Mapa elaborado por el FIDA | 12-02-2019

Resumen

1. El presente Programa sobre Oportunidades Estratégicas Nacionales (COSOP) para Rwanda abarca el período 2019-2024. El examen final del COSOP anterior (2013-2018) se llevó a cabo entre octubre y diciembre de 2018. El nuevo COSOP se aplica a los ciclos 2019-2021 y 2022-2024 del Sistema de Asignación de Recursos basado en los Resultados (PBAS). En virtud de las puntuaciones con arreglo al PBAS actual, la financiación del FIDA destinada a los dos ciclos (2019-2024) ascienden a USD 110 millones.
2. El COSOP se ha preparado en consonancia con el IV Plan Estratégico para la Transformación de la Agricultura 2018-2024 (PETA IV) del Gobierno, con el fin de garantizar que las operaciones crediticias y no crediticias del FIDA sigan prestando apoyo al programa de inversiones y el marco normativo para el crecimiento y la reducción de la pobreza del Gobierno, en los que la agricultura desempeña una función central.
3. El objetivo general del COSOP consiste en reducir la pobreza mediante el empoderamiento de los hombres, las mujeres y los jóvenes pobres de las zonas rurales para que participen en la transformación del sector agrícola y mejoren su resiliencia. Este objetivo se logrará mediante la adopción de medidas centradas en lo siguiente:
 - Objetivo estratégico 1. Incrementar de forma sostenible la productividad agrícola de las cadenas de valor alimentarias y de exportación prioritarias.
 - Objetivo estratégico 2. Mejorar los procesos poscosecha y fortalecer los vínculos de mercado.
 - Esferas temáticas transversales. Acceso a financiación; mejora de la nutrición; empoderamiento de las mujeres y los jóvenes, y gestión de los recursos naturales y el cambio climático.
4. Las intervenciones del FIDA centran su atención en la cartera de préstamos, que se combina con donaciones para promover innovaciones. A este respecto, se sigue prestando apoyo a través de la actuación en materia de políticas, la creación de capacidad y la gestión de los conocimientos a nivel nacional. El FIDA potenciará sus alianzas estratégicas, en particular con los organismos de las Naciones Unidas con sede en Roma, y su enfoque en la cooperación Sur-Sur y la cooperación triangular.

República de Rwanda

Programa sobre Oportunidades Estratégicas Nacionales

I. Contexto del país y programa del sector rural: principales desafíos y oportunidades

1. **Antecedentes socioeconómicos.** Entre 2000 y 2016, la economía de Rwanda creció en un promedio impresionante del 7,9 % al año, mientras que el producto interno bruto (PIB) per cápita aumentó de USD 242 a USD 729¹. Según un análisis del Fondo Monetario Internacional (FMI)², las perspectivas macroeconómicas a medio plazo siguen siendo favorables, y se prevé que el crecimiento del PIB se mantenga fuerte. Esta tendencia se ve respaldada por la constante diversificación de la base de exportaciones, el gasto público en inversiones diseñadas para atraer inversiones del sector privado y una mayor resiliencia del sector agrícola gracias a extensos programas de riego. Se calcula que la inflación se mantendrá por debajo del 5 %, cifra objetivo del banco central.
2. La inclusión financiera había aumentado de un 48 % en 2008 a un 89 % en 2016³, mientras que la propiedad de teléfonos móviles había subido del 6 % en 2006 al 71 % en 2017⁴. Sin embargo, Rwanda sigue siendo un país de ingresos bajos con una gran densidad de población de 12,2 millones de habitantes⁵ en una superficie de 26 338 km². Se prevé que la población ascenderá a 22 millones de habitantes para 2050. Más del 50 % de la población tiene menos de 20 años de edad, lo cual ejerce una presión cada vez mayor en la cantidad de tierras disponibles, que ya es limitada. Rwanda es predominantemente rural, el 83 % de la población vive en zonas rurales⁶.
3. **Contexto de la pobreza rural.** Los niveles de pobreza nacional⁷ habían disminuido del 60 % de la población en el año 2000 al 38 %⁸ en 2017, en 2010 seguían siendo más elevados en las zonas rurales (un 48,7 %)⁹. En general la desigualdad ha disminuido, y el coeficiente de Gini pasó de 0,49 en 2011 a 0,45 en 2014. Si bien Rwanda ha logrado convertir el crecimiento económico sostenido en una reducción de la pobreza, la pobreza rural sigue siendo un desafío y es mayor en los hogares con poca o ninguna tierra, que obtienen sus ingresos principalmente del trabajo estacional. Las mujeres y los jóvenes del medio rural son más propensos que otros a entrar en esta categoría.
4. **Entorno político y empresarial.** Desde 1994, Rwanda ha tenido un entorno normativo favorable y estable que ha asegurado el éxito en la ejecución de programas de desarrollo. Rwanda cuenta con una sólida política anticorrupción y se ubica en el puesto 48 de 180 países en el índice de percepción de corrupción de 2017 elaborado por Transparency International, lo que lo convierte en el tercer país menos corrupto de África Subsahariana. En el informe del Banco Mundial

¹ Instituto Nacional de Estadísticas de Rwanda (INER), National Accounts, 2016.

² El programa macroeconómico de Rwanda recibe apoyo del Instrumento del FMI de Apoyo a la Política Económica.

³ INER, FinScope, 2016.

⁴ INER, Quinta encuesta integrada sobre las condiciones de vida de los hogares (EICV 5).

⁵ Banco Mundial, 2017.

⁶ Indicadores del Banco Mundial para Rwanda.

⁷ El INER define la tasa de pobreza como el porcentaje de la población que no puede permitirse una canasta básica de artículos alimentarios y no alimentarios.

⁸ INER, EICV 5.

⁹ Banco Mundial, Indicadores del desarrollo mundial, 2010. No se dispone de datos más recientes.

Doing Business 2018, Rwanda ocupa el segundo puesto en África y el 29.º de 190 países a nivel mundial¹⁰. No obstante ello, a pesar del fuerte crecimiento económico, Rwanda todavía depende de la asistencia oficial para el desarrollo para cubrir el 16 % de su presupuesto¹¹.

5. **Sector agrícola.** La economía de Rwanda depende en gran medida de la agricultura, que emplea al 70 % de la población activa, proporciona el 91 % del suministro de alimentos y el 70 % de los ingresos de exportación, y aporta el 32,7% del PIB del país. Los medios de vida de alrededor del 96 %¹² de los hogares del medio rural dependen de la agricultura. Será fundamental incrementar de un modo sostenible desde el punto de vista ambiental la producción, la productividad y la comercialización de los alimentos y los productos básicos de exportación para reducir la pobreza rural y convertir este sector, que sigue siendo en gran medida de subsistencia, en uno más competitivo y orientado al mercado. A pesar de los importantes esfuerzos desplegados por el Gobierno, la producción de alimentos básicos sigue estando por debajo del nivel necesario para cubrir la demanda interna y la diferencia se cubre con importaciones.
6. Alrededor del 80 % de la población rural está formada por hogares de pequeños agricultores que emplean sistemas de producción agrícola de secano. El tamaño medio de las parcelas es de solo 0,33 hectáreas, lo cual refleja el fuerte grado de presión demográfica al que están sometidos los recursos de la tierra del país. Ello ha conducido al asentamiento en zonas marginales, el sobrepastoreo, la erosión del suelo y las pérdidas de fertilidad.
7. **Seguridad alimentaria y nutricional.** A pesar de la constante mejora observada en la clasificación del país en el Índice Global del Hambre¹³, alrededor del 20 % de los hogares¹⁴ siguen padeciendo inseguridad alimentaria; este indicador muestra una tendencia similar a la que se observa en la distribución de la pobreza en los distintos distritos, siendo las tasas más elevadas las que se registran en el norte (un 46,2 %) y el oeste (un 45,3 %) del país. Mientras que la malnutrición crónica ha disminuido notablemente en el último decenio, el retraso del crecimiento sigue estando por encima del umbral de gran gravedad de la Organización Mundial de la Salud y sigue siendo un problema importante de salud pública. Cerca del 38 % de los niños menores de cinco años padecen malnutrición crónica¹⁵ y los niveles de retraso del crecimiento se mantienen por encima del 40 % en más de 30 distritos.
8. **Impacto del cambio climático.** El cambio climático ha ocasionado sequías recurrentes de media estación¹⁶ y estaciones húmedas de mayor intensidad, que, si bien son más breves, también son erráticas. Las sequías han provocado una disminución de la producción agrícola, especialmente en la Provincia Oriental¹⁷, mientras que las provincias Septentrional y Meridional se ven afectadas por fuertes inundaciones que causan deslizamientos de tierra, la erosión del suelo, la destrucción de cultivos e infraestructuras, y la pérdida de vidas humanas y animales.

¹⁰ En términos de calidad/eficiencia de los entornos reglamentarios empresariales.

¹¹ Indicadores del Banco Mundial para Rwanda.

¹² INER, EICV 4.

¹³ Rwanda obtuvo una puntuación de 58,1 en 2000 y ascendió a 28,7 en 2018, ubicándose en el puesto 91 de un total de 119 países. Fuente: <https://www.globalhungerindex.org/results/>.

¹⁵ INER, Encuesta demográfica y de salud de Rwanda 2014-2015.

¹⁶ En 2012, la carencia de precipitaciones causó un descenso del crecimiento agrícola y en 2013, una disminución del 4 % en el crecimiento del PIB.

¹⁷ Red de sistemas de alerta temprana contra la hambruna, índice de satisfacción de las necesidades de agua.

II. Marco normativo e institucional del Gobierno

9. Los objetivos de desarrollo a largo plazo de Rwanda se definen en los documentos Visión 2020 y Visión 2050, cuya atención se centra en que el país pase de una economía de bajos ingresos basada en la agricultura a una economía de ingresos medianos basada en los conocimientos y orientada a los servicios. En la Estrategia Nacional para la Transformación (ENT 1) se integran los compromisos internacionales derivados de los Objetivos de Desarrollo Sostenible (ODS) de las Naciones Unidas, la Agenda 2063 de la Unión Africana, el componente dedicado a la generación de empleo de la estrategia Visión 2050 de la Comunidad del África Oriental y los acuerdos convenidos durante la Conferencia de las Partes en la Convención Marco de las Naciones Unidas sobre el Cambio Climático.
10. En el PETA IV se ofrecen directrices para adoptar medidas estratégicas y realizar inversiones prioritarias diseñadas a transformar el sector. Se identifica al sector privado, en particular a los agricultores y las cooperativas, como un motor de cambio, mientras que el Ministerio de Agricultura y Recursos Animales y el sector público en su conjunto otorgan un entorno propicio.
11. A escala continental y regional, este plan constituye la adhesión de Rwanda al Programa General para el Desarrollo de la Agricultura en África de la Unión Africana. En este marco, la Declaración de Malabo¹⁸ de 2014 establece metas específicas para la contribución del sector agrícola a las oportunidades y el crecimiento económicos, la seguridad alimentaria y nutricional, y la resiliencia. Rwanda encabeza la lista de países con los mejores resultados en términos de tasa de progreso¹⁹.
12. En la Estrategia Nacional sobre Cambio Climático y Desarrollo con Bajas Emisiones de Carbono para Rwanda se subraya la necesidad de hacer frente a la variabilidad del clima en busca del desarrollo social, ambiental y económico del país. La contribución del país prevista, determinada a nivel nacional, se basa en esa estrategia y tiene como fin alcanzar la categoría 2 en materia de seguridad energética. Con ella se prestará apoyo al desarrollo de industrias y servicios ecológicos, la gestión sostenible de la tierra y el agua, el desarrollo urbano, la biodiversidad y los servicios ecosistémicos.
13. La Política Nacional de Alimentación y Nutrición reafirma el firme compromiso del país de lograr la seguridad alimentaria, erradicar la malnutrición y prevenir el retraso del crecimiento en niños menores de 2 años de edad. Además, mediante el Plan Estratégico para la Juventud de Rwanda, la Política Nacional de Género y, en particular, la Estrategia de Género en el ámbito de la Agricultura se pretende abordar los desafíos que enfrentan las mujeres y los jóvenes por medio de un enfoque conjunto integral.
14. Otras políticas y estrategias del Gobierno que guardan relación con el COSOP incluyen la Política Nacional sobre Promoción de las Cooperativas, el Plan Maestro de riego, la Estrategia Nacional para la Poscosecha de Cultivos Básicos y la Estrategia Nacional de Tecnología de la Información y las Comunicaciones para la Agricultura de Rwanda. Entre las estrategias pertinentes del sector cabe destacar la Política Nacional de Horticultura y su Plan Estratégico de Ejecución, el Plan Maestro de Ganadería, en especial de los componentes que se centran en los criadores de ganado menor, y la Estrategia Nacional para el Sector Lácteo. Las iniciativas para el desarrollo de cadenas de valor incluyen la Política titulada "Hecho en Rwanda" y la Estrategia de Recuperación del Mercado Interno.

¹⁸ Fuente: <https://au.int/en/documents/20160810-4>.

¹⁹ El país tiene una puntuación de 6,1 en la tarjeta de puntuación relativa a la transformación agrícola de África del CAADP.

III. Actuación del FIDA: enseñanzas extraídas

A. Enseñanzas y resultados anteriores y en curso

15. El examen final del anterior Programa sobre Oportunidades Estratégicas Nacionales (COSOP) demuestra la eficacia del programa del FIDA y su contribución a la reducción de la pobreza rural durante el período 2013-2018.
16. Entre las principales enseñanzas extraídas de las intervenciones pasadas y en curso en Rwanda y la región, cabe destacar²⁰ lo siguiente:

Asociación con el sector privado

- Los modelos de asociación entre el sector público, el sector privado y los productores (asociación 4P) y el enfoque de un centro único²¹ formalizan con éxito los vínculos de agronegocios entre los agricultores y los compradores, y esto ayuda a que los compradores se conviertan en inversores conjuntos y que los agricultores accedan a los servicios financieros y los mercados de productos y insumos²². Los centros contribuyen de forma decisiva en la provisión de equipos de procesamiento poscosecha, servicios de extensión y tecnologías poscosecha resilientes.
- Cuando se utilizan de forma estratégica, las donaciones de contrapartida basadas en los resultados atraen inversiones privadas y facilitan el acceso de los beneficiarios a servicios financieros. No obstante, es preciso establecer asociaciones estratégicas con varios tipos de instituciones financieras (bancos, instituciones de microfinanciación, proveedores de seguros, organizaciones cooperativas de ahorro y crédito) a fin de promover el acceso de los beneficiarios a una amplia gama de servicios financieros asequibles y sostenibles a largo plazo.

Creación de capacidad dirigida a cooperativas

- Ha quedado pendiente la solución de los desafíos en materia de gobernanza y sostenibilidad incluso tras haber brindado apoyo a las cooperativas. Por tanto, es preciso que se siga respaldando una creación de capacidad que se adapte a las necesidades específicas e integre un modelo de graduación, y que se cuente con la participación de los órganos centrales de las organizaciones de agricultores. Un elemento que es de importancia fundamental para la introducción de cambios sistémicos es recurrir a la aplicación de un enfoque integral centrado en i) el aumento del capital social; ii) la mejora de la producción y la productividad, y iii) el desarrollo de la capacidad de las cooperativas para acceder a mercados sostenibles.

Descentralización

- Como se ha demostrado con el Proyecto de Ordenación Comunitaria de Cuencas Hidrográficas en Kirehe, aplicar un enfoque a nivel de distrito en el diseño y la ejecución de los proyectos contribuye a lograr en el distrito un fuerte sentido de apropiación y la creación de capacidad en lo que respecta a medidas de planificación, ejecución y seguimiento centradas en la transformación del sector agrícola, con lo cual se presta apoyo al proceso de descentralización.
- Un elemento decisivo para garantizar la sostenibilidad de la gestión de las cuencas hidrográficas consiste en aplicar un enfoque integrado y participativo a la preparación, ejecución y seguimiento de los planes de gestión de cuencas

²⁰ Véase el informe final del COSOP 2013-2018 para obtener más información.

²¹ Un centro es el lugar físico donde se agrupan los productos primarios y se les añade valor. En el enfoque de un único centro se aprovecha la facilitación de las competencias, tecnologías y equipos técnicos y de gestión necesarios.

²² Como ya se ha ensayado en el Proyecto de Apoyo a los Agronegocios y las Actividades Poscosecha Resilientes al Cambio Climático y el Proyecto de Fomento del Sector Lechero en Rwanda.

hidrográficas. El fortalecimiento de las asociaciones de usuarios del agua de riego y otras estructuras descentralizadas contribuye a garantizar el sentido de apropiación y la gestión sostenible de las infraestructuras por parte de la comunidad.

Esferas transversales: los jóvenes y la nutrición

- A fin de promover la participación de los jóvenes en la agricultura, es fundamental contar con asociaciones estratégicas y enfoques innovadores. El Foro de Jóvenes de Rwanda en el ámbito del Agronegocio es un asociado importante²³ dirigido a fomentar la participación de los jóvenes en la agricultura como proveedores de servicios, así como de los beneficiarios de las actividades de creación de capacidad y los servicios financieros y empresariales.
- Hace falta una integración más explícita de las cuestiones relacionadas con la nutrición en los proyectos. El Proyecto de Fomento del Sector Lechero en Rwanda ya está prestando apoyo al programa del Ministerio de Agricultura titulado "Una taza de leche por niño", gracias al cual han aumentado notablemente el número de alumnos matriculados en jardines de infantes, las tasas de asistencia y el estado de salud y, por ende, se ha contribuido a mejorar el rendimiento escolar.

Actuación en materia de políticas

- Debería incrementarse el apoyo que se presta a la formulación de políticas de base empírica y la selección de inversiones, con miras a complementar las experiencias y enseñanzas adquiridas en el marco de otros proyectos y donaciones estratégicas y basarse en ellas. Al hacerse referencia explícita a proyectos como el Proyecto de Fomento del Sector Lechero en Rwanda, se reforzará la actuación en materia de políticas que promueve el FIDA a través de diversos proyectos y donaciones.

B. Actuación del FIDA en curso

17. La fuerte orientación de la cartera del FIDA en Rwanda al desempeño y los resultados ha servido como modelo para el Fondo. Rwanda tiene la capacidad de absorber una mayor asignación con arreglo al PBAS y lo viene haciendo de forma periódica en cada ciclo de financiación, presentando todas sus operaciones nuevas durante el primer año del ciclo del PBAS y obteniendo recursos adicionales a medida que se van poniendo a disposición²⁴. Los factores clave del éxito son el compromiso político nacional y la calidad de la gobernanza y la gestión de los proyectos.

IV. Estrategia en el país

A. Ventaja comparativa

18. El objetivo general del COSOP para 2019-2024 consiste en reducir la pobreza mediante el empoderamiento de los hombres, las mujeres y los jóvenes del medio rural para que participen en la transformación del sector agrícola y potencien su resiliencia. La ventaja comparativa del FIDA es que centra su atención en las comunidades rurales, en particular los pequeños agricultores, y en ayudarles a lograr la estabilidad de sus parcelas en un entorno vulnerable, impulsar la productividad agrícola y obtener un mayor acceso a los mercados y servicios a través de los centros y los vínculos de agronegocios.

²³ En el marco del Proyecto de Apoyo a los Agronegocios y las Actividades Poscosecha Resilientes al Cambio Climático y el Proyecto de Fomento del Sector Lechero en Rwanda.

²⁴ La asignación con arreglo al PBAS para Rwanda correspondiente a 2016-2018 en el marco de la Décima Reposición de los Recursos del FIDA (FIDA10) se incrementó de USD 45 millones a USD 54,9 millones.

El objetivo general y los objetivos estratégicos del COSOP 2013-2018 siguen siendo válidos, aunque se han vuelto a formular para que se ajusten al PETA IV. El COSOP contribuirá al logro de los ODS, en particular el ODS 1 (fin de la pobreza), el ODS 2 (hambre cero), el ODS 5 (igualdad de género), el ODS 8 (trabajo decente y crecimiento económico), el ODS 13 (acción por el clima) y el ODS 15 (vida de ecosistemas terrestres).

19. En consonancia con el PETA IV, las cadenas de valor prioritarias son las del maíz, las papas, los frijoles, la horticultura, el arroz, los productos lácteos, la cría de ganado menor y los cultivos de exportación (café, té, horticultura y cría de gusanos de seda). Se estudiarán las oportunidades de desarrollo de la pesca y la acuicultura, y se prevé un crecimiento sustancial de estos sectores en los años venideros²⁵.

B. Grupo objetivo y estrategia de focalización

20. **Mecanismo de focalización.** El programa en el país, de alcance nacional, se valdrá de criterios de selección para las zonas objetivo específicos de cada proyecto. En el marco del Proyecto para la Promoción de los Ingresos Rurales mediante las Exportaciones, el Proyecto de Fomento del Sector Lechero en Rwanda, el Proyecto de Apoyo a los Agronegocios y las Actividades Poscosecha Resilientes al Cambio Climático y el Proyecto a favor de la Inclusividad de los Mercados de Ganado Menor, las zonas objetivo de los proyectos se seleccionarán sobre la base de diversos criterios de pobreza y la evaluación del potencial de desarrollo de cadenas de valor específicas. En el Proyecto de Gestión Integrada de las Cuencas Hidrográficas y el Riego en Kayonza se adoptará el mismo enfoque adoptado en el marco del Proyecto de Ordenación Comunitaria de Cuencas Hidrográficas en Kirehe que se centra en un distrito específico (en este caso, Kayonza). Los criterios de selección incluyen: niveles de pobreza relativamente elevados, una elevada densidad de población, un sector agrícola cada vez más débil, un entorno físico sometido a estrés y, fundamentalmente, buenas perspectivas para el desarrollo de sistemas de riego.
21. El principal grupo objetivo comprende al menos 350 000 hogares, lo cual supone 1,4 millones de personas, y refleja la atención especial que se presta en brindar apoyo a las mujeres, los jóvenes y los grupos vulnerables de las zonas rurales. Las mujeres, provenientes de hogares encabezados por mujeres y hogares encabezados por hombres, representan el 50 % del grupo objetivo.
22. El FIDA se centrará principalmente en los hogares del medio rural que padezcan pobreza e inseguridad alimentaria y tengan potencial económico. Estos hogares se seleccionarán sobre la base del sistema nacional de categorización de la riqueza, el *Ubudehe*. Los hogares de la categoría 1²⁶ están cubiertos por el plan nacional de protección social (el programa *Umurengu*)²⁷, mientras que la categoría 2²⁸ comprende a los agricultores de subsistencia y las personas pobres y vulnerables con escasez de tierras y acceso a los recursos. Los hogares de estas dos categorías se beneficiarán de la creación de capacidad y activos que tenga lugar en el marco de las intervenciones de los proyectos. Los hogares de la categoría 3²⁹ y la categoría 4³⁰ son beneficiarios en calidad de productores orientados al mercado y de impulsores y empresas líderes en relación con los modelos de asociación 4P.

²⁵ Según un estudio de viabilidad realizado en 2015 por la Junta de Agricultura de Rwanda, la producción acuícola podría aumentar a 95 000 toneladas métricas en cinco años.

²⁶ Categoría 1: familias que no poseen una casa y apenas pueden satisfacer sus necesidades básicas.

²⁷ La selección de los hogares de la categoría 1 se ajusta a la del segundo Plan de las Naciones Unidas de Asistencia para el Desarrollo (PNUAD II). También contribuye a la consecución del compromiso 2.2, centrar la atención en las personas más pobres y vulnerables, asumido en virtud de la FIDA11.

²⁸ Categoría 2: quienes tienen vivienda propia o pueden alquilar una pero que raramente obtienen empleos de tiempo completo.

²⁹ Categoría 3: aquellos hogares cuyos miembros tienen un empleo y agricultores que no solo practican una agricultura de subsistencia, sino que producen un excedente que puede venderse.

