جمهورية موزامبيق  
برنامج الفرص الاستراتيجية القطرية  
2027-2023

---

الوثيقة: EB 2023/OR/6

التاريخ: 23 أغسطس/آب 2023

التوزيع: عام

اللغة الأصلية: الإنكليزية

للاستعراض

الإجراء: المجلس التنفيذي مدعو إلى استعراض برنامج الفرص الاستراتيجية القطرية للفترة 2027-2023 لجمهورية موزامبيق.

---

الأسئلة التقنية:

**Jaana Keitaanranta**

المديرة القطرية

شعبة أفريقيا الشرقية والجنوبية

البريد الإلكتروني: j.keitaanranta@ifad.org

**Sara Mbago-Bhunu**

المديرة الإقليمية

شعبة أفريقيا الشرقية والجنوبية

البريد الإلكتروني: s.mbago-bhunu@ifad.org

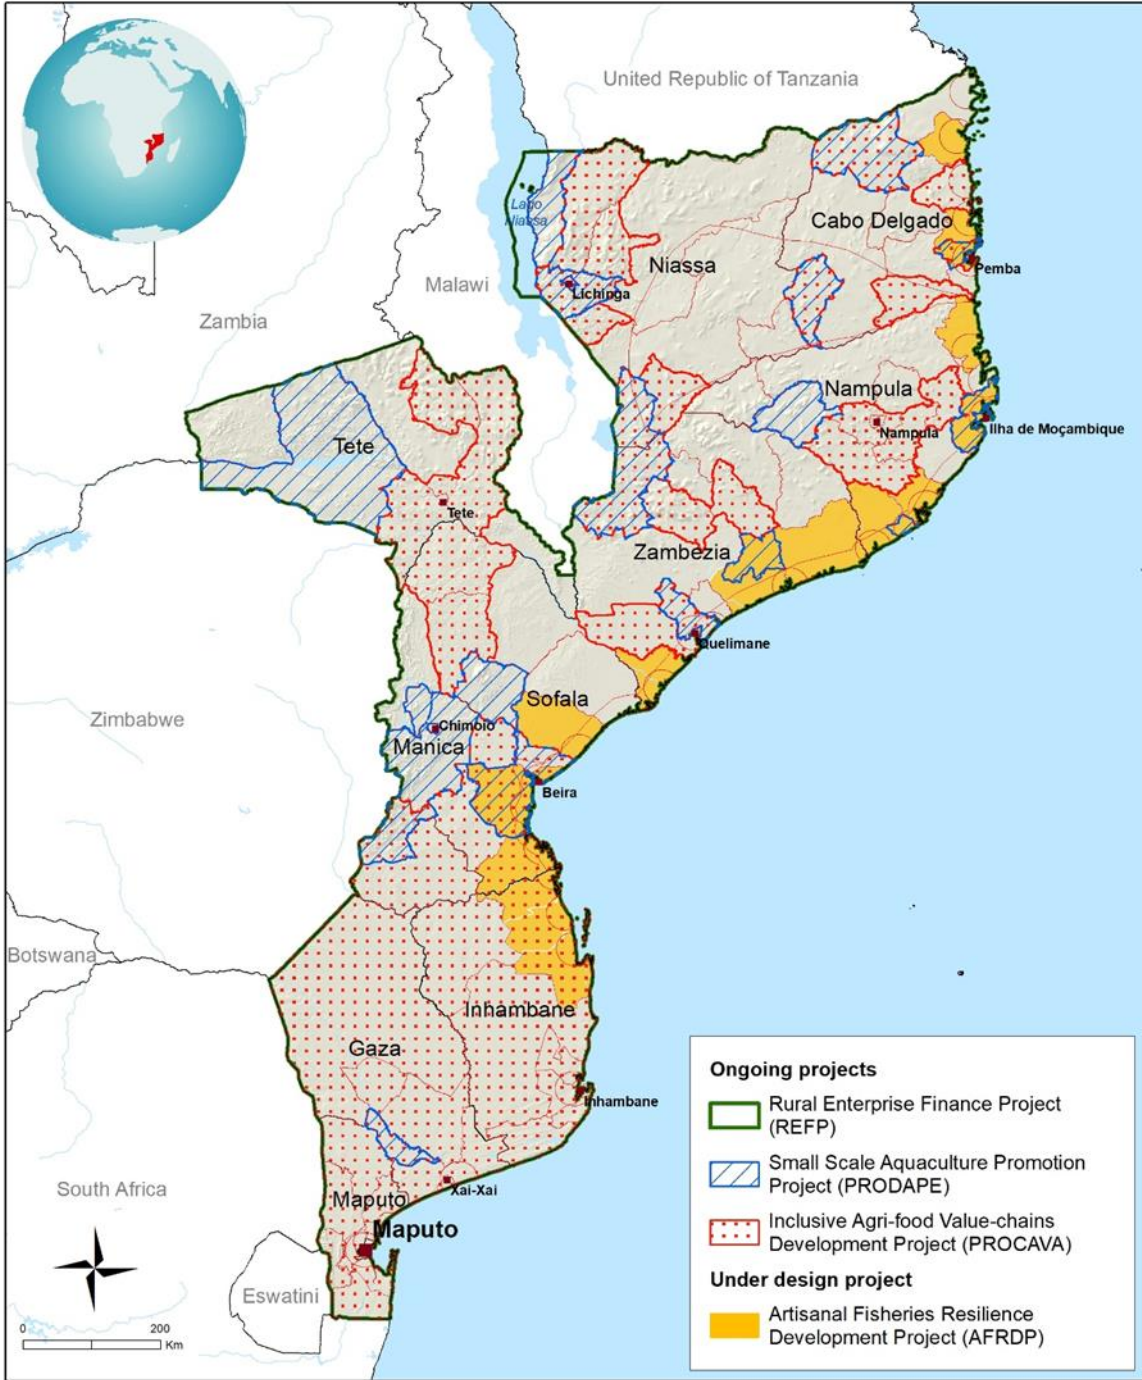

## جدول المحتويات

ii	خريطة العمليات الممولة من الصندوق في البلد
iii	موجز تنفيذي
1	أولا- السياق القطري
2	ألف- السياق الاجتماعي والاقتصادي
3	باء- سيناريو الانتقال
3	جيم- النظام الغذائي، وخطة القطاعين الزراعي والريفي
5	ثانيا- مشاركة الصندوق: الدروس المستفادة
5	ألف- النتائج التي جرى تحقيقها خلال برنامج الفرص الاستراتيجية القطرية السابق
6	باء- الدروس المستفادة من برنامج الفرص الاستراتيجية القطرية السابق ومصادر أخرى
7	ثالثا- استراتيجية البرامج القطرية المفضية إلى التغيير
7	ألف- نظرية التغيير لبرنامج الفرص الاستراتيجية القطرية
7	باء- الغاية الشاملة والأهداف الاستراتيجية
9	جيم- المجموعة المستهدفة واستراتيجية الاستهداف
10	رابعاً- تدخلات الصندوق
10	ألف- أدوات التمويل
11	باء- المشاركة في السياسات على المستوى القطري
12	جيم- بناء المؤسسات
12	دال- الابتكار
12	هاء- إدارة المعرفة
12	واو- تكنولوجيا المعلومات والاتصالات من أجل التنمية
12	زاي- الشراكات الاستراتيجية والتعاون بين بلدان الجنوب والتعاون الثلاثي
13	خامساً- تنفيذ برنامج الفرص الاستراتيجية القطرية
13	ألف- حجم الاستثمار ومصادره
14	باء- الموارد المخصصة للأنشطة الإضافية
14	جيم- الشفافية
15	دال- إدارة البرنامج القطري
15	هاء- الرصد والتقييم
15	سادساً- مشاركة المجموعات المستهدفة
16	سابعاً- إدارة المخاطر

### فريق تنفيذ برنامج الفرص الاستراتيجية القطرية

Sara Mbago-Bhunu	المديرة الإقليمية:
Jaana Keitaanranta	المديرة القطرية:
Shirley Chinien	الخبيرة الاقتصادية الإقليمية:
Zainab Semgalawe	الأخصائية التقنية:
Edith Kirumba	أخصائية المناخ والبيئة:
Virginia Cameron	موظفة الشؤون المالية:

## خريطة العمليات الممولة من الصندوق في البلد

إن التسميات المستخدمة وطريقة عرض المواد في هذه الخريطة لا تعني التعبير عن أي رأي كان من جانب الصندوق فيما يتعلق بتقسيم الحدود أو الترخوم أو السلطات المختصة بها.  
أعد هذه الخريطة الصندوق الدولي للتنمية الزراعية | 2023-08-16

