Carte des zones d'intervention du FIDA dans le pays

Source: FIDA; 28/01/2020

Les appellations figurant sur cette carte et sa représentation graphique ne constituent en aucun cas une prise de position du FIDA quant au tracé des frontières ou limites, ou aux autorités de tutelle des territoires considérés.

Résumé

1. L'État d'Érythrée et l'Éthiopie ont signé un accord de paix en juillet 2018, et le Conseil de sécurité de l'ONU a levé les sanctions en novembre 2018. La paix retrouvée offre à l'Érythrée la possibilité de réaffecter les ressources publiques à son développement social et économique, à actualiser ses stratégies de développement, à créer des emplois au profit des jeunes et des soldats démobilisés et à relancer la coopération internationale.
2. Le FIDA demeure déterminé à aider le Gouvernement érythréen pendant ce processus et a donc élaboré avec lui le présent programme d'options stratégiques pour le pays (COSOP) 2020-2025. Le COSOP est harmonisé avec la Politique et Stratégie nationale de développement agricole récemment mise à jour, le Plan stratégique quinquennal de développement agricole (2019-2023) et le projet de plan de développement stratégique (2016-2020), établi par le Ministère des ressources marines. Le COSOP a été conçu de manière à ce que les activités de prêt et les activités hors prêts du FIDA soient systématiquement harmonisées avec les priorités du Gouvernement.
3. La finalité du COSOP sera de contribuer à l'amélioration de la sécurité alimentaire et nutritionnelle des petits exploitants agricoles et des artisans pêcheurs dans le cadre d'interventions relatives au renforcement de la résilience. À cette fin, les trois objectifs stratégiques (OS) ci-après ont été définis:
 - i) OS 1: Renforcement de la résilience face aux changements climatiques et de l'adaptation à leurs effets grâce à une gestion et à une utilisation durables des ressources naturelles (terres et eau);
 - ii) OS 2: Amélioration de l'accès à des technologies, des infrastructures et des services adaptés, et de leur utilisation, à l'appui de l'accroissement de la productivité et de la durabilité des systèmes d'agriculture paysanne et de pêche artisanale;
 - iii) OS 3: Renforcement des capacités institutionnelles, communautaires et individuelles au service de l'amélioration de la sécurité alimentaire et nutritionnelle, et de la mise en place de moyens d'existence durables.
4. La théorie du changement du présent COSOP est axée sur l'expansion des axes de travail fondamentaux du FIDA dans le secteur agricole et l'économie bleue par les moyens suivants: i) établissement de la base de ressources nécessaire au développement de l'agriculture et de la pêche grâce à la gestion de la terre et de l'eau et à l'expansion de l'irrigation; ii) structuration et renforcement des organisations de producteurs; iii) consolidation des systèmes nationaux de mise au point et de fourniture d'intrants; iv) accès aux facteurs favorisant l'intensification et l'ajout de valeur; v) formations et développement des capacités institutionnelles; vi) gestion des écosystèmes aquatiques. Le portefeuille d'investissements du FIDA intégrera les questions transversales que sont le genre, les jeunes, la nutrition et les changements climatiques, une attention particulière étant accordée à la création d'emplois au profit des jeunes, des femmes et des soldats démobilisés.
5. Le présent COSOP couvrira deux cycles du SAFP, ceux de la Onzième et de la Douzième reconstitution des ressources du FIDA (FIDA11 et FIDA12), et une partie de celui de la Treizième reconstitution des ressources du FIDA (FIDA13). S'agissant de FIDA11, l'Érythrée est admise à recevoir 80% de son allocation sous forme de dons et les 20% restants, à titre optionnel, sous forme de prêts à des conditions particulièrement favorables, au titre du Cadre pour la soutenabilité de la dette (CSD). Les conditions de prêt et les conditions de financement connexes seront évaluées pendant la période couverte par FIDA12, au regard du revenu national brut, du niveau d'endettement du pays et des modalités d'application du CSD au FIDA.

I. Contexte du pays et programme relatif au secteur rural – principales difficultés et perspectives

1. **Contexte macroéconomique.** L'État d'Érythrée est situé sur la rive occidentale de la mer Rouge. Son littoral s'étire sur 1 200 kilomètres et le pays a une superficie de 124 000 km². Pendant plusieurs décennies, l'Érythrée a été détournée de la voie du développement; en effet, après une guerre qui a duré 20 ans, le pays a connu une situation de "ni guerre, ni paix" et dix ans de sanctions internationales. La situation s'est normalisée avec la signature de l'accord de paix entre l'Érythrée et l'Éthiopie en juillet 2018 et la levée des sanctions par le Conseil de sécurité de l'ONU en novembre 2018. Depuis lors, l'Érythrée s'est progressivement tournée vers le développement et le renforcement de la résilience, mais dans un contexte qui la rend extrêmement vulnérable aux chocs climatiques, économiques ou exogènes, notamment la fluctuation des cours des produits en ce qui concerne ses exportations de matières premières¹.
2. Le PIB de l'Érythrée dépend essentiellement du secteur tertiaire (58,9%) et du secteur secondaire (23,5%). L'agriculture et la pêche n'y contribuent qu'à hauteur de 17,6%², mais ce secteur emploie 65 à 70%³ de la population. La croissance du PIB réel a reculé, passant de 11,0% en 2011⁴ à 4,8% en 2016, mais a progressivement commencé à rebondir (5,4% en 2018)⁵, notamment grâce à des investissements publics et privés dans le secteur de l'extraction minière.
3. Selon l'indice 2019 de la facilité de faire des affaires⁶, l'Érythrée est reléguée au 189^e rang sur 190 pays. La participation du secteur privé est entravée par des politiques restrictives. Le déficit budgétaire s'élevait à 7,9% du PIB en 2018, avec un déficit du compte courant de 2,7%⁷. Fermement maintenu à 15,37 nakfa érythréens (ERN) pour 1 USD à partir de 2005, le taux de change a été fixé à 15,08 ERN pour 1 USD en décembre 2016. Le nakfa était devenu considérablement surévalué compte tenu de l'inflation à deux chiffres qu'avait connue le pays, associée aux déficits du compte courant et à la monétisation des déficits budgétaires. En conséquence, l'agriculture érythréenne peine à être compétitive sur le plan international, notamment en raison de la restriction des déplacements transfrontières due à la volatilité de la situation dans la Corne de l'Afrique.
4. **Pauvreté, genre, jeunes et nutrition.** La population de l'Érythrée est estimée à 3,29 millions de personnes⁸, avec un taux de croissance annuel de 2,9%. Quelque 70% des habitants ont moins de 35 ans. La démobilisation de jeunes adultes qui a suivi la signature de l'accord de paix avec l'Éthiopie devra s'accompagner de créations d'emplois dans le secteur privé et le secteur agricole, ce qui supposera la réalisation d'investissements publics et privés et le transfert de technologies.
5. Les statistiques relatives à la pauvreté n'ont pas encore été publiées. Avec un indice de 0,44, l'Érythrée continue à figurer parmi les derniers pays du classement effectué selon l'indice de développement humain établi par le Programme des Nations Unies pour le développement (PNUD) puisqu'elle se situe au 178^e rang sur 189 pays. Ce résultat est imputable aux effets de la guerre et des sanctions, à la pauvreté rurale généralisée et à la dépendance de 65 à 70% de la population à l'égard de l'agriculture paysanne.

⁶ Banque mondiale, 2019.

⁷ Economist Intelligence Unit, septembre 2019.

⁸ Estimations du Gouvernement pour 2012 (Ministère en charge des collectivités locales – Bureau de l'administration locale).

6. Les femmes constituent 55% de la population⁹ et sont à la tête de 47,2% des ménages¹⁰. Des facteurs culturels et un accès inégal aux intrants et aux débouchés économiques freinent l'autonomisation socioéconomique des femmes vivant en milieu rural.
7. L'Érythrée est confrontée à de graves problèmes en matière de sécurité alimentaire et nutritionnelle. La malnutrition touchant les enfants de moins de 5 ans induit un lourd fardeau de retard de croissance (50,3%), d'insuffisance pondérale (38,8%) et d'émaciation (15,3%)¹¹. Les causes en sont notamment la dénutrition chronique et les carences en micronutriments. En 2014, l'Érythrée enregistrait un résultat médiocre (33,8) selon l'indice de la faim dans le monde¹². Fortement dépendant des importations alimentaires, le pays est également frappé de plein fouet par les variations des cours internationaux des produits alimentaires, qui continuent à avoir des effets préjudiciables sur les acheteurs nets de produits alimentaires et les autres personnes vulnérables vivant en milieu rural.

Agriculture, élevage et pêche

8. Environ 75% des habitants vivent de cultures pluviales et de l'élevage pratiqués dans le cadre de systèmes agraires paysans traditionnels, durement mis à l'épreuve par la versatilité des conditions climatiques, le manque d'eau et la dégradation environnementale. La performance sous-optimale du secteur agricole est imputable aux facteurs suivants: i) forte dépendance à l'égard de l'agriculture pluviale dans un contexte de précipitations faibles et erratiques; ii) fertilité limitée des sols, associée à un accès insuffisant aux intrants, aux technologies et au matériel améliorés en raison des contraintes concernant les devises; iii) compétences techniques insuffisantes à différents niveaux. La fourniture limitée d'énergie soulève une autre difficulté. L'accès à l'irrigation (généralement 0,1 à 0,25 hectare par ménage) permet d'assurer deux à trois campagnes de production et de produire des excédents pour le marché.
9. L'élevage continue à tenir une place importante dans les systèmes agraires érythréens, car 49% des terres conviennent au pâturage, et seulement 17% aux cultures. La productivité de l'élevage est généralement faible au regard de son potentiel. L'une des raisons en est que les intrants et services vétérinaires font cruellement défaut ou sont difficiles d'accès. Le sous-secteur de la pêche contribue au PIB à hauteur de 3% environ. L'Érythrée dispose de ressources marines considérables et relativement sous-exploitées. Les captures nationales enregistrées dépassent rarement 10 000 tonnes par an, dont moins de 2 000 tonnes de capture par des artisans pêcheurs. Le Gouvernement a établi avec l'appui de ses partenaires plus de 330 réservoirs d'eau douce sur le continent, mais 70 seulement ont été empoisonnés avec différentes espèces afin d'améliorer les régimes alimentaires en milieu rural.
10. Dans le secteur agricole, la commercialisation des produits et l'ajout de valeur demeurent très peu développés dans les zones rurales. Les difficultés auxquelles se heurtent les petits producteurs désireux de vendre leurs excédents sont notamment les suivantes: forte variabilité saisonnière des prix payés au producteur; écarts considérables entre les prix payés au producteur et les prix de gros pratiqués en milieu urbain, du fait du manque d'installations de regroupement de la production dans les zones rurales et de l'insuffisance des possibilités de transport; infrastructures, installations de regroupement et transport inadéquats; services d'appui au développement des petites et moyennes entreprises par des organisations paysannes peu développées.

¹⁰ Enquête démographique et sanitaire en Érythrée, 2010.

¹¹ *Ibid.*

¹² Institut international de recherche sur les politiques alimentaires, 2018.

11. Les changements climatiques et la variabilité croissante du climat ont de graves incidences sur la production végétale et les moyens d'existence. L'adaptation aux changements climatiques est indispensable compte tenu de la modification des régimes de précipitation et de la hausse des températures observées en Érythrée. Le pays a ratifié la Convention des Nations Unies sur la lutte contre la désertification, la Convention-cadre des Nations Unies sur les changements climatiques et la Convention des Nations Unies sur la diversité biologique.

II. Contexte institutionnel et cadre de l'action publique

12. Le plan d'avenir du Gouvernement transparaît dans le Plan indicatif national de développement 2014-2018. Les principaux cadres relatifs au secteur agricole sont: la Politique et Stratégie nationale de développement agricole 2019; le Plan stratégique quinquennal de développement agricole (2019-2023); la Stratégie de développement des petites et moyennes exploitations agricoles commerciales; l'initiative "Minimum Integrated Household Agricultural Package" (distribution aux ménages d'un ensemble intégré minimal de moyens de production agricoles). D'ici à 2023, la Stratégie de développement des petites et moyennes exploitations agricoles commerciales vise à favoriser la création d'entreprises agricoles associées à des filières agricoles productives et rentables, liées aux marchés nationaux et internationaux.
13. Malgré la ferme détermination du Gouvernement à mener à bien le programme de développement de l'Érythrée, les déficits de capacités institutionnelles perdurent, notamment: i) l'absence de procédures et de cadres de réglementation adaptés, de nature à régir la mise en œuvre des projets; ii) les faibles capacités administratives et techniques; iii) une coordination intersectorielle limitée; iv) des systèmes de gestion financière et de suivi-évaluation (S&E) inadaptés, autant de facteurs qui compromettent l'aptitude à démontrer d'une manière quantitative l'impact en matière de développement.
14. L'État est le principal fournisseur des intrants et du matériel destinés à l'agriculture, à l'élevage et à la pêche, et il emploie à cette fin des fonds renouvelables distribués selon des principes coopératifs. Les organisations et coopératives d'agriculteurs doivent moderniser et diversifier leurs modèles afin de pouvoir offrir de meilleurs services à leurs membres et assurer leur propre viabilité. Les services de finance rurale sont fournis par une institution de microcrédit relevant du Programme d'épargne et de microcrédit mené à l'échelle du pays.
15. Le cadre stratégique établi par le Ministère de la pêche et des ressources marines¹³ est axé sur: i) le développement de la pêche continentale et la promotion de la consommation de poisson; ii) la croissance durable de la pêche maritime comme source de recettes en devises.

III. Engagement du FIDA: bilan de l'expérience

16. Le programme d'options stratégiques pour le pays (COSOP) 2006-2015 pour l'Érythrée a concentré les efforts sur l'appui à la transition entre la reconstruction et le développement structuré. Après 2015, le FIDA a élaboré pour 2016-2018 une note de stratégie de pays relative à une période de 24 mois, qui a été prolongée jusqu'en décembre 2019.
17. L'engagement du FIDA en Érythrée a débuté en 1995. Sept programmes et projets ont été approuvés pour un montant total de financement du FIDA de 114,78 millions d'USD. Le montant total des investissements réalisés jusqu'à aujourd'hui, y compris les cofinancements, s'élève à 165,92 millions d'USD. Le portefeuille en cours du FIDA consiste en deux projets, qui représentent un financement total de 77,78 millions d'USD: le Programme de gestion des

¹³ Projet de politique côtière nationale, projet d'action nationale pour la conservation des tortues marines, projet de plan d'aménagement intégré des zones côtières et plan de développement stratégique (2016-2020).

ressources halieutiques et le Projet national de développement de l'agriculture. Ce dernier, qui est le premier projet de portée nationale appuyé par le FIDA, a permis de dégager de précieux enseignements.

- 18. Principaux enseignements tirés de l'expérience.** Les principaux enseignements tirés de l'expérience du FIDA en Érythrée sont les suivants:
- i) La relation de confiance établie entre le FIDA et le Gouvernement, en particulier pendant la période d'isolement du pays, a fait que les interventions du FIDA dans le secteur agricole ont porté sur l'ensemble du secteur. Les ressources limitées fournies par le FIDA ont été mises à dure épreuve, le Fonds s'efforçant de s'attaquer aux différents problèmes qui touchent le secteur.
 - ii) De nombreuses difficultés liées à la mise en œuvre dans les *zobas* (régions) s'expliquent par les disparités entre ces régions, pour ce qui est des capacités. Avant le Projet national de développement de l'agriculture, la plupart des interventions menées par le FIDA en Érythrée ont concerné principalement les *zobas* de Gash-Barka et de Debub, qui tendaient à être plus performantes que les autres. L'intégration des fonctions d'exécution du projet dans les structures administratives publiques existantes favorise la durabilité.
 - iii) La gestion des bassins versants, associée au développement de l'irrigation, offre une solution durable permettant d'accroître la production et la productivité des petits exploitants qui travaillent dans les zones arides ou semi-arides. Dans le cadre du Projet national de développement de l'agriculture, des barrages de retenue, aménagés sur la plaine de Tselma (*zoba* de Debub), ont permis d'assurer deux à trois saisons de production agricole par an, ce qui a fait passer le nombre de ménages producteurs de 300 à 800.
 - iv) La faible disponibilité d'énergie, notamment d'électricité, a des incidences négatives sur les composantes de projet relatives aux infrastructures, ce qui se traduit par de faibles taux de décaissement. Il faut donc faire preuve de souplesse pendant l'exécution.
 - v) La disponibilité limitée des ressources allouées aux fonds renouvelables utilisés pour la distribution des intrants compromet l'expansion de la production dans les différents sous-secteurs (cultures, pêche). Pour assurer l'efficacité et la durabilité, il faut améliorer l'accès à des mécanismes de finance rurale adaptés.
 - vi) Le développement des filières est au cœur de l'approche adoptée par le Ministère de l'agriculture dans la Stratégie de développement des petites et moyennes exploitations agricoles commerciales, mais l'expérience d'autres pays (Kenya, Malawi, République-Unie de Tanzanie) laisse penser qu'il faut en premier lieu renforcer les facteurs favorisant le bon fonctionnement des relations entre tous les acteurs des filières. De plus, le recours insuffisant aux outils de l'entrepreneuriat agricole met en péril l'efficience de l'allocation budgétaire et la viabilité des interventions¹⁴.
 - vii) L'autonomisation des femmes est essentielle à la réalisation des objectifs relatifs à la sécurité alimentaire et nutritionnelle des ménages, mais il convient de centrer les efforts sur les traditions sociales et culturelles afin d'améliorer rapidement la participation économique des femmes. Le petit élevage a démontré sa grande efficacité s'agissant de remettre en selle les

¹⁴ Rapport de supervision du Projet national de développement de l'agriculture, août 2019.

ménages indigents, les ménages monoparentaux et les ménages dirigés par une femme¹⁵.

- viii) En raison de la grande faiblesse des capacités techniques dans le pays, la définition des spécifications techniques demeure une cause majeure des retards constatés dans l'exécution, en particulier concernant les travaux relatifs aux infrastructures et l'acquisition de matériel et de biens importés. La matrice des risques liés à la passation de marchés indique des défaillances dans de nombreux domaines, notamment: absence de structure juridique et de réglementation adaptée; documents d'appel d'offres inadaptés aux marchés publics; accès insuffisant à l'information relative aux marchés publics. Le recours à des contrats-cadres et à l'assistance technique pourrait contribuer efficacement à l'accélération des processus de passation de marchés.
- ix) La gestion financière¹⁶ est inefficace, car les systèmes d'établissement de rapports sont semi-manuels, les infrastructures de communication sont limitées (y compris la couverture du réseau d'Internet) et, en Érythrée, les comptables sont peu qualifiés. Dans le domaine de la communication de l'information financière, l'utilisation des systèmes nationaux n'est pas envisagée à ce stade, car les systèmes existants ne sont pas conformes aux exigences du FIDA. Des mécanismes d'audit interne et externe ont été mis en place, mais il convient de les renforcer.
- x) La disponibilité limitée de données issues du suivi fait qu'il est difficile de mesurer l'impact, d'apprécier la mesure dans laquelle les ressources sont utilisées d'une manière optimale et de mener des activités visant l'élaboration de politiques fondées sur des éléments factuels. La plupart des données collectées ont trait au rapport production/dotation. Il faut accorder toute l'attention requise au S&E pour faire en sorte que des enquêtes de référence soient réalisées, que les résultats obtenus soient suffisamment documentés et diffusés, et que les enseignements tirés de l'expérience soient compilés afin d'éclairer la conception et l'exécution des projets. Dans le cadre du Projet national de développement de l'agriculture, le FIDA a déjà mobilisé une assistance technique pour améliorer le S&E.