³⁰ Categoría 4: quienes son propietarios de empresas de gran envergadura.

C. Meta general y objetivos estratégicos del COSOP

23. **Objetivo estratégico 1. Incrementar de forma sostenible la productividad agrícola de las cadenas de valor alimentarias y de exportación prioritarias.** El objetivo estratégico 1 se centra en mejorar la seguridad alimentaria de los hogares e incrementar los excedentes de producción disponibles para la venta como medio de fortalecer la resiliencia de las poblaciones rurales. Entre las inversiones destinadas a la consecución del objetivo estratégico 1, cabe destacar el riego en laderas y tierras pantanosas, la mejora de la mecanización, las tecnologías de producción, la fertilidad del suelo, la lucha contra las plagas, la conservación de suelos y aguas, y la integración de las actividades agrícolas y pecuarias. Se usarán escuelas de campo para agricultores para impartir formación sobre buenas prácticas agrícolas a los agricultores. La intensificación de la ganadería se centrará en la producción láctea y la cría de ganado menor. Se prestará apoyo a la formación y consolidación de las organizaciones de agricultores, incluidas las cooperativas, las asociaciones de usuarios del agua y sus órganos centrales.
24. **Objetivo estratégico 2. Mejorar los procesos poscosecha y fortalecer los vínculos de mercado.** El objetivo estratégico 2 se centra en fortalecer los procesos poscosecha y los vínculos de mercado, a fin de aumentar los excedentes de producción disponibles para la venta, incluso en los mercados de exportación, y generar oportunidades económicas para los hombres, las mujeres y los jóvenes del medio rural. Sobre la base de las experiencias satisfactorias, la consecución del objetivo estratégico 2 se basará en el establecimiento de centros para productos lácteos y de otro tipo, los vínculos de agronegocios y la participación del sector privado por medio de disposiciones de asociación 4P, la creación de cooperativas, vínculos con las instituciones financieras y servicios de asesoramiento empresarial, junto a la formación profesional. Las inversiones también se centrarán en reducir la vulnerabilidad de la población rural a las perturbaciones económicas y climáticas que podrían empujarlos por debajo del umbral de la pobreza.
25. Cuestiones transversales³¹:
- Un enfoque armonizado a las finanzas rurales. El FIDA colaborará con actores tales como Access to Finance Rwanda (AFR) para superar las barreras sistémicas que obstaculizan el acceso a los servicios financieros en la agricultura. El apoyo incluirá diálogos sobre políticas y la creación de asociaciones entre los proveedores de servicios financieros de las zonas rurales y los asociados del sector público y privado, con objeto de promover soluciones innovadoras y el intercambio de conocimientos.
 - Nutrición. En esta esfera, se hará hincapié en i) la agricultura que tenga en cuenta la nutrición, incluida la evaluación sensorial de variedades, la evaluación en las explotaciones de variedades tolerantes a la sequía y las inundaciones, la distribución de semillas de alta calidad y la promoción de bioplaguicidas; ii) la comunicación para el cambio de los comportamientos sociales, en particular campañas de sensibilización; iii) las buenas prácticas de manejo poscosecha, de certificación y en relación con las normas de inocuidad de los alimentos; iv) el desarrollo del sector lechero y la ganadería menor que tengan un impacto en la nutrición; v) la prevención de la contaminación por aflatoxinas, y vi) la sensibilización sobre nutrición.
 - Igualdad de género y empoderamiento de la mujer. Las mujeres representarán por lo menos el 50 % de los beneficiarios; se empoderará a los hogares encabezados por mujeres y a las mujeres de los hogares encabezados por hombres para que participen en las actividades que se realicen en el marco de los proyectos o para que emprendan actividades

³¹ Las medidas que se adopten en las esferas temáticas transversales de la nutrición, el género, los jóvenes y el clima contribuirán al cumplimiento del compromiso 3.3 relativo a la incorporación de la perspectiva de género, asumido en virtud de la FIDA11.

económicas. Ahora es obligatorio que al menos el 30 % de los miembros de todas las instancias decisorias del país sean mujeres. En consonancia con la intención del FIDA de garantizar que sus proyectos apliquen un enfoque de carácter más transformador en materia de género³², se introducirá el Sistema de Aprendizaje Activo de Género para abordar las causas profundas de la desigualdad.

- Empoderamiento de los jóvenes³³. Los jóvenes constituirán el 30 % de los beneficiarios y podrán acceder a oportunidades de empleo a través de i) la formación profesional y empresarial; ii) la generación de empleo gracias a las actividades que se realicen en el marco de los proyectos, los centros, las asociaciones 4P y la prestación de servicios; iii) programas de aprendizaje, y iv) el acceso a servicios financieros. En el marco de los proyectos, se colaborará activamente con el Foro de Jóvenes de Rwanda en el ámbito del Agronegocio en el ámbito del Agronegocio.
- Gestión de los recursos naturales y cambio climático. Se intensificarán las inversiones en adaptación al cambio climático y prevención de la degradación ambiental. Se adoptarán medidas para incrementar el uso de prácticas y tecnologías climáticamente inteligentes, tales como la captación del agua de lluvia, el uso de variedades de cultivo de maduración temprana tolerantes a la sequía, la difusión de información meteorológica, la promoción de especies de forraje de agroforestería y forrajeras tolerantes a la sequía, y la gestión del abono animal.

D. Gama de intervenciones del FIDA

26. **Préstamos y donaciones.** La cartera de préstamos para respaldar las inversiones del Gobierno incluirá tres proyectos (el Proyecto para la Promoción de los Ingresos Rurales mediante las Exportaciones, el PSAP y el Proyecto de Fomento del Sector Lechero en Rwanda) diseñados en el marco del COSOP anterior y, posiblemente, dos proyectos nuevos (el Proyecto de Gestión Integrada de las Cuencas Hidrográficas y el Riego en Kayonza y el Proyecto a favor de la Inclusividad de los Mercados de Ganado Menor. Véase en el cuadro 1 más información sobre cada proyecto y en la figura 3 el escalonamiento de los proyectos en el transcurso del COSOP.

³² Proyecto de incorporación en el FIDA de los enfoques de carácter transformador en materia de género: plan de acción para 2019-2025

³³ Es decir, personas que tengan entre 18 y 35 años de edad.

Cuadro 1
Cartera de préstamos del FIDA en el marco del COSOP 2019-2024

Proyecto	Objetivo
<p>PRICE Proyecto para la Promoción de los Ingresos Rurales mediante las Exportaciones</p> <ul style="list-style-type: none"> - USD 67,4 millones - Dic. 2011-dic. 2020 	<p>El PRICE se centra en el café, el té, la seda y la horticultura para la exportación. Su finalidad es promover un aumento sostenible de la rentabilidad de los agricultores mediante el aumento de los volúmenes y la calidad, la mejora de la comercialización y la eficacia de las organizaciones de agricultores.</p>
<p>PASP Proyecto de Apoyo a los Agronegocios y las Actividades Poscosecha Resilientes al Cambio Climático</p> <ul style="list-style-type: none"> - USD 83,4 millones - Mar. 2014-sep. 2019 	<p>El PASP apunta a incrementar los ingresos de los pequeños agricultores, en particular los ingresos de las mujeres, los jóvenes y los grupos vulnerables, mediante la concentración de productos para el mercado, el apoyo a la transformación, la reducción de las pérdidas y la creación de valor agregado. El PASP se centra en el maíz, los frijoles, la yuca, las papas y los productos lácteos.</p>
<p>RDDP Proyecto de Fomento del Sector Lechero en Rwanda</p> <ul style="list-style-type: none"> - USD 65,1 millones - Ene. 2017-dic. 2024 	<p>El RDDP tiene por objeto incrementar la competitividad y la rentabilidad del sector lácteo, de modo que los pequeños agricultores puedan ofrecer productos de calidad a los consumidores nacionales y regionales y, por ende, mejorar los medios de vida, la seguridad alimentaria, el estado nutricional y la resiliencia en general.</p>
<p>PRISM (nota conceptual)</p> <ul style="list-style-type: none"> - Proyecto a favor de la Inclusividad de los Mercados de Ganado Menor - USD 30 millones - 2019-2024 	<p>El PRISM se centrará en la producción, la productividad y las oportunidades de negocio, con miras a mejorar el estado nutricional y aumentar los ingresos de los hogares que crían ganado menor. Heifer International será una de las entidades cofinancadoras y un asociado fundamental para la ejecución del proyecto.</p>
<p>KIIWP (en tramitación) Proyecto de Gestión Integrada de las Cuenas Hidrográficas y el Riego en Kayonza</p> <ul style="list-style-type: none"> - USD 79 millones (provisionales) - 2019-2025 	<p>El KIIWP se aprovechará de las enseñanzas adquiridas del KWAMP y tratará de mejorar la resiliencia de los pequeños agricultores ante las sequías y los efectos del cambio climático. Se centrará en incrementar los niveles de producción y productividad de determinados alimentos y cultivos comerciales y en mejorar el acceso al mercado.</p>

27. Seguirán movilizándose donaciones regionales y nacionales con objeto de realizar pruebas experimentales de las innovaciones estratégicas en asociación con instituciones regionales de investigación y asociados estratégicos (véase el cuadro 2).

Cuadro 2
Donaciones nacionales y regionales en curso

Asociado	Objetivo
Heifer International	Integración del modelo de centros lácteos en los proyectos financiados por el FIDA
Centro Internacional de Agricultura Tropical (CIAT)	Promoción de sistemas de producción lechera climáticamente inteligentes en África Oriental sobre la base de estrategias forrajeras y de alimentación animal mejoradas
Instituto Internacional de Agricultura Tropical (IITA)	Combate de las enfermedades del estriado marrón y el mosaico de la yuca mediante la distribución de nuevo germoplasma resistente y semillas limpias en Burundi y Rwanda
Federación de Agricultores de África Oriental y Programa Mundial de Agricultura y Seguridad Alimentaria	Uso de la innovadora plataforma móvil eGranary para prestar servicios económicos a los agricultores de África Oriental
Helvetas e Itad	Incorporación del instrumento AG-Scan y un enfoque basado en el conocimiento para perfeccionar los sistemas nacionales de seguimiento
ONU-Mujeres, Programa Mundial de Alimentos (PMA) y Organización de las Naciones Unidas para la Alimentación y la Agricultura (FAO)	Programa para el empoderamiento económico de las mujeres del medio rural centrado en la seguridad alimentaria, la nutrición, las oportunidades de generación de ingresos, el liderazgo y un entorno de políticas que tengan en cuenta las cuestiones de género
SunDanzer y Winrock International	Desarrollo sostenible de cadenas de valor para cultivos y productos animales perecederos mediante el uso de tecnologías verdes

28. **Préstamos basados en los resultados.** En virtud de su marco de transición, el FIDA se ha comprometido a ofrecer a los países clientes una gama más amplia de productos de financiación en consonancia con la evolución de las capacidades del país. En el marco de la FIDA11, el Fondo estudiará la posibilidad de poner a prueba en Rwanda de modo experimental préstamos basados en los resultados, dados los sólidos resultados de la cartera del FIDA en el país³⁴.
29. **Actuación a nivel nacional en materia de políticas.** Se incrementará el apoyo que se presta a la formulación de políticas de base empírica y a la selección de inversiones. La actuación del FIDA en materia de políticas contribuirá a la consecución de los objetivos estratégicos. La contribución a la elaboración de políticas con base empírica complementará, prestará apoyo y aprovechará las experiencias y las enseñanzas adquiridas gracias a proyectos y donaciones estratégicas. El FIDA dará a conocer las mejores prácticas y enseñanzas adquiridas en foros como el del Grupo de trabajo técnico del sector agrícola y sus grupos temáticos. Se prestará apoyo a lo siguiente: i) la formulación de políticas y estrategias sectoriales, tales como la Política nacional del sector lechero; ii) grupos de trabajo sectoriales, como el Grupo de trabajo técnico del sector hortícola, y iii) plataformas de financiación agrícola a nivel nacional, en cooperación con AFR.
30. Se hará hincapié en la **gestión de los conocimientos** en consonancia con la agenda del Ministerio de Agricultura y del FIDA para la ampliación de escala y la integración de innovaciones y en apoyo de la actuación a nivel nacional en materia de políticas. Se preparará un plan de gestión de los conocimientos para orientar estas actividades, en el que se incluirá lo siguiente: i) generar e intercambiar conocimientos derivados de operaciones del programa en el país, donaciones nacionales y regionales, asociaciones y otras experiencias; ii) promover los aspectos técnicos y los relacionados con las políticas del programa en el país, y iii) organizar rutas de aprendizaje para intercambiar las enseñanzas adquiridas.

³⁴ Con ello se contribuirá al cumplimiento del compromiso 3.6 asumido en virtud de la FIDA11, es decir, poner a prueba de forma experimental productos diversificados, incluida la financiación basada en los resultados, que se adapten a las circunstancias de los distintos países.

31. Más concretamente, el plan de gestión de los conocimientos supondrá lo siguiente:
- a) colaborar estrechamente con el Centro de Información y Comunicación Agrícola del Ministerio de Agricultura y Recursos Animales para generar productos de conocimiento y materiales de comunicación pertinentes;
 - b) aprovechar y reforzar la función de gestión de los conocimientos de la UUEP como forma de promover el intercambio de experiencias entre proyectos, un enfoque estructurado para el desarrollo, la documentación de conocimientos prácticos y conocimientos especializados, y la selección con base empírica de las esferas críticas que requieran atención y apoyo en materia de políticas, e
 - c) identificar los canales de difusión, en particular los grupos de trabajo sectoriales nacionales existentes y las plataformas en línea, como el AFR.
32. Se consolidará la **cooperación Sur-Sur y la cooperación triangular**, que se vinculará con la agenda para las innovaciones y la ampliación de escala³⁵. Entre las actividades básicas³⁶ cabe destacar el apoyo a plataformas de conocimientos y estudios e intercambios Sur-Sur con vistas a posibles inversiones conjuntas:
- i) La cooperación Sur-Sur y la cooperación triangular adoptarán la forma de visitas de intercambio, viajes de estudio y otros tipos de actividades de aprendizaje y transferencia de tecnología. Una iniciativa de esa índole podría suponer la cooperación entre el Gobierno argentino y el Gobierno de Rwanda en el marco del Proyecto de Fomento del Sector Lechero en Rwanda en relación con la producción ganadera y la seguridad alimentaria.
 - ii) Como parte de las actividades no crediticias regionales, podrían elaborarse carteras regionales del FIDA y facilitarse los intercambios y la cooperación regionales. El Gobierno brasileño ha mostrado interés en la cooperación Sur-Sur y la cooperación triangular con Rwanda. Las modalidades de cooperación podrán incluir la evaluación de las necesidades, la realización de actividades de formación, el intercambio de conocimientos y la prestación de asistencia en el diseño y la ejecución.

V. Innovaciones y ampliación de escala para el logro de resultados sostenibles

33. La generación de innovaciones estará basada en: i) asociaciones con centros internacionales de investigación, el Grupo Consultivo sobre Investigaciones Agrícolas Internacionales, la FAO, centros de investigación de la Junta para Fomentar (RAB) los Recursos Agrícolas y Pecuarios de Rwanda y la Facultad de Agronomía, Ciencias Animales y Medicina Veterinaria; ii) plataformas dedicadas a las innovaciones con organizaciones no gubernamentales (ONG) y servicios públicos, y iii) donaciones estratégicas del FIDA.
34. Las esferas prioritarias para la innovación incluyen: i) el nexo entre la agricultura y la energía (por ejemplo, unidades pequeñas y grandes de biogás y energía solar dedicadas al riego y la refrigeración); ii) tecnologías de la información y las comunicaciones y ciberagricultura en apoyo de la Estrategia nacional de tecnología de la información y las comunicaciones para la agricultura, incluidas las disposiciones para pagos móviles, y iii) cadenas de valor prioritarias, tales como pruebas experimentales de la fertilidad del suelo.
35. Entre los enfoques prioritarios y las actividades que han obtenido resultados satisfactorios cuya escala ha de ampliarse, cabe destacar los modelos de asociación 4P y el enfoque de un único centro. Estos enfoques han demostrado ser eficaces a la hora de formalizar los vínculos de agronegocios entre los agricultores y los

³⁵ Ello contribuirá al cumplimiento del compromiso 3.4 asumido en virtud de la FIDA11, es decir, fortalecer las sinergias entre la actuación crediticia y no crediticia.

³⁶ Véase la estrategia relativa a la cooperación Sur-Sur y la cooperación triangular en el apéndice VIII.

compradores y permitir que los compradores pasen a ser inversionistas conjuntos y ayuden a los agricultores a acceder a los servicios financieros y a los mercados de insumos y de productos.

VI. Ejecución del COSOP

A. Recursos financieros y metas de cofinanciación

36. El COSOP 2019-2024 abarcará dos ciclos del PBAS del FIDA: USD 54,4 millones para la FIDA11 (2019-2021) y aproximadamente USD 60 millones para la FIDA12 (2022-2024).
37. Gracias al constante crecimiento del PIB, en 2015 Rwanda pasó de tener condiciones crediticias muy favorables con arreglo al Marco de Sostenibilidad de la Deuda (un 50 % en forma de donación, un 50 % en forma de préstamo en condiciones muy favorables) a condiciones muy favorables de financiación mediante préstamos. Rwanda podrá seguir recibiendo préstamos en condiciones muy favorables durante los próximos seis años, dado el promedio actual de su tasa de crecimiento del PIB de 6,9 % al año y el carácter tanto de la hipótesis de elevado crecimiento (proyecciones de crecimiento del 10 %) como de bajo crecimiento (proyección de crecimiento del PIB equiparable a su tasa de crecimiento demográfico del 2,4 %)³⁷. La deuda de Rwanda también se considera sostenible³⁸ y el riesgo de sobreendeudamiento sigue siendo bajo³⁹.
38. El FIDA recurrirá a sus capacidades como depositario de la financiación para el desarrollo. El coeficiente de cofinanciación en Rwanda durante el ciclo de tres años 2015-2017 fue del 0,36 (nacional e internacional). Se estudiarán futuras oportunidades de cofinanciación procedente del Fondo Verde para el Clima en apoyo del Crecimiento verde y la Estrategia de Rwanda de resiliencia ante el clima. Se espera cofinanciación adicional de otros asociados para el desarrollo, como el Banco Mundial, el Banco Africano de Desarrollo, el Organismo de Cooperación Internacional de Corea y el Gobierno español. Se calcula que el coeficiente de cofinanciación total en el marco de la FIDA11 será de alrededor del 0,7 (un 0,5 nacional; un 0,2 internacional)⁴⁰. El coeficiente de cofinanciación aumentará todavía más en el marco de la FIDA12.

Cuadro 3

Financiación y cofinanciación del FIDA de los proyectos en curso y previstos

(en millones de USD)

Proyecto	Financiación del FIDA	Cofinanciación		Coeficiente de cofinanciación
		Nacional	Internacional	
En curso				
RDDP (2016-2022)	44,7	16,4	4,0	0,5
PASP (2013-2019)	33,9	49,5	-	1,5
PRICE (2011-2020)	57,2	8,6	-	0,2
Previstos				
PRISM (2019-2024)	18,0	8,0	7,0	0,8
KIIWP (2019-2025)				
KIIWP 1 (2019-2021)	17,8	2,8	0,3	0,2
KIIWP 2 (2021-2025)	26,0	11,0	22,0	1,3
Total	197,6	96,3	33,3	0,7

³⁷ Sobre la base del umbral de 2018 de USD 1 507 para poder recibir préstamos en condiciones muy favorables, dado el actual PIB per cápita de USD 729.

³⁸ Según el análisis de sostenibilidad de la deuda, la deuda de Rwanda está por debajo de la deuda pública de referencia para los países de bajos ingresos, que es del 74 % para los países con políticas e instituciones fuertes.

³⁹ Análisis de sostenibilidad de la deuda del FMI, 2017.

⁴⁰ Compromiso 1.2 asumido en virtud de la FIDA11 de fortalecer la función del FIDA como "recolector" de la financiación para el desarrollo.

B. Recursos destinados a actividades no crediticias

39. Además de los proyectos de inversión en curso, se movilizarán recursos procedentes de donaciones regionales y nacionales, con objeto de promover las innovaciones y facilitar el aprendizaje y el intercambio en esferas temáticas específicas. También se utilizarán recursos disponibles en el marco de la cooperación Sur-Sur y la cooperación triangular para promover una amplia gama de actividades de cooperación técnica. Las asignaciones con cargo al presupuesto administrativo del FIDA complementarán las inversiones en proyectos para la formulación de políticas y estrategias sectoriales y la promoción de una mayor participación en la formulación de políticas a nivel nacional.

C. Principales asociaciones estratégicas y coordinación del desarrollo

40. El FIDA seguirá siendo un miembro activo del Grupo de trabajo para el sector agrícola, en el que el Gobierno de Rwanda y los asociados para el desarrollo debaten sobre estrategias, programas y avances en la ejecución en los ámbitos sectorial e intersectorial. El FIDA también participará activamente en el Grupo de coordinación de los asociados para el desarrollo. Colaborar con los asociados para el desarrollo permitirá aprovechar los recursos financieros del Fondo y el diálogo sobre políticas⁴¹.

D. Asociaciones con otros miembros del sistema de las Naciones Unidas para el desarrollo

41. El FIDA es un signatario del segundo Plan de las Naciones Unidas de Asistencia para el Desarrollo para Rwanda 2018-2023 (PNUAD II), en el que se incluye a la agricultura en la esfera de resultados estratégicos relativa al pilar de transformación económica. Las esferas de resultados se ajustan a la Visión 2050, la ENT 1 correspondiente a 2017-2024 y los correspondientes planes estratégicos sectoriales del Gobierno y se basan en la Agenda 2030 para el Desarrollo Sostenible de las Naciones Unidas y la Agenda 2063 de la Unión Africana.
42. Otras esferas clave en las que el FIDA aportará su contribución son el uso sostenible de los recursos naturales y la promoción de la adaptación al cambio climático y la nutrición y la seguridad alimentaria. El FIDA también es miembro de la red de las Naciones Unidas del Movimiento para el Fomento de la Nutrición, con la cual se apunta a desarrollar iniciativas conjuntas de nutrición en Rwanda, en coordinación con organismos de las Naciones Unidas, asociados para el desarrollo y ONG. Las posibles esferas de cooperación con la Organización Internacional del Trabajo incluyen el desarrollo de competencias empresariales y la formación técnica y profesional.

E. Colaboración con los otros organismos con sede en Roma

43. El FIDA seguirá trabajando en estrecha colaboración con los otros organismos de las Naciones Unidas con sede en Roma. Se propone trabajar con la FAO para aprovechar sus conocimientos especializados en lo que respecta a las escuelas de campo para agricultores y sus módulos de formación para fomentar la agricultura como actividad comercial, a la evaluación de las pérdidas poscosecha, el registro del rendimiento del ganado lechero y la realización de censos ganaderos, el empleo de RuralInvest para elaborar planes empresariales financiables y el uso de aplicaciones móviles desarrolladas por la FAO. Junto con la FAO, el FIDA prestará apoyo al Centro Juvenil de Rwanda, una iniciativa que pretende promover el empleo de los jóvenes y su participación en la agricultura.

⁴¹ Véase el apéndice VII.

44. La estrategia del PMA para Rwanda correspondiente a 2019-2023 fortalecerá el compromiso con los pequeños agricultores. Entre las posibles esferas de colaboración cabe destacar la Alianza entre las explotaciones agrícolas y el mercado del PMA.

