

Join us at this Committee on World Food Security (CFS) 47 Side Event to identify the gaps in evidence on how we can meet the climate challenge—and ways we can address those gaps—to drive transformative change through the UN Food Systems Summit and COP26.

Faced with accelerating climate change, we need a step change in agricultural innovation. Better focus and coordination—with enhanced efforts to scale what works—will deliver benefits to people, nature and climate. But significant gaps remain in the evidence base on what works, where and how, and this prevents us from achieving our climate goals.

This CFS47 side-event will present the latest evidence on the challenges and opportunities in scaling approaches that are proven to work, building on innovations and demand-driven solutions.
