclusion and access to fair and favourable markets and value chains</li> <li>-Provisioning of financial, technical, insurance and underwriting services</li> <li>-Promoting solidarity groups of women and their federations, empowering them and facilitating their access to information, markets, institutions and resources.</li> <li>-Access to quality health care that is affordable</li> <li>-Improving access to affordable and quality primary, secondary, higher education and vocational training</li> <li>-Strengthening representative, social and gender inclusive community and traditional organizations for self help, self -governance, sustainable production and marketing, community driven development, securing entitlements and holding the system accountable.</li> <li>-Improving access to land, tenure and entitlements particularly in tribal areas.</li> <li>-Promotion of social security and insurance services.</li> <li>-Promotion of the Right To Information Act (RTI) and encouraging its use.</li> </ul> |

## Key file 2: Organizations matrix (strengths, weaknesses, opportunities and threats [SWOT] analysis)

| Organizations  | Strengths  | Weaknesses   | Opportunities & Threats  | Comments |
|--|--|--|--|----------|
| Dept. of Economic Affairs, MOF, GOI                    | -Has an overall perspective of external resource inflows and their convergence with national priorities.<br>-Effective coordination of multiple programs   | -Shortage of personnel for the existing workload.  | -Can coordinate synergistic engagements and partnerships between various programs and donors.  |          |
| Ministry of Agriculture & Cooperation, GOI             | -Programs impact the lives of the majority of Indians and the poor.<br>-Has a vast network of agricultural knowledge centers   | -Agriculture is a state subject and it can only play the role of coordination, knowledge dissemination, policy and financing.      | -Become a Knowledge Management and Capacity Building Centre for sustainable rainfed and small holder farming systems.<br>-Feed into the Ministry needs from the field so as to strategize agricultural research to address farmer problems in an integrated, multidisciplinary manner.<br>-Weak extension system especially for rainfed systems. |          |
| Ministry of Rural Development, GOI                     | -Primary funders of rural development programs at the state level through centrally supported schemes<br>-It mandate and involvement touch crucial aspects of governance, poverty reduction and livelihoods. | Rural development is a state subject and it can only play the role of coordination, knowledge dissemination, policy and financing. | -IFAD can partner MORD through knowledge and best practices sharing and dissemination.<br>-Convergence and dovetailing with MORD programs at the ground level.   |          |
| Ministry of Tribal Affairs, GOI                        | -Plays a key role in coordinating tribal affairs in Schedule 5 Areas.  | -Shortage of funds and personnel.<br>-Weak linkages with and influence on state tribal plans                                       | -Can play a key role in defining policies and overseeing their implementation especially in conflict affected tribal areas.<br>-IFAD can provide inputs for policy dialogue.<br>-Can become a Knowledge Centre for tribal development  |          |
| Ministry of Development of North Eastern Region, GOI / | -Plays a key role in coordinating tribal affairs in Schedule 6 Areas.<br>-Coordinates donor programs.<br>-Because of direct linkage to   | -Shortages of personnel<br>-Inadequate capacity of organization to utilize available funds.  | -IFAD can strengthen the knowledge base of DONER and contribute to building its capacity.<br>-IFAD can provide inputs for policy dialogue.   |          |