F. Participación de los beneficiarios y transparencia

45. Este COSOP se ha preparado sobre la base de consultas con una amplia gama de partes interesadas y actores (véase el apéndice VI). La participación de los beneficiarios es una prioridad, ya que el uso de mecanismos eficaces de retroinformación potencia la buena gobernanza, la transparencia y la rendición de cuentas. A nivel de los proyectos, se consolidarán los mecanismos de retroinformación de los beneficiarios (por ejemplo, en relación con los procesos de seguimiento y evaluación (SyE), reclamación y compensación, y seguimiento de adquisiciones y contrataciones), con el propósito de mejorar la calidad y la ejecución de los proyectos y contribuir al empoderamiento de la población pobre de las zonas rurales de Rwanda. Estos mecanismos se aprovecharán para fundamentar los exámenes que se realicen en el marco del COSOP y podrían potenciarse con la aplicación de las normas nacionales de transparencia en vigor⁴².

G. Disposiciones de gestión de los programas

46. Todos los proyectos que reciben apoyo del FIDA en Rwanda se ejecutarán por conducto de la UUEP, que se ha trasladado recientemente a los organismos de ejecución del Ministerio de Agricultura y Recursos Pecuarios, a saber, la RAB y la Junta nacional para fomentar las exportaciones agrícolas (NAEB). Un equipo básico de personal técnico del FIDA destacado en el Centro de África Oriental y el Océano Índico en Nairobi prestará apoyo a la Oficina en el País para Rwanda. El Gerente del Programa en el País tendrá su base en el centro de Nairobi, mientras que un Oficial del Programa en el País se encargará de dirigir las actividades cotidianas de la Oficina en el País desde Kigali.

H. Seguimiento y evaluación

47. El Ministerio de Finanzas y Planificación Económica llevará a cabo un examen anual del COSOP con apoyo del grupo de examen de los resultados de la cartera del país y el equipo de gestión del programa en el país. En 2021/22 se organizará un examen de los resultados del COSOP por parte del Gobierno y el FIDA a través del cual se evaluarán los progresos e introducirán ajustes de ser necesario.
48. El seguimiento del impacto en términos de reducción de la pobreza y seguridad alimentaria y nutricional se valdrá de los indicadores de la ENT 1 y el PETA IV. Sobre la base del sistema *Ubudehe*, la EICV 4 y datos sobre malnutrición, se llevará a cabo una autoevaluación en los planos de las cooperativas, las comunidades y los distritos para seguir de cerca la satisfacción de los beneficiarios y facilitar su retroalimentación y participación en la toma de decisiones.

⁴² Las normas para la transparencia de la ayuda elaboradas en el marco de la Iniciativa Internacional para la Transparencia de la Ayuda se aplican en la base de datos de asistencia para el desarrollo de Rwanda, que es un sistema nacional de gestión de la información sobre ayuda.

VII. Gestión de riesgos

49. A continuación, se identifican los riesgos potenciales junto con las medidas de mitigación correspondientes.

Cuadro 4
Riesgos y medidas de mitigación

<i>Riesgos</i>	<i>Calificación del riesgo</i>	<i>Medidas de mitigación</i>
Políticos/gobernanza	Bajo	Creación de capacidad institucional en todos los niveles y fortalecimiento de la gobernanza de las partes interesadas del programa
Macroeconómicos	Bajo	Apoyo al aumento de la productividad y la producción nacionales y creación de cadenas de valor orientadas a la exportación
Estrategias y políticas sectoriales	Bajo	Apoyo al diálogo sobre políticas y el diseño de políticas y estrategias sectoriales
Capacidad institucional	Medio	Planificación y ejecución cuidadosas de las misiones de apoyo a la ejecución y comunicación continua entre las contrapartes del Gobierno y la Oficina del FIDA en el país
Cartera	Medio	Constante creación de capacidad en lo que respecta a la gestión de los proyectos, las salvaguardias, los asuntos fiduciarios y el SyE
Fiduciarios: gestión financiera	Medio	Preparación oportuna de manuales satisfactorios de adquisición y contratación y gestión financiera. Evaluación de la capacidad fiduciaria de las entidades de ejecución y de sus necesidades en materia de creación de capacidad
Fiduciarios: adquisición y contratación	Medio	Preparación oportuna de manuales satisfactorios de adquisiciones y contrataciones y gestión financiera
Medio ambiente y clima	Medio	Correcta aplicación y seguimiento de las salvaguardias. Incorporación de tecnologías climáticamente inteligentes
Sociales	Medio	Selección de grupos vulnerables
Otros riesgos específicos del COSOP	Bajo	
Globales	Medio	

Véase el apéndice X – Financial management issues - summary.

COSOP Results Management Framework

Country Strategy Alignment	Related SDG UNDAF outcome	Key Results for COSOP			
		COSOP's Strategic Objectives	Lending and non-lending activities for the COSOP period	Outcome Indicators	Milestone indicators
PSTA4 Overall objective: Transformation of Rwandan agriculture from a subsistence sector to a knowledge-based value creating sector, that contributes to the national economy and ensures food and nutrition security in a sustainable and resilient manner. Priority areas PA 1: Innovation and extension provide the knowledge base for PAs 2-3. The focus is on improving agronomic knowledge and technology in terms of basic research and innovation, development of efficient proximity extension services, as well as promoting knowledge and skills of value chain actors. PA 2: Productivity and resilience focus on promoting sustainable and resilient production systems for crops	SDG 1	COSOP overall objective Reduce poverty by empowering poor rural men, women and youth to participate in the transformation of the agricultural sector and rural development and to enhance their resilience.		- 1) 350,000 rural households are reached (representing 1.6 million people of which at least 50% are women and 30% youth) - 2) 20% of very poor (Category 1) and poor (Category 2) move up one Ubudehe category - 3) 20% average increase in rural per capita income, derived from targeted value chains - 4) 5% reduction in share of underweight children under five in project area	
	SDG 2 SDG 5 SDG 13 SDG 15	SO 1 To sustainably increase agricultural productivity in priority food and export value chains	Lending / investment activities <ul style="list-style-type: none"> • PRICE (tea, sericulture, horticulture) • RDDP (dairy) • KIIWP (food crops) • Project for Inclusive Small livestock Markets (poultry, pigs, goats) Non-lending / non-project	- 5) 30% farmers reporting an increase in production (CI 1.2.4) - 6) 30% average yield increase in selected value chains - 7) Volume of dairy produced is at least 100,000 MT; Value of dairy produced is at least USD 24	- 2000 hectares of farmland under water-related infrastructure constructed or rehabilitated - At least 1300 L/FFS put in place - 400 associations and/or cooperatives formed and

Country Strategy Alignment	Related SDG UNDAF outcome	Key Results for COSOP

<p>and animal resources.</p> <p>PA 3: Inclusive markets and value addition seek to improve markets and linkages between production and processing. This includes key input markets such as fertilisers, insurance and finance as well as upstream activities such as aggregation, promotion of value addition, market infrastructure and export readiness.</p> <p>PA 4: Enabling environment and responsive institutions provide the regulatory framework and define and coordinate public sector involvement.</p>			<p>activities</p> <ul style="list-style-type: none"> • CPLE (dairy policy, horticulture policy) • Partnerships (Heifer Int., FAO, NAEB, RAB) • Knowledge management (scaling up experiences from past projects) 	<p>million</p> <ul style="list-style-type: none"> - 8) Volume of export horticulture products supported by PRICE is at least 2,750 MT - 9) 50% average increase in percentage of farmers (baseline 80,000 farmers) organised in associations and/or cooperatives, with at least 30% of them with women in leadership positions 	<p>strengthened</p> <ul style="list-style-type: none"> - 5 outgrower schemes established and contractually linked to horticulture exporters - 150,000 farmers (at least 50% women) adopt environmentally sustainable and climate resilient technologies and practices (C.I. 3.2.2)
	<p>SDG 2</p> <p>SDG 5</p> <p>SDG 8</p> <p>SDG 13</p>	<p>SO 2</p> <p>To improve post-harvest processes, strengthen market linkages</p>	<p>Lending / investment activities</p> <ul style="list-style-type: none"> • PASP (food crops) • PRICE (tea, sericulture, horticulture) • RDDP (dairy) • KIIWP (food crops) • Project for Inclusive Small livestock Markets (poultry, pigs, goats) <p>Non-lending / non-project activities</p> <ul style="list-style-type: none"> • CPLE (ASWG) • Partnerships (NAEB, RAB) • STTC (Brazil, Argentina) • Knowledge management 	<ul style="list-style-type: none"> - 10) 30% of farmers reported an increase in sales (C.I. 2.2.5) - 11) 20% average reduction on post-harvest losses in targeted value chains - 12) 35 million litres of milk exported and 5% penetration in the East Africa Community dairy market (currently at 1%) - 13) 25,000 jobs created (C.I. 2.2.1), of which at least 50% for women and 30% for youth 	<ul style="list-style-type: none"> - 150,000 of farmers engaged in formal partnerships / agreements or contracts with public or private entities - 40,000 persons trained in income-generating activities or business management (C.I 2.1.2)

Transition scenarios

The purpose of this appendix is to offer an understanding of likely and possible country trajectories over the period of the COSOP, and to identify the possible implications of these for IFAD's country programme over the COSOP period.

Table 1: Projections for key macro-economic and demographic variables⁴³

Case	Projection
Avg. GDP growth	7.6% (2018-2020)
Avg. GDP per capita (USD)⁴⁴	765.20 (2018-2020)
Avg. Public debt (% of GDP)	33.9 (2018-2020)
Avg. Debt service to revenue ratio (2018-2020)	12.3 (2018-2020)
Avg. Inflation rate (%) (2018-2020)	4.3 (2018-2020)
Rural population	Current: 10.1M inhabitants (WB 2017)
	(end of COSOP period): 14.25M ⁴⁵
	Annual growth rate: 1.95% (2018-2022)
Private sector enabling environment	<p>5/6</p> <ul style="list-style-type: none"> • WB Doing Business: ranked 29th out of 190 countries. • The authorities' medium-term policies are geared towards sustaining improvements in the business environment for private sector development and increasing productivity through strategic infrastructure investments.
Vulnerability to shocks	<p>2.5/6</p> <ul style="list-style-type: none"> • See below

As per the IMF⁴⁶ and EIU⁴⁷ analyses, overall, since Rwanda's political and economic situation is deemed to be highly stable and is projected to continue on this very positive trajectory, only one scenario is provided for the period 2018-2020, which is based on the assumption that international oil prices increase by cumulative 40% over Q3 2018 and Q2 2020. Although data is not available for 2021-2024, it is confidently assumed that there will not be dramatic changes in the country's macroeconomic environment:

- The economy is expected to continue to grow at above 7% over the next three years while inflation will be kept under control.
- Rwanda's external debt is expected to remain sustainable and the country will continue to rank in the category of *low-risk of debt distress*. In order to preserve

⁴³ Suggested data sources: World Bank's "Global Economic Prospects", with 2-year projections; IMF Article IV consultations, with 2-year projections; Economic Intelligence Unit (EIU) "Country Forecasts" with 4-year projections.

⁴⁷ <http://country.eiu.com/rwanda>

debt sustainability, the authorities will continue to resort to prudent borrowing to finance their development projects.

Risks to the medium-term outlook pertain specifically to the country transitioning to a Middle income status. The IMF states that these risks include unpredictable weather, pests, and regional political issues, together with risks of further adverse movements in international commodity prices. In this context, policies should, on the one hand, bolster the improved macroeconomic conditions by preserving low-inflation, continuing to increase external buffers, and maintaining low risk of debt distress, while meeting Sustainable Development Goal (SDG) targets.

Projected Implications for IFAD's Country programme

(a) Lending terms and conditions

- It is expected that the country's lending terms would remain as Highly Concessional (HC) throughout the COSOP period.

(b) PBAS allocation

- In line with the projected implications for the lending terms and conditions, it is foreseen that Rwanda will utilize its IFAD11 allocation and given its high absorption capacity, the country is expected to request for more resources from IFAD, as was the case under IFAD10.

(c) COSOP Priorities and Products

- Actions towards the ownership of projects will continue to be essential to ensure programme's sustainability at its early stages.
- Whilst the main financial products with IFAD will continue to remain projects and grants, it is also foreseen that Rwanda would be a best candidate for testing new financial instruments, including the Results-Based Lending instrument.
- It is not deemed that the identified COSOP priorities would change and thus policy engagement could be pursued within the COSOP's currently defined strategic objectives.

(d) Co-financing opportunities and partnerships

- It is foreseen that IFAD will have relatively sizeable co-financing opportunities.
- Partnerships with Non-Governmental Organisations (NGOs) and key players, such as Heifer International, AGRA, Helvetas and Technoserve, will continue during this COSOP period, notably to pilot innovations and mobilise additional non-lending financing for the achievements of the COSOP's strategic objectives.

Agricultural and rural sector issues

Priority areas	Affected group	Major issues	Actions needed
High levels of poverty in general and chronic malnutrition (stunting) in children under five	Landless households or households with very small landholding (<0.2 ha) without alternative employment possibilities; Often women-headed households	The affected households do not have enough land to feed their families and productivity is low. Situated in more remote areas with reduced access to social services, credit and opportunities for non-farm employment resulting in very low-income levels. Low level of knowledge regarding nutritious diet and inaccessibility to nutritious food. Low level of education and often confronted with difficulty to participate in farmers association or cooperatives, thus remaining isolated.	Adopt strategies to maximize equitable distribution of lands, including land consolidation, benefiting from major investments in rural infrastructure, including irrigation. Promote access to livestock on cut-and-carry systems and/or small ruminants and poultry. Facilitate linkages to government social protection and nutrition programmes. Promote the establishment of kitchen gardens with water collection systems. Provide nutrition education. Assist in vocational training and generation of off-farm employment. Support adult literacy programmes. Coordinate with other UN agencies in assisting in the implementation of District Plans to end malnutrition, to mainstream specific activities supported by IFAD. Targeted women and youth empowerment and asset building initiatives.
Productivity of crop and livestock production	Majority of smallholder producers and micro-small enterprises	Current estimates indicate that major crops such as cassava, maize, wheat, potatoes, and beans are at 40-50 percent of their productivity potential. Small plot size, limited land availability and low soil fertility due to erosion.	Continue supporting the CIP programme, promoting diversity of the production systems and produce, and their related services. Improve access and use of agricultural inputs (in particular improved seeds and

Priority areas	Affected group	Major issues	Actions needed
		<p>Soils low in organic matter and high acidity.</p> <p>Production on marginal lands due to population pressure on arable land.</p> <p>Public sector services focused on narrow range of food staples under flagship CIP.</p> <p>Limited utilisation of improved technology, improved seeds and fertiliser, pest management.</p> <p>Non-sustainability of the fertilizer and seed subsidy, inefficiency in use and crowding out of private sector.</p> <p>Limited access to irrigation.</p> <p>Vulnerability to climate change with less than 20% land irrigated.</p> <p>Low productivity of endogenous livestock breed, inappropriate feeding and management.</p> <p>Limited access to advisory services & credit.</p>	<p>organic fertiliser use) and mechanisation.</p> <p>Adopt integrated soil fertility management practices to improve efficiency of fertiliser and reduce costs.</p> <p>Promote sustainable pest management techniques, soil conservation and land husbandry.</p> <p>Expand the coverage of Farmer Field School for empowering farmers and improving their technical capacity.</p> <p>Improved public and private research and extension services.</p> <p>Continue supporting livestock programmes.</p> <p>Develop rural infrastructure, in particular small-scale irrigation.</p> <p>Promote climate smart agricultural practices and diversification.</p>
Access to credit	Majority of producers and micro-small enterprises	<p>Low involvement of financial institutions in the agriculture sector.</p> <p>Inadequate skills for risk assessment.</p> <p>Lack of products to serve rural smallholders.</p> <p>Lack of financial knowledge and skills of farmers and enterprises</p> <p>Insufficient trust among the actors across the value chain.</p> <p>Women and youth have limited access to formal finance and are more at risk of financial exclusion</p>	<p>Alignment with national entities such as Business Development Fund.</p> <p>Develop innovative financial products tailored for agriculture.</p> <p>Capacity building of MFIs and SACCOs.</p> <p>Improve financial literacy of producers and enterprises.</p> <p>Strengthen public-private dialogue along value chain actors.</p> <p>Target women and youth in financial literacy and access to finance</p>

addition and agro-processing	producers, in particular the resource poor with marketable surpluses, and micro-small enterprises	<p>estimated between 20 and 40%.</p> <p>Insufficient organisation of farmers associations for bulking of inputs and produce, and low negotiation power.</p> <p>Markets informal and unorganised, with challenges in aggregating fragmented, remote farmers.</p> <p>Lack of knowledge on post-harvest handling to obtain quality products.</p> <p>Lack of knowledge in value addition and certification.</p> <p>Lack of infrastructure for drying and storage as well as processing.</p> <p>Lack of private investment in processing and value addition.</p>	<p>training on post-harvest handling and processing.</p> <p>Assist in investing in necessary drying and storage infrastructure, which improves productivity, food safety and quality of agricultural produce.</p> <p>Promote aggregation, market information and linkages.</p> <p>Support HUBs to establish contractual relations with private sector with knowledge of rights and duties of each party.</p> <p>Promote and facilitate private sector investment, in particular in value addition.</p> <p>Promote value chain development, in particular diversification into high value crops.</p>
Farmers organisations/cooperatives	Majority of producers	<p>Cooperative movement is growing rapidly, but still a minority of farmers are organised.</p> <p>Need of capacity development, in particular regarding management and business skills.</p> <p>Low organisational and governance capacity of cooperatives.</p> <p>Lack of know-how of market linkages and demand-driven service provision to members.</p> <p>Low capacity specifically of the Water Users Associations (WUAs) and their insufficient independence from the cooperatives.</p> <p>Rwanda Cooperative Agency (RCA) needs to coordinate and harmonise approaches.</p>	<p>Support capacity development of cooperatives to:</p> <ul style="list-style-type: none"> (i) provide training to their members on production, post-harvest handling and quality control of produce; (ii) acquire business skills to serve as a bulking centre for their members; and (iii) organisational, governance and management skills. <p>Strengthen WUAs.</p> <p>Assist RCA in its regulatory and coordination of capacity development role.</p>
Off-farm employment and youth	Micro and small enterprises	Large number of youth entering the workforce (200,000 per year).	<p>Promote entrepreneurial and business skills.</p> <p>Provision of vocational training.</p>

Priority areas	Affected group	Major issues	Actions needed
		<p>Limited private sector investment, due to perceived risk in the agricultural sector and lack of available finance.</p> <p>Lack of capacity, skills and collateral.</p> <p>Weak linkages to financial and other markets.</p>	<p>Promote technical and related off-farm business and services in the agri-food sector.</p> <p>Strengthen linkages to rural finance and development of tailored products for youth and women.</p>
Decentralisation	Majority of producers and district governance systems	<p>Insufficient resources at district level to offer required services.</p> <p>Limited capacities at district level - lack of trained personnel, both technical and in planning and monitoring.</p> <p>Lack of coordination between RAB and district technical extension services.</p> <p>Insufficient coordination between partners intervening in same district</p>	<p>Align district development planning to national strategies.</p> <p>Strengthen capacities at district level in order to maximise synergies between different partners and improve the level of services delivered.</p> <p>Increase the capacity of local organisations to participate in the decision-making processes.</p>

Social, Environmental and Climate Assessment Procedures (SECAP) background study

SECAP Preparatory Study

A. Objectives

1. The Government of Rwanda has developed several policies and strategies which provide a vibrant environment for enabling inclusive and sustainable development, green growth and climate resilience in all the sectors of the Rwandan economy. This SECAP background study aims at orientating IFAD future investments into green, resilient and socially inclusive development.
2. This COSOP covers the period between 2019 and 2024. Based on lessons learned from the previous COSOP (2013-2018), the overall objective of this framework is to reduce poverty by empowering poor rural men, women and youth to participate in the transformation of the agricultural sector and rural development and to enhance their resilience. It is aligned to the recently developed policies, mainly the Government Strategic Plan for the Agricultural Transformation 2018-2024 (PSTA IV) and National Strategy on Climate Change and Low-Carbon Development (NCCLCD) for Green Growth and Climate Resilience (2011) and the Nationally Determined Contributions (2015).
3. Within this COSOP, IFAD will contribute to national targets for achieving sustainable development goals and targets for gainful employment, productivity and economic transformation; and mitigating and adapting the agricultural sector to the adverse effects of climate change. Ongoing and future programmes will scale up innovations and interventions on gender and youth empowerment, nutrition security and mainstreaming natural resource management and climate-smart agriculture.
4. **Approach and methodology.** The approach and methodologies used for conducting this background study include: (i) desk review of relevant national policies and strategies, (ii) analysis of ongoing projects within IFAD and development partners portfolios and (iii) consultations of national stakeholders, civil society organisations and farmers organisations. This report is also informed by existing institutional and context analysis, country programme evaluations and existing environmental, social and climate change studies and assessments.