IV. Stratégie de pays

A. Avantage relatif

- 19. Depuis 2006, le FIDA figure parmi les principaux partenaires de développement international restés actifs dans le secteur agricole en Érythrée. Cela a permis d'asseoir la crédibilité du FIDA auprès du Gouvernement s'agissant de s'attaquer aux problèmes sectoriels qui touchent l'agriculture et de mener à titre pilote des interventions de développement du secteur de la pêche. Compte tenu des nouvelles priorités définies dans la Stratégie de développement des petites et moyennes exploitations agricoles commerciales, le FIDA travaillera avec les pouvoirs publics en adoptant une vision à long terme afin d'amener progressivement l'agriculture et l'économie bleue (pêche) sur une voie plus commerciale, plus résiliente et plus durable.
- 20. Le but primordial du FIDA sera de continuer de mettre en place les fondements d'un secteur rural de l'agriculture et de la pêche durable, productif et axé sur le marché, notamment en renforçant sa résilience et en améliorant les moyens d'existence ruraux et la sécurité alimentaire. Pour y parvenir, il adoptera une approche programmatique mettant l'accent sur: la promotion de l'adaptation aux changements climatiques et de la gestion des ressources naturelles; le renforcement des capacités individuelles et institutionnelles; l'amélioration de la

¹⁵ Rapport de l'examen à mi-parcours du Projet national de développement de l'agriculture, novembre 2016.

¹⁶ Voir les informations détaillées en appendice.

productivité et de l'ajout de valeur; la mise en place de nouveaux moyens d'existence non agricoles. On s'attachera à accorder toute l'attention voulue à la mise en place d'approches participatives, à la sécurité alimentaire et nutritionnelle et à l'autonomisation sociale et économique des femmes et des jeunes.

B. Groupe cible et stratégie de ciblage

21. **Groupe cible.** Les interventions menées au titre du présent COSOP devraient profiter directement à 90 000 ménages (soit quelque 450 000 personnes), dont plus de 40% sont dirigés par une femme. Les bénéficiaires comprendront au moins 50% de femmes et 30% de jeunes adultes.
22. **Stratégie de ciblage.** Le programme de pays du FIDA couvrira les six *zobas*¹⁷. Compte tenu de l'allocation consentie au titre du Système d'allocation fondé sur la performance pour FIDA11, environ la moitié des *sous-zobas* seront ciblées. Les sites d'intervention seront sélectionnés en fonction des données relatives à la sécurité alimentaire et nutritionnelle et à la pauvreté, du caractère adéquat des conditions agroécologiques, et des conclusions d'études de marché.
23. On s'attachera particulièrement à atteindre les jeunes et les femmes en combinant autociblage, ciblage direct et mesures d'autonomisation, et à obtenir des effets directs dans le domaine de la nutrition. Dans le cadre du COSOP, les ménages ruraux menant des activités d'agriculture et de pêche bénéficieront principalement de l'offre de moyens d'existence fondés sur la production. Des approches spécifiques seront adoptées pour répondre aux besoins des femmes, des jeunes (y compris les soldats démobilisés) et des membres les plus pauvres des communautés, dont l'accès à la terre est limité, qui bénéficieront de nouvelles sources de revenus, par exemple dans le cadre de l'initiative "Minimum Integrated Household Agricultural Package" ou avec le développement de microentreprises ou l'emploi saisonnier, garantissant leur sécurité alimentaire et nutritionnelle.
24. Le COSOP sera axé sur le développement social et, à cet effet, il renforcera les organisations de base en appliquant des mesures d'incitation favorisant l'intégration des pauvres fondées sur des activités d'autociblage.

C. Finalité et objectifs stratégiques

25. La théorie du changement est axée sur l'expansion des axes de travail fondamentaux du FIDA dans le secteur agricole et l'économie bleue par les moyens suivants: i) établissement de la base de ressources nécessaire au développement de l'agriculture et de la pêche grâce à la gestion de la terre et de l'eau et à l'expansion de l'irrigation; ii) structuration et renforcement des organisations de producteurs; iii) consolidation des systèmes nationaux de mise au point et de fourniture d'intrants; iv) accès aux facteurs favorisant l'ajout de valeur et intensification de ces facteurs; v) renforcement des capacités institutionnelles; vi) amélioration de la gestion des écosystèmes aquatiques.
26. La finalité du COSOP sera de contribuer à l'amélioration de la sécurité alimentaire et nutritionnelle des petits exploitants agricoles et des artisans pêcheurs dans le cadre d'interventions relatives au renforcement de la résilience. Le COSOP contribuera également à la réalisation des objectifs de développement durable (ODD) suivants: ODD 1, ODD 2, ODD 5, ODD 13, ODD 14 et ODD 15.
27. Les objectifs stratégiques du COSOP sont harmonisés avec le Cadre stratégique du FIDA 2016-2025. Ils sont également harmonisés avec la Politique et Stratégie nationale de développement agricole, le Plan stratégique quinquennal de développement agricole, et l'initiative "Minimum Integrated Household Agricultural Package", et contribueront à créer les conditions propices à la mise en œuvre de la

¹⁷ L'Érythrée est constituée de *zobas* (régions), *sous-zobas* et *kebabis* (regroupements de villages).

Stratégie de développement des petites et moyennes exploitations agricoles commerciales.

- **OS 1: Renforcement de la résilience face aux changements climatiques et de l'adaptation à leurs effets grâce à la gestion et à l'utilisation durables des ressources naturelles (terres et eau).** Cet objectif stratégique contribuera à préserver l'intégrité écologique et le capital naturel au service de la production, au moyen de techniques de gestion et de conservation durables de la terre, du sol et de l'eau, permettant de surmonter le manque d'eau et de lutter contre la dégradation des terres. Les activités porteront principalement sur: le déploiement d'une approche intégrée de gestion des bassins versants susceptible d'étayer les interventions de production agricole; la création de ressources naturelles stratégiques permettant de lutter contre l'érosion du sol et la dégradation des terres (y compris les terrains de parcours); la production d'énergie renouvelable et la conservation des écosystèmes marins côtiers à l'appui des moyens d'existence des communautés de pêcheurs. L'offre de moyens d'existence sera étoffée à l'intention des femmes et des jeunes, en lien avec la prestation de services dans les interventions relatives à la préservation des écosystèmes. Les effets directs escomptés de l'OS 1 sont les suivants: i) adoption de technologies améliorées adaptées et intelligentes face aux aléas climatiques; ii) intégration systématique du souci de gestion durable des ressources naturelles.
- **OS 2: Amélioration de l'accès à des technologies, des infrastructures et des services adaptés, et de leur utilisation, à l'appui de l'accroissement de la productivité et de la durabilité des systèmes d'agriculture paysanne et de pêche artisanale.** Cet objectif stratégique sera centré sur l'amélioration des systèmes de production, afin de satisfaire les besoins alimentaires et nutritionnels des ménages, et sur la mise en place de moyens d'existence ruraux durables, ainsi que sur la prise en compte progressive des réactions du marché dans les systèmes de production. L'accès amélioré aux technologies et aux moyens de production intelligents face aux aléas climatiques, de même qu'aux infrastructures et aux services de conseil, sera encouragé. Les principaux facteurs favorisant la réalisation de cet objectif seront l'établissement de systèmes locaux d'approvisionnement en intrants et l'aménagement d'infrastructures hydrauliques (barrages, irrigation) et d'installations après récolte en vue de favoriser la mise en place de moyens d'existence agricoles et non agricoles durables. Les effets directs escomptés de l'OS 2 sont les suivants: i) amélioration de la production et de la productivité (céréales, cultures horticoles, petits ruminants, lait, volaille, poisson); ii) aménagement d'infrastructures rurales et de systèmes d'irrigation économes en eau; iii) adoption de technologies tenant compte des enjeux nutritionnels.
- **OS 3: Renforcement des capacités institutionnelles, communautaires et individuelles au service de l'amélioration de la sécurité alimentaire et nutritionnelle et de la mise en place de moyens d'existence durables.** Cet objectif stratégique, qui sera transversal et permettra de remédier aux lacunes de capacités constatées en lien avec les OS 1 et 2, s'appuiera sur des évaluations des besoins en matière de renforcement des capacités. L'accent sera principalement mis sur le renforcement des capacités techniques et administratives des ministères chargés de l'exécution, des prestataires de services et des organisations non gouvernementales nationales, ainsi que des groupements d'agriculteurs et des groupements communautaires, des individus et des ménages. Les interventions tiendront compte des thèmes transversaux, et le processus de prise de décisions concernant les investissements intégrera progressivement des approches

axées sur le marché. Les effets directs escomptés de l'OS 3 sont les suivants: i) renforcement des capacités des institutions publiques et des autres prestataires de services; ii) amélioration de la participation structurée des communautés aux prises de décision et au développement local.

28. Quatre thèmes seront transversalisés dans le programme de pays du FIDA:

- La sécurité alimentaire et nutritionnelle, notamment au profit des femmes et des enfants. L'accent sera mis sur les aspects suivants: i) agriculture, horticulture et aquaculture tenant compte des enjeux nutritionnels, et notamment distribution de variétés nutritives et tolérantes à la sécheresse; ii) campagnes de sensibilisation des communautés à l'importance que revêt la consommation d'aliments nutritifs (légumes, légumineuses, fruits, volaille, produits laitiers et poisson); iii) promotion des bonnes pratiques en matière de gestion après récolte et d'entreposage, de respect des normes de sécurité sanitaire des aliments, et de préparation des aliments; iv) accès à l'eau potable; v) actualisation des protocoles relatifs à la sécurité sanitaire des aliments et à la certification.
- Égalité des sexes et autonomisation des femmes. Les femmes bénéficieront d'un appui ayant trait aux aspects suivants: i) accès à l'irrigation et amélioration des compétences en la matière, principalement en vue de la production de cultures de haute valeur; ii) développement des microentreprises (petit élevage, prestation de services); iii) représentation améliorée dans les coopératives et renforcement de l'aptitude à occuper des postes de responsabilité; iv) accès aux services financiers; v) agriculture et éducation tenant compte des enjeux nutritionnels (fermes-écoles destinées aux femmes). De plus, la démarche suivie pour traiter cette question reposera sur: i) la fixation de quotas, si nécessaire, pour faire en sorte qu'au moins 50% des bénéficiaires des activités soient des femmes; ii) le suivi de la participation des femmes; iii) des formations visant la sensibilisation à la question de l'égalité des sexes à l'intention des agents chargés de l'exécution du programme. L'indice de l'autonomisation des femmes dans l'agriculture sera utilisé comme un cadre.
- Emploi des jeunes. Les jeunes âgés de 18 à 35 ans, en particulier les soldats démobilisés, bénéficieront systématiquement des possibilités offertes, notamment: i) dans le cadre des programmes d'irrigation et des activités en amont et en aval des filières; ii) dans le contexte de la promotion du développement des coopératives et des petites et moyennes entreprises. Les jeunes, qui seront les bénéficiaires prioritaires des formations (aspects techniques, compétences de base de la vie quotidienne, prestation de services et développement de microentreprises), pourront accéder aux technologies et moyens de production adaptés (petits animaux d'élevage) au titre de l'initiative "Minimum Integrated Household Agricultural Package".
- Changements climatiques. Les investissements visant l'adaptation aux changements climatiques et l'atténuation de leurs effets ainsi que la prévention et l'inversion du phénomène de dégradation environnementale seront renforcés. La promotion des technologies intelligentes face aux aléas climatiques concernera: i) la récupération de l'eau de pluie; ii) les variétés végétales précoces et tolérantes à la sécheresse; iii) les cultures fourragères tolérantes à la sécheresse et les espèces fourragères liées à l'agroforesterie; iv) la conservation et la gestion des bassins versants; v) le reboisement; vi) la régénération et la conservation de la mangrove; vii) l'énergie solaire et les autres sources d'énergie renouvelable ainsi que les méthodes d'économie d'énergie.

D. Éventail des interventions du FIDA

Réalisation des objectifs stratégiques

29. **Approche stratégique.** Étant donné qu'il faut évaluer d'une manière exhaustive les effets évolutifs de la paix sur le secteur du développement rural, le FIDA suivra en permanence la situation lors des missions de conception, de supervision et d'appui à l'exécution. Cette démarche permettra de déterminer la mesure dans laquelle le contexte est favorable à l'intensification de l'approche "axée sur le marché" dans le portefeuille du FIDA. L'examen à mi-parcours du COSOP, qui sera réalisé en 2023, permettra de décider de la révision éventuelle des objectifs stratégiques.
30. **Prêts et dons.** Le portefeuille (tableau 1) associé au présent COSOP comprendra deux projets en cours (le Projet national de développement de l'agriculture et le Programme de gestion des ressources halieutiques) et un nouvel investissement au titre de FIDA11, à savoir le Programme de développement agricole intégré. Ce nouveau programme, qui s'appuiera sur l'expérience acquise dans le cadre du Projet national de développement de l'agriculture, cristallise l'avantage comparatif du FIDA en matière de gestion des bassins versants, de développement de l'irrigation et de production animale et végétale, tout en intégrant les thèmes transversaux du FIDA. Il devrait également contribuer à la mise en place de conditions propices à la future collaboration du FIDA avec les pouvoirs publics concernant l'approche axée sur le marché, comme énoncé dans la Stratégie de développement des petites et moyennes exploitations agricoles commerciales. Lors de l'examen à mi-parcours du COSOP, il pourrait être envisagé de réaliser un nouvel investissement, sous réserve que le montant accordé dans le Système d'allocation fondé sur la performance au titre de FIDA12 le permette.
31. En ce qui concerne les problèmes liés à l'exécution, l'OS 3 vise spécifiquement à renforcer les capacités techniques et administratives des diverses institutions participant à la mise en œuvre. Un logiciel intégré de gestion de projet sera mis en place pour améliorer la gestion financière et le S&E. Les conceptions des projets seront simples et comprendront des dispositions garantissant l'apport régulier d'un appui à l'exécution (gestion financière, passation des marchés, S&E) et l'adoption intégrale du Manuel de passation des marchés du FIDA. L'examen à mi-parcours du Programme de gestion des ressources halieutiques pourrait donner lieu à une restructuration du projet visant l'harmonisation de ce dernier avec l'approche relative aux thèmes transversaux préconisée dans le présent COSOP.

Tableau 1
Séquence chronologique du portefeuille en cours et du futur portefeuille du FIDA

	FIDA8			FIDA9			FIDA10			FIDA11			FIDA12			FIDA13		
	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022	2023	2024	2025	2026	2027
Projet national de développement de l'agriculture 40 millions d'USD																		
Programme de gestion des ressources halieutiques 37,7 millions d'USD																		
Programme de développement agricole intégré 45 millions d'USD (en cours de conception)																		
Nouvel investissement (FIDA12)																		

32. Plusieurs dons régionaux seront mobilisés avec le Groupe consultatif pour la recherche agricole internationale (CGIAR), dans le but de compléter le portefeuille d'investissements, notamment des dons fournis par: i) WorldFish, en faveur d'essais pilotes d'aquaculture continentale et de mariculture intelligentes face aux aléas climatiques; ii) un programme spécial de l'Union européenne et du FIDA en faveur de la Corne de l'Afrique (Djibouti, Érythrée, Somalie et Soudan du Sud), qui sera exécuté par le Centre international d'agriculture biosaline; iii) le Centre international de recherche agricole dans les zones arides (ICARDA). Les capacités d'exécution seront également renforcées dans le contexte du Programme du FIDA relatif au suivi-évaluation rural (PRIME), au titre de RESOLVE: Gestion axée sur les résultats au service de la transformation du monde rural et Renforcement des capacités visant à améliorer la passation des marchés relatifs aux projets (deux initiatives qui seront soumises au Conseil d'administration du FIDA). Le FIDA s'efforcera par ailleurs de mobiliser des financements additionnels en faveur du renforcement de la résilience des petits exploitants agricoles au titre du futur Programme élargi d'adaptation de l'agriculture paysanne (ASAP+).
33. **Contribution à l'élaboration des politiques au niveau national.** La concertation entre le FIDA et les pouvoirs publics portera principalement sur le renforcement des conditions propices à l'amélioration de l'aptitude à absorber les investissements et à mettre en place les fondements d'une production axée sur le marché et intelligente face aux aléas climatiques. Avec le Ministère de l'agriculture, le dialogue sera centré sur la viabilité de l'initiative "Minimum Integrated Household Agricultural Package" comme moteur potentiel du programme de commercialisation agricole à l'avenir. Avec le Ministère de la pêche et des ressources marines, le dialogue sera focalisé sur l'intégration de la planification des activités en tant qu'étape importante de la détermination des interventions associées aux investissements. La concertation sera également permanente en ce qui concerne le renforcement du cadre de gestion environnementale et sociale en lien avec les Procédures d'évaluation sociale, environnementale et climatique.
34. Le FIDA restera un membre actif du Groupe de travail sur l'agriculture, la sécurité alimentaire, l'environnement et les changements climatiques, dans le cadre duquel les représentants du Gouvernement et les partenaires de développement examinent les stratégies et programmes sectoriels et intersectoriels et l'état d'avancement de leur mise en œuvre. Le FIDA travaillera avec le Groupe de travail sur les statistiques dans le contexte du Forum des partenaires de développement de l'Érythrée et avec l'Organisation des Nations Unies pour l'alimentation et

l'agriculture (FAO) sur le recensement agricole national en vue de remédier aux problèmes de S&E.

35. Le **renforcement des capacités** sera étayé par des évaluations des capacités menées au niveau national ainsi qu'au niveau des *zobas* et des *sous-zobas*, l'objectif étant d'améliorer les capacités relatives aux questions techniques, à la gestion de projet, au S&E, à la passation des marchés et à la gestion financière. La stratégie, élaborée au titre de l'OS 3, comprendra aussi l'offre de formations de courte ou de longue durée (master et doctorat), à l'intention des jeunes membres du personnel travaillant dans des domaines techniques (recherche) ou opérationnels afin de créer une réserve de ressources humaines, ainsi que la mise en place de fermes-écoles à l'intention des exploitants agricoles. Les instituts régionaux du CGIAR, la FAO et la Fondation pour le renforcement des capacités en Afrique, entre autres, seront des partenaires clés dans le domaine du renforcement des capacités. Le programme de pays bénéficiera également des savoirs spécialisés pertinents issus de la collaboration actuelle entre le FIDA et l'Islande, notamment sur le thème de l'économie bleue.
36. **Gestion des savoirs.** Une stratégie relative à la gestion des savoirs sera élaborée en 2020. Elle comportera les éléments suivants: i) détermination des lacunes de connaissances et hiérarchisation par ordre de priorité des produits du savoir à élaborer; ii) diffusion du savoir-faire et des meilleures pratiques sur les supports de communication disponibles (bulletin du Ministère de l'agriculture, brochures, sites web, radio, fermes-écoles/fermes-écoles à vocation commerciale; iii) collecte de données; iv) évaluation des besoins en capacités. Les domaines de savoirs potentiels sont les suivants: modèles de production agricole axée sur le marché applicables au contexte local, conservation durable de l'eau et techniques d'irrigation de pointe, viabilité et efficacité des fonds renouvelables, et sources d'énergie renouvelable.
37. La **coopération Sud-Sud et triangulaire (CSST)** sera renforcée et étroitement harmonisée avec le programme relatif à l'innovation, au renforcement des capacités et à la reproduction à plus grande échelle. Le centre de CSST du FIDA pour l'Afrique d'Addis-Abeba et les centres et plateformes de recherche internationaux, tels que l'Institut international de recherche sur les cultures des zones tropicales semi-arides, l'ICARDA, la FAO, WorldFish et l'Association pour le renforcement de la recherche agricole en Afrique orientale et centrale, concourront au transfert des savoirs et des données d'expérience. En matière de coopération bilatérale, les partenaires potentiels sont la Chine, l'Égypte, l'Éthiopie, le Kenya, le Rwanda, l'Afrique du Sud et le Viet Nam. La CSST portera notamment sur les possibilités d'établir des liens commerciaux pour certains biens et services, comme les intrants agricoles (en particulier les semences), le poisson et les produits d'origine animale. L'un des instruments susceptibles d'être utilisés est le Mécanisme de CSST Chine-FIDA.
38. **Communication et visibilité.** Une stratégie de communication sera adoptée pour favoriser la diffusion des savoirs et des informations, notamment sur les enseignements tirés de l'expérience et les bonnes pratiques ayant trait aux principaux domaines thématiques du présent COSOP. L'élément central sera la mise en place et la maintenance de systèmes de gestion de l'information.