|  |  |  |   |  |
|--|--|--|---|--|
| North Eastern Council (NEC)                | state governments through NEC, it can influence and oversee implementation.<br>-NEC is a high level governance and policy making body  |  |   |  |
| Ministry of Women & Child Development, GOI | -Has the mandate and resources to impact the lives of women and children<br>-Plays an important role in feminizing development programs  | -Shortage of personnel and no state level presence<br>-Inadequate funds<br>-Not considered in popular perception as a core Ministry  | -IFAD can support it by providing inputs and field generated learnings for purposes of policy formulation.<br>-Can play an important role in ensuring that the National Food Security Mission can achieve its target of reducing hunger and malnutrition especially among women and children. |  |
| Ministry of Panchayati Raj, GOI            | -Key agency to promote and implement the Constitutional Amendments dealing with self governance.   | -Shortage of personnel and funds<br>- Inadequate machinery at the state levels and therefore is unable to cope with the enormity of the challenge faced.<br>-Slow effective devolution of resources, authority and personnel to PRIs .                               | -Can play a major role in empowering the poor through local self governance and PRIs<br>-IFAD can provide knowledge and experience based inputs for policy formulation.<br>-In tribal areas, IFAD can support its mandate through building capacities of PRIs and grounding PESA.             |  |
| Ministry of Environment & Forests, GOI     | -Has a key role to play regarding Climate Change and enforcing environmental laws<br>-Is well resourced in terms of personnel and funds<br>-Has a high level of environment, climate and wildlife related knowledge.<br>-Has a presence across the country | -Enormity of the task<br>-Politically vulnerable because conservation and environmental protection is seen as coming in the way of development and growth.<br>-Mindset, culture and procedures of the Forest Dept. in involving community still need re-orientation. | -Can promote sustainable development<br>-Implementation of several Acts and entitlements for tribals can make a huge difference to well being of tribals.   |  |
| State Governments                          | -Have significant resources and presence across the states.<br>-Have the mandate and infrastructure to implement all developmental programs.   | -The relative size of IFAD's projects does not attract sufficient attention which is reflected in not deputing staff who are up to the challenge and for the   | -Innovative approaches and best practices of IFAD can be mainstreamed and up-scaled for the benefit of the poor.<br>-IFAD projects can be used to test innovative approaches in on-going state managed projects   |  |

|                                  |  |   |  |  |
|----------------------------------|--|---|--|--|
|                                  |  | <p>required tenure or retaining competent deputed personnel.</p> <p>-Structural rigidities and institutional climate do not facilitate and encourage cooperative partnerships with civil and community organizations.</p>                                     | <p>-Convergence opportunities available for generating synergies and additional benefits to the poor.</p>  |  |
| Resource NGOs                    | <p>-Enormous experience and competencies particularly in building capacities in training, implementation and innovation</p> <p>- A few of them have built up competencies in cutting-edge technologies and have a suite of competencies</p>  | <p>-Not widely distributed and have limitations in terms of spread.</p> <p>-Financial resources limit their ability to expand and also build on their potential to upscale.</p>   | <p>-IFAD can facilitate their mainstreaming in governmental projects and therefore foster building of partnerships.</p> <p>-RNGOs learn new management systems and approaches which also feed into improving their own programs</p> <p>-RNGOs can be network partner and provide resources for facilitating policy dialogue and change.</p>  |  |
| NGO Service Providers            | <p>-Have close grassroots contacts and the confidence of the target groups.</p> <p>- Maintain close links with govt. depts and other service providers which facilitate convergence.</p> <p>-Are flexible and can adapt as necessary.</p>  | <p>-Most experience high turnover of key personnel</p> <p>-Dependence on project funding leads them to often venture into areas where they do not have adequate competencies.</p> <p>-Many do not have professional management systems institutionalized.</p> | <p>-Can acquire new competencies as project is long term.</p> <p>-Project requirements will enable them to progressively institutionalize professional systems of management.</p> <p>-Partnerships between public and civil society agencies can be very synergistic and fruitful.</p> <p>-Project objectives of inclusiveness and accountability can more easily be realized at the grassroots.</p> |  |
| Private Sector Service Providers | <p>-Provide value-enhancing goods and services.</p> <p>-Are market and technology savvy and can provide/ facilitate market linkages as well as access to new technologies and practices.</p> <p>-Can provide services and presence in project area even after project closure.</p> | <p>-will engage only if profits can be realized</p> <p>-Remote and ill connected areas would not be attractive markets.</p>   | <p>-Using project resources, they can develop new service areas and markets or deepen existing engagements.</p> <p>-Can also acquire new competencies, skills and technologies.</p> <p>-Target groups benefit from the market linkages as well as access to technologies and services.</p>   |  |