Part 1 - Situational analysis and main challenges

1.1 Socio-economic situation and underlying causes

5. The population is estimated at 12.2 million people and the population density is the highest in Africa with 495 people per square kilometre (WB, 2017). With a growth rate of 2.4%, the population is expected to reach 14.6 million by 2025. The livelihoods of over 80% of Rwanda's population depend directly or indirectly on the agriculture sector. The majority of the population of Rwanda lives in private households with an average size of 4.3 persons. Households are a bit smaller in urban areas, with 4.0 persons.
6. Rwanda's economic structure is dominated by the service sector which represents 47.3% of GDP and the agriculture sector representing 30.9% of GDP while the industry sector only amounts to 15.8% of GDP (WB, 2017). The agricultural sector employs 66.5% of the active population. While marketable surpluses have increased, harvest and post-harvest losses amounts to more than 20% for key commodities and are a major drain on production. This makes improving post-

- harvest handling and infrastructure for harvesting, cleaning, sorting, drying and storing critical.
7. Rwanda has been able to translate its sustained economic growth into poverty reduction. Yet, more than 4.4 million people remain poor and the country is ranked 159th out of 188 countries in the Human Development Index (2016). In addition, the 2017 Transparency International Corruption Perception Index ranked Rwanda 48th out of 180 countries.
 8. **Demographics:** The population of Rwanda is young, with one in two persons being under 19 years old. People aged 65 and above account for 4.9% of the resident population. The elderly population is composed of 207,239 elderly men and 304,499 elderly women (RPHC4, 2012). The larger proportion of elderly women is also reflected in the population shares, as the proportion of elderly females in the total female population (5.6%) clearly exceeds the proportion of elderly males in the total male population (4.1%). The share of elderly population is higher in rural (5.2%) than in urban areas, where they represent 3.0% of the total urban population. The largest proportion of elderly people lives in the Southern Province (29%), followed by the Western and the Eastern provinces (both 23%).
 9. About 42% of the population living in rural areas is under 15 compared to only 35% in urban areas. On the contrary, urban areas attract more young adults, presumably for studies or work: 34% of the urban population is aged between 20 and 34, compared to 24% of the population in rural areas.
 10. Overall, 446,453 persons with disabilities aged 5 and above are living in Rwanda according to the 2012 Census, out of which 221,150 are male and 225,303 are female. The distribution of the resident population by nationality shows that 99% of the populations are Rwandan.
 11. At national level, according to the latest Household Living Conditions Survey (EICV4, 2016), the percentage of female-headed households account for about 26%; the percentage of households headed by minors is under 1%; while households headed by persons with disabilities is 9%.
 12. **Poverty.** The recently published fourth Integrated Household Living Conditions Survey (EICV4) 2013-2014 shows that the standard of living of Rwanda's population has improved over the last 5 years, the birth rate has fallen, literacy levels amongst the young have grown, electrification was improved and so have sanitation methods and access to health.
 13. Poverty has reduced from 44.9% in 2011 to 39.1% in 2014 and extreme poverty from 24.1% to 16.3%. This follows similar reduction between 2006 and 2011 where poverty dropped from 56.7% to 44.9% and Extreme poverty from 35.8% to 24.1%. Inequality reduced as well with both the Gini coefficient dropping from 0.49 in 2011 to 0.45 in 2014 and the ratio of the wealthiest 10% to the poorest 10% dropping from 6.36 to 6.01.
 14. Despite considerable progress, poverty is still widespread and extremely deep. Rwanda ranks 158 out of 189 countries in the 2017 Human Development Index (HDI value for 2017 was 0.524). Poverty is estimated at 39.1% nationally and 43.8% in rural areas. The minimum food consumption basket needed by someone involved in physically demanding work is calculated at current RwF 159,375 per year. Extreme poverty which is estimated at 16.3% nationally and 18.5% in rural areas is calculated at RwF 105,064 a year.
 15. **Poverty and Vulnerable groups:** Poverty in Rwanda is concentrated among certain groups. According to the National Social Protection Strategy (2011) and the Comprehensive food security and vulnerability analysis (2015) priority vulnerable categories of the population, which corresponds to the poorer and the

poorest are the following:

- Households with older people aged above 65 years are one of the poorest groups in the country. They have a poverty rate 5.7% higher than the national average.
 - Households with a disabled member have a poverty level 1.7% above the national average and 76.6% are either poor or vulnerable to living in poverty.
16. **Children:** Poverty levels of households with children under-12 are 1% above the national average.
 17. **Female-headed households:** Have a poverty rate that is 4.4 percentage points above the poverty rate for all households. Female-headed households are slightly more likely to be poor than male-headed households, with 44% of female-headed households being poor compared to 37% of poor male-headed households in 2013/14. Poor households seem to have more dependents (infants, children and elderly people) than non-poor households and this difference is especially striking in relation to extremely poor households.
 18. **Rural women.** Women represent 51% of the population⁴⁸. The agriculture sector is worked mainly by poor women (86%) with lowest levels of schooling and highest rates of illiteracy (23%). As a result, women remain in the subsistence agriculture, they receive low prices for their products due to weak knowledge of markets, they lack capacities to participate in agri-business and are employed in low-paid positions in secondary agriculture. All these result in a vicious cycle of poverty that transcend generations. Women contribute immensely to the agriculture value chain by providing labour for planting, weeding, harvesting and processing in addition to reproductive activities and community work. They also produce and sell vegetables from home gardens or forest products and the income obtained is mainly used on meeting family food, health, and education needs. In male-headed households, women work for more hours (15.5 hours) than men (7 hours), spending over three hours more on farming activities than the seven hours worked by men, in addition to five hours on unpaid reproductive and household work. In all IFAD funded projects, women represent at least 40% of total beneficiaries.
 19. Women perform the bulk of the labour in the agriculture sector, putting in approximately 51 hours per week on farm and domestic duties compared to men who work 40 hour⁴⁹. Most women farmers lack the means to purchase high-quality seeds and proper storage facilities to protect their crops. Many also never received education on effective farming methods to increase yields and to ensure that the soil on their land remains healthy. This creates a cycle of subsistence farming leaving very little or no profit from outputs for farmers to use as a source of income or capital.
 20. The 2015 CFSVA also reveals that Rwanda has made significant achievements in terms of gender empowerment. The country has a high representation of women in parliament and an enrolment rate of girls to boys in primary school of 1.02. However, the report observes that a higher proportion of households headed by women are found to be poor, a higher proportion of women are employed in subsistence farming than men, and women are more likely to carry out unpaid work such as household chores which keep their income levels at lower level. In addition, it is stressed that agricultural daily labourers, low-income agriculturalists are among the poorest segments of the population (WFP, 2015).

⁴⁸ This section draws on the findings, analysis and gender gaps in the agriculture sector presented in the Agriculture Sector Strategy prepared by MINAGRI (2010).

⁴⁹ National Gender Statistics Report, 2016

21. **Livelihoods:** Agriculture is still the backbone of the Rwandan economy and is regarded as the major catalyst for growth and poverty reduction. The sector continues to account for around one-third of GDP. Agriculture is also important for national food self-sufficiency, accounting for well over 90.0% of all food consumed in the country⁵⁰. Because of its forward and backward linkages, it remains a key driver of overall economic performance and poverty reduction (accounting directly for over one-third of the overall reduction in poverty from 59% in 2001 to 39% in 2013). The Rwandan labour market is predominated by agriculture (73%). A higher percentage of employed females is employed in agriculture (82%) compared to males (63%) and a higher percentage of employed persons in rural areas is farmers (83%) compared to those in urban areas (21%).
22. Farm size is a major challenge. The average farm size is only 0.33 ha with perhaps 0.12 ha per worker. Men and women farmers with very small fields survive by selling labour to those with larger plots of land. Such families do not afford to pay for education costs resulting in children dropping out of school early, do not access medical care, quality of housing very poor, food insecure, malnourished children and children migrate to search for livelihoods opportunities.
23. It is widely accepted that population pressure, compounded by limited land availability is one of the major challenges faced by the government and by the largely agricultural workforce. Supported by policies and strategies aimed at reducing the poverty rate by 30% by 2020⁵¹, the Government of Rwanda has invested substantially in agriculture over the last years through its Crop Intensification Programme and its Land Use Consolidation Programme. This has led to bringing together fragmented plots of land and encouraging the concentration of crop production areas through fully subsidised seed and partly subsidized (50%) fertiliser distribution.
24. Livelihood Groups Besides the EICV data, based on household income, expenditure and consumption, two other sources, the Comprehensive Food Security and Vulnerability Analysis and Nutrition Survey (CFSVA) defines livelihood groups based on their resource base, capacity and livelihood strategy (10 categories): (1) low income agriculturalists; (2) medium/high income agriculturalists; (3) agro-pastoralists; (4) agricultural daily labour; (5) unskilled daily labour; (6) skilled labour; (7) formal/informal trade and petty trade; (8) salaried work and own business; (9) transfers/support/begging; and (10) artisanal work and other activities; and the Ubudehe, a classification of poverty based on a participatory self-assessment (6 categories), provide substantive information on livelihood groups, comparable over time.
25. According to the latest CFSVA (2015), households rely on three most important income activities to sustain their livelihoods. In Rwanda, almost half of households (48%) rely on two livelihood activities, 41% rely on only one livelihood activity and 10 % rely on three or more livelihood activities. The activities most commonly engaged in by households are: agricultural production (72% of households), daily labour agricultural work (24%), livestock raising for sales (18%), unskilled daily labour (13%) and informal sale/petty trade (11%)⁵².
26. Production systems are largely constituted by small family farms that cultivate an average of 0.33 ha, with 26% cultivating less than 0.2 ha. Households manage complex, mostly rain fed farming systems and food crops cover around 67% of cultivated area; whereas two-thirds are consumed by the family, an increasing proportion of households are involved in marketing staple crops (up to 20%). Often, one or more members of the family work as wage labourers to bring in

⁵¹ Vision 2020 and its related economic growth and poverty reduction strategy (2013-2018 EDPRS)

⁵² Rwanda: Comprehensive Food Security Analysis 2015 (Data collected in April-May 2015) WFP

additional income.

27. The prevalence of poverty is associated with low productivity in subsistence agriculture. Poverty is highest by far (76.6%) among households (often landless) who obtain more than half their income from working on other people's farms. The next poorest group is those with diversified livelihoods who obtain more than 30% or more of their income from farm wage work (76.2%). Women are more likely to fall into the category. Given the transition of some men to off-farm employment, there are now more women involved in agricultural subsistence production than before.
28. Based on the EICV 4, the highest poverty levels remain amongst farm wage laborers who increased by 2.8% since 2005/6 (from 6.2% to 9%) followed by those working in agriculture, who remain the vast majority, at 49.5% (54.1% in rural areas).
29. **Gender empowerment.** Women concentrate their work in agriculture (82% are active in the sector) and find it more difficult to find alternative non-farm employment (over the last five years, only 4% of women managed to find work outside of agriculture, as opposed to 9% among men). The incidence of poverty is 4.4% higher in women-headed households (44% compared with 37% of the households headed by men). They have the lowest levels of schooling and highest levels of illiteracy (23%) and are often unable to move beyond subsistence agriculture, have limited market access information, lack access to knowledge and finance, and have difficulty in participating in new ventures and agri-businesses which could provide additional economic opportunities. Women are associated with primary processing and marketing of small quantities in the local markets.
30. Women-headed households are less resilient to both economic and climatic shocks and have limited or no savings. 30% of the country's households are female-headed and most of them are very poor. The increasing number of female headed households in the rural areas makes agriculture vulnerable to any type of shock events because women rarely have asset stocks nor financial savings because of their foundation of being illiterate, poor and stereotyped to be subordinate to male counterparts be it at household, community and governance structure levels.
31. Impoverished women are also vulnerable to discrimination and to a vicious cycle of inadequate health care and education and a lack of awareness of their legal rights. The main objective of the 2014-15 Rwanda Demographic and Health Survey (RDHS) was to obtain current information on demographic and health indicators, including family planning; maternal mortality; infant and child mortality; nutrition status of mothers and children; prenatal care, delivery, and postnatal care; childhood diseases; and paediatric immunization. In addition, the survey was designed to measure indicators such as domestic violence, the prevalence of anaemia and malaria among women and children, and the prevalence of HIV infection in Rwanda. The 2014-15 RDHS included a domestic violence module for both women and men, in recognition of the seriousness of the problem of domestic violence.
32. Statistics show that 35% of women and 39% of men age 15-49 have experienced physical violence since age 15. Fourteen percent and 11%, respectively, experienced physical violence in the 12 months prior to the survey. Ever-married women are more likely to have ever experienced physical violence than those who have never been married, implying that in Rwanda violence perpetrated by spouses is more prevalent than violence perpetrated by other individuals. Fifty-four percent of women who are divorced, separated, or widowed and 39% of currently married women have experienced physical violence since age 15, as compared with 22% of never-married women. The percentage of women who have experienced physical violence decreases as educational level increases from 41% among those with no education to 26% for those with secondary or higher

- education and is lowest among those in the highest wealth quintile (30 %).
33. Twenty-two percent of women age 15-49 and 5% of men have ever experienced sexual violence and that 8% of women and one percent of men experienced sexual violence in the past 12 months. Younger women (age 15-19) are less likely than older women (age 40-49) to report ever having experienced sexual violence (15% and 26%, respectively). Similarly, those who have never been married and those who have no children are less likely to have experienced sexual violence⁵³.
 34. **Indigenous peoples and marginalised groups.** The only minority group in Rwanda is one classified as an historically marginalized people, the Twa. They are classified as part of the cluster of Twa population found in the Great Lakes Region, mainly in Rwanda, Burundi, Eastern DRC and Uganda. Since 1997, the government of Rwanda encouraged land sharing among all peoples and enforced the policy of village settlement, especially in rural areas benefiting the “Twa” group as well. Historically, this category of people suffered from insecure land tenure and being landless. Government addressed their status through the distribution of state land and houses in village settlements to those who were landless and homeless. This was well supported by the prevailing legal framework. For example, the Rwandan constitution, revised in 2015, aims at eradicating all forms of discrimination and divisionism based on ethnicity, region or on any other ground as well as promoting national unity. The 2013 Organic Land Law also highlights that land is a common heritage of all Rwandans, and all forms of land-related discrimination are prohibited. The LTR process has also leveraged existing legal instruments to treat all categories of people equally.
 35. Other social vulnerable categories include: Households with older people aged above 65 years. They have a poverty rate 5.7% higher than the national average. Indeed, 79.1% of these households could be regarded as poor or vulnerable to falling into poverty. There are currently an estimated 328,000 people over 65 years of age, but only 24,300 (7.4%) have access to a pension from the Social Security Fund for Rwanda (SSFR). These households – and their children – are particularly vulnerable in the absence of assistance from government⁵⁴.
 36. Households with a disabled member have a poverty level 1.7% above the national average and 76.6% are either poor or vulnerable to living in poverty. The need to care for disabled people means that some households cannot work as much as they otherwise could while many disabled people are inhibited from working themselves because they are too poor and cannot meet the additional costs they face when accessing work. People who are both old and disabled experience double vulnerability. Those who are chronically ill are also very vulnerable to living in poverty: 22% of food insecure households have a chronically ill member.
 37. **Youth.** Rwanda’s national youth policy was recently revised to define youth as being between the ages of 16-30. The total youth in Rwanda (aged between 14 and 35 as per the old definition of youth) is 4,474,000 people. According to the 4th Rwanda Population and Housing Census (RPHC4) of 2012, the population of Rwanda was 10.5 million with 78.7% aged below 35 years. Young people aged between 16-30 years is 29% of which 51.0% are female and 48.9% are male. Among them, 20.9% live in urban areas and 79.1% in rural areas. On average, young people are more likely to migrate internally and outside the country than the rest of the population. 19% of 14–35 years old people had moved in the five years that preceded the study compared to 13% of all Rwandans. The rate is high (23%) in the 25–29 and 20–24 age groups. Here, males and females move at a similar rate. The majority of Rwandans (59%) migrated internally due to family reasons while 22% migrated looking for job in 2013/14. Youth aged 14–19 years

⁵³ Rwanda Demographic and Health Survey (RDHS) 2014-2015

⁵⁴ Fourth Population and Housing Census, thematic report: Socio-Economic Status of elderly people.

migrate a lot internally (73%) due to family reasons.

38. Thanks to the significant efforts made over the last decade by the Government of Rwanda and its partners to expand access to education throughout the country, Rwanda is one of the top-performing countries in sub-Saharan Africa in education, having achieved Millennium Development Goal (MDG) 2 for access to Universal Primary Education, with a net enrolment rate of 97.7% (boys: 97.3%; girls: 98%) (MINEDUC, 2016). In terms of gender equality in education, Rwanda’s education system boasts the highest participation rates in East Africa as well as gender parity in net and gross enrolment at the pre-primary, primary, and secondary levels. In fact, girls’ enrolment surpasses boys’ enrolment at all levels. Despite these achievements, gender disparities exist, namely in learning outcomes for girls and negative social norms that impact both boys and girls, which have been informed by a Knowledge, Attitudes, and Practices Study on Gender in Education. These impressive gains in access at the primary level now need to be matched by similar increases in access at the pre-primary level, which presently stands at only 23.7 gross enrolment rate (MINEDUC, 2016), and significant improvements in quality and efficiency throughout the system.
39. Around 81% of the population aged 14–35 years know how to read and write. This varies from about 68% for those in the lowest quintile to 90% in the highest quintile. The youngest age groups have a higher literacy rate (85%) than the older age groups (74% for 30–35 years), reflecting the expansion of education in recent years. 10% of Rwandans aged 14–35 years are computer literate. The number is high in Kigali (27%) and among the wealthiest quintile (27%). There is a high difference between urban and rural areas in computer literacy rates. Only about 6% of rural youth are confident in using a computer compared to 27% in Kigali city.
40. Employment and economic activity rates for young people (14–35) is lower than the one for all working age people (16 years+) which is about 87% especially in 14–19 age category. The overall employment rate for youth is 76 % and most of those who are not active are students (16%). 64% of young people work in agriculture, forestry, and fishing as their main job(EICV 4, 2016). Among the youth working in wage employment, the majority (92%) is in private sector and 7% are in the public sector. Unemployment is predominant in urban areas and affects young people (16-30 years) more than adults. The unemployment rate in urban areas (9%) was slightly above four times the one at the national level (2%), whereas it was 0.6% in rural areas. The unemployment rate among active youth (16–30) was 3.3% at the national level and reaches 12% in urban areas.

Source: RPHC4, National Institute of Statistics Rwanda, 2012

41. The economy has experienced fast and sustained growth at an average of 8%

from 2000 to 2013; it is predicted to continue on this strong trajectory. Growth has been driven by strong policies such as the Economic Development and Poverty Reduction Strategy (EDPRS-II 2013- 2018) that builds on the country's Vision 2020. There is significant emphasis on infrastructure development, particularly in power generation, rail and road connectivity and on productivity investments in agricultural value chains. As a result, the services and agriculture sectors have been key growth drivers for Rwanda's economy.

Figure 2: Economic Sector Shares in Rwanda GDP

Source: MINECOFIN Macro-Framework dataset, June 2015

42. This economic growth has not translated into sufficient productive employment particularly for the growing youth cohort aged 14-35 years, which represents 39.3% of the population. Driven by 2.8% average annual population growth over 2010 – 2013, the size of the working-age population has continued to increase and outpace job creation. Each year, 125,000 first-time job seekers enter the labour market which the economy is not able to absorb. Indeed, with a total of 396,000 waged jobs in the formal economy today, only a handful of new labour market entrants will gain access to the formal sector. While only 4% of active youth are unemployed, 65% are underemployed and youth are disproportionately located in—and migrating to—urban areas where youth unemployment is three times that of rural areas.

Figure 3: Mapping of youth and unemployment

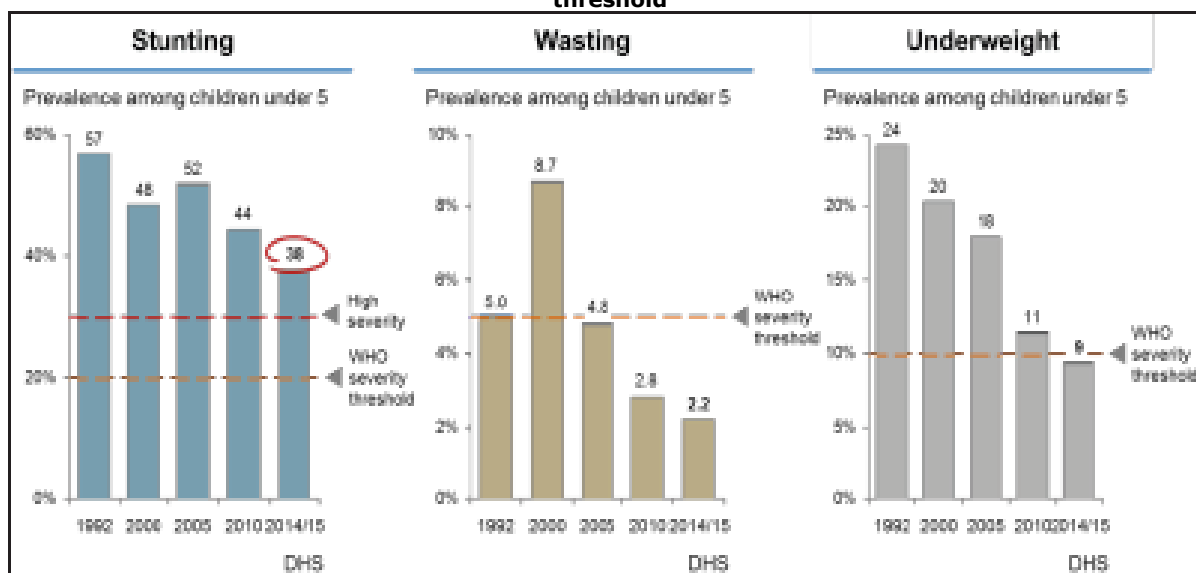

Source: EICV3, National Institute of Statistics Rwanda, 2011

43. To address this growing urban 'youth bulge,' the government of Rwanda is engineering a shift from a low productivity agriculture-dependent economy to a service-based 'knowledge economy'. 'Productivity and youth employment' is thus central to the government's Economic Development and Poverty Strategy, which targets the creation of at least 200,000 off-farm jobs annually.
44. Despite this progress there is a need for more interventions and rapid actions in order to limit the negative impact of disempowerment on the youth population, and the negative impact of youth unemployment on Rwandan society. Youth unemployment represents a sizeable economic loss stemming from unrealized human resources, foregone potential income tax revenues, and a loss of returns on government investment in education. In addition, protracted joblessness increases youth disenfranchisement, which can lead to increased social unrest, political instability, and crime while increasing youth's vulnerability to poverty.
45. **Nutrition.** Nationally, 38% of children under 5 years are stunted. Stunting increases with the age of the child up until 23 months, rising from 18% among children 6–8 months to a peak of 49% among children 18–23 months. Variation in children's nutritional status by province is quite evident, with stunting being highest in West (45%) and lowest in the city of Kigali (23%). Forty-one percent of rural children are stunted, as compared with 24% of urban children. Both a mother's level of education and wealth quintile have a clear inverse relationship with prevalence of stunting. For example, the prevalence of stunting is higher among children living in the poorest households (49%) than among children in the richest households (21%) and is higher among children whose mothers have no education (47%) than among those whose mothers have a secondary education or higher (19%) (RDHS 2015).
46. Underweight (low weight for age) affects 9% of children under 5 while wasting, (acute malnutrition or low weight for height) which is associated with a high death rate, affects 2.2% of children under 5 (wasting rates <5% are considered within an acceptable range).
47. Early childbearing also contributes to malnutrition in Rwanda. By age 19, 21% of adolescent girls had begun childbearing in 2014–2015, which is a slight increase from 20% in 2010 (RDHS 2010 and 2015). This has serious consequences because, relative to older mothers, adolescent girls are more likely to be

malnourished and have a low birth weight baby who is more likely to become malnourished, and be at increased risk of illness and death than those born to older mothers. The risk of stunting is 33% higher among first-born children of girls under 18 years in Sub-Saharan Africa, and as such, early motherhood is a key driver of malnutrition⁵⁵.

48. Undernutrition, especially stunting, in children is attributed not only to food insecurity and poverty, but also to inadequate feeding. In fact, while breastfeeding rates are very high throughout the country, complementary feeding practices are inadequate for any infant. Only 19% of children 6–23 months receive a minimum acceptable diet (RDHS 2015).
49. In addition to chronic and acute malnutrition, anaemia levels in children under 5 are high and the pace of reduction is slow while steadily increasing in prevalence among women. Currently, anaemia affects 37% of Rwandan children under 5 and 19% of women of reproductive age (15–49 years). Although the trend is changing, Rwanda’s staple diet is starch-based. With plantains, tuber and root crops providing the majority of food energy, very little bio-available iron is consumed by the average person. Existing surveys and studies do not provide information on essential minerals and vitamins other than iron. Moreover, some studies indicate that while having sufficient and diverse foods serves as a preventive measure, food alone is not sufficient to eradicate stunting in Rwandan households.

Figure 4 – Trends in under nutrition among children under 5 years compared to the WHO severity threshold

Source: NISR, RDHS 2010 and RDHS 2014/15

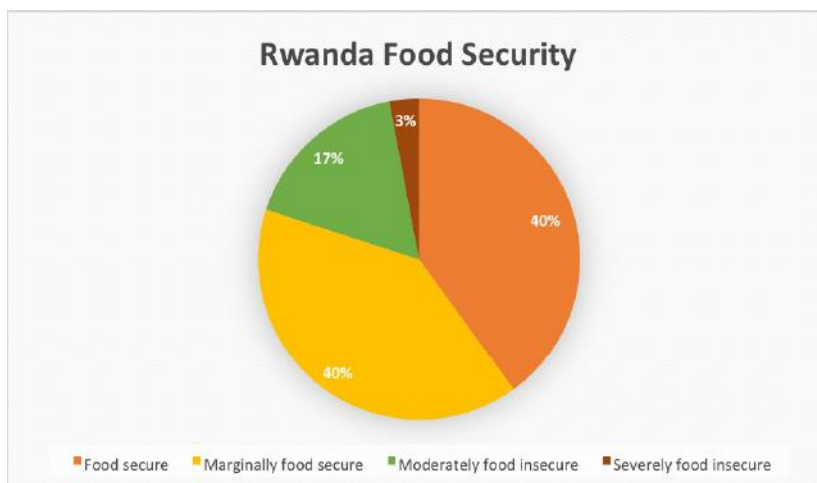

50. Additional influencing factors include (a) access to quality water, health services and sanitation (WASH) and (b) care practices of women and children. Findings show that access to improved sources of water and/or potable water is important in reducing the risk of stunting among children. Unfortunately, access to clean drinking water remains a challenge both in rural (47% have access to water within 500 meters of their residence) and urban areas (61% have access to water within 200 meters of their residence), consequently increasing the burden on women and children who are generally responsible for fetching water.
51. Rwanda is also experiencing the double burden of malnutrition with 21% of women and 8% of children under 5 years suffering from overweight and obesity (RDHS 2015). Recent studies also indicated that overweight and obesity rates are

⁵⁵ Fink, G., Sudfeld, C.R., Danaei, G., Ezzati, M., and Fawzi, W.W. 2014. “Scaling-Up Access to Family Planning May Improve Linear Growth and Child Development in Low and Middle-Income Countries.”

rising with the increase of wealth. Some cultural attitudes and perceptions are suspected to contribute to overweight and obesity rates among women more than men based on popular beliefs that fatness among women is considered a sign of beauty in some Rwandan communities. Nonetheless, obesity is associated with an increased risk of various non-communicable diseases in all sex and age categories.