## موجز تنفيذي

- 1- تصنف موزامبيق كبلد من أقل البلدان نموا وتعاني من أوضاع هشة، مع ارتفاع مستويات الفقر وخصوصا في المقاطعات الشمالية. وفي عام 2021، أُشيرَ إلى أن 45.1 في المائة من السكان كانوا يعيشون دون خط الفقر، وحوالي نصف السكان (49.9 في المائة) كانوا يعانون من الفقر المدقع المتعدد الأبعاد.
- 2- وكنتيجة لتغير المناخ، تتعرض البلد لأحوال جوية شديدة متواترة (الأعاصير، والفيضانات، وموجات الجفاف)، تترك آثارا مدمرة على الأمن الغذائي للسكان الريفيين الفقراء وسبل عيشهم.
- 3- وبعد نمو قوي بين عامي 2001 و2015، مر الاقتصاد في هبوط مطرد بسبب مجموعة من العوامل تمثلت في أزمة "الدين المستتر"، والأحوال الجوية الشديدة، وجائحة كوفيد-19، مما عرض البلد لمخاطر مرتفعة من المديونية الحرجة.
- 4- ويتواءم برنامج الفرص الاستراتيجية القطرية مع استراتيجية التنمية الوطنية لموزامبيق للفترة 2015-2035، والخطة الاستراتيجية لتنمية قطاع الزراعة (2022-2031)، والسياسات القطاعية الرئيسية الأخرى في التزامه بالتغلب على الفقر الريفي. كما أنه متواءم بالكامل مع أهداف التنمية المستدامة، والإطار الاستراتيجي للصندوق وأهدافه الاستراتيجية.
- 5- وتتمثل غاية برنامج الفرص الاستراتيجية القطرية في المساهمة في التحول والشمول الريفيين من خلال تعزيز الروابط بين التغذية والزراعة، مع تركيز أوسع على سلاسل القيمة والنظم الغذائية. وسوف يتحقق هذا من خلال زيادة إنتاجية الأسر المعيشية الريفية وأمنها الغذائي عن طريق تعزيز قدرتها على الصمود وقدراتها على التكيف مع الصدمات البيئية وتغير المناخ.
- 6- وفي سياق التهديدات التي يشكلها تغير المناخ، والصدمات البيئية الشديدة، والقيود على الموارد، تستند نظرية التغيير لبرنامج الفرص الاستراتيجية القطرية إلى مبدأ أن الحد من الفقر، وزيادة الأمن الغذائي، وتحسين التغذية ستتطلب:
  - الاستخدام المستدام للموارد الطبيعية، وزيادة التنوع البيولوجي وحفظ النظام الإيكولوجي، والنظم الزراعية المتنوعة الأكثر قدرة على الصمود في وجه آثار الصدمات البيئية وتغير المناخ (الهدف الاستراتيجي 1)؛
  - تعزيز سلاسل القيمة المراعية للتغذية، وفرصا أكبر للوصول إلى الخدمات المالية ومشاركة القطاع الخاص (الهدف الاستراتيجي 2)؛
  - التعزيز المؤسسي للكيانات الحكومية الوطنية، والإقليمية، والمحلية من خلال حوار السياسات، وتنسيق القطاع، وتعزيز الأنظمة الوطنية للمساءلة (الهدف الاستراتيجي 3).
- 7- ستشمل قائمة تدخلات الصندوق مشروعات استثمارات ريفية مموله بالقروض/المنح، وأنشطة غير إقراضية مثل العمل التحليلي، وبناء القدرات، والمشاركة في السياسات على المستوى القطري، والتعاون بين بلدان الجنوب والتعاون الثلاثي. وسيغطي برنامج الفرص الاستراتيجية القطرية الفترة 2023-2027، بما يتماشى مع إطار عمل الأمم المتحدة للتعاون في مجال التنمية المستدامة للفترة 2022-2026، والتجديد الثالث عشر لموارد الصندوق.

## جمهورية موزامبيق - برنامج الفرص الاستراتيجية القطرية للفترة 2023-2027

### أولا- السياق القطري

- 1- **السياق السياسي.** موزامبيق بلد ديمقراطي برلماني. وفي حين جرى التوصل لتسوية للنزاع والاضطراب السياسي السابق بين الحكومة وحزب المعارضة الرئيسي، يدور تمرد مسلح في المقاطعات الشمالية منذ عام 2017، وتبقى الحالة الأمنية متقلبة.
- 2- **الهشاشة.** في عام 2021، أُدرجت موزامبيق مرة أخرى في قائمة البنك الدولي للبلدان التي تعاني من أوضاع هشة والمتأثرة بالنزاع. وتشمل العوامل الرئيسية المحركة للهشاشة: (1) نزاعا متوسط الشدة في مقاطعة كابو ديلغادو؛ (2) الفقر الريفي المرتبط بالإنتاجية الزراعية المنخفضة وأوجه عدم المساواة بين الأقاليم؛ (3) المؤسسات والحوكمة الضعيفتين؛ (4) التعرض المرتفع للكوارث الطبيعية وتغير المناخ (الذيل الخامس).
- 3- **التنمية الاقتصادية الكلية.** لقد كانت التنمية الاقتصادية في موزامبيق على مدى العقود الأربعة الماضية متفاوتة. وبين عامي 2001 و2015، كان متوسط النمو الاقتصادي السنوي 7 في المائة، مدفوعا بمشروعات الاستثمار الواسعة النطاق في القطاعات الاستخراجية، والاستثمار العام في البنية التحتية، والدعم الكبير من الجهات المانحة. ومنذ عام 2016، تراجع النمو بسبب مجموعة من العوامل تمثلت في أزمة "الدين المستتر"<sup>1</sup>، والأحوال الجوية الشديدة، وجائحة كوفيد-19. وهبط نمو الناتج المحلي الإجمالي إلى 2.3 في المائة في عام 2019، ثم تراجع أكثر إلى سالب 1.2 في المائة في عام 2020 كنتيجة لجائحة كوفيد-19.<sup>2</sup>
- 4- وفي عام 2021، ارتفع نمو الناتج المحلي الإجمالي إلى 2.2 في المائة بسبب التعافي في قطاعات الخدمات، والصناعة، والزراعة، وحقق متوسطا بنسبة 5.7 في المائة بين عامي 2022 و2024، اعتمادا على انتعاش الطلب والإيرادات المتولدة نتيجة لاستئناف إنتاج الغاز الطبيعي المسال في مقاطعة كابو ديلغادو.<sup>3</sup>
- 5- وتشكل الحرب في أوكرانيا تهديدا آخر للتعافي الاقتصادي، والتي فاقمت من التضخم، وزادت الضغط المالي بسبب الإنفاق على الدعم الموجه (الوقود والأغذية) الذي أدخل للتخفيف من تكاليف المعيشة المتزايدة.

## ألف- السياق الاجتماعي والاقتصادي

الجدول I  
المؤشرات القطرية

السنة المرجعية	البيانات	المؤشر
42021	480 دولارا أمريكيا	نصيب الفرد من الدخل القومي الإجمالي
2022	%4.1	نمو الناتج المحلي الإجمالي
2020	%102.9	الدين العام (النسبة المئوية من الناتج المحلي الإجمالي)
2020	%34	نسبة خدمة الدين
52022	%102.4	نسبة الدين الى الناتج المحلي الإجمالي
62023	%7.4	معدل التضخم (النسبة المئوية)
72022	33 مليوناً (تقدير)	حجم السكان
2021	21 مليوناً (تقدير)	السكان من النساء
82022	%94.3	السكان من الشباب
92022	مرتفع للغاية	معدل البطالة
2020	%34	مؤشر الهشاشة
102021	10/6.7	مؤشر إدارة المخاطر INFORM

- 6- الخصائص الديموغرافية. من المتوقع أن يتضاعف عدد سكان موزامبيق إلى 66 مليون شخص بحلول عام 2053.<sup>11</sup> ويشكل الشباب النشطون اقتصاديا نسبة 64 في المائة من عدد السكان، تعيش أغليبتهم (62 في المائة) في المناطق الريفية.
- 7- الفقر الريفي يقدر بنسبة 64.2 في المائة، ويعاني نصف السكان من الفقر المدقع المتعدد الأبعاد.<sup>12</sup> ويعيش الجزء الأكبر من السكان الذين يعانون من الفقر المدقع في المناطق الريفية، وبالدرجة الأولى في المقاطعات الشمالية.
- 8- بيئة الأعمال. صنفت موزامبيق في المرتبة 147 من أصل 180 بلدا في عام 2021 على مؤشر مدركات الفساد الخاص بمنظمة الشفافية الدولية<sup>13</sup>، ويواجه المستثمرون الراغبون في القيام بأعمال طائفة من التحديات الإدارية والقانونية.

- 9- **التغذية والأمن الغذائي.** على الرغم من تسجيل درجات هبوط طفيفة، صُنفت نسبة 40.4 في المائة من السكان على أنها تعاني من انعدام الأمن الغذائي في عام 2020، ونسبة 33 في المائة من نقص التغذية<sup>14,15</sup>، مع مستويات مرتفعة بشكل خاص في الشمال.
- 10- **تغير المناخ.** وفقا لمؤشر ND-Gain لعام 2020، تشغل موزامبيق المرتبة 57 من أصل 181 بلدا من حيث شدة التعرض لتغير المناخ، والمرتبة 11 من حيث أقل البلدان استعدادا للاستجابة للصدمات.<sup>16</sup> وقد أخذت الأعاصير، والفيضانات، وموجات الجفاف تصبح أكثر تواترا، مما يترك أثرا مدمرا على الأمن الغذائي للسكان الريفيين الفقراء وسبل عيشهم. وقد أصبح تعزيز قدرة المجتمعات المحلية الريفية على الصمود والتكيف أولوية وطنية.