V. Innovations et reproduction à plus grande échelle pour des résultats durables

39. **Innovations.** Les domaines d'innovation prioritaires seront les suivants: techniques d'irrigation de pointe; développement des coopératives et établissement de liens avec les marchés; énergie renouvelable; amélioration de la nutrition; services financiers à l'appui de l'entrepreneuriat agricole; techniques d'aquaculture et de mariculture. La promotion et/ou la reproduction à plus grande échelle des

innovations seront réalisées dans le cadre de partenariats établis avec les institutions nationales compétentes (comme l’Institut national de recherche agricole), des centres de recherche internationaux (tels que l’Institut international de recherche sur les cultures des zones tropicales semi-arides, l’ICARDA, le Centre international d’agriculture tropicale, l’Institut international de recherches sur l’élevage, WorldFish, la FAO) et d’autres partenaires de développement.

40. **Reproduction à plus grande échelle.** Le COSOP prévoit la reproduction à plus grande échelle des bonnes pratiques, sélectionnées au moyen de la gestion des savoirs, au niveau national et régional. Les domaines prioritaires seront les suivants: i) amélioration de l’efficacité de l’utilisation de l’eau dans le contexte de l’irrigation; ii) gestion durable des ressources en terre et en eau, agriculture de conservation et fertilité des sols; iii) utilisation de l’initiative "Minimum Integrated Household Agricultural Package" pour concrétiser les grandes priorités définies au titre de FIDA11; iv) sécurité sanitaire des aliments dans le secteur de la pêche et financement de l’expansion de la capacité de la flotte de pêche nationale.

VI. Exécution du COSOP

A. Enveloppe financière et cibles de cofinancement

41. Le COSOP 2020-2025 couvrira deux cycles de financement du FIDA, comprenant notamment une allocation d’un montant de 37 millions d’USD au titre de FIDA11. Sur ce montant, et conformément aux dispositions du Cadre pour la soutenabilité de la dette (CSD) du FIDA, l’Érythrée est admise à recevoir 80% de son allocation sous forme de dons et les 20% restants, à titre optionnel, sous forme de prêts à des conditions particulièrement favorables. Le Gouvernement accepte ces conditions et est déterminé à utiliser intégralement le montant de l’allocation. Les allocations au titre de FIDA12 (2022-2024) et les modalités et conditions de prêt applicables doivent encore être confirmées, car le dialogue avec les États membres du FIDA concernant la politique du CSD est encore en cours.

Tableau 2
Projets en cours ou prévus: financements du FIDA et cofinancements
(en millions d’USD)

Projet	Financement du FIDA	Cofinancement		Ratio de cofinancement
		National	International	
En cours				
Programme de gestion des ressources halieutiques	15	Gouvernement: 1,42 Bénéficiaires: 1,35	Fonds pour l’environnement mondial: 7,89 Allemagne: 11,55 FAO: 0,50	1/1,51
Projet national de développement de l’agriculture	26,61	Gouvernement: 5,4 Bénéficiaires: 3,7		1/0,3
Prévu				
Programme de développement agricole intégré	37	Gouvernement: 7,0 Bénéficiaires: 6,0		1/0,3
Total				1/0,6

42. L’Érythrée est désormais classée dans la catégorie "rouge" au titre du CSD. En mai 2019, après une interruption de dix ans, le Fonds monétaire international a mené une mission au titre de l’article IV de ses Statuts, ce qui indique un commencement de normalisation des relations internationales. En ce qui concerne FIDA11, l’admissibilité de l’Érythrée est déterminée par le CSD du FIDA.

B. Ressources consacrées aux activités hors prêts

43. Les ressources consacrées aux activités hors prêts qui sont destinées à des domaines thématiques techniques proviendront de dons régionaux, au titre desquels une enveloppe cumulée de 3,5 millions d'USD permettra d'appuyer l'Érythrée et d'autres pays. L'Érythrée bénéficiera aussi d'une enveloppe de dons mondiaux (5,5 millions d'USD), qui servira à renforcer les capacités en matière de passation des marchés et de gestion (RESOLVE). Une assistance technique complémentaire concernant le secteur de la pêche sera mobilisée en faveur du Programme de gestion des ressources halieutiques grâce à des fonds supplémentaires fournis par l'Allemagne (700 000 EUR). Des propositions seront élaborées pour être soumises au mécanisme de CSST Chine-FIDA.

C. Principaux partenariats stratégiques et coordination du développement

44. Les principaux partenaires nationaux du FIDA sont le Ministère des finances et les deux ministères responsables de l'exécution des projets, à savoir le Ministère de l'agriculture et le Ministère de la pêche et des ressources marines. Les autres partenaires importants sont le Ministère des questions foncières, de l'eau et de l'environnement, l'Union nationale des femmes érythréennes et l'Union nationale des jeunes et étudiants érythréens.
45. Les partenariats existants qui appuient les secteurs de l'agriculture et de la pêche seront renforcés, notamment avec l'appui de l'Union européenne et du système des Nations Unies, en particulier les organismes ayant leur siège à Rome (FAO et Programme alimentaire mondial [PAM]). L'Allemagne restera un partenaire de cofinancement essentiel du Programme de gestion des ressources halieutiques. Les possibilités de travailler conjointement avec la Banque mondiale, le PAM et l'Agence italienne pour la coopération au développement, qui sont en passe de rétablir leur collaboration avec le pays, seront explorées.
46. Un domaine de collaboration potentielle avec les autres organismes ayant leur siège à Rome pourrait concerter la stratégie de renforcement de la résilience pour l'Érythrée, que la FAO et le PAM se proposent d'élaborer conjointement en partenariat avec les pouvoirs publics.

D. Participation des bénéficiaires et transparence

47. **Participation des bénéficiaires.** Tous les investissements seront harmonisés avec le Cadre des retours d'information opérationnels des parties prenantes établi par le FIDA. Les investissements permettront de promouvoir les environnements institutionnels et les partenariats propices au renforcement de la transparence et de la responsabilisation, grâce à l'accroissement de la participation des groupes cibles du FIDA à tous les processus de gestion des programmes de pays et grâce à l'intégration de systèmes de S&E des retours d'information.
48. **Transparence.** Des dispositions seront prises pour améliorer la transparence et la visibilité des interventions du FIDA et de leurs résultats (par exemple publication des résultats financiers et des rapports de supervision, processus transparents et justes de passation des marchés et publication d'évaluations participatives).

E. Modalités de gestion du programme

49. Le pôle sous-régional du FIDA d'Addis-Abeba, par l'intermédiaire du/de la directeur(trice) de pays et avec l'appui des équipes techniques du pôle de Nairobi et du siège, aidera les pouvoirs publics et les unités nationales de coordination du projet en assurant un appui à l'exécution. Un appui collectif sera fourni pour concrétiser les priorités institutionnelles et les thèmes transversaux définis par le FIDA. Une collaboration étroite avec l'équipe de recherche agricole pour le développement (FIDA) est prévue compte tenu des activités conjointes susceptibles d'être menées avec les institutions du CGIAR.

50. La gestion des deux projets en cours est entièrement intégrée dans les systèmes nationaux à tous les niveaux, ce qui en garantit l'appropriation. Un suivi étroit et la conduite régulière de missions conjointes d'appui à l'exécution par le FIDA et les pouvoirs publics permettront d'évaluer la performance axée sur les résultats des agents chargés de l'exécution des projets, en matière de planification des activités, de passation des marchés, de suivi et d'établissement de rapports, et de gestion des contrats.

F. Suivi-évaluation

51. Le cadre de résultats du COSOP (appendice I) comporte des indicateurs d'effet direct mesurables, harmonisés avec les ODD, le Plan indicatif national de développement et la Stratégie de développement des petites et moyennes exploitations agricoles commerciales. Tous les projets du portefeuille produiront les données permettant de mesurer les indicateurs d'effet direct définis dans le COSOP. Les données collectées par d'autres organismes des Nations Unies seront également utilisées. Dans la mesure du possible, les évaluations annuelles des effets directs tiendront également compte des exigences de données associées au cycle du COSOP. Les données seront ventilées par sexe et par âge. Dans le cadre de ses réunions annuelles, l'équipe d'exécution de pays examinera l'état d'avancement de la mise en œuvre du COSOP, déterminera les enseignements tirés de l'expérience et formulera des recommandations. À mi-parcours, en 2023, le FIDA et les pouvoirs publics examineront la performance du COSOP et procéderont aux ajustements nécessaires. Un examen sera réalisé à l'achèvement du COSOP en 2025.

VII. Gestion des risques

Tableau 3
Risques et mesures d'atténuation

Risques	Évaluation du risque	Mesures d'atténuation
Politique/gouvernance	Élevé	Les projets seront intégrés dans les structures de l'administration publique, au niveau national et à celui des <i>zobas</i> . L'ancrage institutionnel des projets et la mise en œuvre ne changeront pas fondamentalement dans la mesure où le nombre de prestataires de services privés est très limité. Pour améliorer l'appropriation au niveau local, on s'attachera à autonomiser les coopératives en renforçant les capacités de planification des activités et en promouvant la prise en main des responsabilités par les membres.
Macroéconomique	Élevé	La compétitivité au niveau international étant problématique, l'accent sera mis sur l'amélioration de la sécurité alimentaire et nutritionnelle nationale, l'innovation et l'adoption systématique des nouvelles technologies à l'appui de l'accroissement de la productivité, l'approvisionnement des marchés locaux et la substitution progressive des produits importés.
Stratégies et politiques sectorielles	Élevé	On favorisera: la collaboration avec les partenaires techniques et financiers dans le domaine du développement des filières; l'analyse de la viabilité économique et financière lors de la conception de tout investissement; l'établissement de liens avec tout secteur de services de finance rurale existant; la contribution à l'élaboration des politiques dans les secteurs du développement rural et du développement agricole.
Capacités institutionnelles	Moyen/élevé	On fournira une assistance technique internationale et nationale spécialisée; on développera les capacités institutionnelles à tous les niveaux; on formera les jeunes membres du personnel.
Portefeuille	Élevé	On fournira une assistance technique et on assurera en permanence le renforcement des capacités du personnel du Ministère de l'agriculture et du Ministère de la pêche et des ressources marines au niveau national et à celui des <i>zobas</i> en matière de passation des marchés, de programmation, de mécanismes de protection, et de S&E.

<i>Risques</i>	<i>Évaluation du risque</i>	<i>Mesures d'atténuation</i>
Fiduciaire – gestion financière	Élevé	On renforcera la communication de l'information financière, les infrastructures de communication et les mécanismes de contrôle pendant la période couverte par le COSOP, et on assurera un appui à l'exécution.
Fiduciaire – passation de marchés	Élevé	En l'absence de systèmes nationaux, on se conformera aux Directives du FIDA pour la passation des marchés relatifs aux projets, au Manuel de passation des marchés et aux documents types d'appel d'offres. On conduira plus régulièrement des missions d'appui à l'exécution, comportant des formations ciblées et un appui à la préparation de documents d'appel d'offres conformes aux exigences du FIDA.
Environnement et climat	Élevé	Il faudra mener des interventions intelligentes face aux aléas climatiques et intégrer systématiquement l'adaptation climatique aux projets d'investissement.
Social	Moyen	On veillera à améliorer le ciblage des personnes vulnérables, en particulier les femmes et les jeunes.
Autres risques propres au COSOP	s.o.	
Risque global	Élevé

Figure 1
COSOP theory of change

Appendix II: Transition scenarios

1. **Data sources.** Eritrea and Ethiopia signed a peace agreement on the 9th of July, 2018, which has put an end to a longstanding conflict and normalized ties between the two countries. In addition, the United Nations Security Council lifted sanctions in November 2018, opening the space for widening international cooperation. The peace dividend offers Eritrea opportunities to reallocate public resources to its economic development.
2. The Government of the State of Eritrea does not publish macro-economic data. The World Bank interrupted the monitoring and sharing of macro-economic data on Eritrean in 2010. However, a World Bank mission visited Eritrea to explore potential for renew its support to the country.
3. The most recent IMF Article IV Consultation – Staff Report dates from June 2003¹⁸. Article IV Consultation is delayed, due to a lack of adequate information that would allow IMF staff to make such an assessment. In May 2019, a new IMF Article IV Consultation mission visited Eritrea to renew consultations. No report is available
4. The Economist Intelligence Unit (EIU) publishes Country Reports for Eritrea. Their macro-economic data are mainly estimates and projections. EIU is the main source of information for this annex.
5. As per the Economist Intelligence Unit's (EIU) outlook for Eritrea, activity in the mining sector will sustain accelerating real GDP growth rates, from an estimated 5.4% in 2018 to 5.8% in 2020. Agriculture and fisheries contribute only 14.5% to GDP, although about 65% of the population depends on this sector for their livelihoods. Real GDP growth slowed down from 11% in 2011 to 5.4% in 2018. GDP growth depends mainly on investments in mining by public-private partnerships. Despite economic growth over the last 15 years, Eritrea remains one of the least developed countries in the world. The country depends on food and fuel imports, as local supply is structurally insufficient.
6. The exchange rate for ERN to US\$ has been fixed at 15.37 since 2005, while inflation has soared over the past two decades and was estimated at 13% in 2018, compared to 2% or less for international reference currencies. As a result, the ERN is overvalued, agriculture has difficulties to compete in the international environment and cross-border movements of capital, goods and services are restricted. The fiscal deficit was 7.9% of GDP in 2018 with a current account deficit of 2.7%¹⁹. As for inflation, it has soared over the past two decades, but is projected to ease to 11% in 2020. The country is also forecasted to have an unsustainable debt burden.
7. Based on International Monetary Fund Article IV 2009, Eritrea was at the pre-decision point for becoming a heavily indebted poor country (HIPC) and therefore may be eligible for HIPC multilateral debt relief. The Debt Sustainability Framework classifies Eritrea as "red".
8. In light of the circumstances, three possible trajectories were considered over the 2020-2025 period:
 - i. **Base case.** The base case reflects the projections in the EIU. Real GDP growth is projected to be on average about 5.5% per annum over the five years of the COSOP period. Under this scenario, the Government continues to implement prudent macro policies and the external environment remains benign. Prices of minerals remain at their current level while exports of minerals grow. Oil prices and international prices of cereals stay at current levels. **The country** remains in the lower income category.
 - ii. **High case.** Under the high case, mineral prices (gold, zinc, copper) increase significantly, while international oil prices decline. This would improve the current-account balance significantly, reduce the fiscal deficit and make resources available for the social sectors and for development of agriculture. Under this scenario, the

¹⁸<https://www.imf.org/en/News/Articles/2018/06/28/pr18262-delayed-article-iv-consultation-with-the-state-of-eritrea>.

¹⁹Economist Intelligence Unit. August 2019.

country would renew its collaboration with IMF and the community of technical and financial partners. In this case, a sustained 6.5% of GDP growth rate could be realistic. The country remains in the lower income category.

- iii. **Low case.** In the low case, Eritrea is hit by a number of shocks. Most significant shocks would be a sustained decline in mineral prices due to weak global growth and increase international food and petrol prices. Under this scenario, the current-account deficit would increase in growing fiscal deficits, increased debt and difficulties to import inputs and equipment that are required to develop agriculture. Under this scenario, the country remains in the lower income category.

Table 1 Projections for key macroeconomic and demographic variables²⁰

Case	2017	2018	2019	2020
Average GDP growth (2018 - 2020)	4.9	5.4	5.4	5.6
GDP per capita (2018)		1219 US\$		
Government balance (% of GDP)	-10.2	-7.9	-7.0	-6.3
Current account balance (% of GDP)	-3.5	-2.5	-2.4	-2.2
Inflation rate (%) (2018-2020)	14.0	13.0	12.3	11.4
Rural population		3.29 million (Government of the State of Eritrea) (End of COSOP period): 3.9 million Annual growth rate: 3.2% per annum		
Investment climate for rural business		Rating: 1/6 Ease of Doing Business: 189 th on 190 countries		
Vulnerability to shocks		Rating: 2/6 Eritrea is particularly vulnerable to changes of international prices of petrol, food (wheat, vegetable oil) and minerals (gold, zinc, copper, silver), which have a direct impact on the current-account balance and potential of the country to import international inputs and equipment to develop agriculture. The NG-Gain index classifies Eritrea as 179 th country. The country is very vulnerable to CC.		

Footnotes:

Economic Intelligence Unit (EIU) "Country Forecasts" with 4-year projections.

^b Rating (1-6), based on justified qualitative assessment. Source RSPA

^c Rating (1-6), based on justified qualitative assessment of vulnerability to CC; food price shocks; political risk.

9. The implications for IFAD Country Programme are as follows:

- (a) **Lending terms.** For IFAD11, Eritrea is eligible to receive 80% of financing as grant, and 20% as an optional loan on highly concessional terms, under the DSF. The country's lending terms and related financing conditions for IFAD12 will be assessed at the beginning of the replenishment period taking into consideration GNI, the country's debt burden and the application of the DSF reform, if approved by IFAD's Governing Council in 2020.
- (b) The **PBAS allocation** for Eritrea is unlikely to change under the three scenarios.
- (c) **COSOP priorities and products.** The COSOP is aligned with the Small and Medium Commercial Farmers Strategy under which the government seeks to modernize family farming and assist organizations of small producers gain access to the market. The COSOP strategy remains valid under the three scenarios, although under the low case, access to external inputs and equipment (cement, irrigation equipment, etc.) will become very problematic and slowdown innovations in agriculture.
- (d) **Co-financing opportunities and partnerships.** As the UN Security Council lifted sanctions, Eritrea is opening up to the international community and co-financing opportunities might arise during the COSOP period.

²⁰ Economist Intelligence Unit. August 2019.