52. Eighty percent of all households are food secure, which corresponds to about 1,963,975 households. However, 979,045 (40%) of these households are considered marginally food secure, meaning they are at high risk of becoming food insecure. Of the 473,847 (17%) households considered food insecure, 63,696 (3%) are severely food insecure. The level of food insecurity is particularly high in the western and northern parts of the country, especially in the livelihood zones of Western Congo Nile Crest Tea Zone (49%), Lake Kivu Coffee Zone (37%), and the Northern Highland Beans and Wheat Zone (32%). At the provincial level, the Western Province is most concerning, with over 35% of its households considered food insecure. Although the Western Province holds 22% of the country's households, 42% of all severely food insecure households in Rwanda are found there. At the district level, Rutsiro (57%), Nyamagabe (42%), Nyabihu (39%), Nyaruguru (37%), Rusizi (36%), Karongi (35%), and Nyamasheke (35%) have the highest percentages of households classified as food insecure⁵⁶.

Figure 5 – Households' Food Security situation in Rwanda(2018)

Source: MGFP. Rwanda Country Strategic Review of Food and Nutrition Security. 2018

53. In general, Rwanda's food basket is primarily dominated by tuber and root crops (37.3%), bananas (27.6%) and cereals (11%). Legume and pulse crops (7.6%), as well as vegetables and fruits (4.7%), represent a smaller proportion. Currently, average energy consumption measures 2,754 Kcal/per capita/day, while the availability of protein and lipids is estimated at 69 and 31 g/per capita/day, respectively. To date, food imports represent a substantial proportion of Rwanda's food balance sheet. One of the major constraints to domestic food production is low productivity gains for smallholder farmers. Low crop and animal productivity levels have negative implications for the food security of Rwandan households, especially small landholders and those who depend on their own food production for subsistence.
54. Food access in Rwanda is mainly determined by seasonal patterns, commodity prices and people's purchasing power. Many Rwandans continue to face difficulties

⁵⁶ WFP, MINAGRI and NISR (2015). Comprehensive Food Security and Vulnerability Analysis Report (CFSVA). Kigali, Rwanda.

in accessing adequate amounts of food at some point of the year, especially during lean seasons. These periods are generally coupled with an increase in food prices which in turn lead to food inflation, thus reducing a household's purchasing power. Other factors such as the limited physical access to markets, inadequate market infrastructure, and a short supply of post-harvest handling facilities also affect access to food.

55. Despite tremendous increases to food availability, stability of food throughout the year and at all times remains an important constraint in Rwanda. Shocks and disaster-induced food insecurity disproportionately impact poor households in Rwanda, rendering relevant the need for a shock-responsive/sensitive social protection system that strengthens risk mitigation and rapid response capacities. In implementing and strengthening social protection interventions, it is crucial to ensure that early warning systems are established along with contingency plans, financing mechanisms and appropriate institutional arrangements in order to adequately respond to potential shocks. Currently, production systems are very similar with harmonized cropping calendars and unified uses of inputs and cropping techniques. While these similarities allow gains in the penetration and adoption of technology and increased access to markets, they also increase the seasonality of food production and impact of shocks. Production patterns affect the stability and access to food through an aligned seasonality of prices. This also implies the need for more flexibility in the use of risk mitigation techniques for staple crop production including production diversification in a given area, use of mixed-cropping techniques, crop rotation and diversification of calendars. Increasing the resilience of the production system is a key determinant for more stable food systems and food access. As emphasized previously, resilience is partly influenced by the production system, particularly in regard to diversification and integration with other sub-programs such as agroforestry, livestock and fish farming⁵⁷.

1.2 Environment and climate

56. Rwanda is a land-locked country, bordered by Burundi in the South; Tanzania in the East; Uganda in the North, and the Democratic Republic of Congo in the West. The borders of Rwanda stretched up to 900 kilometres. The country total area is 26,338 km² of which 3% is covered by water. The country counts five provinces (Northern, Western, Southern, Eastern provinces and the City of Kigali) and is subdivided into 30 districts which are further partitioned into 416 sectors.
57. The country is characterized by hilly and mountainous landscapes with widely varying altitudes across the country (900 m in south-west, 1,500-2,000 m in the south and the centre of the country, 1,800-3,000 m in the highlands of the north and the west and 3,000-4,507 m in the regions of Congo-Nile Crest and the chain of volcanoes. The average altitude is 1,700 meters. The country has a tropical temperate climate due to his high altitudes. The average temperature is 18.5 °C and the average rainfall is about 1,250 mm per annum. The country is divided into 12 agro-ecological zones that can be clustered into three natural regions: highlands, midlands, and lowlands.

⁵⁷ Ministry of gender and Family Promotion. Rwanda Country Strategic Review of Food and Nutrition Security. 2018.

Figure 6: Agro-ecological zones (AEZs) in Rwanda and their characteristics⁵⁸

Natural regions	AEZs	Elevation (m)	Relief	Temperature (C°)	Rainfall (mm)	Dry season (month)	Major limitation
Highlands	Birunga*	> 1900,	Mountainous	15- 17	1250-2000	1 to 2	Slope+++ Acidity+++
	Buberuka						
	CNWD						
Midlands	Impala	1,600-1,900	Dissected Plateaus	17-20	1000- 1250	3 to 4	Slope++ Acidity++
	Kivu lake borders						
	Central Plateau Granitic Ridge						
Lowlands	Imbo	< 1,600	Pediplains	20-21	700 – 1000	4 to 5	Slope+ Erratic rainfall+++
	Mayaga						
	Bugesera						
	Eastern Plateau						
	Eastern Savanna						

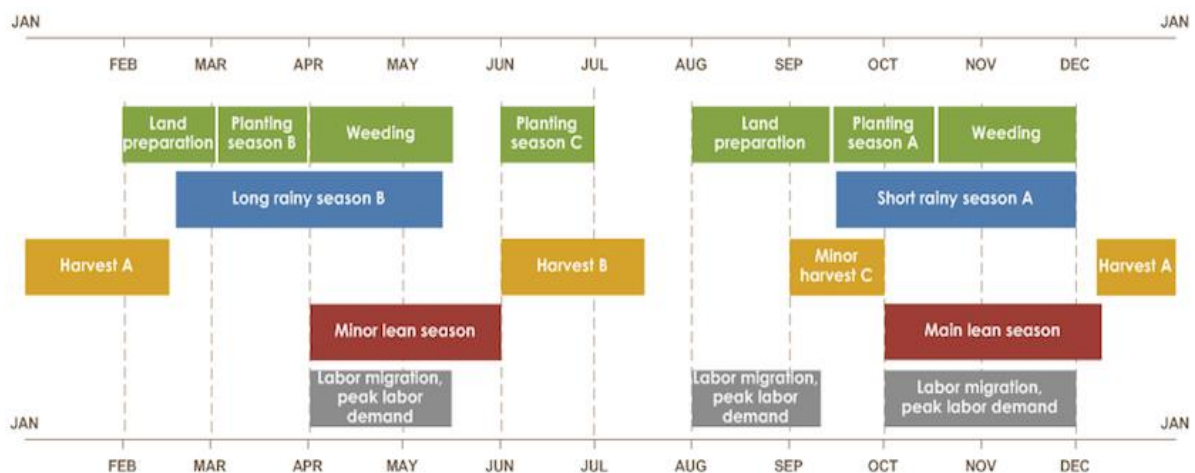

58. **Scarcity of agricultural land.** Due to the country's mountainous geography, only about 60% of the total land area is currently under cultivation. The favourable climatic conditions and the generally fertile soils allow cultivation of a wide range of agricultural products comprised of both cash and food crops. The most important cash crops are coffee, tea, sugar cane and pyrethrum while food crops include roots and tubers, bananas, fruits, vegetables, cereals and pulses (beans and peas).
59. Due to high population density, smallholders farm an average of four to five plots that make up an average land size of 0.33 hectares (GOR, 2016), limiting their ability to expand their operations, commercialize, increase production and income, and thereby escape poverty.
60. **Environmental degradation.** Rwanda's topography is characterized by steep slopes. The majority of Rwandan crop land (90%) is located at slopes which have a gradient ranging from 5% to 50%. The 2015 State of Environment report highlights that large parts of Rwanda were once covered with natural montane-grassland ecosystems, which today are occupied mostly by terraced agriculture. This situation exacerbates vulnerability to the impacts of climate change such as heavy rainfall leading to soil erosion and permanent fertility loss (GoR 2015).
61. Rural communities are at the forefront of environmental degradation as they rely mostly on natural resources. In the Rwandan context, a major environmental issue is the imbalance between the growing population and the pressure on the natural resource base (land, water, forests, flora, fauna, and non-renewable resources). The agricultural sector is the hardest hit by adverse climate conditions as agricultural production is very exposed to climate risks such as floods, droughts, intense and erratic rainfall, increasing incidence of high winds and temperature shifts.
62. Rwanda Environment Management Authority (REMA) acknowledges that land scarcity in Rwanda has led to the reduction or abandonment of fallow periods in many areas of Rwanda, along with limited manure and mineral fertilizer inputs, few soil conservation practices and associated low yields. In many instances, it resulted in over-cultivation and land degradation. The impact has been a vicious cycle of erosion and reduced soil fertility and thus low agricultural productivity (REMA, 2010). FAO classifies 40% of land in Rwanda at a high erosion risk and with about 37% requiring soil retention measures before cultivation. In addition, REMA stresses that poor farming practices, deforestation, and environmental

⁵⁸ Source: Rushemuka, 2015, N.P, Priorities for sustainable soil fertility management for Rwanda, FAO : <https://www.slideshare.net/FAOoftheUN/rwanda-53016797>

degradation are triggered by humans and exacerbate the intensity of many natural hazards (REMA, 2015).

63. In 2011, UNEP has stressed that the growth and displacement of population has led to conversion of wetlands into agricultural lands, which affect biodiversity, water regulation, and water purification. In addition, many forests across the country have been under high human pressure and degraded due to agriculture expansion, trees cutting for firewood collection, charcoal production, poles and timber production (CBD 2016).
64. The agriculture sector contribution to GHG emissions is estimated at 5,345 million of CO₂. Rema stated that between 2006 and 2015, agriculture sector was the main contributor to total GHG emissions followed by the energy and waste sectors. Livestock production contributes significantly to greenhouse gas emissions. In addition, mismanagement of cattle may lead to environmental degradation. In some areas of the country, cattle herds are continually being observed on or near the boundaries of protected areas. This may negatively impact on the delimitation and biodiversity conservation in the national park as well as potential disease transmission between wildlife and livestock. Furthermore, erosion caused by overgrazing by cattle has caused extensive topsoil loss (GoR, 2015).
65. **Impacts of climate change and projections on key agricultural and rural development sectors.** Rwanda is ecologically diverse for its size ranging from highland mountain forests in the west to savannah grasslands and low altitude marshes in the east. The climate of Rwanda is dominated by the Inter Tropical Convergence Zone (ITCZ) which passes over the country twice a year and is further modified by varied altitudes and by the presence of large adjacent water bodies of the great lakes. Most of the country benefits from two agriculture rainy seasons (February - May; September - December) (see below figure 2 on typical seasonal calendar). The duration of the two rainy seasons is increasingly variable, ranging from seven to nine months, with an annual rainfall up to an amount of 1,500 mm. Rainfall in the eastern part of the country is below the national average of 1,250 mm per annum.

Figure 7: Rwandan seasonal calendar for a typical year

66. Environmental and ecosystem degradation in Rwanda is triggered by two main factors: climate disturbances and anthropogenic activities. The former is caused by several factors including the El-Niño and La Niña phenomena associated with surface temperatures in the Indian and Atlantic Oceans. A study by the University

of Reading⁵⁹ shows that climate variability in Eastern Africa is due to the influence of ocean –atmosphere climate phenomena, namely El Niño Oscillations (ENSO) and the Indian Ocean Dipole (IOD). Warm ENSO events are thought to be responsible for a build-up of warm sea surface temperatures (SSTs) in the Eastern Pacific Ocean which lead to increasing rainfall. These events are specifically observed in the short rains seasons. Furthermore, the recently discovered Indian Ocean Dipole (IOD), in addition to ENSO effects, most probably causes anomalously high rainfall in East Africa (see Marchal et al., 2006; REMA, 2011). For some years (1963, 1972, 1982, 1997), El Niño events are thought to have coincided with positive IOD events leading to high rainfall in East Africa, whereas high rainfall anomalies in East Africa have been documented when positive IOD events occurred independently of ENSO events. However, as East Africa has varied topography (e.g. mountains and rift valleys) its features are not yet adequately represented in climate model projections and deserve further investigation, especially with the modifying influence of the Congo basin.

67. In 2015, the Ministry of Disaster Management and Refugees Affairs (MIDIMAR) published the National Risk Atlas. This report encompasses a comprehensive assessment of existing risks at national and local levels. It highlights that over the last decade, the frequency and severity of natural disasters, such as floods and droughts, have significantly increased. The National Risk Atlas highlights the most known disasters as the droughts that occurred in 1989, 2000, 2005-2006 and 2014 and the devastating landslides that occurred in 1988, 2006, 2010, 2011 mainly in the Northern and Western provinces. The extreme weather events have recently destroyed crops, caused serious environmental degradation and led to food insecurity, malnutrition and famine in affected areas, with water shortages affecting livestock and pasture productions. Below is a table summarizing main climate change projections and potential impacts on agriculture and livestock production.

⁵⁹ Black, 2005, "The relationship between Indian Ocean sea surface temperature and East African rainfall", Phil. Trans. Roy. Soc., A., N 363, 43-47

Figure 8: Scenarios analysis of potential climate change impacts on agriculture and livestock sector (2018⁶⁰)

Climate change scenarios (TNC report on CCS&P)	Potential impacts on agriculture and livestock
Increasing trend in mean temperatures (projected annual mean temperature increase between 0.10°C and 0.30°C)	<ul style="list-style-type: none"> • Decrease in tea and coffee production; • Leads to significant reduction of crop yields of cereals; • Shift in pest ecologies, and thus resulting in pest and disease outbreaks in new areas; • Heat stress affects physiological processes health and mortality of livestock.; • Higher disease pressure on livestock, through change of the thermal optimum for pathogens, hosts, vectors and epidemiology, together with a number of indirect effects;
Decreasing trend in mean rainfall and number of rainy days coupled with more days with extreme rainfall intensities particularly in the Eastern and parts of Southern regions	<ul style="list-style-type: none"> • Late harvests, delay of sowing in the next season, seasonal crop failures and low yield; • Famines and food insecurity; • Limited grazing and feed resources during long dry spells significantly reduce milk productivity and thus affect food security of cattle farmers;; • Increased use of swamps for agricultural purposes will soon or later also have implications for overall water balance in the country and its availability for agriculture.
Increase in rainfall intensities in North-west highlands and South-western regions	<ul style="list-style-type: none"> • Increase soil loss and nutrient leaching from soil, thus challenging agricultural productivity growth. • Increased runoff during heavy storms destroy existing soil conservation facilities, increase sedimentation of lakes and ponds thus altering fish habitats..
More frequent violent storms (strong winds, hailstones, thunders, torrential rains)	<ul style="list-style-type: none"> • Crop damage or total crop destruction and thus yield reduction; • Increased flooding and landslides destroying crops cultivated on vulnerable/fragile areas such as valleys and steep slopes;

Part 2. Institutions and legal framework

2.1 Institutions

68. **Nutrition Coordination Mechanism:** In Rwanda, several multi-stakeholder platforms have also been set up at central and local level to scale up nutrition. The Inter-Ministerial Coordination Committee is the highest level convening body under the leadership of the Minister of Health and co-chaired by the Minister of Finance and the United Nations (UN) Resident Coordinator. The committee brings government and development partners together. Together, they coordinate and implement the National Food and Nutrition Policy (NFNP) and the National Food and Nutrition Strategic Plan (NFNSP) with the support of the ministries of education, gender & family promotion, disaster management & refugees, and public service & labour. The National Food and Nutrition Technical Working Group (NF&NTWG) was set up in 2013 and is Rwanda's multi-sectoral nutrition coordination platform. The NF&NTWG includes representation from the SCF&NSC, donors, UN agencies, civil society, academia and the private sector. The Civil Society Alliance was established in 2014 and academia is engaged through the NF&NTWG. The private sector has established the National Food Fortification Alliance under the auspices of the NF&NTWG within the Ministry of Health.

⁶⁰ Republic of Rwanda (2018). Third National Communication: Report to the United Nations Framework Convention on Climate Change. Republic of Rwanda, Kigali

69. **Gender:** (i) Ministry of Gender and Family Promotion: In addition to the leading role in facilitating the implementation of the National Gender Policy and action plan, the Ministry of Gender and Family Promotion had to ensure effective gender mainstreaming and full participation of women in all activities related to the socio-economic development of the country; (ii) The Gender Monitoring Office: With the view to strengthen gender monitoring the Gender Monitoring Office, established as an independent organization in 2007. The office has undertaken the role to effectively monitoring progress towards gender equality; (iii) The National Women's Council: The National Women's Council promoted by the government as a platform to advocate for the integration of women's development and non-development concerns into the national policies, the country's legal framework and local development initiatives.
70. **Youth:** The Ministry of Youth and Information Communication Technology 's mission is to address national priorities for economic growth and poverty reduction through the development and coordination of national policies and programs. The institution carries out its primary role in the implementation of EDPRS II (2013-2018) priorities that shall drive the country towards Vision 2020 aspirations. These focus mostly on youth employment and skill creation.
71. **Environment and climate change.** In Rwanda, management of natural resources is shared by several ministries (Ministry of Environment, Ministry of Agriculture and Animal Resources, Ministry of Infrastructures and Ministry of Local Authorities), decentralized organs (Districts and Sectors), public institutions (Rwanda Environmental Management Authority), local and international non-governmental organizations (NGOs), research and/or higher education institutions. With the new administrative reform, each district has an officer in charge of environment.

2.2 Policy and regulatory frameworks

72. **Gender:** The government of Rwanda has made a strong political commitment to gender equity and equality. Rwanda is signatory to various international conventions, including, the Convention for the Elimination of all Forms of Discrimination Against Women (CEDAW), the Beijing Declaration and Platform for Action and other instruments for promoting gender equality. The National Gender Policy has been developed to serve the government and its partners as a framework for guiding the mainstreaming of gender into the national development process and outcomes. The main objective of the policy is to integrate gender into critical areas such as poverty, health, agriculture and food security, education and professional training, governance, human rights and gender based violence, peace building and reconciliation, environment protection and information, communication and technology. The commitment was also translated into action by integrating gender dimensions into the Rwanda Vision 2020 and by establishing institutional structures to address challenges of achieving gender equality, including placing it and women's empowerment at central level.
73. The development of the Agriculture Gender Strategy is in line with Rwanda's Constitution of 2003, the Economic Development and Poverty Reduction Strategy (EDPRS), the National Gender Policy and MINAGRI's Strategic Plan for the Transformation of Agriculture in Rwanda (PSTA-4). These provide the need for equality between men and women and boys and girls in all spheres of socio-economic development. MINAGRI's Gender Strategy notes that, as far as access and control over livestock and its products is concerned, women have weak decision making powers over product and sales and are unable to build any physical assets as cattle ownership is predominantly in men's hands⁶¹.

⁶¹ MINAGRI Gender strategy 2010

74. **Social Protection:** The social protection sector strategy contributes to a range of EDPRS2 objectives, with a particular focus on the poorest in the population. The mission of the social protection sector strategy is to ensure that the poor and vulnerable are guaranteed a minimum standard of living and access to core public services, while the goal of the policy is to “contribute to reduced poverty and vulnerability and to promote equitable growth”. Some of the social protection sector priorities are: to increase the coverage of social protection programmes among the extremely poor and vulnerable; to build an effective, efficient and harmonized social protection sector; to build a sustainable social protection system; measuring and communicating social protection results and impacts; and to respond to climate related risks.
75. Food and nutrition are considered foundational issues of Rwanda’s EDPRS-2. FNS development goals are captured and acknowledged first in the National Food and Nutrition Plan (2013) and again reiterated in the 7YGP (2010-2017), EDPRS-2 (2013-2018), the National Food and Nutrition Strategic Plan (2013-2018), the third Health Sector Strategic Plan (HSSP-3, 2012-2018), and PSTA-3 (2013-2018). Food and nutrition issues outlined in these strategic documents, include a high prevalence of child stunting, high levels of anemia among children and women, and insufficient food intake levels, among others. Furthermore, the understanding and nature of FNS interventions are shifting from a purely agriculture and health related framework, to prioritization in other sectors which are increasingly accommodating various dimensions of FNS in their respective policies and strategies. This inclusion further enforces the need to link household FNS to social protection, education, safe water, hygiene and sanitation, gender, family issues, and emergency and disaster management. Adequate and integrated approaches from these multi-sectors are expected to substantially reduce the prevalence of stunting in children under two years of age, and to improve household food security, particularly among the most vulnerable families. The table shown in figure 4 lists all relevant policies/ strategies with the potential to impact food and nutrition security.

Figure 9 - Sector Policies and Strategic Plans Relevant to Food and Nutrition Security

Policy/Strategy /Programme	Sector	Lead Ministry
School Health Policy (2013-draft)	Education	MINEDUC
Revised Agricultural Policy (2017-)'	Agriculture	MINAGRI
Health Sector Strategic Plan (2012/2013-2017/ 2018)	Health	MoH

76. **Youth.** The national youth policy was revised in 2015 and highlights the overall objective as to promote the "economic, social, cultural, intellectual and moral welfare of youth". The revised policy reiterates the Country's commitment to undertake systematic Youth programming through a multi-sectorial strategy involving partnerships between Government, Development Partners, Private Sector, Civil Society Organizations, and Communities.
77. The policy categorically highlights the policy objectives that include enabling youth to utilize their full potential and tap into existing opportunities for gainful employment, productivity and economic transformation; encourage youth to be innovative and creative especially through the use of ICTs; mobilising youth for positive behaviour and mind-set change towards physical, reproductive and psychological health; nurture a civic and patriotic generation with ethic values.
- Several key policy areas have been identified and are as follows :
 - Education and Skills development;
 - Employment, productivity and economic empowerment,
 - Information communication and technology;
 - Youth and health;
 - Youth Arts, Sports, recreation and talent development;
 - Youth mobilization, participation and outreach;

- Global opportunity;
 - Coordination, M&E, mainstreaming job based budgeting;
78. In this regard, three major priority programs have been identified: (i) Youth mobilization and training; (ii) Support to youth initiatives and; (iii) Youth Cooperation.
79. In regards to agriculture, "the programs to be delivered in youth centres up to the sector levels will provide skills to/change the attitude of rural youth towards work and entrepreneurship thereby contributing to an increase of their productivity even in farm activities. In addition, interventions in this strategic plan such as sensitizing youth to join cooperatives will enhance linkages between rural farms and SMEs.