## باء- سيناريو الانتقال

- 11- تُعتبر التوقعات المتوسطة الأجل إيجابية، مدعومة بالانتعاش العالمي التدريجي، والتنمية في مجالي الغاز الطبيعي المسال والزراعة. وعلى الرغم من المخاطر المتبقية الكبيرة (ارتفاع تكاليف الغذاء، والوقود، والأسمدة، والتهديدات الأمنية، وتهديدات الكوارث الطبيعية وتغير المناخ)، من المتوقع حدوث فترة انتعاش اقتصادي، مع توقع سيناريو أساسي لنمو الناتج المحلي الإجمالي السنوي بنسبة 5 إلى 8 في المائة في الفترة 2023-2026 (انظر الذيل الثالث). ويعتمد هذا السيناريو على زيادة إنتاج وصادرات الغاز الطبيعي المسال، وتحسين الناتج الزراعي، واستقرار الأمن في المقاطعات الشمالية. كما يدعمه قرار صندوق النقد الدولي باستئناف الدعم لميزانية الدولة بعد الموافقة على تسهيل ائتماني ممدد جديد. وفي أغسطس/آب 2022، أدخلت الحكومة حزمة من تدابير التسريع الاقتصادي،<sup>17</sup> وهي عبارة عن إصلاحات مصممة لتحفيز النمو الاقتصادي.

## جيم- النظام الغذائي، وخطة القطاعين الزراعي والريفي

### التحديات والفرص

- 12- **الفرص.** شكل قطاع الزراعة 25.6 في المائة من الناتج المحلي الإجمالي في عام 2020<sup>18</sup>. ويمثل المزارعون أصحاب الحيازات الصغيرة حوالي 95 في المائة من إجمالي الإنتاج، ولكن تبقى إمكانات مناطق الزراعة الإيكولوجية العشر للبلد غير مستغلة إلى حد كبير. وتساهم مصائد الأسماك الصغيرة النطاق بشكل كبير في الأمن الغذائي ودخل الأسر المعيشية<sup>19</sup> وتشكل أكثر من 95 في المائة من الإنتاج الإجمالي للأسماك.
- 13- **التحديات.** تُقيد تنمية الاقتصاديين الأخضر والأزرق بالقدرة المحدودة لزيادة الإنتاج من مصائد الأسماك الطبيعية، والبنية التحتية الريفية غير الكافية، والوصول المحدود إلى المدخلات والأسواق، والوصول المقيد إلى التمويل والخدمات الاجتماعية الأساسية، والصدمات المناخية المتواترة، والمشاركة المحدودة من قبل القطاع التجاري.

14- دعم المؤسسات المالية الدولية للنظم الغذائية. يشارك الصندوق بقوة مع المؤسسات المالية الدولية في موزامبيق، ويدعم كلا من الأنشطة الاقتصادية الخضراء والزرقاء، وقطاع التمويل الريفي. ويمثل تغير المناخ أحد مجالات التعاون المحددة، حيث تكمن الميزة النسبية للصندوق في نهجه المناصر للفقراء وتركيزه الجغرافي.

### سياسة الحكومة والإطار المؤسسي

15- تُحدّد الأهداف الإنمائية لموزامبيق في خطة 2025، واستراتيجية التنمية الوطنية للفترة 2015-2035<sup>20</sup>، اللتين تركزان على التحول الهيكلي الاقتصادي وتنوع قاعدة الإنتاج.

16- وجرى مؤخرا تحديث الخطة الاستراتيجية للتنمية الزراعية 2022-2031، والخطة الوطنية للاستثمار في القطاع الزراعي 2022-2026 اللتين توفران منصة مواتية لمجموعة من مبادرات التنمية الريفية.

17- ومشروع الزراعة وإدارة بيئات الموارد الطبيعية برنامج وطني شامل يهدف إلى دمج الزراعة الأسرية في سلاسل القيمة الإنتاجية.

18- تشمل السياسات، والاستراتيجيات، وخطط العمل الوطنية التي تعالج تغير المناخ والكوارث الطبيعية الاستراتيجية الوطنية للتكيف مع تغير المناخ والتخفيف من آثاره 2013-2025، والخطة الرئيسية للحد من المخاطر والكوارث (2017-2030). واستحدثت التأمين ضد المخاطر الكارثية، الممول من التمويل المناخي المتاح، هو قيد النظر.

19- وقدمت موزامبيق مساهمتها المحددة وطنيا إلى اتفاقية الأمم المتحدة الإطارية بشأن تغير المناخ في عام 2020. وتسعى المساهمة المحددة وطنيا إلى تخفيض 40 مليون طن من مكافئ ثاني أكسيد الكربون من انبعاثات غازات الدفيئة بين عامي 2020 و2025 من خلال تدابير التخفيف مثل الطاقة المتجددة، والممارسات الزراعية المنخفضة الكربون، والحد الواسع النطاق من الانبعاثات الناجمة عن إزالة الغابات وتدهورها في البلدان النامية.

20- ولدى الحكومة إطار مؤسسي شامل لتنفيذ سياساتها وبرامجها للتنمية الريفية على المستوى الوطني ومستوى المقاطعات. والمؤسسات الرئيسية المعنية هي وزارة الزراعة والتنمية الريفية، ووزارة الأراضي والبيئة، ووزارة البحار والمياه الداخلية ومصايد الأسماك.

21- وهناك حاجة لبناء المهارات في المؤسسات العامة من أجل تنفيذ نظم الإنذار المبكر، وإنتاج البيانات وتجهيزها، وتكنولوجيا المعلومات والاتصالات من أجل التنمية من أجل تدخلات أكثر كفاءة وفعالية، وإدخال الزراعة الذكية مناخيا، وما إلى ذلك.

22- وقد منح برنامج وطني معني باللامركزية حكومات المقاطعات استقلالاً أكبر ولكنه أوجد حالة من عدم اليقين في بعض الأدوار، مما أدى إلى تكرار الجهود، مع تبعات على التدخلات المتلقية لمساعدات من الجهات المانحة.

23- واستخدام أنظمة الإدارة المالية العامة للبلد، بما في ذلك الخزائن، والمدفوعات، والإبلاغ المالي، في المشروعات الممولة من الصندوق في موزامبيق، واسع النطاق. ومن الآن وصاعداً، سوف تراجع حسابات مشروعات الصندوق، التي كانت تراجع سابقاً من قبل شركات خاصة، من قبل المؤسسة الوطنية لمراجعة الحسابات (Tribunal Administrativo).

<sup>20</sup> يجري تنقيح استراتيجية التنمية الوطنية وستغطي الفترة 2015-2035.

24- وفي عام 2020، شغلت موزامبيق المرتبة 140 بين 166 بلدا على مؤشر أهداف التنمية المستدامة. وفي حين يجري تحقيق بعض التقدم بشأن أهداف التنمية المستدامة 3، و11، و12، و13، و14، من المحتمل ألا يتحقق سوى هدف التنمية المستدامة 12 فقط بحلول عام 2030<sup>21</sup>.