Appendix III: Agricultural and rural sector issues

Production systems and rural incomes

1. The State of Eritrea has certain agro-ecological diversity: the Northern/Central Highlands (cool sub-humid to semi-arid, average annual rainfall of 300-700 mm); the Western Lowlands (hot semi-arid, annual rainfall of 200-600); and the Eastern Lowlands (arid, annual rainfall of 50-300 mm); and a coastline of over 1,000 km along the western coast of the Red Sea. This allows to develop various production systems: (i) crop farming (rain fed: sorghum, finger millet, teff, maize, barley, wheat and beans; and irrigated cropping: banana, citrus cropping, onions, potatoes, tomatoes, pepper, lettuce, cabbage etc.), (ii) agro-pastoralism (in addition to crops: dairy, small stock, and poultry); (iii) pastoralism (cattle, small stock, camels, donkeys and poultry), and (iv) marine fisheries. This zonal production specialization requires an inter-regional marketing and logistics organization (e.g.: development of cold chain to supply sea foods to the highlands). The main food import of Eritrea consists of wheat and edible oil.
2. The importance of livestock in Eritrea can be seen by the fact that 49% of the total land area is suitable for grazing whereas only 17% is suitable for cropping. This situation does, however, lead to competition between livestock raising and crop cultivation in some cases, and policy for resolving those conflicts is not yet fully articulated. Important quantities of live sheep and goats were exported to regional markets. Exports of hides and skins were also significant. Eritrea has substantial and relatively underexploited marine and fisheries resources: recorded fish catches rarely exceed 10,000 tons per year out of the maximum sustainable yield (MSY) of Eritrea's Red Sea fisheries estimated in 2005 at 80,000 tons per year.
3. Crop and livestock productivity is low, compared to potential yield, because of difficult access to land especially for youth and women; low and erratic rainfall and drought prone area; limited soil fertility and land degradation; weak agricultural services and limited outreach; poor access to modern inputs; inadequate technical skills; difficult access to information, knowledge, and technologies; and limited capacity of project implementers most of which are public institutions. Notwithstanding these limitations, there are good opportunities for agricultural development based on adoption of proven and affordable technologies, production and distribution of improved seeds, expanded and improved irrigation, innovative approaches to soil and water management and promotion of sustainable natural resource management.
4. Fisheries productivity is mainly constrained by lack of production tools and inputs. The fishers communities are mostly using artisanal method of fishing which does not allow them to increase in productivity. Under FDP and FReMP, many fishers were provided with inputs supplied on credit (net, fishing boats, engine) under the Cooperative Service Unit (CSU) but are however unable to repay their loans due to the high prices, particularly for bigger items such as fishing boats or engines, and low income-generating activity of fishing. Further training in modern fishing techniques shall continue to be held to enhance their capacity in addition to introduction to new/innovative technologies. The CSU shall be strengthened in terms of managerial and financial capacity. These need to be rebuild, by enabling fishers (paying particular attention to young fishers and demobilized soldiers) to acquire the fishing assets and providing the training they need in modern fishing techniques. Interventions will include ecosystem approach to fisheries management to ensure sustainability of resources and improvements in the value chain infrastructure and services to reduce post-harvest losses. Building the capacity of MMR for proper management of the sector will be essential.
5. To move from subsistence to profitable and market-oriented farming, priority should be given to: irrigation and catchment protection infrastructure development; equitable distribution of lands; agricultural services advisory strengthening; inputs

supply systems improvement; water and land conservation and management; animal genetic potential improvement and disease control; and animal feed production.

6. The main constraints for livestock intensification are: Degradation of rangeland from overgrazing; insufficient livestock watering points; shortage of supplementary feed in dry season; restrictive regulations on opening private feed plants; weak disease control systems and insufficient veterinary service; lack of qualified and professional veterinarians, animal breeders and animal nutritionists; underdeveloped export marketing.

7. Climate change adversely affects the crop and livestock production of 75% of the population who derives its livelihoods from rain-fed crop production and cattle rearing on traditional smallholder systems. Indeed, about 80% of the country receives less than 500mm of rainfall per year, and only 1.5% of the country receives more than 700 mm annually so water resources are limited. Rainfall is also erratic and droughts are becoming frequent. In recent years, the length of the main rainy season has been declining, and temperatures are increasing faster than the global average reflecting the emanating of the influence of climate change. In future temperatures are likely to increase further and though there is no clear prediction for trends in overall levels of rainfall, increased heat will increase. Smallholder farmers' livelihood resilience is still limited given that access to irrigated land is difficult; seeds are not yet adapted to rainfall variation, incentives for climate-smart practices and modern technologies adoption are not in place yet; etc. Farmers with access to wells continue to use fuel-led water pump system. The use of fossil fuel hinders the sustainability of the activity as fuel may not be available easily to farmers due to cost and availability while harming the environment. Through the COSOP, renewable energy method of irrigation shall be incorporated.

8. The marketing, aggregation and value addition of agricultural products are not enough organized and farmers cannot take advantage of them. Marketing of production and input supply is generally based on cooperatives, although some private intermediaries exist. Often, farmers sell some parts of their products to the cooperative and some directly in the market (weekly market places and merchants). Market prices vary on a weekly basis impacting the income of farmers. Overall, access to imported inputs and equipment remains difficult due to the currency constraint. Livestock and fisheries have high potential for export but affected by exchange rate, high transaction costs, lack of services including logistics and cold storage/chain system, less competitiveness of the value chain.

9. The approaches for marketing, aggregation and value addition development have not been developed yet. Moreover, they request an attractive environment for private investment, marketing infrastructures development, structured farmer organization and post-harvest handling to obtain quality products. The main motivation of farmers to intensify their production is a better farm gate price.

10. Farmers' organizations and cooperatives need to upgrade and diversify their models in order to better provide services to their members and ensure their viability. A minority of farmers are organized and some of them have already left their organization as a result of a lack of organization clear vision and objective, demand-driven service provision to members, know-how of market linkages, profitability, low capacity specifically of the Water Users Associations (WUAs), the cooperatives independence, etc.

11. The fisheries cooperative support unit (CSU) does not have a department for service delivery (business plan preparation, advice, coaching, financial service, etc.) as its structure at different level consists only of activities management. The ownership of its cooperatives members is limited because they have not been able to orient the CSU actions according to their needs: more ice, boat, engine and processing. There is also a need of the VC development coordination regarding those key interventions.

12. Access to rural financial services relies only on local revolving funds as the parastatal system (commercial and development bank) outreach is limited. There is almost no access to asset acquisition or working capital even through matching grant. This is the second limitation for investment promotion after the market access. The women federation is active in revolving fund and vocational training. In the short term, the revolving fund could be upgraded and institutionalized.

13. A rural financial sector development framework is not in place and hamper the involvement of financial institutions in the agriculture sector development to provide appropriate responses to its actors' needs. Then, its piloting and development still require demands and risks assessment, products promotion especially innovative financial products tailored for agriculture, training for financial knowledge and skills of farmers and enterprises, facilitation to women and youth formal finance access, capacity building of MFIs and SACCOs.

14. Youth and women could not take advantage of off-farm activities, which would have played key roles for agricultural and marketing service delivery, even for value chain development. However, number of youth entering the workforce are interested more in off-farm activities than the agricultural production itself due to perceived work painfulness, risk and lack of available finance. Youth are usually engaged in the national service system where they are assigned in different ministries and other government bodies according to their skills/education. The participation of youth will only be fully realised if there is a significant demobilization. But an off-farm opportunities assessment and business skills orientation and promotion should be carried out prior to the development of off-farm activities.

Policy and regulatory framework for smallholder agricultural development

15. The Ministry of Agriculture (MoA) has updated in 2019 the Eritrea National Agriculture Development Policy and Strategy, which covers rural energy, agriculture research, extension, forestry and wildlife, soil and water management, livestock and crop production. In parallel, the Five-year Strategic Agricultural Development Plan 2019-2023 sets the operational targets: (a) to increase the agricultural, horticulture and livestock output; and (b) to earn foreign currency through exports of agricultural and agro-industrial products and substitute imports. The Ministry of Marine Resources (MMR) prepared a draft Strategic Development Plan (2016-2020).

16. IFAD will remain an active member of the Agriculture, Food Security, Environment (AFE) and Climate Change Working Group (AFE-WG), in which the Government and its development partners discuss sector and cross-sector strategies, programs and implementation progress.

17. The main policy issues are related to the following topics:

- i. Enabling conditions for value chain development, in particular for high value commodities (fish, dairy and horticulture produce). The support could focusses on value chain coordination platform to ease actors' engagement; promotion of public and private investment synergy (including PPP based on the mining experience); planning of value chain upgrade and development; set-up of the requested services and capacity building.
- ii. Implementation approach of the new Small and Medium Commercial Farmers Strategy (SMCFS; May 2019) on how to orient farm enterprises in highly productive, profitable agriculture value chains; prepare the related business plan; mobilize financial resource; and develop business development services including management coaching.
- iii. Youth and women Small and medium enterprise promotion. In addition to the SMCFS, youth and women inclusion to business requires (i) access to land and other assets; (ii) income generation activities to cope with their immediate

- needs; (iii) knowledge and skills development in entrepreneurial and business opportunities; and (iv) continued management coaching.
- iv. Rural finance support would focus on the revolving fund case study preparation to orient its upgrading and institutionalization as well as its regulatory framework and development strategy formulation.
 - v. Migrant workers' remittances contribute to a secondary income surplus as a share of GDP. IFAD has acquired substantive experience in helping remittance families leverage the development impact of their own resources. Hence remittances to Eritrea remain very high and an important source of hard currency for the country both through formal channels (income tax, etc) and informal channels (relatives etc).
 - vi. Model and governance of cooperatives for better ownership and effectiveness
 - vii. Costing of the Strategic Development Plan;
 - viii. Statistics and national M&E system development;
 - ix. Land tenure reform;
 - x. Sustainable management of fisheries, aquaculture and the ecosystem;
 - xi. Vocational training organization; public staff specialization training (masters and PHD level);
 - xii. Information management system set-up.

18. IFAD Eritrea will support the MoA and MMR through analytical work, technical assistance and facilitation to translate policy orientations into regulations, institutional capacity and investments. IFAD Eritrea would also mobilize other organizations and institutions.

Public institutions and private sector

19. Non-Governmental Organizations and the Private Sector operations are currently limited and are restricted to relief and rehabilitation by Proclamation No. 145 of May 2005, entitled "A Proclamation to Determine the Administration of Non-Governmental Organizations". However, an NGO may engage in development work if it has an agreement with a specific ministry. The border stalemate has curtailed private sector operation, particularly in the construction sector where parastatals dominate.

20. The National Union of Eritrean Women (NUEW) is an autonomous non-governmental organization dedicated to improving the status of Eritrean women. The union partners with Government projects, financial and development partners to implement actions related to its advocating areas: development of women's confidence in themselves; laws that protect women's rights in the family; equal access to education and employment opportunities; improved access to adequate health care; the eradication of harmful traditional practices that endanger women's health and well-being.

21. Key institutional partners of IFAD are: (a) at the national level, the Ministry of Finance, Ministry of Agriculture, Ministry of Marine Resources (MMR), Ministry of Land, Water and Environment, (b) at the regional level – zoba and sub-zoba Administrations, the decentralized services that will be responsible for project implementation.

22. The COSOP and its project cycle involve the Ministry of Agriculture (MoA) and its national services such as the Planning and Statistics Division (PSD), the Regulatory Services Department (RSD); the National Agriculture Research Institute (NARI), the national breeding centres (poultry, rabbits and swine, horses, etc.), the National Animal Plant Health Laboratory (NAPHL), the Agricultural Extension Department (AED).

23. The Ministry of Land, Water and Environment has responsibility for the allocation of land concessions for agricultural development though areas under traditional agriculture have not yet been registered in accordance with the 1994 Land Proclamation. The Water Resources Department mandate includes establishment of the necessary legal and regulatory frameworks for water use; in this regard a new Water Proclamation has been approved in 2010.

24. Under the direction of the Governors, Zoba administrations are the lead agencies for the day-to-day implementation of agriculture and rural development interventions. These departments are replicated at the Sub-zoba level. For the community participation, each Kebabi administration has a Planning and Implementation Committee (PIC) to review and consolidate Village Development Plans, prepared by the communities, into a Kebabi Plan. At kebabi level, extension officers working closely with local communities are assigned. The AED will provide technical backstopping to the Zoba administrations, and ensure that Project implementation is aligned with GOE policy and strategy.

25. In brief, Government's departments and decentralized agencies are the main implementers of interventions. This favors alignment with GoE systems and procedures, stronger partnerships and harmonization with other development partners and other stakeholders in the sector, and optimization of partners and domestic resources.

26. However, those public implementers already face challenges in terms of implementation capacity gap, appropriateness of tools and procedures with no other alternative, limited outreach given the current staffing, limited option of capacity leveraging such service providers contracting, etc. Moreover, there is a risk of overlapping role of different institutions throughout the project cycle management (steering committee, planning, implementation, internal control, etc., which must be played by separate bodies).

27. Capacity building and empowerment expect to cope with the current implementation capacity gap but will take time and should also deal with the growth of the agriculture investment portfolio following the re-engagement of many development partners.

Appendix IV: SECAP background study

Introduction

1. The annex is the preliminary SECAP Review note that will be completed and fine-tuned during the COSOP and project preparation process.

Part 1 - Situational analysis and main challenges

Socio-economic situation and main challenges

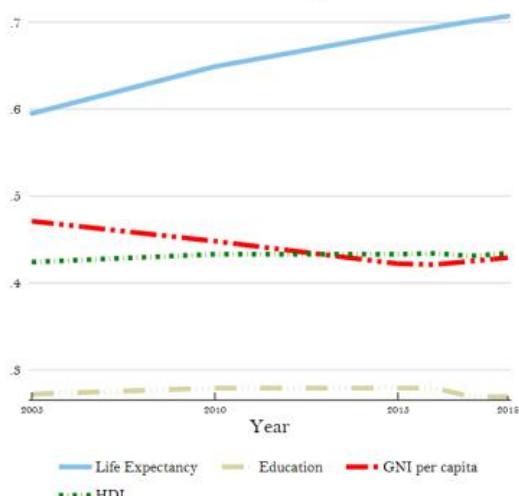

2. **Poverty and Social Indicators.** Several social indicators improved significantly during the last decades. Life expectancy at birth is 65.5 years²¹, up from 50 years a decade ago. For example, the child mortality rate has declined from 8.9% in 2000 to 4.5% in 2016 (see further details under the gender section below). The scarcity of statistics makes it difficult to establish the country's rural poverty situation but an estimated 80% of poor people live in rural areas²². For context, in spite of the incompleteness of reliable statistical information, inequality weighted metrics for Eritrea and other countries in the Horn of Africa are presented as Table 1. This shows that, in spite of the UNDP Human Development Index (HDI) in 2018 being relatively low at 0.43, that differences in life expectancy as a function of inequality are moderated compared to this group of countries. This means that material differences in equality do not necessarily translate into worse health outcomes.

Table 1. Human Development Index and Trends

	Life expectancy at birth	Expected years of schooling	Mean years of schooling	GNI per capita (2011 PPP\$)	HDI value
1990	49.6			895	
1995	52.3	3.8		2,250	
2000	55.3	4.7		2,484	
2005	58.7	5.3	3.7	2,265	0.424
2010	62.2	5.4	3.9	1,941	0.433
2015	64.7	5.4	3.9	1,633	0.433
2016	65.1	5.4	3.9	1,627	0.434
2017	65.5	5.0	3.9	1,670	0.431
2018	65.9	5.0	3.9	1,708	0.434

Figure 1 below shows the contribution of each component index to Eritrea's HDI since 2005.

Figure 1: Trends in Eritrea's HDI component indices 2005-2018

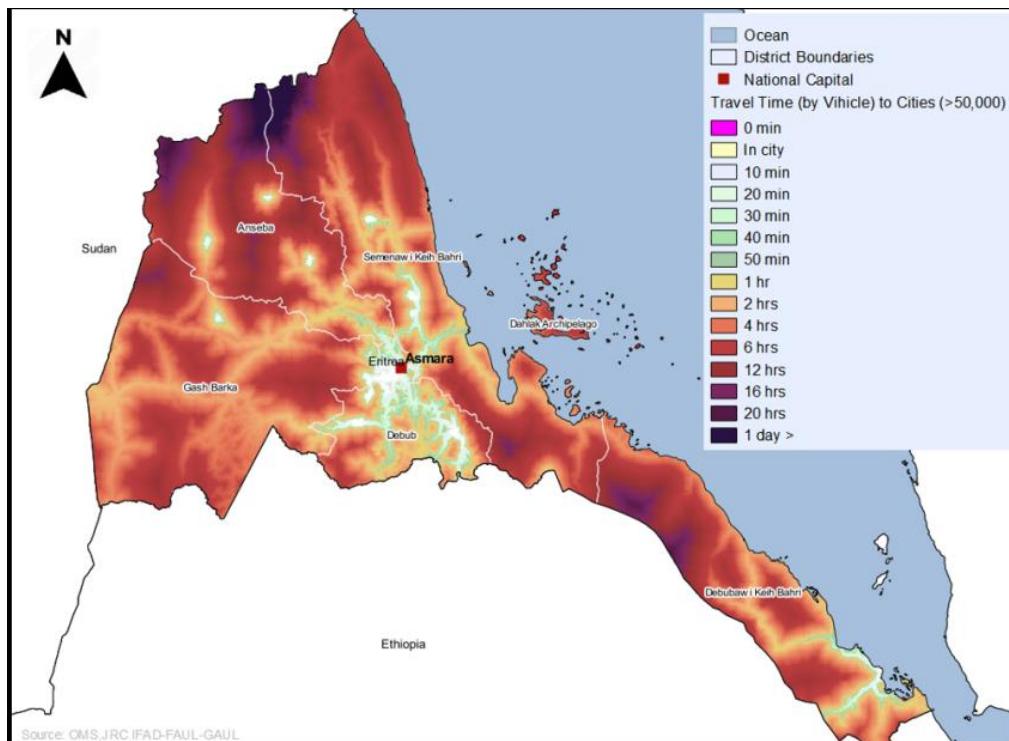

²¹ UNDP. Human Development Index. 2019

²² IFAD

3. Poverty and Vulnerability in rural Eritrea. Both poverty and vulnerability are often associated with distance to market centres and service centres. This affects, among others, the ability to acquire agricultural inputs and services, add value to and market agricultural products. As such IFAD's GeoSpatial Support Unit has created as Figure 1 a mapping of distance to urban centres of at least 50,000 people in terms of time by vehicle. In fact, depending on vehicle access it may take significantly longer for more remote populations. Vulnerability due to remoteness should be taken into account in IFADs targeting strategy for interventions designed within this COSOP period.

Time required from any point to an urban centre of over >50,000, by vehicle

4. Other dimensions of vulnerability include climate change, which is further detailed at various points in this SECAP, as well as social discrimination which could be a result of cultural factors, meaning that women and youth may have less access to inputs and opportunities. Access to land and animal draught power may also be strongly influenced by cultural norms and practices. This is particularly important given the low level of mechanization. The time burden for women in particular to collect water should not be overlooked, as well as fuelwood. There is good reason to believe that in rural Eritrea there is an environment (water, fuel) – women – nutrition nexus, all exacerbated by climate change. Figure 2 highlights the challenges in terms of safe water availability and sanitation. Hence IFAD should ensure that this is reflected in the theory of change of development and reflected in interventions designed during this COSOP period.