Environmental management and climate change policies

80. The **National Strategy on Climate Change and Low-Carbon Development (NCCLCD) for Green Growth and Climate Resilience (2011)** underlines the need to manage the implications of climate variability for the social, environmental and economic development of the country. Given that Rwanda seasonal agriculture is vulnerable to climate change and population pressure, the strategy recognizes that slight changes in rainfall patterns would have significant impacts on crop and livestock production. Therefore, the Green Growth Plan fosters the development of irrigation infrastructure that give farmers more control of the water resource, facilitate diversification of crops, contribute to efficient land and water usage and ensure water availability in dry areas.
81. The **Nationally Determined Contributions (2015)** are built upon the NCCLCD and advocate for a climate resilient economy. The framework aims at achieving Category 2 energy security and low carbon energy supply that supports the development of green industry and services, sustainable land-use and water resource management, appropriate urban development as well as biodiversity and ecosystem services. The development of irrigation infrastructure and other water efficient technologies will contribute to both sustainable intensification of agriculture and integrated water resources management and planning. These are the pillar for enhancing food security, biodiversity and ecosystem conservation and preservation.
82. In 2015, the Ministry of Disaster management and refugees affairs elaborated the **National Contingency Plan for Drought (2015)** that aims at minimizing drought impacts by improving agency coordination; enhancing monitoring and early warning capabilities, water shortage impact assessments and preparations, response, and recovery programs. The crucial objective of the drought response system is to promote early mitigation efforts that reduce the time that elapses between the drought early warning message and the active response at the country level.
83. The phase 4 of the **Strategic Plan for Agricultural Transformation (PSTA 4)** (2018-2024) outlines the priority public investments in agriculture and estimates required public resources for the agricultural sector for the period 2018/2024. As changes in weather and climate patterns are becoming more acute, PSTA 4 seeks to build resilience through on-farm measures and enabling actions to increase productivity. Maintaining and promoting farmers' practice of mixing crop varieties mitigates certain risks, including the spread of pest and diseases as well as ensuring dietary diversity. PSTA 4 emphasises alternative land management to complement terracing with comprehensive climate smart soil and integrated watershed management. PSTA 4 also encourages better weather and climate information and early warning and seeks to ensure all investments are climate smart.

84. In October 2017, the Rwanda Environment Management Authority (REMA), with support from the United Nations Development Programme (UNDP) and UN Environment through the Poverty-Environment Initiative (PEI), commissioned the development of **an Environment, Natural Resources, and Climate Change (ENR&CC) Mainstreaming Strategy for Rwanda (2018)**. The rationale for the mainstreaming strategy is that sustainable use of environment and natural resources (ENR) will maintain and increase the social and economic benefits generated from ENR as well as resilience in the face of climate change, and contribute to mitigation. Given its reliance on natural resources, the strategy recognizes that agriculture must be given priority. In order to achieve food security and poverty reduction objectives, the agricultural sector must increase efficiency through sustainable resource use, biodiversity conservation, climate mitigation and adaptation to changing weather patterns so as to improve productivity and reduce climate related risks. While the strategy advocates for an inclusive sustainable use of environment and natural resources (ENR) in all sectors of Rwandan economy, it also recognizes that specific policies and strategies for climate change adaptation in the agriculture sector have only recently been identified and promoted, and more time is needed to assess their effectiveness. It recommends: (i) enforcing the institutional coordination of land-use planning and monitoring systems, with inspection and enforcement mechanisms supported by public awareness; establishing of ENR revenue raising schemes in agriculture, forestry, energy and water.

2.3 Programmes and partnerships

85. **Social Protection and poverty reduction:** The Vision 2020 Umurenge Programme (VUP) - is an Integrated Local Development Program to Accelerate Poverty Eradication, Rural Growth, and Social Protection. This is an initiative by the Government of Rwanda (GoR) in collaboration with development partners and NGOs. It is led by the Ministry of Local Government, Good Governance, Community Development and Social Affairs (MINALOC) and supported by the Ministry of Finance and Economic Planning (MINECOFIN). The ongoing WB funded *strengthening social protection programme aims at* improving the effectiveness of Rwanda's social protection system, notably the flagship Vision 2020 Umurenge Program (VUP), for targeted vulnerable groups.
86. The objectives of the VUP programme are to:
- i. Contribute to the reduction of extreme poverty;
 - ii. Stimulate changes in the effectiveness of poverty eradication (coordination, interconnectedness of services, mind-set change);
 - iii. Ensure that economic growth is pro-poor and that the majority of the population have improved their living conditions as a result of GDP growth
87. The programme has three components: (1) direct support through cash transfers to those among the poorest who are unable to work; (2) public works offered seasonally to the poorest households with the aim of building productive community assets; and (3) financial services such as microcredits and training for the start-up of small businesses. The programme has also developed a component on Nutrition.
88. The Government of Rwanda recognizes that the problem of malnutrition is a multi-sectoral challenge that requires all concerned sectors to work together in synergy; and it recognizes the importance of nutrition in achieving national economic and social development goals through access to an age-appropriate balanced diet and living in a favourable healthy environment. Fighting against stunting, requires all actors to work together in synergy, therefore, the Government is collaborating with development partners to implement the National

- Food and Nutrition Plan (2013) and the National Food and Nutrition Strategic Plan (2013-2018).
89. In addition to the official country programs from UN Agencies (UNICEF, WFP, FAO, WHO, UNDP), non-government organizations such as Heifer International, Catholic Relief Services, and SNV, etc. implement significant plans which contribute to the improvement of FNS in Rwanda. International research and technology transfer organizations such as CGIAR Centers (e.g. CIP, CYMIT, CIAT, IITA, Africa-Rice, ICRAF, IFPRI, etc.), the Alliance for a Green Revolution in Africa (AGRA), and Harvest Plus play a significant role in bridging research and knowledge gaps (as well as disseminating technology) on various areas of FNS in Rwanda. For instance, CIP, CIAT, Harvest Plus and AGRA support initiatives aimed at developing (breeding) and disseminating bio-fortified crops in Rwanda (e.g. Orange Flesh Sweet Potato, Iron-rich Beans, Orange Maize, etc.). Additionally, IFPRI specializes in providing research-based policy solutions to sustainably reduce poverty as well as end hunger and malnutrition in developing countries. Within the private sector, the Private Sector Federation (PSF), in collaboration with MINICOM, developed the Rwanda Private Sector Development Strategy (RPSDS, 2013-2018). One of RPSDS's priority programs focuses on Entrepreneurship Development, with a specific focus on Commodity Chain Development based on CIP achievements. To date, there are several large and SME agri-processors (e.g. Inyange Industries Ltd, AZAM Industries, Sina Gerard Enterprises, MINIMEX, DUHAMIC ADRI, SHEMA Fruits, etc.) involved in businesses that promote the availability and access of nutritious food products on Rwanda's domestic market. One of the major players (African Improved Foods- AIF) has begun producing energy-dense and nutrient-rich food products that are being used under the VUP program to improve the nutrition status of Rwanda's most economically disadvantaged people.
 90. **Youth.** Given the cross cutting nature of the sector, the national youth policy clearly spells out the need for effective implementation of all interventions will entail the involvement of all Government Ministries, Departments and Agencies, CSOs, FBO, Development Partners, Private Sector, NGOs, and Youth Organizations, among others. The Policy is designed to complement a set of existing policies and provides a framework for collective action and coordination of strategies for youth socio-economic development and empowerment. The current Youth Policy pushes to ensure effective response for the sensitive and high risk category such as educated but not employed, non-educated, unemployed, redundant, urban, rural, youth with disability, orphans, sex workers, marginalized youth among others.
 91. All public initiatives, including those targeted at youth, fall under the umbrella of the National Employment Program (NEP). The NEP (2013 – 2018) is the implementation framework for employment interventions in seven different ministries, national agencies, the Rwanda Development Board (RDB), the National Youth Council (NYC), and the Workforce Development Authority (WDA). The program's chief aim is to facilitate the creation of 200,000 off-farm jobs annually. While NEP programs are well-coordinated by the Ministry of Labor, they all need to achieve scale and require significantly more resources. The Rwandan government has recognized the need to expand and strengthen the TVET system. Indeed, TVET accounts for a predominant part of the cost assigned to the 'Productivity and Youth Employment' (pillar III of EDPRS-II)
 92. One of the major multi-sectoral programs is the YouthConnekt Hangout that serves as a platform that brings together various partners including UNDP, ADMA, Tigo Rwanda, Zilencio Creativo and HeHe Ltd to connect Rwandan youth to resources and opportunities for employment and business development. In addition, alternative programs such as TechnoServe's "Strengthening Rural Youth Development through Enterprise" (STRYDE) program addresses the need of

creating livelihoods for youth in agricultural value chains but has only reached 4,860 youth so far—0.12% of the total youth population.

93. The One UN flagship Youth and Women Employment Program, which aims to support government efforts, is the only other large-scale comprehensive program. So far, it has suffered from large funding gaps; it is budgeted at more than USD 28 million but has only received about USD 3.5 million since its inception in July 2014. Most other initiatives, including the comprehensive USAID Akazi Kanoze program, target fewer than 50,000 youth.

Country priorities and links to environmental and climate change regional and international policy, plans and programmes

94. In 2017, REMA commissioned **a Detailed Implementation Plan for the NDCs** which aims at assessing each measure listed in the NDC as well as further relevant measures. The report provides a prioritization of efforts based on stakeholder consultations undertaken in May and June 2017. It provides an estimate cost and sustainable development co-benefits of the measures as well as Measurement, Reporting and Verification (MRV) of results and suggests timelines for their implementation. The report acknowledges that the agricultural sector is vulnerable to soil erosion, with 50% of the country's farm land affected by modest to severe soil erosion and nutrient depletion due to excessive farming. The report recommends promoting agro-forestry as sustainable agricultural practices combining both agriculture and forestry and contributing to income generation and diversification, energy and water security as well as biodiversity conservation and restoration. Rwanda's NDC sets out targets for increasing the share of households applying agro-forestry to 100% by 2030. The implementation plan for the NDCs has established two main areas of interventions: sustainable agricultural production and agricultural diversity in local and export markets. Below is a table that depicts the alignment between NDC priorities programmes and IFAD portfolio:

Table 7: Alignment between NDCs priorities actions and IFAD programmes

<i>NDC programmes relevant to IFAD mandate</i>	<i>IFAD contributions to the national NDC targets</i>
Mainstreaming agroecology techniques using spatial plant stacking as in agroforestry, kitchen gardens, nutrient recycling, and water conservation to maximize sustainable food production	<ul style="list-style-type: none"> - KIIWP aims at increasing climate resilient management and practices through sound land husbandry and soil and water conservation practices (including use of nitrogen fixing trees such as agroforestry, erosion control measures, etc. - In addition both RDDP and Small Livestock Project will support improved pasture management practices through the adoption of drought resistant forage and fodder varieties within the Farmer Field School (FFS).
Utilizing resource recovery and reuse through organic waste composting and wastewater irrigation	<ul style="list-style-type: none"> - KIIWP will promote water use efficiency through sound irrigation infrastructures and the capacity building of water user associations; - Within the Small Livestock project, waste management facilities will be integrated in the building codes of livestock infrastructures.
Using fertilizer enriched compost	<ul style="list-style-type: none"> - KIIWP will promote efficient use of fertilizer

	<p>through appropriate fertilizer selection, timing and split application.</p> <ul style="list-style-type: none"> - All projects in IFAD portfolio (RDDP, KIIWP and Small Livestock project) will encourage storage and proper use of manure; improving nutrient management so as to increase productivity and thus volume of crop residues available for soil carbon sequestration, soil fertility and animal feeds.
Soil conservation and land husbandry	<ul style="list-style-type: none"> - KIIWP will build local adaptive capacities to cope with prolonged dry spells and droughts through soil conservation techniques and improvements in soil quality through the promotion of integrated soil fertility management practices. In addition, the project will promote animal and land husbandry. This approach aims at conserving natural resources, raising productivity, increasing animal productivity and optimizing the use of resources.
Irrigation and water management	<ul style="list-style-type: none"> - KIIWP intends to build communities resilience through better management of water resources. The project will support the construction of water harvesting and small storage technologies (e.g. rainwater and floodwater harvesting, water storage units, etc.). This will contribute to reduced raindrop impact and runoff.
Add value to agricultural products through processing to meet its own market demand for food stuffs	<ul style="list-style-type: none"> - The second strategic objective of the Rwanda COSOP aims at improving post-harvest processes and strengthen market linkages. Hence, in all projects in IFAD portfolio (RDDP, KIIWP and Small Livestock project), processing and linkages to the market will be essential for improving local livelihoods and increase smallholder incomes. For instance, Small Livestock Project will support national and local authorities to enforce the sanitary regulations (including support to sanitary inspection of abattoirs and processing facilities) while RDDP is promoting infrastructure for collection, handling, processing and marketing of milk and other dairy products improved and tailored to adverse climate risks.

95. Rwanda is developing seven **Nationally Appropriate Mitigation Actions** (NAMAs), including two pertaining to the agricultural sector: sustainable fertilizers production and use and sustainable charcoal value chain in Rwanda.

96. According to the 2014 **Fifth National Report to the Convention on Biological**

Diversity (CBD), biodiversity has over the years been subjected to various threats. Currently the country is losing its biodiversity due to anthropogenic activities, especially agriculture expansion which constitutes the main threat to remnants forests. In the Eastern Province, the report deplores that the wetlands complex which have a very rich biodiversity are encroached by agriculture development both in the vicinity of wetlands and surrounding hillsides, causing erosion and siltation downstream. Therefore, within the **Aichi Biodiversity targets**, the country has pledged the following targets:

- By 2020, fishing and aquaculture, agriculture and forestry are managed sustainably, legally and taking into consideration ecosystem specificities to ensure biodiversity conservation.
- By 2020, environmental pollutants including those from excess nutrients are controlled and their harm has been brought to levels that are not detrimental to ecosystem function and biodiversity.
- By 2020, invasive alien species, their pathways, spatial distribution are identified. Harmful species are controlled or eradicated, and related mitigation measures are put in place.
- By 2020, at least 10.3% of land area is protected to maintain biological diversity.

Part 3 - Strategic recommendations

3.1 Lessons learned from previous COSOP 2014-2018.

97. The overall objective of COSOP 2013-2018 was to reduce poverty by empowering poor rural men and women to actively participate in the transformation of the agricultural sector and rural development and by reducing vulnerability to climate change. The previous COSOP included 4 projects: **KWAMP** (2009-2016)⁶², **PRICE** (2012-2020)⁶³, **PASP** (2014-2019)⁶⁴ and **RDDP**⁶⁵ (2017-2022). Within the IFAD portfolio, food nutrition security is a priority thematic in all IFAD-funded projects in Rwanda:
- **KWAMP** has addressed food security through intensification and diversification of agricultural production in addition to an improved access to agricultural knowledge, technology and information.
 - The primary objective of **PRICE** is to increase farmers' revenues by dint of increasing production, processing, and marketing of exports crops. However, the project is supporting food security through generating additional incomes, creating new jobs for labour in new plantations and in processing facilities, offering thus a source of income to poorer and landless categories; finally promoting intercropping with food crops whenever possible. Intercropping is promoted during first years of plant maturation in the new plantations of coffee and tea.
 - **RDDP**: The dairy subsector is crucial for rural development, poverty reduction and food and nutrition security for the country. Through applying the nutrition lens to

⁶² Kirehe Community Based Watershed Management Project (2009-2016) totalizes a budget of US \$ 64.8 million
http://operations.ifad.org/web/ifad/operations/country/project/tags/rwanda/1431/project_overview

⁶³ Project for Rural Income through Exports (2012-2018) totalizes US\$ 68.1 million
http://operations.ifad.org/web/ifad/operations/country/project/tags/rwanda/1550/project_overview

⁶⁴ Climate Resilient Post-harvest and Agribusiness Support Project (2014-2019)
http://operations.ifad.org/web/ifad/operations/country/project/tags/rwanda/1497/project_overview

⁶⁵ Rwanda Dairy Development Project (2017-2022)
<https://operations.ifad.org/web/ifad/operations/country/project/tags/rwanda>

the dairy value chain, the project envisages to maximize the positive impact of the project on household food and nutrition security with specific focus on increasing the availability and accessibility of affordable and nutrient-rich dairy products through behaviour change communication and nutrition education. The nutrition-sensitive interventions aims to generate positive impacts on three different pathways: increased safe and affordable milk availability from production leading to increased direct consumption (Consumption Pathway); improved access to diversified food as a result of increased income (Income Pathway); and increased awareness on shared-income, appropriate infant caring capacity and practices through women's empowerment (Empowerment through Increased Knowledge Pathway). RDDP project design envisioned exploring alternative milk distribution schemes for improving efficiency and effectiveness of the national initiative called "one-cup of milk programme". In the first year of the project (2017-2018), RDDP replicated the existing programme initiated by MINAGRI, by buying milk at the standard prize (800 Rwf/liter) including free deliveries to 26 schools (target 36) reaching 20,396 pupils (target 12,170). With one litre per child per week, this intervention had significant impacts on attendance rate; increase on number of students enrolled in the nursery schools; and health status, thereby contributing to better school performance.

98. The former COSOP acknowledged that Rwanda is severely affected by frequent extreme weather events, which cause major socio-economic impacts and reduce economic growth in various regions. Hence, the 2013-2018 COSOP intended to provide greater attention to the environmental risks and potential opportunities for greening the agricultural sector. Climate change adaptation and mitigation as well as environmental management were well mainstreamed in all three strategic objectives and materialized in the following interventions:
- **KWAMP:** Rural competitions were organized as a strategy to address and fight against environment degradation through an integrated community-based watershed management approach that took into account ecological, economic and social factors. Furthermore, KWAMP supported 451 Households to get biogas systems. 141 households got fixed dome systems and 310 Households got flexi biogas. The project also piloted a large fixed dome digester which is a large scale biogas plant in one of the communal cowshed. The impact of these technologies consists of reduction of the consumption of wood for energy and well-being of targeted households.
99. **KWAMP** investments in Soil and Water Conservation (SWC) were critical in addressing issues of natural resources management. SWC activities and comprehensive land husbandry practices had increased the total area protected in the 18 Kirehe watersheds from 7,507 ha in 2009 (baseline) to 25,302 ha as of 31 March 2016. This had a positive impact on erosion control. KWAMP supported plantation of trees on private and public land. Regarding tree plantation, 13.3 million seedlings of forestry and agroforestry trees were produced and planted. The large scale reforestation was done as part of a Hilltop Reforestation Initiative where 323 ha were reforested in the three most degraded sectors of the district of Kirehe.
100. **PASP.** Climate resilience was integrated into the project design, through ASAP grant funding to facilitate the introduction of climate-smart post-harvest practices and structures, adaptive research to identify and promote crop varieties (maize, beans, Irish potatoes) that are tolerant to climate-related stresses and have

farmer preferred traits, post-harvest management technologies. Adaptation to climate change is a core objective of the project approach and related activities are well implemented. The Business Plans financed with a matching grant from the Adaptation for Smallholder Agriculture Programme (ASAP) include mainly: (i) rehabilitation of existing or construction of climate resilient infrastructures so as to integrate ventilation systems, waste management and rainwater harvesting facilities; (ii) purchase of low carbon and labour saving post-harvest facilities, equipment and technologies; and (iii) renewable energy systems (solar and biogas). In addition, together with Rwanda Meteorological Agency (RMA) PASP agro-meteorologist is producing and communicating several climate information products tailored to the post-harvest stages, including seasonal forecast, ten-day forecast and daily weather SMS communicated to farmers, project and MINAGRI staff, district and sector agronomists.

- **RDDP** has started implementing activities contributing to building the resilience of local communities. The climate-smart livestock interventions include improvement of animal nutrition, better dairy farm and dairy infrastructures management and rehabilitation. L-FFS members have received seeds of forage varieties adapted to climate change. In addition, the project includes supporting small-scale dairy farmers implement climate smart and strategic investments such as improved water access, biogas, rainwater harvesting as well as climate proofing the building codes of the rural infrastructures (e.g. boreholes, MCCs, MCP, etc.). At design, it was proposed to conduct an assessment on GHG emissions that will be conducted at baseline, mid-term review and completion. At project level, the study will help to clarify the optimum number of animals that the country could afford considering the animal feed resources locally available. The study will draw lessons and recommendations in terms of economic development of the dairy sector and poverty reduction. At national level, the findings of the study will be critical to assist the political authorities in deciding about the key orientations and priorities for the livestock development in Rwanda. Practically, it will analyse the impact of the projects interventions in terms of human nutrition, particularly in terms of food balance in animal proteins consumption. The study will also analyse the impacts on natural resources and on global GHG emissions. This assessment will be integrated in the M&E plan developed for each Annual Work Plan and Budget (AWPB).

Lessons learned from development partners

101. Within the previous national and sector development planning period (PSTA III 2013-2018), climate change adaptation and environment management were identified as a priority cross-cutting theme. Within the Climate Smart Agriculture profile of Rwanda, CIAT has listed the most important climate smart agriculture (CSA) practices implemented in the country. The CSA practices include improved management of pasture, the use of improved crop varieties, pest and disease tolerant varieties of coffee and food commodities, soil conservation techniques (for cassava, maize, tea/banana system), agroforestry, watershed management and conservation, efficient use of fertilizer, water harvesting, afforestation, early warning systems, among many others (CIAT, 2015). The development partners, international and national research institutions engaged in mainstreaming climate risk management in the agricultural sector include DfiD, World Bank, Fonerwa, USAID, CCAFS, CIAT, Embassy of the Kingdom of Netherlands, Belgian Development Agency, African Development Bank, KfW, FAO, to name a few. Their support comprises financial support in form of project or programme, policies and strategies development, and technical assistance.

3.2 Strategic orientation and strategic actions and targeting

Recommendations to enhance environmental and climate resilience in the agriculture and rural development sectors

IFAD planned intervention	Main environmental and climate resilience considerations to be adopted during project design or implementation process
RDDP	<p>A SECAP review note was prepared in 2016 and recommended the following climate smart livestock interventions :</p> <p>In extensive grazing system:</p> <ul style="list-style-type: none"> • introduction of flood/or drought and nutritional tolerant forage and fodder varieties, agro-forestry and intercropping to prevent soil erosion and enhance provision of animal feed • Better rotational and grazing management plan • Manure management and composting to increase soil fertility and crop yields which will participate to increasing beneficiaries incomes (acknowledgment of farm as multi-enterprises) • Establishment of cow-sheds to ease milking process and protect animals from heat stress • (Flood prone areas) small dams and water ponds for increasing water accessibility and availability at grazing land area and hygiene when cleaning milking equipment • small-scale choppers, chilling and dairy machineries powered by biogas and solar energy sources • (in drought prone areas) Boreholes, well, and small-scale dams to increase water availability and accessibility • (in drought prone areas) Charcoal evaporative cooling systems for transport as well as at farm level to avoid milk spoilage • Climate information service on weather forecast to assist farmers with cattle keeping planning //L-FFS • Waste management at farm and processing units levels • Identify and develop evaporative cooling systems during transport (coolers boxes, etc..) • Advocate for investments in climate resilient infrastructures (withstand higher winds, heavy rains increased temperature, etc..) along the dairy value chain <p>In zero-grazing system:</p> <ul style="list-style-type: none"> • introduction of improved flood or drought and nutritional forage and fodder varieties, agro-forestry species and intercropping to enhance provision of animal feed • rainwater harvesting systems to increase animal water consumption and hygiene at farm level as well as MCCs level • Biogas which will allow heating water for washing milking equipment and thus enhance hygiene at farm level • Manure management and composting to increase soil fertility and crop yields which will participate to increasing beneficiaries incomes (acknowledgment of farm as multi-enterprises) • (Drought prone areas) Conservation of forage for dry periods • Valorisation of crop residues as animal feed as well as crop by products (sunflower cake, maize bran, rice polish, etc.) • Charcoal evaporative cooling systems at farm and collections points for adding value to evening milk and avoid milk spoilage • (Drought prone areas)Charcoal evaporative cooling facilities for transportation of milk • Climate information service on weather forecast to assist farmers with cattle keeping planning //L-FFS • Waste management at farm and processing levels • Identify and develop evaporative cooling systems during transport (coolers boxes, etc..)