## ثانيا- مشاركة الصندوق: الدروس المستفادة

### ألف- النتائج التي جرى تحقيقها خلال برنامج الفرص الاستراتيجية القطرية السابق

- 25- ترد أدناه تفاصيل بعض النتائج الرئيسية التي تحققت.
- 26- في وقت استعراض منتصف المدة في عام 2021، كان برنامج الفرص الاستراتيجية القطرية قد وصل إلى ما مجموعه 184 786 أسرة معيشية، أي 56 في المائة من المجموع المستهدف البالغ 330 173 أسرة معيشية. وعاد مشروع الترويج لتربية الأحياء المائية على نطاق صغير، الذي انتهى في عام 2019، بالفائدة على 1 950 مزارعا للأسماك (كان 1 116 منهم مزارعين جدد).
- 27- وحقق التركيز المفضي إلى تحول في المنظور الجنساني، ونهج نظام تعلم العمل الجنساني اللذان اعتمدهما برنامج ترويج الأسواق الريفية الهدف المتمثل في نسبة 51 في المائة من النساء، ونسبة 51 في المائة من الشباب المستفيدين. ونتج عن التنقيف التغذوي تحقيق نسبة 40 في المائة من النساء الحد الأدنى من التنوع الغذائي للنساء، في حين كانت نسبة 51 في المائة من أعضاء منظمات المزارعين من النساء، و31 في المائة من الشباب. وفي منظمات المزارعين، تولت نسبة 75 في المائة من النساء مناصب قيادية، و50 في المائة من التجار يشركون زوجاتهم وأولادهم الآن في أعمالهم. وساهم نظام تعلم العمل الجنساني في التمكين الاقتصادي للنساء وإيصال أصواتهن، وجعل أعباء عملهن أكثر توازنا، وخفض من العنف المنزلي.
- 28- وعممت موزامبيق وأعدت تحديث مكونات التغذية في جميع الحوافز بنجاح. وأكدت التقديرات النهائية للحد الأدنى من التنوع الغذائي أثر ومساهمة البرنامج القطري في حالة التغذية العامة في البلد، التي هبطت بشكل إجمالي من 43 في المائة إلى 38 في المائة (سوء التغذية المزمن). وتستخدم جميع المشروعات الجديدة نموذج سلاسل القيمة المراعية للتغذية وتتضمن تدخلات متعلقة بالتغذية في جميع مكونات المشروع.
- 29- بقي الدعم حاسما بالنسبة لرابطات الادخار والائتمان ونموذجا مستداما للبرنامج القطري لموزامبيق. وجرى إنشاء وتعزيز ما مجموعه 3 388 رابطة ضمت 25 000 عضو. وتستخدم هذه المجموعات حاليا تكنولوجيا المعلومات والاتصالات، والمنصات المالية القائمة على الهاتف المحمول من أجل المعاملات الآمنة، وتتلقى الدعم لإقامة روابط مع القطاع المالي الرسمي.
- 30- ووصل نموذج الشراكات بين المنتجين والقطاعين العام والخاص إلى ما مجموعه 11 077 مزارعا (33 في المائة منهم من النساء و35 في المائة من الشباب). وعلى سبيل المثال، من خلال الشراكة بين المنتجين والقطاعين العام والخاص التي أنشئت مع وحدة التجهيز DATCO Mandioca Moçambique، باع حوالي 5 803 مزارعين من أصحاب الحيازات الصغيرة في سلسلة قيمة الكسافا حوالي 23 063 طنا من الكسافا الطازجة، وكسبوا حوالي 1 مليون دولار أمريكي.
- 31- وقد عزز الجمع بين البذور المحسنة والمعتمدة، ونقل التكنولوجيا والممارسات الزراعية الجيدة، والمساعدة التقنية من موظفي الإرشاد، وتعزيز مرافق ومجموعة أدوات التجهيز، وتحسين الوصول إلى الأسواق في برنامج تنمية سلاسل قيمة الأغذية الزراعية الشمولية متوسط غلال الكسافا من 6 أطنان للهكتار الواحد (خط الأساس) إلى 20 طنا للهكتار الواحد (خط النهاية). ولكن إذا أخذنا في الاعتبار أن الكسافا تعتبر منتجا

<sup>21</sup> الأمم المتحدة، (2021). التحليل القطري المشترك لموزامبيق.

- "منخفض القيمة"، بقي الدخل الإجمالي للمزارعين دون مستويات الدخل المتوقعة. وينبغي أن تعزز الاستثمارات المستقبلية تجهيز الكسافا وأن تركز على المنتجات ذات القيمة المضافة لزيادة دخل المزارعين.
- 32- ودعمت المنح التدخلات في مجالات إنمائية رئيسية (التغذية، والشباب، والأشخاص ذوي الإعاقة)، من خلال مشاركة أكبر في منصات من أجل الحوار القطري (الفريق العامل المعني بالزراعة والتنمية الريفية)، واستعراض وتطوير سياسات واستراتيجيات قطاعية (الخطة الاستراتيجية للتنمية الزراعية)، والحوارات التي جرت استعداداً لمؤتمر قمة النظم الغذائية، وغير ذلك من الحوارات المخصصة.
- 33- ونجم عن العمل التحليلي، بالشراكة مع وكالات الأمم المتحدة الأخرى استجابة لجائحة كوفيد-19، منتجات معرفية قيمة. ونجم عن تعاون مماثل مع وكالات أخرى للأمم المتحدة في إعداد التحليل القطري المشترك تحليلاً مشتركاً للهشاشة وبرامج لمعالجة الأسباب الجذرية الاجتماعية والاقتصادية للنزاع في المناطق الشمالية.

### باء- الدروس المستفادة من برنامج الفرص الاستراتيجية القطرية السابق ومصادر أخرى

- 34- الاستعداد لحالات الطوارئ. ينبغي لاستثمارات الصندوق، التي تواجه صدمات بيئية ومناخية متكررة، أن تكون رشيقة ومرنة.
- 35- القدرة على الصمود والتكيف. هناك حاجة إلى استثمار أكبر في بنية تحتية قادرة على الصمود في وجه تغير المناخ لحماية استثمارات المشروعات المؤمنة بصعوبة وزيادة استدامتها.
- 36- تركيز الصندوق على تعزيز منظمات المزارعين إلى مستوى عمليات الأعمال المستدامة عملية طويلة الأجل تتطلب دعماً إضافياً ومساعدة في فترة ما بعد المشروعات بالنسبة لبعضها.
- 37- سلاسل القيمة المراعية للتغذية. التركيز على تعزيز الجوانب المختلفة للنظم الغذائية يوفر أفضل الإمكانيات لزيادة صغار المزارعين لدخلهم وأمنهم الغذائي والتغذوي.
- 38- كان اعتماد نهج الشراكات بين المنتجين والقطاعين العام والخاص مهماً بالنسبة لتعزيز سلاسل القيمة والوصول إلى الأسواق.
- 39- ساهم نهج نظام تعلم العمل الجنساني في التمكين الاقتصادي للنساء وإيصال أصواتهن، وجعل أعباء عملهن أكثر توازناً، وقلل من العنف المنزلي. ولكن يجب أن يُعزَّز لضمان وضع النساء كصانعات للقرار في منظمات المزارعين، ومساواة أكبر بين الجنسين في الوصول إلى الفوائد الاقتصادية والاجتماعية.
- 40- تنفيذ المشروعات لطالما تأثر بتأخيرات الاستهلاك. وينبغي للتدخلات المستقبلية أن تضمن: (1) توفر أموال الاستهلاك و/أو التمويل بأثر رجعي؛ (2) الترجمة المبكرة لتقرير تصميم المشروع، واتفاقية التمويل من أجل الحصول على موافقة ومصادقة الحكومة في الوقت المناسب؛ (3) الفتح المبكر للحساب الخاص للمشروع؛ (4) التسجيل المبكر في بوابة عملاء الصندوق وطلب الأموال الاستهلاكية؛ (5) التعيين المبكر للموظفين والأخصائيين الرئيسيين؛ (6) وضع اللمسات الأخيرة على الدليل التفصيلي لتنفيذ المشروع، بما في ذلك ترجمة أقسام محددة من أجل الكيانات اللامركزية؛ (7) حلقة عمل الاستهلاك؛ وما إلى ذلك.
- 41- تعقيد تصميم المشروعات. البساطة في تصميم المشروعات ضرورية لضمان مواءمة المشروعات مع قدرات المؤسسات الشريكة على تنفيذ التدخلات الحالية والمستقبلية.
- 42- الوصول المستدام إلى التمويل. يتسم تعزيز رباطات الادخار والائتمان بالكفاءة من حيث التكاليف والاستدامة في سياق موزامبيق. وينبغي لتدخلات المشروعات أن تضمن ربط رباطات الادخار والائتمان بالقطاعات المالية الرسمية وأن تحسّن الإطار التنظيمي لتعزيز التمويل الريفي في البلد.

43- **المساهمات العينية في المشروعات.** طُوّر برنامج ترويج الأسواق الريفية نموذجاً شاملاً لجمع المساهمات العينية للحكومة والمستفيدين والإبلاغ عنها. وينبغي للمشروعات المستقبلية اعتماد هذا النموذج وإدراج المبادئ التوجيهية في دليل تنفيذ المشروع.

### ثالثاً- استراتيجية البرامج القطرية المفضية إلى التغيير

#### ألف – نظرية التغيير لبرنامج الفرص الاستراتيجية القطرية

44- بالنظر إلى سياق الفقر الريفي، والهشاشة، والضعف (تغير المناخ والتمرد في الشمال)، وانعدام الأمن الغذائي والتغذوي في موزامبيق، وبناء على إنجازات البرنامج القطري للصندوق، سيعزز برنامج الفرص الاستراتيجية القطرية الحالي ويوسع نطاق التدخلات الناجحة لدعم الأنشطة من أجل التصدي لتحديات محددة. وستمثل عوامل النجاح الرئيسية فيما يلي: (1) تسريع وزيادة قدرة المجتمع المحلي على الصمود في وجه الصدمات الخارجية والتكيف معها، واستهداف المجموعات والمناطق الجغرافية الضعيفة؛ (2) استخدام أدوات مالية مختلفة (برنامج القروض والمنح، والتمويل المشترك، والتمويل الموازي، وعمليات القطاع الخاص غير السيادية، والمنح، وما إلى ذلك) لزيادة الرفع المالي للصندوق؛ (3) تعزيز المجموعات المجتمعية، والمؤسسات الحكومية، والشركاء على جميع المستويات. وسوف يؤدي الاستثمار المقترح بموجب برنامج الفرص الاستراتيجية القطرية الحالي إلى التحول المستدام للنظم الغذائية، والتقليل من الضعف الاجتماعي والاقتصادي بين الأسر المعيشية الريفية من خلال تحقيق إنتاجية أكبر، وتعزيز الأمن الغذائي والتغذوي، وتعزيز القدرة على الصمود في وجه الصدمات المناخية والتكيف معها، ووصول أكبر إلى الخدمات المالية، وتحسين سلاسل القيمة والأسواق، ومشاركة القطاع الخاص، وتعزيز القدرات المؤسسية. وسيجري إيلاء اهتمام خاص لتمكين المرأة والحد من أوجه عدم المساواة بين الجنسين، وبطالة الشباب من خلال ضمان أن تفضي الاستثمارات إلى تحول في المنظور الجنساني وتشمل الشباب. وتتواءم نظرية التغيير لبرنامج الفرص الاستراتيجية القطرية مع إطار عمل الأمم المتحدة للتعاون في مجال التنمية المستدامة لموزامبيق (2022-2026)<sup>22</sup>، والإطار الاستراتيجي للصندوق (2016-2025)، واستراتيجيات الصندوق بشأن تنفيذ القرارات المنبثقة عن مؤتمر قمة النظم الغذائية للأمم المتحدة 2021. ويركز الهدف الاستراتيجي 1 على إدارة الموارد الطبيعية، والتنوع البيولوجي، وتغير المناخ؛ والهدف الاستراتيجي 2 على سلاسل القيمة المراعية للتغذية، والوصول الأكبر إلى الخدمات المالية، ومشاركة القطاع الخاص؛ والهدف الاستراتيجي 3 على تعزيز المؤسسي على جميع المستويات.