Figure 2. Drinking water and Sanitation coverage in Eritrea 2000 and 2015

5. Livelihoods and agriculture. Rain-fed agriculture is the predominant economic activity employing more than two thirds of the population. The sector's contribution to GDP, however, has been moderate and declining, reflecting challenges that include recurrent droughts in the Horn of Africa, and low technology farming methods. Over two thirds of Eritreans work in agriculture, but with the scarce yearly rainfall having become ever more unpredictable, reliance on rain-fed agriculture is increasingly precarious. Deforestation has reached a critical rate, leading to limited water retention capacity of soils and thus a significant decrease in the availability of water for irrigation. Soil erosion and declining soil fertility are also major problems. Due to the lack of modern and mechanised tools, there was a need to invest in better techniques and a move towards irrigated agriculture to allow for year-round farming.

6. Economy, Food Production and Food Insecurity. Eritrea has one of Africa's highest level of food insecurity, a current low adaptive capacity and a fragile environment. By virtue of its location in the Sahel, Eritrea suffers periodic droughts and chronic food shortages hampering development efforts. Even in times of good rainfall, domestic food production is estimated to meet 60-70% of the population's needs. The value of imports in 2017 amounted to US\$ 396 million, of which 40.3% are food products (mainly wheat, pasta and soybean oil)²³. There is potential for export of livestock products in particular, especially to the Middle East.

7. Gender empowerment and Gender Based Violence. Women constitute 55% of Eritrea's population²⁴ and they head 47.2% of all households (EPHS²⁵, 2010). Women have been key players in Eritrea's nation building process, from their invaluable participation in the country's independence struggle to their ongoing contributions to the development agenda. Inspired by this powerful legacy, the Government of the State of Eritrea has made the empowerment of women a national priority, and committed to a development agenda grounded in social justice and gender equality. Gender discrimination remains prevalent in some aspects of Eritrean culture, however, and women continue to be affected by prejudice²⁶. However violence against women and girls is widespread, both in the domestic sphere and in the context of the mandatory National Service (OECD, 2019). The militarization of society through conscription is an underlying structural cause of the acceptance of violence in society, particularly against women

²³ UN COMTRADE, 2017

²⁴ FAO. Country Programming Framework for the State of Eritrea. 2017 to 2021.

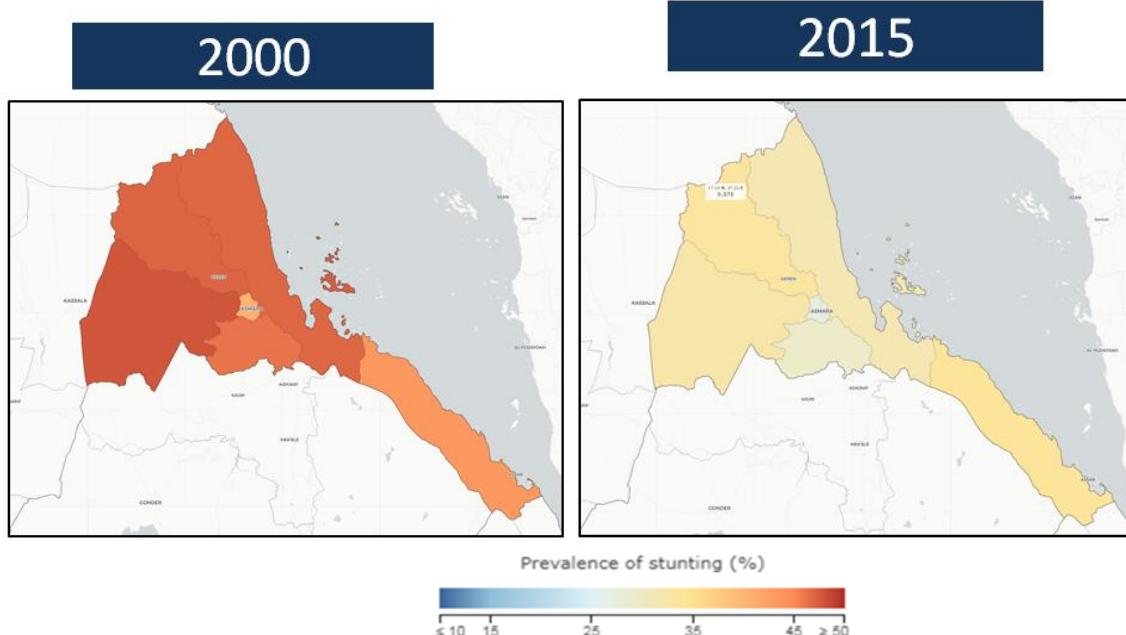

²⁵ National Statistics Office, Eritrea Population and Health Survey, 2010

²⁶ 10 Years Women in Eritrea NUEW/UNDP 2014

(OECD, 2019). On the SIGI scale, Eritrea scores 0.75²⁷ for the laws on violence against women; the legal framework covers some forms of violence against women, i.e. intimate partner violence, rape, sexual harassment (OECD, 2019). In reality, though, attitudes towards violence against women and girls still are embedded in discriminatory social and gender norms

8. **Nutrition security** is a serious challenge, due in part to frequent droughts and a high dependence on rainfed agriculture. According to WHO (2014), malnutrition is one of the greatest public health problems of Eritrea²⁸. Figure 4 shows that about half of children under 5 are not affected by any of wasting, stunting or overweight conditions. As can be seen from Figure 5, the location matters in terms of nutritional status; rural areas fare consistently worse. This distribution together with the magnitude of various measures of malnutrition warrants a focus on nutrition within IFADs investments in Eritrea. Nevertheless, as can be seen from Figure 3, there has been progress in the country between 2000 and 2015, albeit with some geographic variation (courtesy of IFADs GeoSpatial Support Unit, based on IHME 2015)

Figure 3. Spatial and Temporal Trends in Stunting in Eritrea

²⁷ The closer to 1, the higher the inequity.

²⁸ World Health Organization (WHO).

Figure 4 Metrics of Nutrition in Eritrea

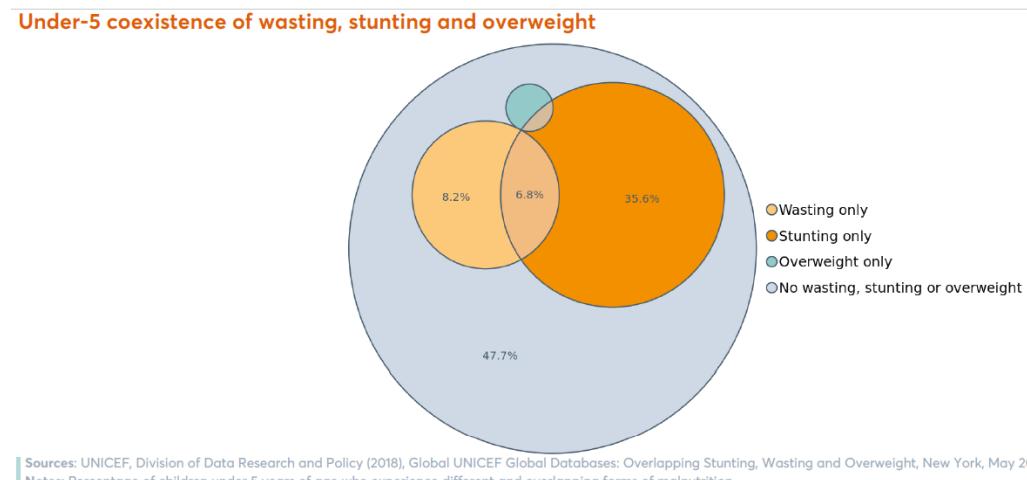

Figure 5 Nutritional differences between rural and urban areas in Eritrea

9. Specific and targeted interventions should be considered in IFADs work in the country to address these via project interventions as well as through policy engagement if possible. This should be based on specific information related to dietary needs. A snapshot at national level is provided as Figure 6. These needs would have to be further discriminated in terms of locality (local soil deficiencies, market access, purchasing power, dietary preferences, range of production possible, patterns by gender and age). This will also vary between agriculturalists, agro-pastoralists and pastoralists.

Figure 6. Dietary Needs in Eritrea in African and Global contexts

Dietary needs

Consumption of food groups and components, 2016

Source: Global Burden of Disease, the Institute for Health Metrics and Evaluation.
Notes: Men and women aged 25 and older. TMREL = theoretical minimum risk exposure level.

10. Women and Health Trends in Eritrea There have been significant improvements in health, in particular for children and child bearing women, between 2000 and 2015. This can be seen from the Figure 7: Mortality per 1,000 live births (IFAD GeoSpatial Support Unit, based on IHME 2015). There have been major improvements and these improvements have been relatively well distributed across the country. In addition, as can be seen from Figure 8, orange line, birth rates per young (15-19) women has declined over the same period and is now approaching the average for middle income counties. This is typically associated with higher 'agency' for women. Finally, as can be seen from Table 2, life expectancy of both women and men has improved over the same period, as well as the under 5 mortality rate.

Figure 7. Spatial and Temporal Child Mortality Trends in Eritrea

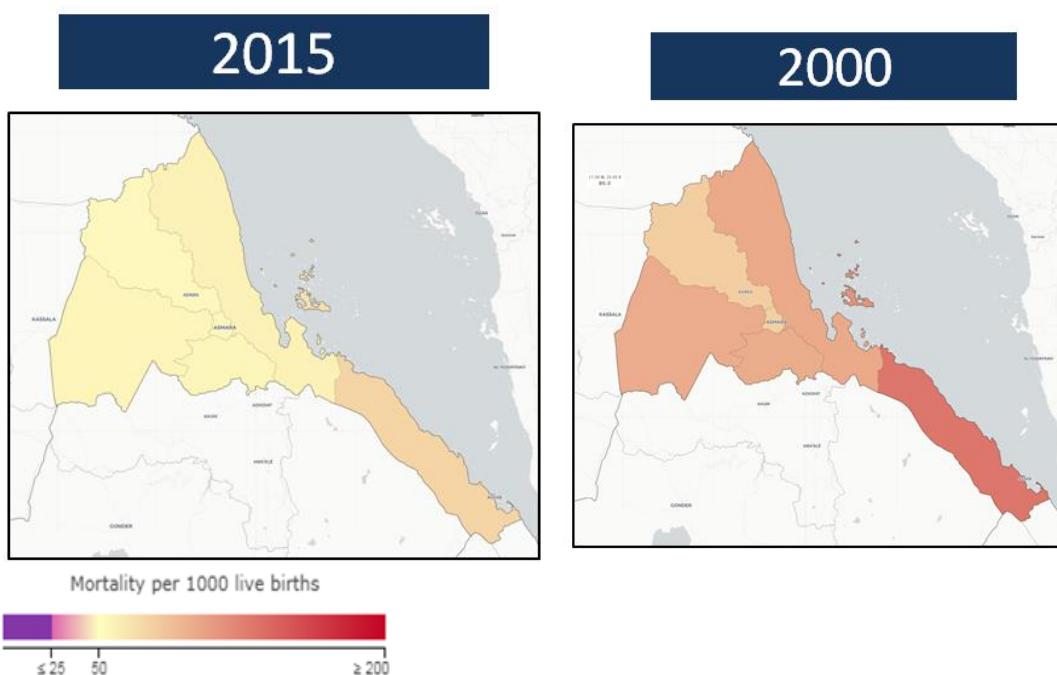

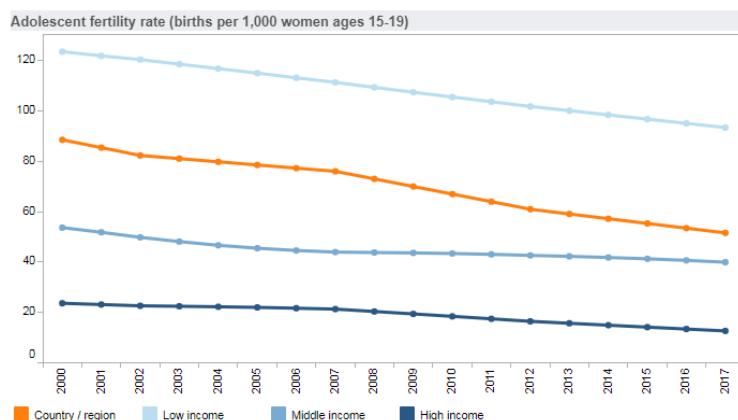

Table 2 Life Expectancy and Under 5 Mortality Trends by sex from 2000 to 2017

	2000	2017
Life expectancy at birth, female (years)	57.2	67.7
Life expectancy at birth, male (years)	53.4	63.4
Mortality rate, under-5, female (per 1,000 live births)	80.6	38.2
Mortality rate, under-5, male (per 1,000 live births)	95.8	47.8

Figure 8. Adolescent Fertility Rate trend 2000-2017 in Eritrea

11. Gender and Land ownership: The TCCE and the 1994 Land Proclamation No.58/1994 (Article 4) grants equal access to land for all citizens (OECD, 2019). Further, all citizens above 18 years of age is allowed access to land based on the usufruct principle through The Land Proclamation (OECD, 2019). All Eritreans residing in the rural areas are accorded equal access to land; both for agricultural activities and for housing. The Constitution asserts that any citizen shall have the right, anywhere in Eritrea, to acquire, own, and dispose of all property individually or in association with others and to bequeath to his heirs or legatees (Article 23(1)) (OECD, 2019). However, in reality, women's access and control over land is often affected by a number of factors including: customary law; attitudes of local authorities; marriage and the type of marriage they enter (i.e. if they enter a polygamous marriage); participation or non-participation (or their husbands) in the National Service (OECD, 2019).

12. Gender, Economic empowerment and Labour rights About 30 per cent of employed women contribute to family enterprises. There are no legal restrictions on women's rights to open bank accounts or access loans, mortgages or other forms of financial credit. Banks and other financial institutions apply financial or collateral criteria equally to women and men when providing loans (OECD, 2019). Some of the challenges women face in accessing employment are related to a lack of opportunity based on limited or no education; illiteracy; lack of mobility; social and cultural norms that vies a woman's role as being one of caring for children and elders as well as looking after household responsibilities

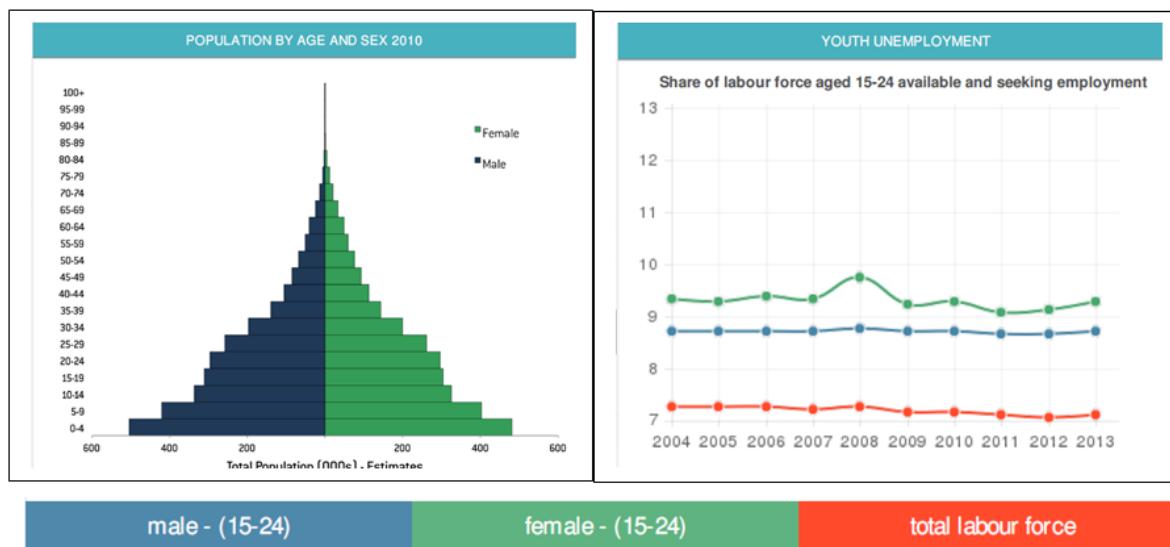

13. Education and Gender. The completion rate for both females and males for primary school education is low; however has improved between 2000 and 2017, as can be seen from Figure X. For those who do complete primary education, progression to secondary school is good for both sexes; however current statistics are not available. Over the past 10 years, NUEW has worked in partnership with the Ministry of Education to eradicate adult illiteracy, both by organizing educational resources and campaigning for the increased participation of women in the programme. Since 2003, nearly 350,000 people – 92% of them women – have participated in the adult education program. However much remains to be done: many NUEW members are still illiterate and female participation in schools remains low. See Table 3 for sex disaggregated educational statistics comparing 2000 (left) and 2017 (right).

Table 3 Education trends in Eritrea by sex from 2000 to 2017

Primary completion rate, female (% of relevant age group) ²⁸	32.2	42.6
Primary completion rate, male (% of relevant age group)	39.2	47.9
Progression to secondary school, female (%)	84.8	
Progression to secondary school, male (%)	87.6	
Lower secondary completion rate, female (% of relevant ..	22.0	30.8
Lower secondary completion rate, male (% of relevant a..	32.4	30.5

14. **Youth.** As can be seen from Figure 9, a substantial proportion of the population are under 35. Currently, as can be seen from Figure 10, youth unemployment is low, an anticipated progressively demobilization of youth will require job creation in the private sector and increased employment in agriculture for the rural youth. The Youth Development of the Commonwealth Secretariat (2016) found that Eritrea has a low Youth Development Index (YDI)²⁹ (Table 5) ranking 163 out of 183 countries with a score of 0.449 where the global average is 0.616 and the Commonwealth average is 0.606.

Figures 9, 10 Population Pyramid by Age/Sex and Youth Employment by Sex

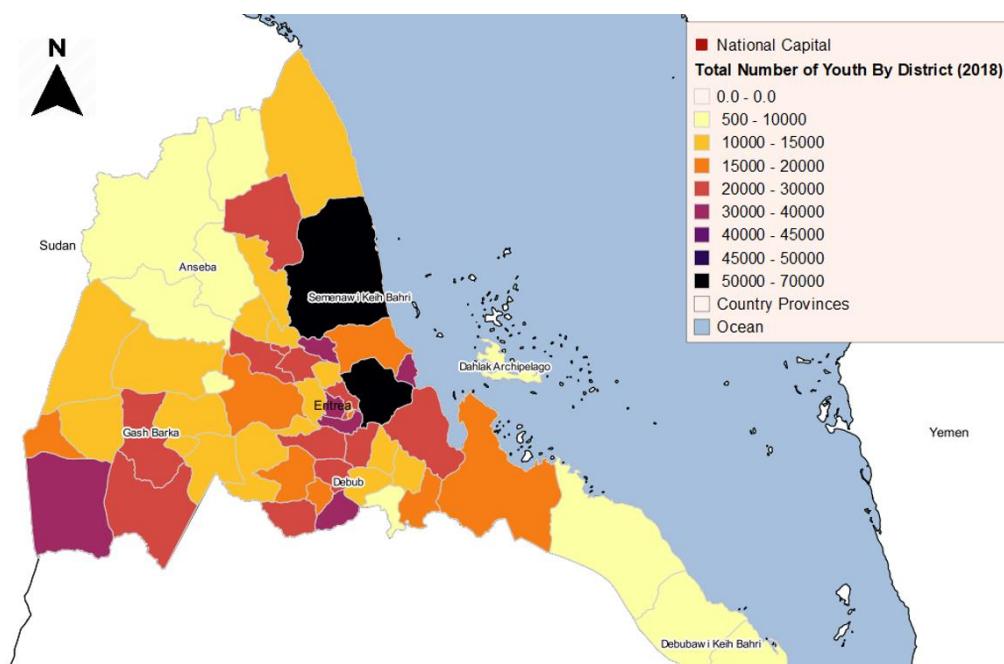

15. Labour force participation in general is high for both male and female over 15 compared to other countries in the same economic bracket. As described by Weldeab (2010), conscription typically starts after the completion of high school or college, meaning that Eritrean society is highly dependent on its youth for its national defence and reconstruction. Eritrea has a very high labour force participation for both men and women and across all ages, in particular for youth (in comparison with other LDCs). However the case of Eritrea is particular in terms of youth employment due to universal conscription that existed during the war. Estimated actual numbers and the spatial distribution of the youth in the country in 2018 is mapped as Figure 11. This is, not surprisingly, generally correlated with the population distribution. Nevertheless this may provide a basis for geographic targeting if youth is a primary beneficiary. Hence the

²⁹ "The YDI score is a number between 0 and 1. For a country to receive a perfect score of 1, it would represent the highest possible level of youth development attainable, with 0 reflecting little to no youth development. This scoring system is the same as the one that underpins the HDI produced by the UNDP's Human Development Report Office (HDTO)." Commonwealth Secretariat, 2016, p. 12.

types of activities chosen if targeting youth in the agricultural sector would need to vary by location.