	<ul style="list-style-type: none"> • Advocate for investments in climate resilient infrastructures (withstand higher winds, heavy rains, increase in temperatures, ,etc..) along the dairy value chain
KIIWP	<ul style="list-style-type: none"> • A preliminary SECAP review note was prepared in 2018 and recommended the following interventions: <ul style="list-style-type: none"> - Building local adaptive capacities to cope with prolonged dry spells and droughts, - Promotion of improved agricultural technologies from farm plot to market, crop diversification, - Soil conservation techniques, - Efficient use of fertilizers, - Improvements in soil quality through the promotion of integrated soil fertility management practices - Promotion of a wide range of cost-effective erosion control measures (tree belts, contour belts, grass strips, contour bunds, planting of fodder grasses on bunds/ridges, use of permanent, perennial vegetation on contours, etc.) - Promotion of agro-forestry (intercropping, integration of trees on farm plots, tree belts, protective forests, nitrogen fixing, erosion control measures, etc.). - Improved pasture management practices through the adoption of drought resistant forage and fodder varieties within the FFS, - Storage and proper use of manure, - Improving nutrient management so as to increase productivity and thus volume of crop residues available for soil carbon sequestration, soil fertility and animal feeds - Hydrological survey for assessing water status and monitoring project water use - Biodiversity conservation, especially near the protected areas, - Buffer zones management - An ecological risk assessment should be conducted to identify and assess the significance of risks to the wetlands in the project areas that are located upstream and downstream of the proposed irrigation sites • Concomitantly an Environmental and Social Management Framework was prepared in order to guide the preparation of Environmental and Social Impact Assessment (ESIA) and Environmental and Social Management Plan (ESMP) for each irrigation scheme. The report assesses key environmental, social and climate risks and makes recommendations for those risks that should be considered during the Project development and design.
Small livestock project	<p>The Concept note for the a small livestock project (PRISM) was elaborated as an attachment to this COSOP. A specific SECAP review note will be prepared during the Project Design process. Below are preliminary recommendations and considerations for the design:</p> <ul style="list-style-type: none"> - Better waste management along livestock value chains - Manure management - Water use efficiency and management - Energy use efficiency - Promotion of renewable energy - Rainwater harvesting - Crop and livestock integration (dual purposes crops, nutrient management, composting, etc.) - Improving pasture quality (intercropping and diversification of forage and fodder species) - Support to local animal feed factories through crop residues management - Promotion of agroforestry and fodder species, especially for small ruminants - Improved feed management (improving feed quality, low cost fodder conservation technologies, etc.) - Promotion of heat tolerant breeds - Livestock infrastructures adaptation measures (housing, shades, etc.)
Cross-cutting interventions	<ul style="list-style-type: none"> - Scaling up the production of drought and flood tolerant/ shorter or longer cycle crops varieties - Scaling up the production of bio-pesticides - Promotion of drip irrigation and closed greenhouse production systems for

	<p>increasing water use efficiency</p> <ul style="list-style-type: none"> - Development of rainwater harvesting technologies and facilities adapted to rural inhabitants needs - Research on agro-chemicals waste management and recommendations for enhancing integrated pest management - Promoting conservation and management of agro-biodiversity
--	---

Recommendations to enhance food and nutrition security

102. In order to accelerate progress towards ensuring food security and eliminating malnutrition, COSOP could consider the following recommendations on actions that have the potential to address existing gaps:

- Encourage programs that promote nutritionally diverse foods (e.g. vegetable kitchen gardens, mushroom production, fruits, poultry and fish farming, etc.);
- Promote short-duration crop varieties;
- Consider new crop varieties with high nutritional values and benefits;
- Promote and support the development of post-harvest management, storage and processing technologies at the household level
- Promote value addition innovations targeting nutrient-rich foods (e.g. fruits, vegetables, milk, fish, etc.);
- Strengthen nutrition awareness and education programs at the household level.
- Strengthen women’s education, empowerment and influence within the household; including special access to extension services;
- Integrate a nutrition education component into all relevant agriculture programmes and projects to improve consumption of nutritious crops among producing farmer households;
- Integrate WASH activities into forthcoming and existing programs;
- Contribute to fill the existing research gap on linkages between nutrition and gender in agriculture.

Recommendations to enhance youth employment and empowerment

103. **Youth.** As highlighted in a recent report titled YOUTHSTART⁶⁶, young people (72%) are primarily working in agriculture, this indicates that the majority of Rwandan Youth are “employed” in the rural areas. Hence, the modernisation of agriculture sector continues to be a priority area for country development especially by linking and improving farm value chains related to investment opportunities. In particular, the report highlights that since land is a key factor of production, it needs to be used rationally for sustainable development and there is a need to streamline mechanisms that help youth to explore unused land to create new opportunities.

104. Agriculture offers a number of high-potential economic opportunities for youth such as livestock raising, horticulture, vegetable and fruit production and processing. increased productivity investments in the sector have the potential to generate decent livelihoods for youth. However, as also highlighted in the same report, a more demand-side set of interventions in rural areas supporting youth in agriculture are needed, particularly in provinces with low program coverage. 70% of youth are engaged in agriculture but only a handful of programs focus on creating livelihoods for youth in agricultural value chains. In the absence of demand-side interventions in rural areas, migration to urban areas will continue, despite the fact the urban areas are not creating sufficient job opportunities either.

⁶⁶ YouthStart Global is a global programme funded by UN Capital Development Fund and the Swedish International Development Cooperation Agency (SIDA)

105. IFAD interventions will lay emphasis on the Monitoring and evaluation of Gender/Social inclusion and Targeting indicators. Interventions will be guided by the Gender, Youth and Social inclusion manual. In this regard, the COSOP should consider the heterogeneity of the youth cohort i.e. Gender, level of education, interest and aspirations in determining investments. The M&E system, which will include age-disaggregated data, will track participation of youth and women in programme activities, and adjust and refine the youth strategy based on results.

106. Hence, the COSOP should consider the following recommendations:

- Address skills and knowledge development of rural young women and men – Training in functional and financial literacy as well as technical and managerial training. Technical and vocational training (TVET) can play a strong role in addressing the critical shortages of hard and soft skills among youth and the difficulties of adapting education curricula to fast changing labour markets. TVET, by its nature, tends to be more strongly linked to labour market realities than does the formal education system.
- Invest in rural infrastructure and labour saving technologies is very important to make activities attractive for youth - Transform agricultural practices to enhance productivity, and increased commercialization.
- Build social empowerment- Support youth groups and encourage youth taking more decision making roles in rural organisations, cooperatives and other community groups
- Promotion of Enterprise Development – Align with the youth policy action areas to (i) Ease Youth Financial Inclusion; (ii) Leverage opportunities provided in the agricultural, non-farming enterprises and technology sectors;(iii) Promote Youth in Agribusiness/Farming is cool Campaign and (iv) Collaborate with the Private Sector to take the lead of availing Apprenticeship, Mentorship and Entrepreneurship
- Identify and exploit opportunities for ICT use in programmes - While ICT is not a labour intensive sector, it is cross-cutting and offers numerous employment opportunities across the labor market, from ICT firms themselves (e.g., telecoms and ICT retail and repair) and most of the services industry (e.g., IT systems in banks, government service delivery, etc.) to the agriculture sector and industry (e.g., databases for market prices, inventories, and accounting systems).
- Support initiatives that also respond to the supply-side of the labour markets in rural economic landscapes

Agreement at completion point of last country programme and strategy evaluation

A. Background and introduction

1. The Independent Office of Evaluation of IFAD (IOE) conducted a country programme evaluation (CPE) in Rwanda in 2010/2011. The CPE had two basic objectives: (i) to evaluate the performance and impact of IFAD-supported operations in the country; and (ii) to generate lessons and recommendations to inform the next country strategic opportunities programme (COSOP) for Rwanda.
2. Though the CPE was conducted in 2010/2011 and provided value input and recommendations to the IFAD COSOP 2013-2018, the recommendations remain valid for COSOP 2019-2024. It is these lessons learned and recommendations that have been referenced below.
3. The agreement at completion point (ACP) reflects the agreement between the Government of Rwanda (represented by the Ministry of Agriculture and Animal Resources, MINAGRI) and IFAD Management (represented by the Associate Vice President, Programmes) on the main evaluation findings (see section B below), as well as the commitment to adopt and implement within specific timeframes the recommendations included in part C of this document. It is noted that IOE does not sign the ACP, although it facilitated the process leading up to its conclusion. The recommendations agreed upon will be tracked through the President's Report on the Implementation Status of Evaluation Recommendations and Management Actions. In addition, this ACP was submitted to the Executive Board of IFAD as an annex, along with the COSOP 2013-2018 for Rwanda, and is included in the COSOP 2019-2024.

B. Main evaluation findings

4. The CPE found that, during the period under review (2000-2010), the partnership between the Government of Rwanda and IFAD had made a significant contribution to reducing rural poverty, and that the performance of the portfolio has improved since the CPE of 2005. On IFAD's part, contributing factors include a more participatory approach and transition to direct supervision, while, on the part of the Government, they include the introduction of clearly-defined strategies and programmes as well as a strong accountability framework. Rwanda's governance culture is highly results-oriented, thereby ensuring that policies and strategies are implemented.
5. The relevance of the portfolio has been assessed as satisfactory. The main thematic thrusts are highly relevant to the national context and sectoral strategies and to IFAD's COSOPs. Overall, they are technically sound and adopt approaches conducive to achieving their main objectives. Nevertheless, the CPE identified selected design issues. In particular, the support for rural finance, an element of the early part of the period under review, was not designed based on best practices and IFAD's rural finance policies. The design of support for watersheds has not adequately anchored its implementation in local government structures. Finally, the design of support for export crop value chains was broadly valid but did not take sufficient account of the food security risks faced by households with very small landholdings.
6. Overall, the portfolio has been effective. It made satisfactory progress in meeting the projects' immediate objectives, and in some cases exceeding them, particularly for watershed and rural enterprise development. Support to developing the capacity of cooperatives and local governments has been less effective to date, while that for rural finance made no contribution to developing a sustainable rural finance system. The portfolio has been generally efficient: target achievement, time overruns and the share of project management costs in total project costs are generally in the satisfactory zone. Monitoring and evaluation

- systems are generally superior to those of other projects in the region, and include systems for assessing impact.
7. Impact has been strong in generating income and access to household assets and in improving food security. In the case of cash crop development, however, protection measures have been missing for very small landholders during the cash tree growing. Prospects for sustainability have been found moderately satisfactory. While many of the activities in the watersheds are likely to be sustained, either by the beneficiaries alone or with government assistance, there are serious questions as to the sustainability of rural finance and cooperatives. The evaluation expressed concern that the Government's policy to formalise the economy, pushing informal entities to register as cooperatives or companies, will be implemented too rapidly, without allowing for a proper transition. Some of the newly-formed cooperatives do not as yet have the capacity to manage high levels of debt and complex operations (e.g. coffee cooperatives).
 8. The portfolio has been moderately innovative. The most important innovations are in the area of improved agricultural practices for yield increases and soil management, which have been the subject of a major testing effort and gradual scaling up. Outside this area, innovativeness and the potential for scaling up have been more limited. Progress has been more modest in upgrading the technology for microenterprises, particularly in relation to the processing of agricultural produce. Progress in gender equality and women's empowerment has been satisfactory, thanks to the participation of women in the activities supported and in the management of cooperatives and associations, which has contributed to raising their status and economic independence.
 9. The performance of non-lending activities is assessed as moderately satisfactory overall, with policy dialogue rated moderately unsatisfactory and knowledge-management and partnership building both rated moderately satisfactory. IFAD has provided technical assistance to the Government to develop its policies and strategies (e.g. the Strategic Plan for the Transformation of Agriculture) but there has been limited institutional-level dialogue between IFAD and the Government on policy directions and strategic objectives. It should be recognised, however, that in the past the Government has seldom invited IFAD to join in such dialogue. Financial partnerships with the Government and other development partners are well established, but there is need for a more active and profiled IFAD participation in sector working groups. Partnerships with the private sector and NGOs have taken the form of contracting out service provision in projects. A new experiment of private- public partnership has recently emerged in the tea sector. Regarding knowledge-management, the situation is positive within and among the projects but IFAD has invested limited resources in capturing and learning from the experiences of other development partners.
 10. Over the period under review, IFAD prepared two strategies (COSOPs) for its cooperation with the Government of Rwanda, in 2002 and 2007. The strategies were very well aligned to Government and IFAD policies and relevant to the national context. However, the CPE noted some inconsistency in the definition of target groups, in particular the various vulnerable groups. Also, while COSOPs have identified areas of policy dialogue and partnership, no action plans (and related resource allocations) have been drawn up. Within policy dialogue in particular, while there is room for improvement, this will require that the Government invites IFAD to contribute its international experience. And while it is the Government's prerogative to define the country's strategic objectives, IFAD's international experiences could, in some areas, contribute to defining strategies and approaches for achieving objectives. With respect to COSOP effectiveness, the CPE finds that there has been progress in achieving the strategic objectives and that IFAD country programme has contributed to this progress.
 11. The partnership between IFAD and the Government of Rwanda has, overall, been

satisfactory and has addressed sub-sectors relevant to poverty reduction. Rwanda has now a more solid institutional and policy environment compared to when the 2007 COSOP was formulated. Adapting to this new context implies, inter alia, pitching the objectives of the programme and the type of interventions at a higher level. Attention will need to be reinforced on, and adequate resources allocated to, non-lending activities (policy dialogue, partnership building and knowledge management) to pursue development objectives that were only achieved in part or not at all (e.g. institutional development of local government, rural finance), as well as to harmonisation and strategic programme management. The present CPE argues that portfolio development activities will remain very important and probably absorb the greater part of IFAD's investments. However, recommendations are deliberately presented starting from "higher plane" objectives as these have so far commanded limited resources.

C. Agreement at completion point Recommendation 1

C.1. Place greater emphasis on institutional support and non-lending activities to promote the scaling up of innovations and harmonised approaches to rural finance and cooperative development.

12. These recommendations include two sub-areas: (i) providing institutional support to local government for the scaling up of agricultural innovations and pave the way to SWAp preparation; and (ii) programme-based support to participate in harmonised frameworks in rural finance and cooperative development. This calls for a gradual shift from project focus towards more attention on the systematisation of lessons learned both from within and outside the IFAD portfolio. It also calls for further dialogue and harmonisation with development partners and for sharing knowledge, experiences and values in the policy arena.

C.1.a. Provide institutional support to local governments in the scaling up of agricultural innovations and in paving the way for the forthcoming agricultural SWAp.

13. Individual projects such as the Support Project for the Strategic Plan for the Transformation of Agriculture (PAPSTA) and the Kirehe Community-based Watershed Management Project (KWAMP) have helped promote emerging agricultural innovations. The long-term challenge to scale up such innovations is of an institutional nature. The challenge is to define an institutional approach that fits into the decentralisation process and local government structure. As decentralisation proceeds into its third phase (2011-2015) and district and sector administrations/governments further develop their capacity, it may be possible to transfer full responsibility for implementation to local governments.
14. Such transfer would need to be facilitated. IFAD, in collaboration with the central and local governments and other developing partners, should support the development and systematisation of approaches and guidance tools that help local governments plan, implement and monitor the various technical interventions. These approaches and tools may create the basis for central government grants to local governments for watershed development, which could be one of the important pillars of the agricultural SWAp. IFAD will explore opportunities for integrating its interventions in the forthcoming SWAp in order to ensure its participation in major strategic and policy dialogue initiatives in the agriculture and rural development sector. IFAD's participation in the SWAp may also include the development of implementation tools and methodologies that ensures ownership by local governments in up-scaling innovations.
15. **Proposed follow-up:** IFAD will explore opportunities for integrating the agricultural existing and new projects it supports in the forthcoming agricultural SWAp by:
 - (i) strengthening the role of district authorities in project planning and implementation through growing partnerships between districts and the single

project implementation unit, and through improved watershed management planning; and

(ii) supporting MINAGRI in the development of at least 3 concept notes for modular key intervention areas such as Watershed Management Planning (WMP), soil and water conservation, and community innovation centres (CCIs).

Deadlines for implementation:

- No deadline, as this is a continuing process; and
- End-December 2012

Entities responsible for implementation:

- MINAGRI, supported by IFAD implementation-support missions; and
- MINAGRI, supported by IFAD.

C.1.b. Support harmonised thematic programmes in rural/micro finance and cooperative development.

16. Within as well as outside IFAD-financed portfolio, support is provided for the development of rural/micro finance and cooperatives but approaches and methodologies often differ. The present CPE finds that such support is of an *ad hoc* character and that systemic issues are not addressed in a coherent and harmonised manner. Through a modest financial contribution to harmonised thematic programmes, IFAD could establish its presence in high-level policy dialogue and share its experiences.
17. In rural finance, explore the option for support to Access to Finance Rwanda (AFR). IFAD should stay involved in rural finance in Rwanda. Despite problematic experiences in Rwanda, the Fund has relevant lessons to contribute through its regional and global portfolio. AFR, established by the Government and several development partners led by the United Kingdom Department for International Development (DfID), is expected to address systemic issues with a view to increasing access to finance, particularly for the large numbers of people who have no, or only limited, access to financial services. Recently, DfID has supported Government in developing a Rural and Agricultural Finance Strategy and AFR has presented a sustainability strategy for Savings and Credit Cooperatives. Even a modest financial participation from IFAD would be important because it would allow IFAD to contribute to the agenda and work, based on its own experience in implementing the portfolio and, at the same time, benefit from exchanges of information. Being outside these harmonised frameworks would severely limit IFAD's ability to engage in policy dialogue and knowledge management. Obviously, IFAD's contribution to AFR should be based on an assessment of whether this facility provides an effective contribution to rural poverty reduction objectives.
18. Regarding cooperative development, IFAD should contribute to efforts to develop a harmonised support framework. The Rwanda Cooperative Agency reports that it is planning to harmonise the current highly fragmented support for cooperative development; it would be appropriate for IFAD to support this endeavour. If the initiative leads to a harmonised framework with financial support from government and several development partners, IFAD should explore the possibility of making a financial contribution so as to become an active participant, as per the rationale described above.
19. **Proposed follow-up:** IFAD will: (i) work with MINAGRI to implement the Rural and Agricultural Finance Strategy, including possible collaboration with sector-wide initiatives to strengthen rural financial services, such as AFR; and (ii) continue the integration of systematic support packages to cooperative development in its Country Programme.
 - **Deadline for implementation:** End-December 2014.
 - **Entity responsible for implementation:** IFAD

Recommendation 2

C.2. Move towards more strategic programme management and reliance on national systems, in line with the Paris Declaration.

20. Increased engagement in non-lending activities will call for a review of current transaction costs in individual project follow-up. In line with the Paris Declaration, IFAD/Government project cooperation should rely more on the Government's accountability and implementation systems, recognised as among the best and most efficient in sub-Saharan Africa. IFAD should move away from micro management, leaving this to government systems, while adopting a more strategic management approach.
21. In this new role, IFAD would use more of its country programme management resources for addressing strategic issues both within and above projects. This should also include more strategic use of technical assistance grants, not only for project design but also for developing the capacity of institutions so that national institutions can take over activities once the projects end. This would be a gradual process, adapted to capacity improvements in government systems, where IFAD and the Government would continuously reassess what should and can be done by government institutions, and what are the most conducive cooperation procedures for ensuring accountability and local ownership. The introduction of portfolio-wide annual joint reviews between the Government and IFAD has been a commendable step towards strategic portfolio management. Additional measures are indicated below.

C.2.a. Replace PCUs with facilitation support.

22. In the current portfolio, there is a tendency to perceive projects as independent institutions and the PCUs as their managers - while in reality "a project" is no more than a temporary initiative for partner institutions. Recent government policy encourages Ministries to reduce the number of PCUs by establishing a single project implementation unit for all donor-assisted projects. Though the efficiency of this new set-up has yet to be demonstrated, eventually IFAD may have to comply and change its implementation management procedures. Under the new set-up, it is recommended that IFAD-supported projects should include the provision of technical assistance/facilitation support, not as decision-making managers but as advisers and facilitators, to the implementing management units - whether at the central ministry level or within district administrations.
23. **Proposed follow-up:** IFAD will explore opportunities for integrating the agricultural existing and new projects it supports in the forthcoming agricultural SWAp by:
- (i) supporting MINAGRI and the MINICOM in transforming the PCUs to a single unit of the MINAGRI Single Project Implementation Unit;
 - **Deadlines for implementation:** End-December 2011
 - **Entities responsible for implementation:** MINAGRI

C.2.b. Articulate more clearly the division of labour between the headquarters, the IFAD regional office in Nairobi and the country office.

24. This implies giving a more substantive role to the latter in partnership-building, policy dialogue and knowledge management. In this context, consideration should also be given to defining the technical backstopping functions of the Nairobi office, which, for example, could include quality assurance of baseline and impact surveys.
25. **Proposed follow-up:** IFAD will raise the implementation-support role of its Rwanda country office, covering both technical and fiduciary issues. Support will be provided by the Regional Office in Nairobi. However, a quality assurance role is not foreseen for the Regional Office.

- **Deadlines for implementation:** No deadline, as this is a continuing process.
- **Entities responsible for implementation:** IFAD

C.2.c. Undertake joint supervision missions with the Government and development partners.

26. One can reduce transaction costs of IFAD, of the concerned Ministries and of development partners by having more joint supervision and implementation-support missions. When feasible, it should be considered to field a single mission covering several projects executed by the same Ministry.
27. **Proposed follow-up:** IFAD has conducted joint missions with the Department for International Development (United Kingdom) for PAPSTA and UNIDO for PPPMER, with good experience. This practice will continue for financed projects. Single missions covering several projects may be experimented with, in particular thematic supervision missions (for example focusing on M&E, knowledge management or financial management of several projects). However, the prospects of providing concrete implementation-support in the context of increasing project size must be kept in view in such undertakings.
28. **Target for implementation:** At least one joint mission per calendar year, and explore scope for thematic supervision missions.

Entities responsible for implementation: IFAD

Recommendation 3

C.3. Develop strengthened sub-sectoral support activities around three main axes: (a) protection of the natural resource base in the watersheds; and develop pro-poor agricultural value chains based on private-public partnerships in (b) food crops and (c) cash and export crops.

C.3.a. Sustainable natural resources development in the watersheds and carbon financing.

29. IFAD's future programme should continue its watershed development initiatives, including the promotion and scaling up of agricultural innovations and soil and watershed protection. It should better assess and document environmental risks as well as opportunities. Both the 2007 COSOP and past project design documents did not include a detailed assessment of environmental risks and trade-offs, and thus no mitigation plans. The next COSOP should include a strategic analysis of environmental and natural resource management issues, in line with the requirements of IFAD's Environment and Natural Resource Management Policy, and explore opportunities for qualifying for carbon financing. Future project designs should include environmental and social impact assessments.
30. **Proposed follow-up:** The recommendation regarding priority sub-sectors will be considered during the design of the next COSOP. In this context, the possible uptake of the three proposed main axes will remain the joint decision of IFAD and the government, supported by the Country Programme Management Team. However, a detailed assessment of environmental risks and trade-offs is not likely to be practical at the COSOP stage, as a risk analysis and the development of mitigation measures will always depend on the clear definition of activities, which is only done after the COSOP stage when proceeding to project design. Such analysis would thus risk remaining superficial and irrelevant.
- **Deadline for implementation:** September 2013
 - **Entities responsible for implementation:** IFAD

C.3.b. Support for the development of value chains for food crops and livestock products through private-public partnerships.