#### باء- الغاية الشاملة والأهداف الاستراتيجية

45- تتمثل غاية برنامج الفرص الاستراتيجية القطرية في المساهمة في التحول والشمول الريفيين من خلال تعزيز الروابط بين التغذية والزراعة، مع تركيز أوسع على سلاسل القيمة والنظم الغذائية. وسوف يتحقق هذا من خلال زيادة إنتاجية الأسر المعيشية الريفية وأمنها الغذائي عن طريق تعزيز قدرتها على الصمود وقدراتها على التكيف مع الصدمات البيئية وتغير المناخ.

46- وتتمثل الأهداف الاستراتيجية لبرنامج الفرص الاستراتيجية القطرية فيما يلي:

- **الهدف الاستراتيجي 1: الاستخدام المستدام للموارد الطبيعية، وزيادة التنوع البيولوجي وحفظ النظام الإيكولوجي، والنظم الزراعية المتنوعة الأكثر قدرة على الصمود في وجه آثار الصدمات البيئية وتغير المناخ.** وسيركز الهدف الاستراتيجي 1 على الاستخدام المستدام للأراضي والمياه، والتنوع

<sup>22</sup> كما جرى تعزيز هذا من خلال التشاور مع المنسق المقيم للأمم المتحدة أثناء تصميم برنامج الفرص الاستراتيجية القطرية.

البيولوجي وحفظ النظام الإيكولوجي والنظم الزراعية المتنوعة، بالإضافة إلى تدابير التكيف مع تغير المناخ وبناء القدرة على الصمود مع الفوائد المشتركة للتخفيف في وجه الصدمات المناخية والكوارث الطبيعية الشديدة والمتكررة.

- **الهدف الاستراتيجي 2: تعزيز سلاسل القيمة المراعية للتغذية، وفرص أكبر للوصول إلى الخدمات المالية ومشاركة القطاع الخاص.** وسيركز الهدف الاستراتيجي 2 على السلع الغذائية الزراعية الرئيسية، ومصايد الأسماك الحرفية، وتربية الأحياء المائية، مقدما الدعم لزيادة إنتاج الأغذية المغذية ووصول صغار المزارعين والمجموعين التجاريين إلى الأسواق، وعلى إيجاد فرص عمل غير زراعية (خصوصا للشباب في مناطق النزاع). وسيشمل هذا تحسين فرص وصول السكان الريفيين الفقراء والمؤسسات الصغيرة إلى التمويل من خلال المؤسسات المالية المجتمعية الرسمية، وزيادة مشاركة القطاع الخاص في نقاط مختلفة من سلاسل القيمة.
- **الهدف الاستراتيجي 3: التعزيز المؤسسي للكيانات الحكومية الوطنية، والإقليمية، والمحلية، من خلال حوار السياسات، وتنسيق القطاع، وتعزيز الأنظمة الوطنية للمساءلة.** وسيشمل هذا دعم عملية اللامركزية الجارية وتعزيز مشاركة المستفيدين في صنع القرار.

الجدول 2

### الأهداف الاستراتيجية لبرنامج الفرص الاستراتيجية القطرية

الاهداف الاستراتيجية الرئيسية (الهدف الاستراتيجي)	المؤسسات الأساسية	تحديات إصلاح السياسات	التدخلات المقترحة (الإقراضية وغير الإقراضية)
<b>الهدف الاستراتيجي 1</b>	وزارة الزراعة والتنمية الريفية وزارة الأراضي والبيئة وزارة البحار والمياه الداخلية ومصايد الأسماك	تلتزم تشريعات وسياسات من أجل: • ضمان الوصول إلى الأراضي الصالحة للزراعة وأمنها (خصوصا للنساء)	أنشطة إقراضية/استثمارية جارية • إشارية/في الذخيرة • أنشطة غير إقراضية/لا تتعلق بالمشروعات • المشاركة في السياسات على المستوى القطري
<b>الهدف الاستراتيجي 2</b>	وزارة الزراعة والتنمية الريفية وزارة البحار والمياه الداخلية ومصايد الأسماك وزارة الأراضي والبيئة وزارة الاقتصاد والمالية المصرف المركزي	تلتزم تشريعات من أجل: • تنظيم تحسين نسل الثروة الحيوانية وتسويقها؛ • تسجيل رابطات المزارعين، ورباطات وتعاونيات مستخدمي المياه. • إيجاد بيئة مواتية للتمويل الريفي • إنشاء إطار قانوني لرابطات الادخار والائتمان التراكمية	أنشطة إقراضية/استثمارية جارية • إشارية • أنشطة غير إقراضية/لا تتعلق بالمشروعات • المشاركة في السياسات على المستوى القطري • الشراكات • التعاون بين بلدان الجنوب والتعاون الثلاثي • إدارة المعرفة
<b>الهدف الاستراتيجي 3</b>	وزارة الاقتصاد والمالية المصرف المركزي وزارة الزراعة والتنمية الريفية/ وزارة البحار والمياه الداخلية ومصايد الأسماك/ وزارة الأراضي والبيئة	تلتزم تشريعات من أجل: • تحسين الكيانات اللامركزية	أنشطة إقراضية/استثمارية جارية • إشارية • أنشطة غير إقراضية/لا تتعلق بالمشروعات • المشاركة في السياسات على المستوى القطري • الشراكات • التعاون بين بلدان الجنوب والتعاون الثلاثي • إدارة المعرفة

47- الاستدامة. ستتألف استراتيجية الاستدامة لبرنامج الفرص الاستراتيجية القطرية من شقين: أولاً، العمل من خلال المجتمعات المحلية، وتعزيز قدراتها، وقدرات الكيانات المحلية، وآليات الحوكمة. وسيتحقق هذا من

خلال منظمات المزارعين، واتحادات وتعاونيات المقاطعات، والمجالس المجتمعية لمصايد الأسماك. وثانياً، دعم تعزيز المؤسسات الحكومية وغيرها من المؤسسات ذات الصلة بالتركيز على بناء القدرات والتعزيز المؤسسي على المستوى الوطني، والإقليمي، وعلى مستوى المقاطعات والمجتمعات المحلية. وسيشمل هذا تركيزاً قوياً على مشاركة القطاع الخاص من خلال نماذج الشراكات المستدامة بين المنتجين والقطاع العام والخاص. ومن المتوقع أن يعزز استخدام المؤسسة الوطنية العليا لمراجعة الحسابات ملكية الحكومة، والمساءلة، والاستدامة.

48- **توسيع النطاق.** تشمل مجالات توسيع النطاق التدخلات الناجحة في التغذية، ورابطات الادخار والائتمان، وتعميم المنظور الجنساني. وتشمل المجالات الأخرى لزيادة توسيع النطاق المشروعات التجريبية في تربية الأحياء المائية، وتطوير سلاسل القيمة على طول ممرات التنمية، والشراكات بين المنتجين والقطاع العام والخاص التي تقدم المساعدة التقنية للإنتاج والوصول إلى الأسواق، ونظماً للحد من خسائر ما بعد الحصاد، وزيادة في البنية التحتية القادرة على الصمود في وجه تغير المناخ.

### التعميم

49- **المنظور الجنساني والشباب والأشخاص ذوو الإعاقة.** بالنسبة للنساء، ستيسر الأنشطة الوصول إلى الأراضي والموارد المنتجة، ومهارات الأعمال، والتمويل. وسيستمر استخدام منهجية نظام تعلم العمل الجنساني في سائر الحافظة. وسيصمم الدعم بحيث يلبي الاحتياجات والمهارات المحددة للشباب، وسيشمل التدريب والإرشاد في نظم وممارسات الإنتاج المحسنة، والزراعة التجارية، وتكنولوجيا المعلومات والاتصالات من أجل التنمية، والعمالة غير الزراعية، وريادة الأعمال.