Figure 11. Distribution of Youth by district in Eritrea 2018

16. **Ethnic minorities** Eritrea recognizes a number of ethnic groups.³⁰ Most of the Tigrina, mostly farmers who constitute about 55 per cent of the population -- live in the highlands, although they have also migrated to other parts of the country. The Tigre, nomadic pastoralists and the Hidarb (Cushtic Beja) (the latter who make up under 5 per cent of the population), reside in the northern, western, and coastal lowlands although many also migrated to Sudan during the Ethiopian-Eritrean conflict; they make up about 2 per cent of the population. The Rashaida reside in the northern coastal lowlands and the northern eastern coasts of Sudan and represent about 2 per cent of the population. The Afar constitute under 5 per cent of the population and live in the Debubawi Keyih Bahri Region and Ethiopia and Djibouti. They suffered greatly from the famine of the 1970s as well as the conflicts. Recent droughts have also put the Afar at risk of hunger and disease.³¹ The Saho represent 4 per cent of the population and mostly reside in the Debubawi Keyih Bahri Region and the Northern Red Sea Region of the country. At about 2 per cent of the population, the Bilen, mostly farmers, are primarily concentrated in the north-central areas, in and around the city of Keren, and south towards Asmara. The Kunama make up around 2 per cent of the population and live mostly around in the Gash Barka Region and the Nara, who make up under 5 per cent of the population live mostly around the south-western border with Sudan and Ethiopia.

17. **People living with disabilities** The 2010 Eritrea Population and Health Survey estimated the total number of persons with disabilities in Eritrea is 149 103, out of which, 96 748 live in rural areas. According to this survey, persons with disabilities constitute around 5 per cent of the country's total population (Abbay, 2015). The EPHS did not provide information on women with disabilities (Abbay, 2015). The EPHS indicates the most prevalent forms of disability as those related to vision, mental/intellectual and motion impairments (Abbay, 2015). The most prevalent forms of

³⁰ State of Eritrea. Ministry of Information. <http://www.shabait.com/about-eritrea/erina/16508-eritreas-9-ethnic-groups> (Accessed 12 January 2020)

³¹ Minority Rights Group International. Eritrea: Afar. <https://minorityrights.org/minorities/afar/> (Accessed 12 January 2020)

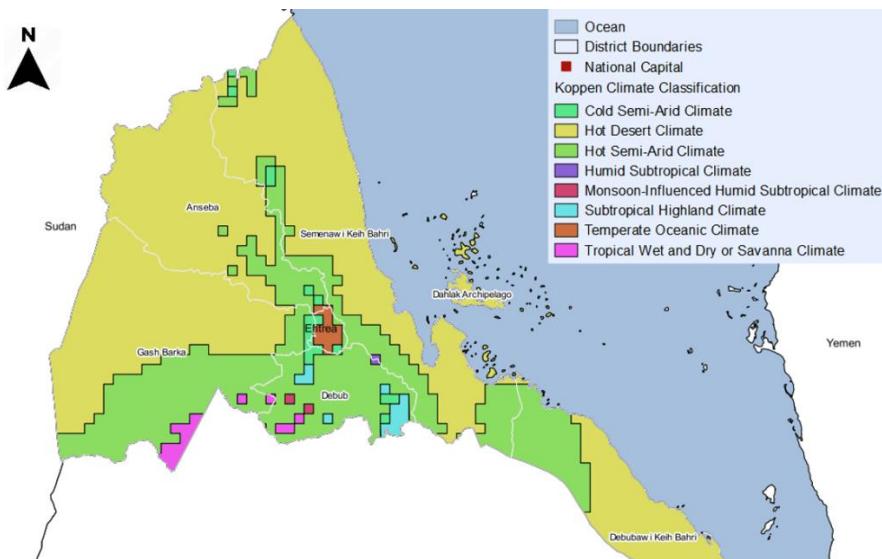

physical disabilities and mental illnesses are those caused by years of war and unexploded ordinances (Abbay, 2015).

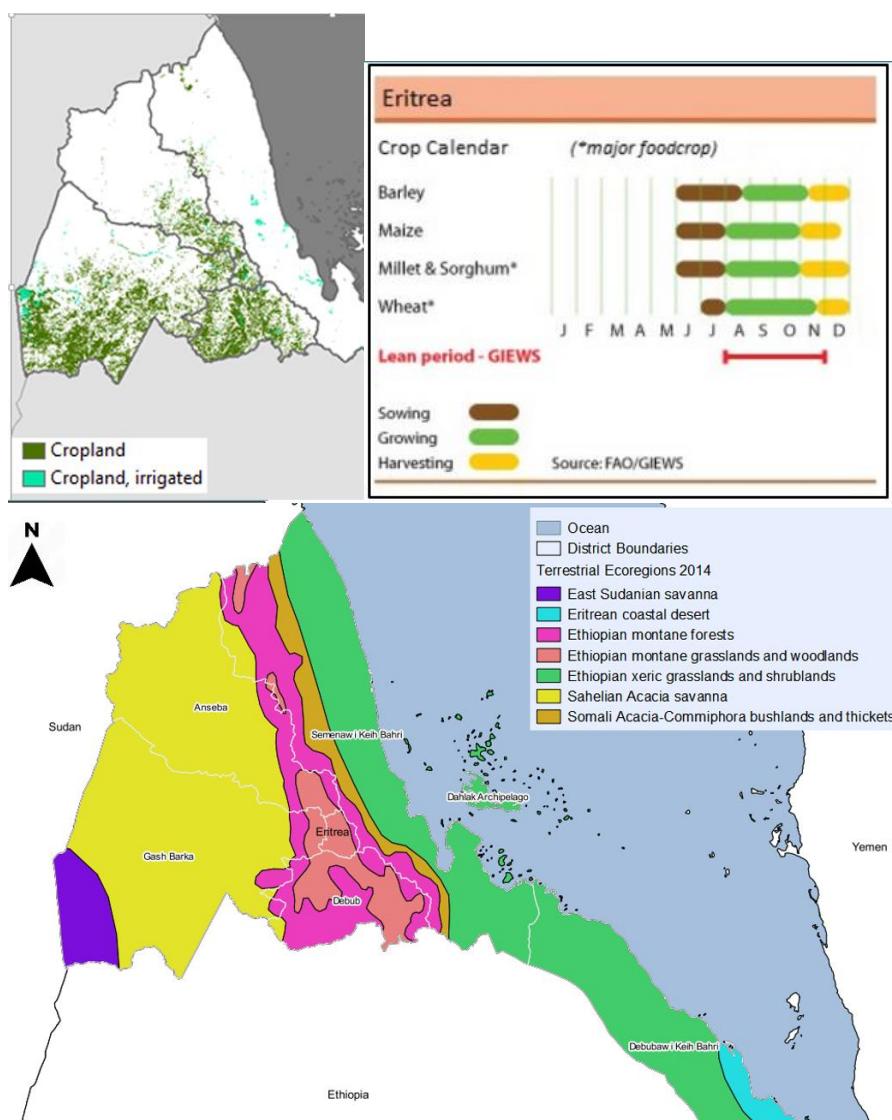

Environment and climate context, trends and implications

18. **Agriculture.** About 75% of the population derives its livelihoods from rain-fed crop production and cattle rearing in traditional smallholder systems, affected by highly variable climatic conditions and environmental degradation. Farm holdings are typically one to two ha with one cropping season. When access to irrigation is ensured, farmers have two cropping seasons, which allows producing surpluses for the market and applying a more commercial approach. Cereals include barley, wheat, teff, sorghum and millet in the highlands, and millet and sorghum in the lowlands. To move from subsistence to market-oriented farming, priority is given to irrigated agriculture and horticulture along seasonal rivers and downstream of dams, combined with watershed management and conservation measures. The livestock sub-sector consists of agro-pastoralism and pastoralism systems.

19. As can be seen from Figure 12, Climate Zones of Eritrea, the country is characterized by (Figure 13) a general semi-aridity, with arid lowlands. As result and as can be seen from Figure 14, Cropland of Eritrea, there is a relative scarcity of arable land and we note also the very small area under irrigated production. This, together with the Cropping Calendar in Eritrea, Figure 15 - showing the seasonality for the principle food crops – highlights the great potential for water development led interventions. Assuming water is available on a sustainable basis, this should inform IFADs interventions in the country. Note a "lean period" of 3-4 months. The reduction or elimination of the hunger associated with this lean period is one development outcome which could be addressed in this way.

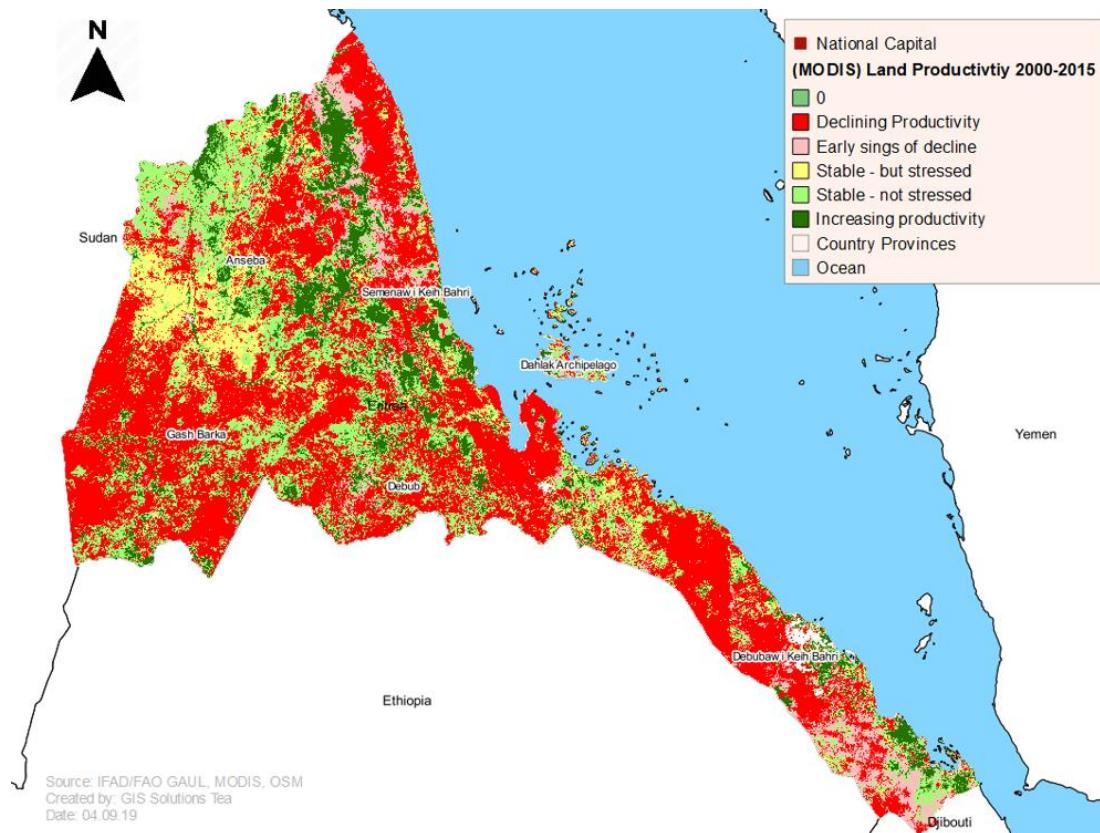

Figures 12, 13, 14, 15: Climatic zones, Agro-Ecological zones, Cropland (including irrigated areas); and Cropping Calendar of Eritrea

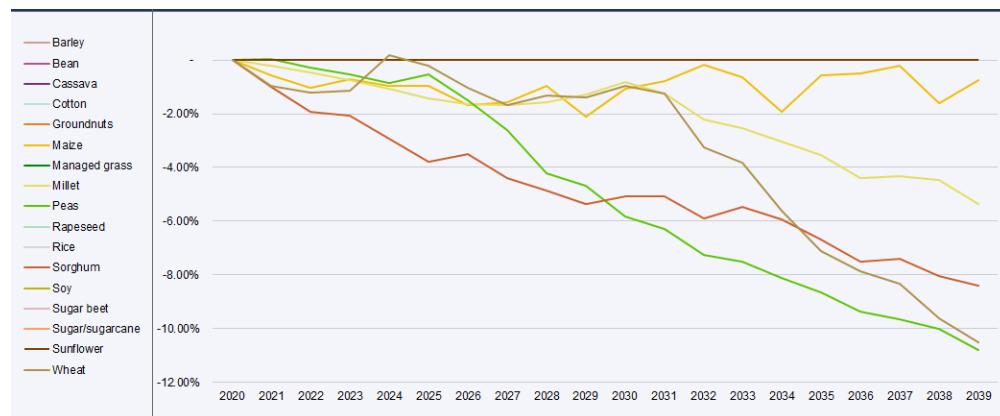

20. Agricultural, Environment and Climate. Over the last several decades there has been a trend in declining land productivity in Eritrea, as can be seen from Figure 15. This is essentially a measure of vegetation cover and health, which is taken to be a metric for land productivity. While not sufficient in and of itself, and the result of different dynamics in different places, it paints an overall picture which warrants concern. Vulnerability to potential negative impacts of climate change is considerable because of serious problems of land degradation, limited access to modern agricultural techniques, the population high dependence on precipitation and groundwater for agricultural production. Now the risk of crop failures and loss of livestock is rising (e.g. rainfed wheat has the potential for yield losses as high as 25% or more³²). As documented in the country's NAPA (2007), traditional coping strategies have been already affected by different factors (e.g. desertification) and will be increasingly disturbed by recurrent droughts, high and spatial variability of rainfall.

³² TEPRI, 2012, East African Agriculture and Climate Change: Eritrea.

Figure 15. Index for Land Productivity Change in Eritrea 2000-2015

21. The impacts of climate change will exacerbate this general picture, as can be seen from the 20 year projection from 2020 in Figure 16 below. This is based on the median risk scenario using the CARD tool developed by IFAD. As can be seen, the impact varies by crop. This should be taken into account when selecting either the crop(s) to focus on and/or the water management regime. There are further distinctions between highland and lowland agro-ecosystems which are detailed further below in Figures 17 and 18

Figure 16 Projected national average crop yield decline due to Climate Change using IFADs CARD model for the period 2020-2040

22. Nevertheless, there will be also areas of the country, where longer growing seasons and potential increases in total rainfall may increase productivity (e.g. sorghum expected to boost in the area of production and in yield²). Adaptation is therefore

essential, not only to response to foreseen changes and unpredictable changes, but also to maximise potential gains³³.

Figures 17, 18 Projected crop yield decline due to Climate Change using IFADs CARD model for the period 2020-2040 by agro-ecological zone: Tropical Highland Semi-Arid (Top) vs Semi-Arid (Below)

Figures 17,18
Projected yield decline over 20 year period with median risk climate impact scenario, by agro-ecozone and crops
Tropical Highland Semi-Arid (top)
Millet, Sorghum, Wheat (from least to greatest yield decline)
Semi-Arid zone
(bottom)
Maize, millet, peas, wheat (from least to greatest yield decline)
Source: CARD (IFAD)

23. **IFADs investments will be strengthened** in Eritrea to adapt to and mitigate CC and to prevent and reverse environmental degradation. Some of the climate smart technologies to be promoted include: a) rainwater harvesting; b) drought tolerant and early maturing crop varieties; c) drought tolerant forage and agroforestry fodder species; d) watershed conservation and management; e) afforestation ;f) mangrove rehabilitation and conservation; g) solar and other forms of renewable energy sources, and energy saving approaches etc

Cross-thematic drivers of poverty & implications for project interventions

24. Determinants of poverty: Poverty in Eritrea has many underlying causes. The economy is one of the poorest performing; according to a recent estimate, a third of the nation's GDP is comprised of remittances from Eritreans living abroad (Callender, 2017). Agriculture has under-performed, also leading to poverty. About two thirds of households are impacted by food insecurity, with most of the threat in rural areas, particularly isolated regions (Callender, 2017). Finally, limited access to education has contributed to poverty - with one of the lowest primary enrolments in the world with just over an estimated 33 per cent (2017 figures) (Callender, 2017). However, a study in Zoba Meakel by Bahta and Haile (2013) found that determinants of poverty also included: number of family members, number of children, children at school age, and rent of land of household head is statistically significant and positively related to household's poverty.

25. Dependency ratio: As noted above, family size is directly related to poverty status. Extreme poor households tend to have larger families; in a study from 2003, these averaged 6.1 persons compared to the non-poor which averaged 4.2 (State of Eritrea, 2004).

³³IFAD, 2012.

26. **Gender and age dimensions of poverty:** The World Bank Poverty Assessment of Eritrea (1996) found that women headed about 30 per cent of households, of which 18 per cent were widows. Women generally earned less than men and most poor rural women were engaged in low-paying manual labor in construction and agriculture. Female-headed households tended to have fewer household assets including livestock than male-headed households. Further, rural women were less likely to be literate – often leaving school early for marriage (World Bank, 1996).

27. **Local responses to poverty:** A 2006 report by IFAD indicated that rural communities across the country have coping strategies in place to protect the poor. In times of stress, wealthier households dispose of assets, mainly livestock, to provide loans to poorer relatives and neighbours. In times of duress, people also make use of labour-sharing including throughout the agricultural cycle where wealthier adults will assist households unable to cultivate land (IFAD, 2006).

28. High unemployment and a lack of skills are constraints for an inclusive economy in Eritrea. Over 80 per cent of students do not acquire specific job-related skills after high school leading to high youth unemployment. Additionally, access to technical and vocational education and training (TVET) at the secondary level is limited (see Figure 4 for numbers enrolled in TVET), increasing the shortage of middle level skills. In 2014, only 2.1 per cent of total secondary school enrolment was in TVET, of which only 25 per cent were women (African Development Fund, 2015).