31. While many farm households have increased their production of food crops and livestock products beyond subsistence needs over the last three years, the systems needed to handle these surpluses (e.g. warehouses, processing and marketing) are not available. Major investments (capital and human resources investments) are required to handle the rapidly increasing surpluses. Given Rwanda's small farm sizes, the country's long-term competitive advantage is unlikely to be in low-value staple food crops that can be produced at lower cost in countries with an abundance of land.
32. For this reason, IFAD should consider moving towards higher-value commodities produced in intensive systems with a high labour input, and with potential for creating significant non-farm employment in processing and marketing enterprises. Based on current intensive zero-grazing systems, dairy would be an obvious candidate - but other candidates may include high-value horticultural products.
33. **Proposed follow-up:** The recommendation relates to the choice of both the priority sub-sectors and the support approach. While the former is covered by recommendation 3.a above, the latter (the choice of the value chain approach) is fully agreed for the sub-sectors that require the horizontal integration of the up and downstream industries. Its integration will be looked at during the design of the next COSOP.
 - **Deadline for implementation:** September 2013
 - **Entities responsible for implementation:** IFAD

C.3.c. Support a pro-poor development of export and cash crops and products through private-public partnerships.

34. Apart from their foreign exchange contributions, some crops have potential for generating significant on- and off-farm employment. For tea and coffee, there are still a number of unexploited value addition activities. Albeit currently in a difficult start-up phase, sericulture could well create many on- and off-farm jobs in activities that are highly labour-intensive and with products of high value to weight. According to international sericulture experts, Rwanda's climatic and natural resource conditions are well suited to sericulture.
35. Special mitigating measures (e.g. based on support to subsistence crops or food-for-work schemes) need to be considered for very poor households. This is because value-chain development for export and cash crops often fails to involve marginal landholders, and expansion of export/cash crop areas may be at the cost of food crops and food security.
36. In pursuing public-private partnerships, support will be needed to promote transparent agreements and competition in order to address situations whereby a large private investor, owing to limited competition, might exploit producers. Consideration will need to be given to the complexity and scale of operations. For certain levels of scale and complexity, private companies may be in a better position than the newly-established cooperatives. Thus, an approach for private-sector development, including development of public-private partnerships, should be developed to guide such support.
37. **Proposed follow-up:** The recommendation has already been implemented in the design of the Project for Rural Income through Exports (PRICE), which builds on the successful public-private partnership of the Smallholder Cash and Export Crops Development Project (PDCRE) in the tea sub-sector. PRICE also includes innovative public-private partnerships in the sericulture and horticulture value chains.
 - **Deadline for implementation:** September 2011.
 - **Entities responsible for implementation:** IFAD, with support from MINAGRI

COSOP preparation process

1. The COSOP preparation process was led by the IFAD Country Programme Team for Rwanda in collaboration with FAO's Investment Centre Division (TCI). The Country Programme Management Team (CPMT), established by the Country Programme Manager (CPM), both at IFAD headquarters and in Rwanda, participated in and contributed to the entire process.
2. The following consultations were undertaken at national level (i) meetings with the key government agencies involved in the proposed RB-COSOP thematic areas; (ii) meetings with key private and non-government stakeholders, including farmer organisations, farmers' apex organisations, civil society, including the Rwandan Youth Agribusiness Forum, and development partners; and (iii) regular meetings, including wrap-up meetings with CPMT at IFAD and country level to reach agreements on the COSOP. The Government of Rwanda led the discussion on the future IFAD support to the country and a new project/programme pipeline, subject to the PBAS of IFAD. This participatory process aimed to ensure that strategic public and non-public stakeholders provided substantive and prioritised inputs and engagement, at various stages of the COSOP formulation.
3. Two in-country missions took place, the RB COSOP identification mission (16th - 27th May) and the RB-COSOP formulation mission (2nd - 10th October). The mission also conducted field visits to Gicumbi District to visit a dairy hub managed by the IAKIB dairy cooperative.
4. The final draft RB-COSOP was submitted for in-house review at IFAD Headquarters in Rome, together with observations and suggestions from external peer reviewers through existing partnerships with the World Bank. This process involved a peer review, an OSC review, and a Quality Assurance process managed by Operational Strategy and Policy Guidance Committee Secretariat (OSC). Eastern and Southern Africa Division (ESA) addressed the comments emerging from the in-house review process in a revised RB-COSOP draft.

Composition of the Core Country Programme Management Team (CPMT)

5. The in-house component of the CPMT consisted of the below IFAD and FAO staff members (Table 1). Table 2 presents the composition of the extended in-country CPMT, which includes representatives from key government agencies involved in the IFAD country programme, coordinators of IFAD supported projects in the country, key external development agencies, civil society organisations, farmer organisations, and resource persons.

Table 1: In-house COSOP team

Technical Division	Name	Title

World Bank	Winston Dawies	Senior Agriculture Economist
World Bank	Ange Marie Aimee Mpambara	Agriculture Specialist
FAO	Gualbert Gbehounou	FAO Representative Rwanda
FAO	Otto Vianney Muhinda	Assistant FAO Rep. / Programme
WFP	Ammar Kawash	Coordinator, Smallholder Farmer Unit

COSOP formulation

6. The COSOP 2019-2024 builds on previous results and achievements. Strategic Objectives (SOs) under COSOP 2013-2018 have been reformulated to reflect the objectives of PSTA 4. Greater emphasis will be placed on policy dialogue, institutional support and non-lending activities. The COSOP stresses to continue support to strengthen farmer's organisations and a harmonised approach to access to finance, and increase its engagement and institutional support to youth in agriculture and nutrition. Under the previous IFAD country programmes, nutrition was not systematically and effectively addressed, and hence a more explicit integration of nutrition is taken, including the promotion of nutrition-sensitive agriculture, in particular small livestock and the promotion of Social Behavioural Change Communication (SBCC).
7. In accordance with the Transition Framework, IFAD is diversifying its financing products, and is exploring opportunities to pilot results-based lending in Rwanda. Regarding targeting and poverty monitoring mechanisms, the RB-COSOP takes into account the revisions of the Ubudehe system, of the Local Administrative Entities Development Agency.

COSOP approval

8. The RB-COSOP draft as amended through the IFAD review process was shared with the COSOP formulation team and the Government for their formal endorsement. The meeting consisted of a presentation of the final draft COSOP by the Country Programme Manager, a brief discussion and an endorsement of the strategy by the participants. Subsequently it was shared with the IFAD Economists Network for review and endorsement. Comments have been addressed and included in the RB-COSOP prior to submission to the OSC. The final document will be submitted to the IFAD Executive Board for review in its session of May 2019.

List of persons met and consulted

Name	Title	Contact details
Marie-Laetitia Busokeye	Director of Research, Environmental Planning and Development CBD Focal Point, REMA	lbusokeye@rema.gov.rw mlbusokeye@gmail.com
Innocent BISANGWA M	Environment and Climate officer, MINAGRI	innocentbisangwa@gmail.com
Octave Semwaga (Dr.)	Director General of Strategic Planning and Programme Direction	osemwaga@minagri.gov.rw
Winston Dawes	Senior Rural Development Specialist – World Bank Group	wdawes@worldbank.org
Francois Xavier TETERO	Head of Water Resources Management Department, Ministry of Environment, Rwanda Forest and Water Authority	francois.tetero@rwfa.rw

Desire Kagabo	CIAT Representativ, Rwanda	D.Kagabo@cgiar.org

Strategic partnerships

<i>Partnership functions</i>	<i>Partners/networks/platforms</i>	<i>Partnership results and outcomes</i>	<i>Justification for partnership</i>	<i>Monitoring and reporting(to be completed for CRR and CCR)</i>
Mobilizing co-financing	Government of Rwanda (MINECOFIN)	Reach a co-financing ratio of 0.4./0.8 especially for KIWP and PRISM	Key partners	
	Heifer International	USD 3 million to co-finance the PRISM and USD 4 million to RDDP fully disbursed	Capitalize on a solid partnership with a center of excellence in livestock and community development Strong Interest and commitment for working in partnership	
	Spanish Government KOICA;	USD 15 million co-financing of IFAD-GoR investments	Alignment with country programme's objective; interest and commitment for working in partnership	
	DFID	USD 0.3 million in the form of consultancies for an irrigation scheme in KIWP	Active member in irrigation development	
Strengthening private sector engagement	Business Development Fund	IFAD beneficiaries' sustainable access to working and investment capital,	BDF already partnered with IFAD in the past and actively engaged in supporting SMES ,smallholders and specific target groups (e.g. women; youth) with a wide range of financial products (BDSs, loan guarantees; loan products; matching grants)	
	Participating financial institutions (banks, MFIs, insurance providers and SACCOs)	Financial institutions more willing and better equipped to serve IFAD target group with tailored financial services, with a particular focus on youth	Access to and use of sustainable financial services is essential for smallholder farmers to invest in their farms, smooth incomes at household level and, reduce vulnerability .	
	Africa Improved Food (AIF) and KUMWE Ltd	Co-investment in project activities (PASP). KUMWE Ltd is investing almost 100,000 USD in post-harvest infrastructure and will work with farmers' organizations producing maize.	Strong commitment and interest in partnering with IFAD	
Engaging in policy and influencing development agendas	Agriculture Sector Working Group (ASWG), Horticultural Sector Working Group	Increase engagement in policy discussion, steering and implementation of the PSTA 4	Key platform to engage with the government	
	Development Partners Coordination Group	Increase coordination with the government in order to harmonize responses to the development agendas.	Key platform to engage with the government	
	Rural Women Economic Empowerment – FAO, WFP, and UN Women	Women economic empowerment focusing on a gender responsive policy	In addition to gender, the initiative also focuses on food security, nutrition,	

		environment	income opportunities and leadership	
	AGRA	Facilitate the creation of a conducive policy environment for private sector investments in the agricultural value	Key partner in ABC Fund	
Enabling coordinated country-led processes	ASWG	Coordinate interventions in the sector, identify synergies, develop partnerships	Key platform for coordinating activities in the sector that has strong government support and engagement. All agriculture-related policies and strategies are discussed and validated by the group.	
	RBA + UNICEF and WHO	Collaborative network on nutrition	The RBA are working together on promoting nutrition sensitive interventions	
	Development Partners Coordination Group	Coordinate interventions in the sector, identify synergies, joint support	Coordination Group meetings to discuss the harmonisation of Development Partners' support to the agriculture sector in Rwanda	
	UNCT	Participate in and inform the UDAF/UNDAP process	IFAD is a signatory to the second UNDAP for Rwanda 2018-2023, in which agriculture is a focus area under the Economic Transformation result area.	
Developing and brokering knowledge and innovation (including SSTC)	EAFF, GAFSP	Introduce in the country the eGranary innovative mobile platform to deliver economic services to farmers	The eGranary platform provides an innovative solution to link actors in a commodity value chain	
	CIAT	Climate-smart dairy systems in East Africa in particular improved forages and feeding strategies	CIAT's expertise in this area is recognized and would be useful for RDDP and PRISM	
	AGRA	Expanding market access through value addition and structured trade; enhancement of input markets, technology adoption and access to finance	Active engagement with the private sector and a key partner in ABC Fund	
	Helvetas & ITAD	Mainstreaming of the AG-Scans & Knowledge Approach and enhancement of national monitoring systems	The IFAD funded AVANTI initiative can contribute to strengthen in-country M&E systems and capacities to the Agriculture sector (AG-Scan),	
	FAO	Technical assistance on (Livestock) Farmer Field Schools and Farming as a Business. FAO also provides support to assess	FAO is recognized in the country to have Strong technical expertise on organizing FFS	

	IITA	post-harvest losses through PASP. Fighting Cassava Brown Streak Disease and Cassava Mosaic Disease	IITA's findings on the diseases would be useful for PASP, PRICE and KIIWP	
	SSTC	Brazil, Argentina	The governments of both countries expressed interest in collaborative activities with IFAD.	
Enhancing visibility	CICA in MINAGRI	Collect and disseminate projects information outputs and outcomes leveraging the Government-funded centre	All actors in the agriculture sector participate, along with Government	
	National Farmers organizations	IFAD closely engaged in the framework of the E-granary with the National Confederation of Cooperatives in Rwanda (NCCR) and IMBARAGA an umbrella organization of farmers	Active national organizations that holds relevant and visible events	
	ASWG	IFAD is currently co-chairing the dairy sub-working group in collaboration with MINAGRI	A key platform for increasing IFAD visibility with regard to policy and strategy development.	
	RBAs	IFAD participates in the World Food Day through a joint organization with the government and sister RBAs	The joint organization of the World Food Day is an opportunity to enhance IFAD visibility.	

South-South and Triangular Cooperation strategy

I. Context

1. Developing countries across all income levels have become increasingly interested in learning from and drawing on the development experiences and resources of their peers. This includes knowledge and technologies, but also institutional frameworks and policies. With this comes a demand for a more structured approach to scale up their knowledge- and resource-sharing activities.
2. In response to the growing importance of South-South and Triangular Cooperation (SSTC), IFAD aims to strengthen its comparative advantage and expand its work in SSTC, in terms of both knowledge-based cooperation and investment promotion, seeing it as an integral part of its business model and of its country programming process.
3. SSTC involves a set of activities, with complementary and coordinated measures that contribute to improving the effectiveness of IFAD's country programming. These include the exchange of knowledge, resources, practical skills and technical know-how on small-scale agriculture and rural development, including innovative solutions for operations supported by IFAD.
4. IFAD updated its approach to SSTC in 2016. The new approach proposes two main objectives for IFAD in its SSTC work:
 - Objective 1: Share relevant rural development solutions and knowledge, and promote investments among developing countries; and
 - Objective 2: Establish and support partnerships and other forms of collaboration to improve rural livelihoods.

II. South-South and Triangular Cooperation in Rwanda

5. SSTC is embedded in the country programming of IFAD operations in Rwanda. In line with the two SSTC objectives above, the COSOP 2019-2024 will undertake a range of technical cooperation activities that build on the success of activities already under way as part of its SSTC work in Rwanda, as well as offer new opportunities for further development. It highlights instruments and activities, as well as thematic areas for SSTC. These activities will be integrated into the lending and grant portfolio, and contribute to knowledge sharing and policy engagement of IFAD operations in Rwanda. Furthermore, it identifies areas in which other countries can learn from Rwanda.

Exchanges, study tours, and learning routes

6. IFAD will promote exchange visits and study tours to support activities aimed at transferring and sharing successful solutions through visits, platforms and trainings. One such area of exchange being explored, is between the Argentinian government, Government of Rwanda (GoR), the Rural Dairy Development Project (RDDP) and WFP, in promoting learning and exchange in areas of livestock production and food security. This will be facilitated by IFAD and the Argentine Fund for SSTC. Through this Fund, the Argentine Ministry of Foreign Affairs finances and develops bilateral and triangular technical cooperation projects, by means of partnership, collaboration and mutual support mechanisms. Small livestock breeding and husbandry management was identified as an additional thematic area for SSTC, given the specific context of Rwanda with its high population density and zero grazing.

7. IFAD will explore the possibility of collaborating with the Brazilian government through the Brazilian Agency for Cooperation (ABC). As part of the Action Plan developed by IFAD and ABC, Rwanda is chosen as one of the initial partner countries. Specific areas and types of support will be discussed and documented as a proposal by the end of March 2019. Potential collaborative activities include needs assessment, training activities, knowledge sharing, technical missions and visits and assistance in the design, implementation and monitoring and evaluation of projects, policies and programmes.
8. Participation and sponsorship of thematic, regional and international events (workshops, symposiums, forums, etc.) will remain an important SSTC tool for IFAD Rwanda. This will include sharing experiences and good examples on innovative development solutions and agricultural and rural development policies, as well as to develop professional networks. IFAD Rwanda will therefore seek to identify opportunities for engagement to exchange lessons on programme and policy formulation and implementation. Existing regional structures and frameworks, such as the African Union's Comprehensive African Agriculture Development Programme (CAADP), as well as regional institutions such as Common Market for Eastern and Southern Africa (COMESA) and the East African Community (EAC) are important platforms.

Regional portfolio

9. The regional non-lending activities have been an important vehicle to promote both regional cooperation and facilitate exchange and learning between Rwanda and other countries in the region and beyond, and will continue to be explored. Under RB-COSOP 2019-2024 the following regional grants will facilitate learning and exchange on specific thematic areas: (i) the Climate-smart Dairy Systems in East Africa through improved forages and feeding strategies: enhancing productivity and adaptive capacity while mitigating GHG emissions; (ii) Fighting Cassava Brown Streak Disease and Cassava Mosaic Disease through deployment of new resistant germplasm and clean seed in Rwanda and Burundi; (iii) Missing Middle Window: Using the eGranary innovative mobile platform to deliver economic services to farmers in East Africa; (iv) Mainstreaming the AG-Scans & Knowledge Approach and enhance national monitoring systems; (v) Supporting Investments in Agricultural Water Management through research, capacity development and policy support in 6 countries; and (vi) the Rural Women Economic Empowerment program implemented in Rwanda and 6 other countries focusing on food security, nutrition, income opportunities, leadership, and a gender responsive policy environment.
10. Under the COSOP 2019-2024, further opportunities to develop IFAD's regional portfolio will be developed, in particular in thematic areas of small-scale irrigation, financing models and small livestock to enhance regional collaboration and knowledge sharing.

IFAD Operating Modalities

11. SSTC activities will also cover activities aimed at improving the efficiency and effectiveness of IFADs operating model. The performance and strong results-orientation of IFAD's portfolio in Rwanda, financial management and procurement compliance, has been a model for IFAD. Furthermore, the Single Project Implementation Unit (SPIU) has proven to be an effective vehicle in guiding the process of designing, implementing and monitoring projects together with IFAD. Several IFAD country programmes in Sub-Saharan Africa have already visited Rwanda to learn from this model.

Financial management issues summary

FIDUCIARY SUMMARY OF COUNTRY PORTFOLIO

COUNTRY	RWANDA	CONCEPT NOTE	Project for Inclusive Small Livestock Markets
<u>COUNTRY and CURRENT PROJECT -Fiduciary KPIs:</u>			
<i>Country Inherent Risk</i>	Medium	Transparency International (TI) The country ranking has improved slightly in 2017 as compare to 2016. Rwanda ranked 48th out of 180 countries with a score of 55/100 in 2017 as compared to a score of 54/100 in 2016. This puts it on the limit of the medium risk bracket: a score of 56 would correspond to a low risk rating. Given the good PSR ratings, the overall inherent fiduciary risk is thus rated low.	
<i>Pending Obligations (Overdue obligation related to pre-financed amount from IFAD's resources to cover for government's contribution)</i>	None	PEFA	
<i>Country Income Classification</i>	Lower middle income	The Rwanda 2008 PEFA highlighted weaknesses in budgetary credibility, financial control at the service delivery level and quality of reporting, however, the 2016 assessment noted significant improvements, particularly in fiscal discipline, orderly budget preparation process and financial controls. The government accounting system is not fully compliant with international standards but this is being addressed by MINECOFIN through a blue print that will transition it to IPSAS accruals accounting. This will be rolled out in a phased approach over the next couple of years. Capacity in PFM is noted as requiring further improvement especially at district level although in most aspects the PFM system is functioning satisfactorily.	
<i>Expected IFAD lending terms for IFAD 11</i>	Highly Concessional		
<i>Country Contribution in IFAD Replenishments</i>			
<i>PBAS – Programme's cycle coverage</i>	IFAD 11 allocation: USD 54.4 million IFAD 12 TBD		
<i>Country Fiduciary Risk</i>	Low	Debt distress assessment	
<i>Disbursement - Profile</i>	Ranges from moderately satisfactory to moderately unsatisfactory	The Rwanda public and publically guaranteed debt has increased in recent years as per the WB/IMF PSI report of May 2018. The upward trajectory since 2013 shows an increase from 37.5% of GDP in 2015 to 44.4 % in 2016. The domestic debt was also noted to have increased slightly due to modest debt guarantees of about 1.1% of GDP.	
<i>Counterpart Funding - Profile</i>	Unsatisfactory	However, in general the debt burden is assessed to be sustainable with a continued low risk of debt distress (significantly below the LIC DSA public debt benchmark of 74% for countries with strong policies and institutions). Rwanda's policies and institutions continue to be classified as "strong" under the world Bank Country Policy Institutional Assessment (CPIA) index. The external debt burden indicators remain below risk thresholds except for one debt service indicator on the Eurobond. A servicing spike is expected in 2023 when the 2013 Eurobond matures and hence the debt-service to revenue indicator is expected to higher than the threshold but this is assumed to be temporal in nature lasting not more than one year. It is however noted that changes in budget support and a shift away from grants together with ambitious development plans will require a focus on sources of financing that do not burden the public balance sheet including the domestic revenue mobilization.	
<i>Current Lending terms</i>	Highly Concessional		

Key Fiduciary OBSERVATIONS:**PROJECT Concept Note – Fiduciary KPIs:**

<i>Fiduciary Project risk</i>	Low		Lending terms are expected to remain stable highly concessional.
<i>Duration:</i>	Five and half years		
<i>Financing Sources:</i>	USD millions	%	
- IFAD – PBAS 11	10.0	33%	
- IFAD PBAS 12	8.0	27%	
- Local - Co-financing (Gov.)	3.0	10%	
- Beneficiaries and private Investor	6.0	20%	
- Heifer International	3.0	10%	
<i>Proposed size:</i>	USD 30.0 M		

PROJECT Concept Note – Key Fiduciary OBSERVATIONS:

- 1) Result based lending foreseen in the COSOP might be piloted and although the government already has experience on result based disbursement with the World Bank projects, it is an area that will definitely pose some risks in terms of funds flow and time reporting given the fact that government policy now requires all projects to be managed through IFMIS. The design will critically assess these areas and taking into considerations/learning points from similar pilots of the results based disbursement framework that are just starting within IFAD. This in addition to available lessons that can be drawn from ongoing projects of the World Bank within the country will be carefully reviewed and appropriate mitigation measures put in place at design.
- 2) Government is steadily moving toward full use of the Integrated Financial Management Information System (IFMIS) system and new approved projects are to be included. However, the PEFA review by World Bank notes the fact that the IFMIS system is not yet fully functional and its coverage must still be fully rolled out to all the districts. Although the concept does not mention the fact, given this requirement for all projects being in the IFMIS system, the design must ensure that this is reviewed at district levels with necessary discussions to avoid funds flow issue during implementation.
- 3) The Single Implementation Unit has been an excellent facilitating arrangement for faster start-ups, capacity building, experience sharing and problem solving and hence the proposed project will be managed under this arrangement. ICP is already rolled out to the Country and hence the project design will incorporate necessary aspects to this.
- 4) Proper documentation and recording of beneficiary as well as government contributions is one area that is currently rather unsatisfactory within the current projects. This has not been properly managed and hence the design will ensure right from the cost that a proper and clear mechanism adopted and embedded in the project implementation manual to ensure that these contributions properly captured and report on regularly. Similarly discussions with government during design will need to emphasize the required percentages of both the local and international contributions that must be met.

There are three current projects ongoing within the portfolio and all have been consistently rated satisfactory in terms of the FM risk. The projects are supervised under the Single Project Implementation Unit. Rwanda is already fully operational on ICP, also receiving disbursement under the Straight Through Processing (STP) on the two low risk projects.

Although PRICE was first approved for funding under the Debt Sustainability Framework in 2011, it received an additional financing of a loan of SDR 8.4 million under highly concessional terms with a no cost extension. A second additional financing, together with a time extension of two years, was approved under the highly concessional terms of SDR 5.84 million to cover the horticulture component.

PASP is financed fully under the debt sustainability framework and is completing soon.

RDDP was approved in September 2016, becoming effective in 2017 but picked up slowly with a low disbursement rate to date. It is also the first project managed entirely through the IFMIS system.

All the projects are being audited by the Auditor General whose work has been rated highly satisfactory for its comprehensive cover and timely performance. The audit reports are unqualified and timely presented. Although internal management issues are noted in the management letters, Management has always addressed them. With the Single Implementation Unit, it is expected that the quality of work and attention to financial management will continue to be highly rated.