50- **التغذية.** سوف تعزز التدخلات، التي تعتمد نهج النظام الغذائي، سلاسل القيمة المراعية للتغذية من خلال دعم توفير الأغذية الغنية بالمغذيات للمجموعات الضعيفة (النساء المرضعات والحوامل، والأشخاص المصابين بفيروس نقص المناعة البشرية/الإيدز))، بأسعار معقولة، واستهلاكها. وقد تشمل التدخلات تعزيز أصناف المحاصيل الغنية بالمغذيات، والتدعيم البيولوجي، وتكنولوجيا ما بعد الحصاد، وتسويق الأغذية المغذية، والتثقيف التغذوي.

51- **الفوائد المشتركة للتكيف مع تغير المناخ والتخفيف من آثاره.** ستدعم التدخلات، المتوائمة مع المساهمة المحددة وطنياً، وضع أو استعراض خطة التكيف المحلية، وتحسين نظم الإنذار المبكر، والحصول على المعلومات المتعلقة بالمناخ والأحوال الجوية، والبنية التحتية القادرة على الصمود في وجه تغير المناخ، والممارسات/التكنولوجيا الزراعية الذكية مناخياً، وتوسيع نطاق الأنشطة الإضافية لخفض الانبعاثات الناجمة عن إزالة الغابات وتدهورها في البلدان النامية، والطاقة المتجددة، والتأمين المناخي، وممارسات إدارة المياه والأراضي المتسمة بالكفاءة، والاتجار بالكربون.

## جيم- المجموعة المستهدفة واستراتيجية الأهداف

### المجموعة المستهدفة

52- ستتألف المجموعة المستهدفة الرئيسية (80 في المائة من المستفيدين) من السكان الفقراء والضعفاء، والمزارعين أصحاب الحيازات الصغيرة وصيادي الأسماك من ذوي الإمكانيات الاقتصادية والذين يعانون من انعدام الأمن الغذائي (مزارعو الكفاف – الفئة ألف،<sup>23</sup> النساء والشباب العاطلون عن العمل<sup>24</sup>)، الذين سيتلقون الدعم لتنمية القدرة على الصمود في وجه تغير المناخ، وتعزيز إنتاجيتهم، والمشاركة في فرص العمل

<sup>23</sup> لمزيد من التفاصيل، الرجاء مراجعة الذيل الثاني.

<sup>24</sup> الشباب في موزامبيق (بين 18 و35 سنة).

غير الزراعية على طول سلاسل القيمة. وسيجري إيلاء تركيز خاص على المجموعات الضعيفة المتأثرة بالنزاع في المقاطعات الشمالية، وبشكل خاص الشباب والنساء.

53- وستتألف المجموعة المستهدفة الثانوية (20 في المائة) من صغار رواد الأعمال الذين يمكنهم أن يكونوا عوامل محركة للتغيير والمساهمة في خلق الوظائف (كمجموعين أو كعوامل تمكين) من خلال تعزيز سلاسل القيمة، وتحسين فرص الوصول إلى الأسواق (المزارعون الناشئون والمزارعون شبه التجاريين – الفئة باء)؛ وسيكون دعم هذه المجموعة رهنا بدعمها للمستفيدين من الفئة ألف. كما ستحتفز المؤسسات التجارية للمشاركة مع منظمات المزارعين في نقاط مختلفة في سلاسل القيمة لإدخال التمويل، والابتكار، والتكنولوجيا، والتدريب، والتجميع، وفرص السوق من أجل السكان المستهدفين (المؤسسات المتوسطة والكبيرة الحجم – الفئة جيم).

54- وستضمن الحصص المستهدفة مشاركة النساء (50 في المائة) والشباب (30 في المائة)، مع ضمان تركيز خاص على الأشخاص المصابين بفيروس نقص المناعة البشرية/الإيدز، والأشخاص ذوي الإعاقة.

#### استراتيجية الأهداف

55- ستهدف المشروعات في حافظة الصندوق، مجتمعة، إلى الوصول إلى 594 200 أسرة معيشية ريفية (حوالي 2 971 000 شخص)<sup>25</sup>. وتنتشر عمليات الصندوق في موزامبيق على نطاق وطني ولكنها تتركز في عدد محدود من المقاطعات المختارة على أساس أولويات الحكومة وخططها الإنمائية. وستعطي الأولويات للمناطق التي تعاني من مستويات مرتفعة من الفقر وسوء التغذية، والمخاطر العالية للتعرض لتغير المناخ، وذات الإمكانيات الزراعية الإيكولوجية لتطوير تدخلات للاقتصاد الأخضر والأزرق، بما في ذلك الإنتاج وممرات الأغذية لتصدير المنتجات الفائضة في المقاطعات الجنوبية، والوسطى، والشمالية. وسينصب تركيز خاص على الأخيرة بسبب حالة الضعف الحالية.

56- سيصل برنامج الفرص الاستراتيجية القطرية إلى السكان الذين يعانون من الفقر المدقع من خلال برنامج التخرج الذي ينفذ حالياً في إطار مشروع تمويل المشروعات الريفية، ويدعم السكان إلى المستوى الذي يصبحون معه من ذوي الجدارة الائتمانية ويمكن إدماجهم في التمويل الريفي الرئيسي.

### رابعا- تدخلات الصندوق

#### ألف- أدوات التمويل

57- هناك ثلاثة مشروعات استثمارية قيد التنفيذ حالياً في موزامبيق: مشروع تمويل المشروعات الريفية (الهدف الاستراتيجي 2 والهدف الاستراتيجي 3)، ومشروع الترويج لتربية الأحياء المائية على نطاق صغير (الهدف الاستراتيجي 1، والهدف الاستراتيجي 2، والهدف الاستراتيجي 3)، وكلاهما سينتهيان في عام 2026، وبرنامج تنمية سلاسل قيمة الأغذية الزراعية الشمولية (الهدف الاستراتيجي 1، والهدف الاستراتيجي 2، والهدف الاستراتيجي 3) الذي سينتهي في عام 2030. ويشمل برنامج الفرص الاستراتيجية القطرية الحالي المشروعات التالية: (1) مشروع تنمية قدرة مصائد الأسماك الحرفية على الصمود (الهدف الاستراتيجي 1، والهدف الاستراتيجي 2، والهدف الاستراتيجي 3)؛ (2) تمويل إضافي لبرنامج تنمية سلاسل قيمة الأغذية

<sup>25</sup> تشير هذه الأهداف إلى المشروعات الاستثمارية قيد التنفيذ وتلك التي في ذخيرة المشروعات. وسيجري الوصول إلى ما مجموعه 255 840 أسرة معيشية من خلال برنامج تنمية سلاسل قيمة الأغذية الزراعية الشمولية، ومشروع الترويج لتربية الأحياء المائية على نطاق صغير، ومشروع تمويل المشروعات الريفية، والباقي من قبل استثمارات جديدة قيد التصميم (مشروع تنمية قدرة مصائد الأسماك الحرفية على الصمود)، بما في ذلك التمويل الإضافي المتوقع من بنك التنمية الأفريقي لصالح برنامج تنمية سلاسل قيمة الأغذية الزراعية الشمولية.

الزراعية الشمولية، وكلاهما في إطار التجديد الثاني عشر لمراد الصندوق؛ (3) المرحلة الثانية من برنامج تنمية سلاسل قيمة الأغذية الزراعية الشمولية، في إطار التجديد الثالث عشر لمراد الصندوق.<sup>26</sup>

58- وعند الموافقة على أول عملية غير سيادية (Futuro Mcb) في موزامبيق، سيواصل الفريق القطري، بالاشتراك مع دائرة الاستراتيجية وإدارة المعرفة ووحدة الاستشارات والتنفيذ المعنية بالقطاع الخاص، تحديد عمليات غير سيادية جديدة لتقديم التمويل لها. وترتبط العمليات غير السيادية بالحفاظ على السيادية وتكملها. وستجري تعبئة منح تكميلية للاستجابة للطلب المستمر.