29. In 2015, over 54 per cent of men, particularly youth, were either unemployed or under-employed in seasonal agricultural work or as casual labourers. The need to skill up youth was identified for the formal and non-formal sectors, including entrepreneurship skills to facilitate the start-up of small businesses, e.g. in agriculture, textiles, and footwear (African Development Fund, 2015). The government also is trying to modernise agriculture to provide improved economic opportunities including youth who are tempted to migrate to Europe and other countries to seek other options (Magidu, 2018).

30. In short, there are complex reasons for poverty and malnutrition in Eritrea, as well as some specific causal explanations for specific potential target groups of IFAD/GoE interventions. Some of these are beyond the scope of interventions via the project modality and over a COSOP timeframe, such as educational levels, but can nevertheless be mitigated through specific actions such as vocational training. There are some technical interventions which can be envisioned however certain outcomes will be contingent upon engaging in policy dialogue even if sectoral if policy barriers can be identified which are subject to change and which are critical.

Part 2 -Institutions and legal framework

Institutions

31. **Gender.** The National Union of Eritrean Women (NUEW) is advocating women's equal participation and is present at all levels of society. To raise women's awareness of the culture of gender discrimination prevalent in Eritrea, NUEW has conducted a number of political advocacy campaigns and educational interventions, including special courses and capacity building programmes for women in leadership positions. Overall, more than 2.9 million people – including 90% women – have been reached through nearly 25,000 meetings over the past 10 years. These have included political advocacy meetings, seminars, short courses and workshops covering a range of topics, including gender mainstreaming, women in decision-making roles and women's participation in elections, among others.

32. **Youth.** The National Union of Eritrean Youth and Students (NUEYS) is a national youth organization with the mission to "cultivate and produce capable youth by promoting and strengthening Eritrean youth in all aspects of national, regional and international development processes". Its main functions are: (1) Advocacy and lobbying, ensuring youth needs and issues are raised with decision-makers, and; (2)

Service provision, temporarily providing services to youth that are in scarce supply, such as establishing and running youth health centres around the country.

33. **Agriculture.** Key institutional partners of IFAD are: (a) at the national level, the Ministry of Agriculture (MoA) and its national services such as the Planning and Statistics Division (PSD), the Agricultural Extension Department (AED), the National Agriculture Research Institute (NARI), the national breeding centres, the National Animal Plant Health Laboratory (NAPHL).

Policy and regulatory frameworks

34. Eritrea has signed onto a number of international agreements, treaties and commitments including the development framework in support of development, reducing poverty, and improving the lives of the population including the 2030 Agenda for Sustainable Development and the Sustainable Development Goals (SDGs). Eritrea has also signed up to the African Union Agenda 2063, which include goals and targets that align with the Government's Self-Reliance Policy and Development Agenda (UN Eritrea, 2017). The Government's Interim Poverty Reduction Strategy Paper (I-PRSP) (GOE, 2003) lays out a macroeconomic framework and steps to create the conditions for resuming rapid economic growth, and policies and programs for poverty reduction.

35. The vision of the Government of the State of Eritrea is operationalized in the National Indicative Development Plan 2014-2018, which has four pillars, namely (i) basic social services; (ii) environmental sustainability, resilience and disaster risk management; (iii) public sector capacity development; and (iv) inclusive growth, food and nutrition security, and sustainable livelihoods.

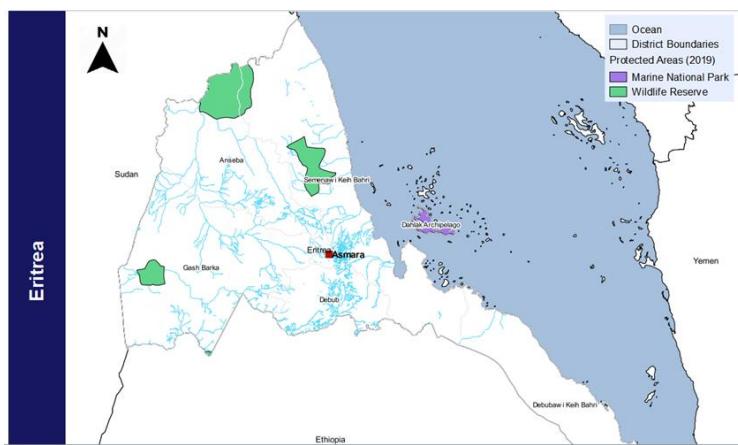

36. **Youth.** There is no governmental authority that is responsible for youth but however incorporated into each sector's priorities (education, health, etc). As described by Weldeab (2010), government agencies that deliver programmes to youth often do so without a specific youth strategy in mind. In some limited cases, government bodies such as the Ministry of Health have sought the input and assistance of youth in the design of their programmes. In one instance, the Ministry partnered with the National Union of Eritrean Youth and Students (NUEYS) because of their success with grassroots HIV/AIDS awareness.

37. **Gender.** The Government adopted several policies supporting equal opportunities, namely the National Education Gender Policy and Strategy (2003), National Policy on Gender (2015), National Gender Action Plan (2015-2019), and a gender awareness strategy of communities. In terms of key institutions, The National Union of Eritrean Women (NUEW) is advocating women's equal participation and is present at all levels of society. The National Union of Eritrean Women(NUEW) was established in 1979 with the support of the Eritrean People's Liberation Front. In its present form, NUEW is an autonomous non-governmental organization dedicated to improving the status of Eritrean women. The organization's mission is to ensure that all Eritrean women confidently stand for their rights and equally participate in the political, economic, social and cultural spheres of the country and share the benefits. NUEW is a member of ECOWAS and other international organizations.

38. **Environmental agreements.** Eritrea has ratified the UN Convention to Combat Desertification (UNCCD) and UN Framework Convention on Climate Change (UNFCCC). Several biospheres have been declared (see Figure 19) across different areas of the country. Considerable progress has been made in particular in combating desertification and towards its Land Degradation Neutrality target.

39. With respect to the environment, the National Environmental Management Plan (NEMP) is the primary policy document. Other key documents are the National Environmental Impact Assessment Procedure and the Integrated Water Resources Management Action Plan (2009-2016).

Figure 19. Protected Biospheres in Eritrea

40. More specifically on climate change, and as per the **Nationally Determined Commitment** (NDC) the GoE is committed to reduce the CO₂ emissions from fossil fuels by 23.1% in 2020, 30.2% by 2025 and 39.2% by 2030 visa-vis to the reference year. If additional support is solicited, it can be further reduced by 36.4% in 2020, 61.1% by 2025 and 80.6% by 2030." "Unconditional mitigation scenario: With internal resources Eritrea can implement its unconditional scenario reaching 1.3 MtCO₂ in 2020, 1.6 MtCO₂ in 2025 and 1.9 MtCO₂ in 2030from fossil fuel CO₂." Furthermore "Conditional mitigation scenario: With external assistances Eritrea can implement its conditional scenario reaching 1.1 MtCO₂ In 2020, 0.9 MtCO₂ in 2025 and 0.6 MtCO₂ in 2030from fossil fuel CO₂

41. Finally, Eritrea intends to raise the share of electricity generation from renewable energy to 70% of the total electricity generation mix (wind, solar, geothermal) [by 2030].

Programmes and partnerships

42. Core national partners of IFAD are the Ministry of Finance, and the two lead ministries for project implementation, namely the Ministry of Agriculture (MoA) and the Ministry of Marine Resources (MMR). Other essential partners are the Ministry of Land, Water and Environment (MoLWE), the National Union of Eritrean Women (NUEW) and the National Union of Eritrean Youth and Students (NUEYS).

43. Current key development partners of IFAD in Eritrea include the European Union (EU), UNDP, FAO, African Development Bank (ADB), Global Environmental Fund (GEF), OPEC Fund for International Development (OFID) in order to attract more co-financing, and maximize synergies and complementarities of operations. Potential partners would be World Bank, World Food Program (WFP) and the Italian Cooperation, which are in the process of renewing their partnership with the Government. UNDP, in partnership with FAO, will implement a US\$ 40 million program in agriculture that will be financed by EU.

Part 3 - Strategic recommendations

Lessons learned

44. There is a the need to further enhance IFAD's Country Programme with respect to environmental management and climate change mitigation, while prioritizing future interventions in areas where the Fund has developed a lead position and comparative advantage vis-à-vis other sectors of the economy in Eritrea (i.e. agriculture, agro-pastoralism, horticulture and fisheries sectors) and generated knowledge over the years.

45. Women empowerment is key to addressing household food security and nutrition goals but needs to pay attention to social – cultures conditions to quickly foster women' economic participation. The development of small livestock (sheep, goats and poultry) have been very effective in the economic recuperation of destitute, single-parent and

woman-headed households. No gender-disaggregated data are available to measure outreach to women.

Scenarios and risks

46. **The IFAD Country Strategy Note** (2016) outlines a number of risks including:

i) country fragility linked to critical environmental issues, increased climatic variability, recurring drought, flash flooding, and sea level rise; ii) limited institutional implementation capacity within government systems, procurement delays, limited availability of service providers, etc.; iii) ineffective fishing technology leading to fisheries over-exploitation; and iv) potential risks of siltation that can endanger dams/reservoirs and the livelihoods of fishers.

47. **Lack of economic opportunities for youth:** The lack of economic opportunities for rural youth, and the ensuing challenge of migration to urban areas and outside of Eritrea is a scenario that is likely to affect the country over the short to long term and will likely increase as climate change impacts increasingly impact rural areas and populations.

48. **Gender and social inequality** are long term challenges and poverty determinants that need to be addressed to achieve the SDGs and other national and global commitments. While policies and programmes are needed as well as translation of these on the ground, behavioural changes are also needed at all levels. Social and cultural norms that discriminate against and limit the opportunities of girls and women, marginalized youth, ethnic minorities, and people living with disabilities need to be addressed in a cross-sectoral fashion including in agriculture and rural development.

49. **Price of staple foods:** The price of staple foods in Eritrea and the East African Region (WFP, 2018) is an issue that affects the country in the short, medium, and long term depending on what happens due to the impacts of climate change, world markets, and other pressures on agriculture, food, and trade. Rural infrastructure and transport can also affect prices. When the prices of staple foods rise above average, they erode the purchasing power of poor market dependent households, leaving them more vulnerable in lean times (WFP, 2018).

50. **Institutional and human resources capacity constraints:** The country continues to experience institutional and human capacity gaps across all sectors in both public and private institutions (ADB, 2017). This is not an issue that can be resolved in the short-term, but one that demands investment in education and training institutions over the long term as well as developing the economic opportunities for those skills to be used.

51. **Inadequate infrastructure:** Deficiencies in agriculture and water and sanitation infrastructure continue to undermine the country's inclusiveness by slowing the transformation of the Eritrean economy, which is heavily dependent on the mining sector (ADB, 2017).

52. **A young private sector:** The country's infrastructure challenges, a dominant public sector, restrictive economic and financial policies, skills gaps and miss-match, continue to undermine the existing potential in agri-business and agro-processing, manufacturing enterprise growth and employment creation and, therefore, curtailing the private sector development.

Strategic orientation

53. the Government has requested the UN Country Team (UNCT) to update the UN Partnership Framework to reflect the 5-year operational plan of the national development strategy. This UN Strategic Partnership Cooperation Framework (SPCF) would focus on inclusive growth and national capacity enhancement for sustainable development. The IFAD Country Programme could contribute to pillars 2 (environmental sustainability, resilience and disaster risk management) and 4 (inclusive growth, food security and sustainable livelihoods).

54. The COSOP will also contribute to achieving the following Sustainable Development Goals (SDGs): Eradicating extreme poverty (1), Ending hunger, guaranteeing food security, improving nutrition and promoting sustainable agriculture (2), Achieving gender equality and empowering all women and girls (5), Fighting climate change and its repercussions (13), Preserving and restoring terrestrial ecosystems (15).

Strategic actions and targeting

55. The Project will contribute to the Small and Medium Commercial Farmers Strategy. The SMCFS identified the following main challenges³⁴ of agriculture and livestock: (a) lack of value chain facilities, infrastructure, technology; (b) inadequate or limited human and financial resources; (c) weak institutional capacity; (d) insufficient access and linkage to markets. In response, the SMCFS proposes two strategic axes, namely: (i) Technological Support; (ii) Creating an Enabling Environment.

56. **Priority strategic areas**, with a focus on innovation, will include: (a) water conservation and advanced irrigation technologies; (b) job creation for youth and SME development, (c) renewable energy, (d) nutrition improvement, (e) sustainable financial services development; (f) food safety and certification. Their promotion will be implemented through partnerships with international research centres and with other development partners.

57. **Priority beneficiaries** will be: (i) rural poor smallholders involved in subsistence agriculture, horticulture and small livestock-keeping; (ii) farmers and youth agribusiness enterprises or farmer organizations, such as cooperatives and small agribusiness groups; (iv) women, especially female-headed households; and (v) youth (18-35 years), in particular IDP and demobilized soldiers.

58. **The target group** is represented by smallholders cultivating only rainfed crops, have food deficits even in good years. This is largely due to low yields resulting from low level of technology, late ploughing (because they have no draught animals), small holdings, and lack of livestock. Specific target groups are: (a) households cultivating small areas of rainfed crops (<2 ha) or small areas of irrigated crops (0.1-0.25ha); (b) pastoralist households with a maximum of 5 cattle and 10 sheep/goats; (c) resettled households (IDPs, expellees, returnees, demobilized soldiers); and (d) woman-headed-households (WHHs). WHHs constitute over 40% of households in the Project area.

59. **Targeting strategy.** The needs identification will be undertaken at the village level by the Sub-zoba and Kebabi administration on the basis of the guidelines provided by the NPCU. Special efforts will be undertaken to reach out to youth and women through a combination of self-targeting, direct targeting, facilitation and empowerment measures.

60. **Gender strategy.** Gender will be mainstreamed in implementation with a focus on supporting women to overcome constraints including access to assets, training and inputs. The MoA has put in place a gender strategy. The Project will help women to: (i) access irrigation schemes; (ii) enhance their skills in irrigated farming, with particular reference to production of high value crops (FFS for women); (iii) enhance women's representation in cooperatives and strengthening of their leadership capacity; (iv) access financial support; (v) nutrition-sensitive agriculture and home gardens for women. In addition, the gender approach will be based on: (a) quotas if required, at least 50% of women among beneficiaries of the various activities; (b) monitoring of women participation in activities; (d) gender training for programme implementers.

61. **Youth strategy.** The interventions will create rural job opportunities, in particular for rural youth in irrigation schemes and upstream/downstream value chain development opportunities. The Project will prioritise young people for training related to the development of skills and capacities in cooperatives, post-harvest handling and marketing.

³⁴ MoA. SMCFS, 2019.

Appendix V: Resilience assessment note

Building resilient agriculture, livestock and fisheries sub-sectors

1. IFAD is providing support to the Government of the State of Eritrea to build sustainable and resilient agricultural, livestock and fisheries sub-sectors, which are key drivers for the country to reduce rural poverty and to follow its development path. After years of conflict, Eritrea is gradually shifting from post-conflict to development in a context that is highly vulnerable to economic, environmental, climate and other shocks. Eritrea has a Country and Policy Institutional Assessment (CPIA) score of 2.0³⁵.
2. According to IFAD, the four main entry points for building resilience are: (i) gender and youth empowerment; (ii) institution-building; (iii) food and nutrition security; and (iv) natural resources management (NRM). These four entry points are particularly prevalent in the COSOP and also in the proposed Integrated Agriculture Development Project.
3. **Poverty context, gender and youth.** Eritrea's population is estimated at 3.29 million people³⁶, with an annual growth rate of 2.7%. No poverty statistics are published. The UNDP Human Development Index (HDI) remains low at 0.44 and ranks Eritrea 178th out of 189 countries, due to the impact of the long years of war and sanctions, widespread rural poverty and the dependence of about 65-70% of the population on small-scale agriculture, with limited land resources in difficult agro-climatic conditions. About 82% of the rural population owns agricultural land³⁷.
4. Eritrea faces severe food and nutrition security challenges. The malnutrition situation among the under five-year old children portrays severe burden of stunting (50.3%), underweight (38.8%), and wasting (15.3%)³⁸. Causes are the chronic failure to receive sufficient and diversified nutrition, including micronutrient deficiency. Eritrea also scored poorly (33.8) on the Global Hunger Index³⁹ in 2014.
5. **Agriculture, livestock and fisheries.** Eritrea is situated along the western coast of the Red Sea with a coastline of over 1,200 km and has a total land area of 124,000 km². Eritrea has certain agro-ecological diversity: the Highlands are sub-humid to semi-arid; the Lowlands are arid with minimum rainfall, which allows the development of various production systems.
6. Agriculture is one of the main economic activities in the country, having two main farming systems. Agro pastoralism and pastoralism is practiced in arid and semi-arid areas, being mainly the east and west lowlands, whereas sedentary mix crop-livestock farming is practiced in the highlands and midlands. Challenges to the sector include: considerable climate variability; soil erosion and declining soil fertility as well as unpredictable water (frequent droughts) and energy supply challenges. Access to irrigation (typically 0.1 – 0.25 ha per household) allows for two or three cropping seasons and production of surpluses for the market. Livestock is an important sub-sector since 49% of the total land area is suitable for grazing whereas only 17% is suitable for cropping. Crop and livestock productivity is generally low, compared to potential yield.

Drivers to enhance Eritrea's resilience

7. As resilience in the context of Eritrea is particularly a multidimensional concept,

³⁵ Assesses the quality of a country's present policy and institutional framework. For each criterion, countries are rated on a scale of 1 (low) to 6 (high). World Bank

³⁶ Government of the State of Eritrea

³⁷ EPHS2010

³⁸ EPHS2010

³⁹ International Food Policy Research Institute (IFPRI), 2018

the transition towards sustainability and resilience requires different operational responses. The dimensions of resilience in the context of agriculture and fisheries in Eritrea have been tackled in the COSOP and the IADP concept note (CN) in the following way:

8. **Gender and youth empowerment** have been mainstreamed in the COSOP and the CN to make them as inclusive as possible with regards to women and youth participation. This will be done by building further on partnerships established by previous IFAD projects, namely with the National Union of Eritrean Women (NUEW) and the National Union of Eritrean Youth and Students (NUEYS), and by working together with other UN partner organizations, particularly IFAD's partnership with FAO and WFP, which are working on resilience.
9. Women will be supported through (i) access irrigation schemes; (ii) enhanced skills in irrigated farming, with particular reference to production of high value crops (FFS for women); (iii) enhanced representation in cooperatives and leadership capacities; (iv) access to finance; (v) nutrition-sensitive agriculture and home gardens for women; (vi) gender training for programme implementers.
10. Rural men and women, aged 18-35, will systematically benefit from rural employment opportunities, e.g. in irrigation schemes and upstream/downstream value chain development opportunities; cooperatives and SMEs promotion. Young people will be prioritised for training in cooperatives, post-harvest handling and marketing. Investment projects will collaborate with the NUEYS.
11. **Natural resource management** has always been a key concern in IFAD interventions in Eritrea, in particular: (a) to reduce the dependency on rain water and to promote water-efficient irrigation; (b) to support land and water conservation measures; (c) to identify and promote innovative technologies and build the institutional capacity. Climate smart practices technologies include a broad range of technologies, including rainwater harvesting, drought tolerant and early maturing crop varieties, drought tolerant forage and agroforestry fodder species, watershed conservation and management, afforestation, mangroves rehabilitation and conservation, solar and other forms of renewable sources of energy.
12. **Food and nutrition security** is essential given (a) the country's structural dependence on imports, in particular cereals (wheat, sorghum, vegetable oil, sugar); (b) the low productivity of rainfed agriculture, which does not allow to produce sufficient surpluses and also leads to seasonal hunger; (c) the malnutrition statistics. The three dimensions of food and nutrition security will be targeted.
13. Specific emphasis would be on: (a) nutrition-sensitive agriculture, horticulture and aquaculture, including distribution of nutritious and drought tolerant varieties, high-quality seeds and fingerlings; (b) community awareness and sensitization campaigns on the importance of nutritious food (vegetables, pulses, fruits, dairy and fish); (c) promotion of good practices in post-harvest handling and storage, food safety standards and food preparation; (d) access to safe drinking water.
14. **Institution building** will include the following dimensions: (a) enhancing key institutions that are involved in project implementation (extension, research, breeding centres) with respect to infrastructure and equipment; (b) enhancing human resources at different levels (capacity building, knowledge management, South-South and Triangular Cooperation); (c) enhancing social capital of youth groups and farmers' organizations; (d) developing the building blocks and linkages for value chains which is likely to give rise to more sustainable results in the long term, as the benefits of better value chain structuring provide incentives for all actors to continue to invest in value chain institutions. Institutional

capacity building will be provided both at national and regional levels.