الجدول 3

### حافطة الصندوق الإقراضية لفترة برنامج الفرص الاستراتيجية القطرية (2023-2027)

المشروع	الهدف
مشروع تمويل المشروعات الريفية (جاري) 2026-2018	زيادة توفر منتجات وخدمات التمويل الريفي (الملائمة، والمعقولة التكاليف، والمبتكرة)، والوصول إليها واستخدامها
مشروع الترويج لتربية الأحياء المائية على نطاق صغير (جاري) 2026-2020	زيادة مستويات إنتاج، واستهلاك، ومبيعات، ودخل الأسر المعيشية الريفية في سلسلة قيمة تربية الأحياء المائية
برنامج تنمية سلاسل قيمة الأغذية الزراعية الشمولية (جاري) 2030-2020	زيادة صافي الدخل من سلاسل قيمة الأغذية الزراعية المقاومة لتغير المناخ
مشروع تنمية قدرة مصايد الأسماك الحرفية على الصمود (نخيرة مشروعات التجديد الثاني عشر لمراد الصندوق) المرحلة الأولى - 2031-2024	تعزيز قدرة المجتمعات المحلية على الصمود في وجه تغير المناخ من خلال تنمية سلسلة قيمة الأسماك
العملية غير السيادية مع مصرف Futuro Mcb	الوصول المستدام والمعقول التكاليف إلى الخدمات المالية

## باء- المشاركة في السياسات على المستوى القطري

59- ستستتير المشاركة في السياسات على المستوى القطري بالأهداف الاستراتيجية وستجري المبادرة بها أساساً من خلال المشروعات الاستثمارية. وسيكون التركيز على دعم وضع السياسات، والاستراتيجيات، والأطر التنظيمية التي: (1) تخلق بيئة مواتية للتمويل الريفي؛ (2) تحسن إنتاج وتسويق أصحاب الحيازات الصغيرة من خلال حيازة الأراضي الآمنة، وأنظمة تحسين نسل الثروة الحيوانية وتسويقها؛ (3) تسمح بتسجيل منظمات المزارعين (رابطات وتعاونيات مستخدمي المياه، وما إلى ذلك)؛ (4) تسمح بالتنسيق الحكومي الدولي المعني بالتدخلات الإنمائية الريفية على جميع المستويات. وسيقدم الدعم أيضاً لصانعي السياسات في مجالات تربية الأحياء المائية الذكية مناخياً، وتحليل السياسات. وسيكون التركيز على سياسة الأراضي الجديدة، واستراتيجية الاقتصاد الأزرق، والاستراتيجية الوطنية للشمول المالي الجديدة.

<sup>26</sup> سيحدّد تمويل التجديد الثالث عشر لمراد الصندوق رهنا بالإجراءات الداخلية وموافقة المجلس التنفيذي اللاحقة في أواخر عام 2024.

## جيم- بناء المؤسسات

60- سيبسر الصندوق بناء القدرات في الوكالات الحكومية الشريكة، عند الطلب. ويشمل هذا تقديم دعم المشاركة في السياسات على المستوى القطري إلى وزارة الاقتصاد والمالية لتحسين تنسيق خطة التنمية؛ وإلى وزارة الأراضي والبيئة في تعزيز النظام الوطني للإنذار المبكر بالكوارث، وأنظمة معلومات المناخ والأحوال الجوية؛ وإلى المديرية الوطنية لتنمية الأراضي والأقاليم في تحسين نظام تسجيل الأراضي الريفية وزيادة أمن حيازة الأراضي، وخصوصا بالنسبة للنساء. وسيكون هناك تركيز رئيسي على تعزيز قدرات منظمات المزارعين، والمجالس المجتمعية لمصايد الأسماك، والتعاونيات، ورابطات الادخار والائتمان، نظرا إلى أهميتها بالنسبة لاستدامة الاستثمارات.

## دال- الابتكار

61- ستشمل الحلول المبتكرة استخدام الأدوات الجغرافية المكانية من أجل الاستهداف والرصد والتقييم، والنظم الخضراء لما بعد الحصاد، والتكنولوجيات الذكية مناخيا، والأدوات الرقمية من أجل حفظ السجلات، والوصول إلى التمويل (المعاملات/التحويلات المالية عبر الهاتف المحمول)، والتسويق، والخدمات الاستشارية.

## هاء- إدارة المعرفة

62- سيستخدم برنامج الفرص الاستراتيجية القطرية إدارة المعرفة لتيسير التعلم والتقاسم، وتوجيه الاستثمارات، وزيادة وضوح صورة البرنامج القطري، بما في ذلك توثيق ونشر الممارسات الجيدة، والدروس المستفادة بشأن المواضيع والابتكارات الرئيسية من أجل توسيع النطاق والمشاركة في السياسات على المستوى القطري. وستستخدم المشروعات أدوات رقمية من أجل مشاركة المستفيدين في إنتاج المعرفة. وستكون الحصائل المتوقعة الرئيسية صحائف الوقائع الموضوعية القطرية؛ وكتيبات مع قصص من الميدان؛ ونشر السياسات والاستراتيجيات التي يضعها البرنامج القطري؛ ونشر نتائج مشروعات ومنح الاستثمارات المختلفة من خلال منصات مختلفة.

## واو- تكنولوجيا المعلومات والاتصالات من أجل التنمية

63- سيواصل البرنامج القطري استكشاف سبل للاستفادة من تكنولوجيا المعلومات والاتصالات لتعزيز كفاءة وأثر التدخلات الإنمائية من خلال الإرشاد الإلكتروني، ونظم الإنذار المبكر، وتطبيقات الروابط مع الأسواق، والنظم الإلكترونية، والزراعة الدقيقة، وما إلى ذلك.

## زاي- الشراكات الاستراتيجية والتعاون بين بلدان الجنوب والتعاون الثلاثي

64- ستركز استراتيجية الشراكات في برنامج الفرص الاستراتيجية القطرية (الذيل السابع) على: (1) تزويد السياسات بالمعلومات وتمكين التنمية المنسقة تحت قيادة قطرية؛ (2) استقطاب الموارد المالية مع المؤسسات المالية الدولية، والشركاء الثنائيين، والصناديق المعنية بالمناخ والبيئة؛ (3) إنتاج المعرفة والابتكار مع شركاء التعاون بين بلدان الجنوب والتعاون الثلاثي؛ (4) تخفيف الآثار الاجتماعية والاقتصادية للتمرد؛ (5) زيادة وضوح الصورة من خلال مشاركة وتواصل أكبر داخل البلد.

## الحكومة والمجتمع المدني

65- سيواصل الصندوق العمل بشكل وثيق مع الوكالات الحكومية ذات الصلة على المستوى الوطني ومستوى المقاطعات لدعم تنفيذ برنامج الفرص الاستراتيجية القطرية. وستواصل مشروعات الصندوق العمل مع منظمات المجتمع المدني، بما في ذلك طائفة من المؤسسات المجتمعية.

الشركاء الإنمائيون (وكالات الأمم المتحدة، والمؤسسات المالية الدولية، والمنظمات غير الحكومية، وغيرها)

66- الصندوق ملتزم بالتعاون الإنمائي وسيتعاون بشكل وثيق مع الوكالتين الأخريين اللتين تتخذان من روما مقرا لهما، ووكالات الأمم المتحدة الأخرى (منظمة العمل الدولية، ومنظمة الأمم المتحدة للتنمية الصناعية)، والمؤسسات المالية الدولية (البنك الدولي، وبنك التنمية الأفريقي)، وجهات أخرى (مثل التحالف من أجل ثورة خضراء في أفريقيا، والاتحاد الأوروبي، ووزارة الخارجية والكونولت والتنمية في المملكة المتحدة، والوكالة الأمريكية للتنمية الدولية، والنرويج، والوكالة اليابانية للتعاون الدولي، والجماعة الاستشارية للبحوث الزراعية الدولية: المركز الدولي للبطاطس، والمعهد الدولي لبحوث الثروة الحيوانية، والتحالف العالمي لتحسين التغذية، ومرصد الموارد الريفية (Observatório do Meio Rural)، وجامعة (Eduardo Mondlane).

67- ويحتاج التنسيق بين الوكالات الإنمائية المتعددة العاملة في موزامبيق إلى التعزيز، الأمر الذي سيتابعه الصندوق من خلال منصات مثل برنامج شركاء التنمية والتعاون، والفريق العامل المعني بالزراعة والتنمية الريفية، والفريق العامل المعني بالاقتصاد الأزرق، ومنتدى الشركاء المعنيين بالتغذية.

## القطاع الخاص

68- من أجل تعزيز مشاركة الأعمال في الاقتصاد الريفي، ستواصل مشروعات برنامج الفرص الاستراتيجية القطرية العمل مع القطاع الخاص من خلال نماذج الشراكات بين المنتجين والقطاعين العام والخاص، والمشاركة مع الجهات الفاعلة المختلفة (اتحاد الرابطة الاقتصادية، والمنظمات غير الحكومية، والحكومة).

## التعاون بين بلدان الجنوب والتعاون الثلاثي

69- سيزداد تعزيز مبادرات التعاون بين بلدان الجنوب والتعاون الثلاثي من خلال نقل التكنولوجيا، وبناء القدرات، وتبادل الدروس المستفادة مع البلدان ضمن الإقليم وخارجه. وستشمل المجالات الرئيسية المناخ وإدارة الموارد الطبيعية، والاقتصاد الأزرق، وبناء القدرات المؤسسية، ومشاركة القطاع الخاص، والتعاون مع منظمات المزارعين (انظر الذيل السابع).

## خامسا- تنفيذ برنامج الفرص الاستراتيجية القطرية

### ألف- حجم الاستثمار ومصادره

70- سيغطي تمويل برنامج الفرص الاستراتيجية القطرية للفترة 2023-2027 دورتين من دورات نظام تخصيص الموارد على أساس الأداء وفقا لنظام المنح والمشروعات الاستثمارية: 49 مليون دولار أمريكي من التجديد الثاني عشر لموارد الصندوق (2022-2024) والتجديد الثالث عشر لموارد الصندوق (2025-2027). ونظرا للمخاطر المتنامية من المديونية الحرجة، جرى نقل موزامبيق إلى شروط الإقراض التيسيرية للغاية بموجب إطار القدرة على تحمل الديون، مما سمح للبلد بتلقي جزء كبير من الدعم المالي كتمويل بالمنح في عام 2023.