15. To further reduce the institutional risks, mitigation measures have been mainstreamed throughout the COSOP. Specific attention during design and implementation will be given to (i) preparation of the implementation manual during design, in close collaboration with the national team; (ii) programming and M&E; (iii) analysis of FM and procurement, as well as capacity building (including linking up with regional grants); (iv) provision of implementation support (financial management, procurement) and mobilization of international technical assistance.

Appendix VI: COSOP preparation process

1. The COSOP preparation process featured a participatory exercise that saw the active involvement of a broad range of stakeholders. The process was led by the IFAD Country Director (DC) for Eritrea in collaboration with FAO's Investment Centre Division (DPI). The COSOP Delivery Team (CDT), established by the Country Programme Manager (CPM), both at IFAD and in Eritrea, contributed to the entire process. The in-country COSOP Delivery Team (CDT) comprised the officials of Ministries of Agriculture and Marine Resources in addition to the national coordinating officers from both National Agriculture Project (NAP) and the Fisheries Resources Management Programme (FReMP).
2. The following consultations were undertaken at national level (i) meetings with the key government ministries involved in the proposed COSOP thematic areas, in particular the Ministry of Finance, the Ministry of Agriculture, and the Ministry of Marine Resources; (ii) the development partners, including FAO, WFP, EU, Italian Embassy, UNDP; (iii) the National Union of Eritrean Women, the National Union of Eritrean Youth; (iv) the Zoba and Sub-Zoba administration, as well as other implementing entities; (v) the beneficiaries at the grassroots levels. The Government of Eritrea led the discussion on the future IFAD support to the country and a new project pipeline, subject to the PBAS of IFAD. This participatory process aimed to ensure that strategic public and non-public stakeholders provided substantive and prioritised inputs and engagement, at various stages of the COSOP formulation.
3. A COSOP formulation mission in Eritrea took place from 8th to 26th July 2019. The mission also conducted field visits to the Zoba Maekel/Central, Debub/Southern, Anseba and Northern Red Sea Region to visit the achievements of the NAP and FReMP projects, to consult beneficiaries and to exchange with implementing entities of these projects.
4. The draft COSOP has been shared with the Government and the UN Resident Coordinator in September 2019. Their feedback has been incorporated in the COSOP.
5. The draft COSOP was submitted for in-house review at IFAD. This process involved a peer review, a review by the Regional Economist, the Network of Regional Economists, and a Quality Assurance Group (QAG) process managed by Operational Strategy and Policy Guidance Committee Secretariat (OSC).

Composition of the COSOP Delivery Team

6. The in-house component of the CDT consisted of the below IFAD and FAO staff members (Table 1). Table 2 presents the composition of the extended in-country CDT, which includes representatives from key government agencies involved in the IFAD country programme, coordinators of IFAD supported projects in the country, key external development agencies, and resource persons.

Table 1: COSOP Delivery Team

Technical Division	Name	Title
East and Southern Africa - HQ	Sara Mbago-Bhunu	Regional Director
ESA-HQ	Shirley Chinien	Lead Regional Economist
ESA-Addis Ababa	Ulac Demirag	Country Director
ESA-Addis Ababa	Joseph Nganga	Country Programme Officer
FAO / DPIA	Frans Goossens	Senior Economist
FAO / DPIA	Haingo Rakotondratsima	Agricultural Economist
ESA-Addis Ababa	Dagim Kassahun	Administrative Assistant
ESA-Asmara	Meala Tesfamichael	Consultant
ESA-HQ	Sylvia Frattini	Programme Assistant
ESA-Nairobi	Zainab Semgalawe	PTL
ESA-HQ	Bernadette Mukonyora	Programme Analyst
Environment, Climate, Gender and Social Inclusion (ECG)	Eric Patrick	Regional Climate and Environmental Specialist
Office of General Council (LEG)	Purificacion Tola	Counsel
Financial Management Division	Virginia Cameron	Finance Officer
Procurement Division	Marie-Claire Colaiacomo	Senior Procurement Officer
Environment, Climate, Gender and Social Inclusion (ECG)	Steven Jonckheere	Senior Technical Specialist, Gender and Social Equality
PMI-HQ	Richard Abila	Fisheries and Aquaculture Specialist

Table 2: Extended In-Country Programme Management Team

Organization	Name	Title
Minister of Agriculture	H.E Arefaine Berhe	Minister of Agriculture
Ministry of Marine Resources	H.E Tewolde Kelati	Minister for Marine Resources
Ministry of Finance	Mr. Efrem Tesfai	Director, International Cooperation
Ministry of Agriculture	Mr. Heruy Asghedom	Director General, Agricultural Extension
Ministry of Agriculture	Mr. Bereket Tsehay	Director, Planning and Statistics, Ministry of Agriculture
Ministry of Agriculture	Mr. Misghina Ketema	National Programme Coordinator-NAP
Ministry of Marine Resources	Mr. Tewolde Woldemikael	National Programme Coordinator-FReMP
UN	Ms. Susan Ngongi	UN Resident, Humanitarian Coordinator
UNDP	Mr. James Wakiaga	Resident Representative
FAO	Mr. Saeed Bancie	Resident Representative, FAO
WFP	Mrs. Miriam Tesfaldet	Officer in Charge

Appendix VII: Strategic partnerships

Strategic Area	Rationale	Expected Outcome/ Result	Partner	Strategic Objective contribution	Monitoring/ reporting
Policy engagement	The SMCFS strategy requires a value chains development approach which is new in Eritrea	Enabling conditions for value chains development in place	FAO Multi-lateral Institutions	SO2	# of value chain study and platform supported # Key Private Sector enterprises engaged in the coordination platform
	Lack of rural finance development and regulatory framework	Rural finance development and regulatory framework piloted and rural finance products improved	UN Multi-lateral Institutions	SO2	Participatory process supported Development Strategy and regulatory framework formulated
	Lack of specific support to youth and women Small and Medium Enterprises (SMEs) and cooperatives development	the promotion strategy of youth and women Small and Medium Enterprises (SMEs) and cooperative piloted	UN Multi-lateral Institutions	SO2	Related capacity (youth & women inclusion) of Business Development Services and vocational training providers built
	Very limited number of cooperative models which are unprofitable	Profitable and viable cooperative and SMEs providing appropriate services to farmers	FAO	SO2	Diversified and profitable models and governance of cooperatives and SMEs developed
	Issues of outreach and response to farmers' specific needs of current services delivery	Greater and diversified capacity of services delivery	FAO	SO1	# of new delivery mechanisms developed
Scaling up	IFAD best practices available on: improved irrigation, catchment protection, production and distribution of improved seeds, animal feed production, etc.,	Increased impact of agricultural development on poverty, food security and nutrition.	Multi-lateral Institutions	SO1	# of partners replicating and upscaling IFAD best practices
Coordination support	The current implementation capacity, tools and approaches gaps require Technical Assistance (international and national)	Capacity of implementing departments and agencies Built Outcome indicators of the COSOP and contribution to SDGs measured	All	All	Capacity of key departments and agencies strengthened Risks anticipated and managed Implementation challenges overcome

Strategic Area	Rationale	Expected Outcome/ Result	Partner	Strategic Objective contribution	Monitoring/ reporting
		Analysis and lessons learnt drawn form M&E			
Knowledge Management and innovation	Limited access to innovation and knowledge products due to the past Country context Lack of documentation on best practices and lessons learned	Innovations discovering tours organized KM products developed Documenting best practices and lessons learned via identification/analysis of date/impact assessment of ongoing projects/focus groups with beneficiaries	UN Agencies Multi-lateral Institutions CGIAR centers	All	Effective KM and innovation management to improve implementation effectiveness and management and enable scaling-up and policy engagement
Co-financing mobilization led with FAO Eritrea	Partners' collective actions are required to cope with the current and future (resumption of other partners' operations) institutions implementation and coordination capacity gap	Smooth and effective implementation of strategy, programme and project Increased procurement and internal control capacity	ACBF UN Multilateral Institutions	All	USD 15 million mobilized to implement the capacity building and KM action plan on staff specialization, institution function development, statistics, etc. Investment plan, programmes and projects M&E development supported
	Synergy development	Resilient practices, agroforestry, conservation agriculture; diversification of income, etc., financed	ASAP GEF, GCF, AF	All	USD 20 million mobilized for CSA, climate change adaption, Climate environment management integration into farming systems

Appendix VIII: South-South and Triangular Cooperation Strategy

I. Introduction

1. Developing countries across all income levels have become increasingly interested in learning from and drawing on the development experiences and resources of their peers. Through SSTC, two or more developing countries: (i) pursue their shared national capacity development objectives (relevant rural development solutions and knowledge) and/or (ii) establish and support partnerships and other forms of collaboration for improved rural livelihoods.
2. In response to the growing importance of South-South and Triangular Cooperation (SSTC), IFAD aims to strengthen its comparative advantage and expand its work in SSTC, in terms of both knowledge-based cooperation and investment promotion, seeing it as an integral part of its business model and of its country programming process.

II. Opportunities for rural development investment promotion and technical exchanges

3. After attaining its independence in 1993, Eritrea faced with many development challenges because of longstanding conflict and post-conflict sanctions until Eritrea and Ethiopia signed a peace agreement on the 9th of July 2018.
4. Eritrea was not able to invest enough public resources to institution and capacity development such as Higher Education (at master level), diversified agricultural services delivery, business development, financial services, etc. The post-conflict sanctions limited its contribution to regional and sub-regional platform (research and exchange centres) as well as international cooperation for investment promotion.

III. SSTC engagement rationale

5. Through South-South Triangular Cooperation (SSTC), this COSOP will support Eritrea to catch up with the (i) innovation: enabling conditions for value chains development, SMEs, rural finance development framework, etc., (ii) capacity building: technical assistance, staff specialization training, etc.; and scaling up agenda: catchment protection, irrigation development, etc., in order to speed-up rural transformation and agricultural development. The related process will be facilitated by IFAD and eventually specific SSTC fund (China, Argentine, etc.) and linked to capacity building and knowledge management.

IV. Partnerships and initiatives

Innovation discovering

6. Participation and sponsorship of thematic, regional and international events (workshops, symposiums, forums, etc.) will remain an important SSTC tool for innovation discovering. IFAD Eritrea will therefore seek to identify opportunities for engagement to exchange lessons on strategy and investment plan formulation; enabling conditions for value chains development, model of SMEs, rural finance development framework, etc. This will include sharing experiences and good examples on innovative development solutions as well as to develop professional networks.
7. Existing regional structures and frameworks, such as the African Union's Comprehensive African Agriculture Development Programme (CAADP), the Economic Commission for Africa (ECA), Intergovernmental Authority on Development (IGAD) in Eastern Africa (IGAD), etc. could contribute to such study tours.

Technical exchange visit for capacity building.

8. Once the appropriate models, skills and training needs are identified, longer technical exchange visits would be organized for staffs from public institutions, agencies,

or services providers' capacity building with targeted countries (involving government, civil society, academia and the private sector) which can host them and share knowledge, skills, resources and technical know-how. This can include specialization and refreshment training by universities in the sub-region. Distance or in situ coaching (periodic technical assistance) from host countries is key to ensure quick learning and overcome challenges related to the practice of knowledge acquired.

Mutualization and partnership

9. International research centres and platforms such ICRISAT, ICARDA, FAO, WorldFish, ASARECA, could support SSTC opportunities and promote mutualization of intervention in vaccine and seeds production, cross boarder diseases management, cross country watershed and infrastructure development and management, etc.

10. Potential partners for bilateral cooperation are countries which have successful experiences in the specific areas of Eritrea interests (including training and capacity building, advanced irrigation technologies, food standards, cooperative development, financial services, and SME business models) for experience exchange like China, Vietnam, Ethiopia, South Africa, Egypt, and Kenya, etc.

Regional portfolio (projects exchange)

11. Through lending and grant financing activities, IFAD-funded projects and country partners have deployed traditional approaches to delivering knowledge-based technical cooperation – peer-to-peer exchanges of knowledge, technology and know-how to improve agricultural productivity – to broaden access to market information, enhance policies and increase community participation in local development, and in some cases bring about new investment opportunities. RB-COSOP 2019-2025 expects to design grants that will support knowledge management and capacity building on specific thematic areas such

12. SSTC activities will also cover activities aimed at improving the efficiency and effectiveness of IFADs operating model such: the Single Project Implementation Unit (SPIU in Rwanda), COSOP support unit (CAPFIDA in Madagascar or PSU in Cambodia) to strengthen the implementation capacity and promote IFAD country programme approaches.

V. Conclusion

13. Given the current institutional country context, SSTC is a key option for the COSOP development as well as the rural transformation and agricultural development. To bringing all partners on board, communication related to SSTC should be based on work plan (expected results), budget and planning.

Appendix IX: Country at a glance

Country profile – The State of Eritrea

Appendix X: Financial management issues summary

FINANCIAL MANAGEMENT ISSUES SUMMARY

COUNTRY	Eritrea		
---------	---------	--	--

COUNTRY and CURRENT PROJECT -Fiduciary KPIs:

Country Fiduciary Inherent Risk	High	The inherent risk is high. The State of Eritrea ranked 157th out of 180 countries in the Transparency International Corruption Perception Index in 2018, with a score of 24, although this represented an improvement compared to 20 in 2017 and 18 in 2016. The country ranked 178 th out of 189 countries in the UNDP Human Development Index (HDI) in 2017. Eritrea has two ongoing projects – National Agriculture Project (NAP) and Fisheries Resources Management Programme (FReMP), which entered into force respectively in 2012 and 2016. In April 2018, FReMP's Financing Agreement was re-stated to include a EUR 9 million supplementary fund grant from Germany. NAP is classified as a problem project and FREMP is classified as a potential problem project, due to fiduciary performance and low rate of budget execution, amongst other factors.
Pending Obligations	No ineligible expenditure has been reported for the ongoing projects	
Country Contribution in IFAD Replenishments	IFAD10: US\$30,000 pledged and paid IFAD11: US\$40,000 pledged and paid	The use of country systems for IFAD's projects in Eritrea is partial. Project units are fully embedded within implementing agencies (national and district), with Government staff. Project funds transit through the Bank of Eritrea, which slows down payments. The Office of the Auditor General (OAG) sub-contracts the external audit function to private audit firms, whose capacity varies. Based on available information, there are no quality assurance mechanisms in place in OAG for reports issued by sub-contracted firms, neither are audit recommendations monitored at this level. There is no evidence of projects' being covered by executing agencies' internal audit plan of work, and IA capacity is weak. Project accounting is not recorded in an Integrated Financial Management System (IFMIS), although FREMP has recently procured an accounting software which is expected to strengthen financial management and reporting. No PEFA is available for Eritrea.
PBAS – Programme's cycle coverage	IFAD 11 allocation: US\$ 37.08 million	
Disbursement - Profile	NAP: moderately unsatisfactory FREMP: moderately satisfactory	The Economist Intelligence Unit's 2019 Country Report for Eritrea highlighted that the economy continues to be dominated by the agricultural and mining sectors, which are both highly vulnerable to shocks (weather-related and global prices respectively). Prospects of economic growth remain modest owing to lower global economic growth and slowdown in China, one of Eritrea's key trade and investment partners. According to the IMF, which completed an Article IV mission to Eritrea in May 2019, a sustained period of high fiscal deficits—albeit reversed over the past three years — has led to a heavy public debt burden. However the authorities have not consented to publication of the IMF report, so little information on the country's debt is publicly available.
Counterpart Funding - Profile	NAP: moderately unsatisfactory FReMP: satisfactory	
Current Lending terms (IFAD11)	20% Highly concessional (optional), 80% DSF Grant	Eritrea's local currency, the nakfa, has been pegged to the dollar at Nfa15.08: US\$1 since December 2016, after earlier being pegged at Nfa15.37. Over this period, the currency has become severely overvalued because of Eritrea's double-digit inflation and large current-account deficits. It is considered unlikely that the currency peg will be dismantled entirely and replaced by a free-floating exchange rate in 2019-20, given the local economic upheaval that this would trigger. Eritrea is expected to take financing from IFAD in US\$ in the IFAD11 period

PORTFOLIO, FM RISK & PERFORMANCE

Existing portfolio

Project	Financing instrument	FLX Status	Lending Terms	Currency	Amount (million)	Completion date

	G-I-DSF-8107-	XDR	11.40					97 %
FReMP	200000228700	EUR	9.00	Medium	Mod. unsatisfactory	Mod. satisfactory	Mod. satisfactory	18%
	200000170000	XDR	10.75					24%

42

Concept note – Key Fiduciary OBSERVATIONS:

The Integrated Agriculture Development Programme will be national in scope, targeting six zobas (regions). Investments will cover 50% of all Sub-zobas, spread across all six zobas and all agro-ecological zones. The key actors involved in the implementation of the project will be the Ministry of Agriculture (MoA), the Agricultural Extension Department (AED), the National Agriculture Research Institute (NARI) and the national breeding centres. At the regional level the coordination and implementation responsibilities will be carried out by the Zoba Project Coordination Committees (ZPCCs). Project costs are preliminary estimated at US\$ 50 million, of which US\$ 37 million from IFAD, while Government will provide counterpart funding and tax exemptions. Beneficiaries will provide labour and construction materials for works and co-financing will be sought.

1. The ongoing projects in Eritrea are moderately unsatisfactory for FM and AWPB execution is very weak, impacting disbursement performance
2. Projects implement under conditions that are not conducive to efficiency. The communication infrastructure is particularly weak, with frequent internet and power outages. Current Government directives require vehicles procured with donor funding to be pooled centrally, resulting in projects operating without vehicles
3. Current projects do not use modern automated accounting systems expenditure, which limits the efficiency and effectiveness of financial reporting. FREMP is in the process of procuring an off-the-shelf accounting software
4. All the above factors significantly constrain project performance and should be addressed as part of the COSOP process
5. Government oversight mechanisms are in place for IFAD's projects, but should be strengthened. The upcoming design will attempt to address gaps in internal audit services and the quality of external audits