## الجدول 4

التمويل المقدم من الصندوق والتمويل المشترك للمشروعات الجارية والمقررة  
(بملايين الدولارات الأمريكية)

المشروع	تمويل الصندوق	المصدر (نظام تخصيص الموارد على أساس الأداء)		التمويل المشترك	
		محلي	دولي	نسبة التمويل المشترك	نسبة التمويل المشترك
<b>جاري</b>					
مشروع تمويل المشروعات الريفية	66.1	10.3			
برنامج تنمية سلاسل قيمة الأغذية الزراعية الشمولية	42	10.3	20		
مشروع الترويج لتربية الأحياء المائية على نطاق صغير	43	6			
<b>مقرر</b>					
مشروع تنمية قدرة مصائد الأسماك الحرفية على الصمود	29.3	5	20	0.851:1	
تمويل إضافي لبرنامج تنمية سلاسل قيمة الأغذية الزراعية الشمولية	20		يؤكد لاحقا		يؤكد لاحقا
برنامج تنمية سلاسل قيمة الأغذية الزراعية الشمولية - المرحلة الثانية	يؤكد لاحقا		يؤكد لاحقا		يؤكد لاحقا
<b>المجموع</b>	<b>200.4</b>	<b>31.6</b>	<b>40</b>	<b>0.49:1</b>	

ملحوظة: سيحدّد التمويل المقترح بموجب التجديد الثالث عشر لموارد الصندوق رهنا بالإجراءات الداخلية وموافقة المجلس التنفيذي اللاحقة.

### باء- الموارد المخصصة للأنشطة الإضافية

- 71- سيجري التماس تمويل تكميلي لرفد حافظة القروض من مرفق البيئة العالمية، والصندوق الأخضر للمناخ، وبرنامج التأقلم المعزّز لصالح زراعة أصحاب الحيازات الصغيرة. كما أُدرجت موزامبيق في مشروع لبرنامج التأقلم المعزّز لصالح زراعة أصحاب الحيازات الصغيرة يشارك فيه الصندوق والصندوق الأخضر للمناخ، وهو في مرحلة وضع المقترح.
- 72- ومن المتوقع الحصول على تمويل مشترك أو تمويل موازٍ إضافي من شركاء إنمائيين آخرين مثل صندوق الأوبك للتنمية الدولية، والاتحاد الأوروبي، وبنك التنمية الأفريقي، والبنك الدولي، وكندا، والنرويج، ومن المتوقع تعبئة موارد إضافية من خلال عمليات غير سيادية من أجل مشاركة القطاع الخاص.
- 73- **الموارد المخصصة للأنشطة غير الإقراضية.** ستركز أنشطة الصندوق غير الإقراضية بالدرجة الأولى على المشاركة في السياسات على المستوى القطري، وإدارة المعرفة، والتعاون بين بلدان الجنوب والتعاون الثلاثي. وستساعد المنح الوطنية والإقليمية الحالية والمستقبلية على دعم هذه المبادرات.

### جيم- الشفافية

- 74- سيجري تعزيز الشفافية من خلال إيصال أهداف المشروعات إلى جميع أصحاب المصلحة ونشر تقارير الإشراف والإنجاز المتعلقة بالمشروعات على نطاق واسع. وستشمل هذه التقارير بيانات عن التقدم المحرز في التنفيذ والنفقات، وتقارير مراجعة الحسابات والقوائم المالية. وسوف تتاح هذه المعلومات، بالإضافة إلى

المبادئ التوجيهية للصندوق بشأن التوريد التنافسي، وآليات معالجة التظلمات، على المواقع الشبكية للمشروعات.

### دال- إدارة البرنامج القطري

75- ستتفقد المشروعات الممولة من قروض الصندوق من خلال وحدات معينة لإدارة المشروعات يعمل فيها موظفون يعينون على أساس تنافسي من الوزارات الشريكة المنفذة. وستتولى وزارة الاقتصاد والمالية مهام التنسيق والإشراف العامة على الاستثمارات. وستدار الحافظة القطرية من قبل المكتب القطري للصندوق في مابوتو. وكجزء من عملية اللامركزية الجارية في الصندوق، فإن المدير القطري منتدب خارج المقر الآن، ولدى موزامبيق مكتب قطري للصندوق يديره مدير قطري.

### هـ- الرصد والتقييم

76- سيجري إنشاء نظام رصد وتقييم للحافظة القطرية من أجل تتبع التقدم المحرز في تحقيق نتائج برنامج الفرص الاستراتيجية القطرية. وستجري مواءمة الأطر المنطقية ومؤشرات الأداء للمشروعات مع إطار إدارة نتائج برنامج الفرص الاستراتيجية القطرية. وسيقدم التدريب لموظفي المشروعات على الرصد والتقييم، كما سيجري توفير المساعدة التقنية لتحسين أدوات وقدرات الرصد لدى الوزارات. كما ستستخدم الأدوات الجغرافية المكانية وتكنولوجيا المعلومات والاتصالات من أجل التنمية.

### سادس- مشاركة المجموعات المستهدفة

77- مشاركة المستفيدين. سيستمر إعطاء الأولوية للعمليات التشاركية لاستخلاص آراء المستفيدين المحتملين خلال تصميم المشروعات، بالإضافة إلى وضع نظم للرصد والتقييم ومؤشرات للأداء. وسوف تسجل آراء المستفيدين خلال بعثات الإشراف، كما ستلتزم مشاركتهم في تخطيط أنشطة التنمية المجتمعية لتحديد الأولويات، والأهداف، ومسؤوليات التنفيذ. وسيحقق المزيد من المشاركة من خلال استقصاءات رضا المستفيدين الدورية.

78- سيجري تضمين آليات لمعالجة التظلمات في جميع مشروعات الصندوق الجديدة والتي ستشمل آليات معيارية لتقديم التظلمات وتفاصيل عن قنوات التعقيبات التي يتعين أن يسلكها أصحاب المصلحة في المشروعات.

## سابعاً- إدارة المخاطر

الجدول 5

## المخاطر وتدابير التخفيف من آثارها

المخاطر	تصنيف المخاطر	تدابير التخفيف
مخاطر السياسة/ الحوكمة/ التمرد الدائر	مرتفعة	بناء القدرات المؤسسية على جميع المستويات وتعزيز الحوكمة. التواصل مع المؤسسة الوطنية لمراجعة الحسابات، ودعمها وتعزيزها من أجل المراجعة المنتظمة لاستثمارات الصندوق. تعزيز استخدام النظم الوطنية، ولا سيما النظام الحكومي للإدارة المالية.
مخاطر الاقتصاد الكلي	مرتفعة	دعم زيادة الإنتاج/الإنتاجية وبناء سلاسل القيمة المستدامة والموجهة نحو السوق.
استراتيجيات وسياسات القطاع غير منسقة أو غير مكتملة	منخفضة	الدعم المتواصل لحوار السياسات من خلال المنتديات المختلفة وتصميم استراتيجيات وسياسات القطاع، وخصوصاً تلك المتعلقة بتغيير المناخ والتكيف معه.
مخاطر القدرات المؤسسية	متوسطة	بناء القدرات وتقديم الدعم المؤسسي للمؤسسات الحكومية، بما في ذلك من أجل بيئة تنظيمية وسياساتية مناصرة للفقراء.
مخاطر الحفاضة	متوسطة	تعزيز بناء القدرات في إدارة المشروعات، وإجراءات التقدير الاجتماعي والبيئي والمناخي، والإدارة المالية، والتوريد، والرصد والتقييم. تعزيز الحضور القطري للصندوق في البلد.
المخاطر الانتمائية: الإدارة المالية	متوسطة	التدريب المنتظم وبناء القدرات في الإدارة المالية للحكومة و وحدات إدارة المشروعات. ضمان استخدام التقارير المالية المرحلية وتحديث أدلة تنفيذ المشروعات باتباع نصوص الاتفاقية المالية وأدلة الإدارة المالية.
مخاطر التوريد	مرتفعة	استخدام التخطيط الصارم ونهج استراتيجي في التوريد، بالإضافة إلى نهج قائم على تقدير المخاطر لإدارة العقود. التدريب المنتظم وبناء القدرات للحكومة و وحدات إدارة المشروعات من أجل إضفاء الطابع المهني على التوريد. تعزيز التدريب (برنامج الصندوق BuildPROC للتدريب على بناء القدرات في مجال التوريد). الاستعراض المنتظم لملفات نظام تتبع عدم الاعتراض، وتحديثات أداة رصد العقود، واستخدام نظام الصندوق للتوريد الشامل المتكامل. استخدام المبادئ التوجيهية للتوريد في الصندوق، ودليل التوريد في الصندوق من أجل جميع عمليات التوريد في المشروعات.
المخاطر البيئية والمناخية	مرتفعة	تعميم تدابير التكيف – الزراعة الذكية مناخياً، والبنية التحتية القادرة على الصمود. تعزيز أنظمة معلومات المناخ والأحوال الجوية. إنشاء بند للطوارئ المناخية كجزء من ميزانيات المشروعات للاستجابة في الوقت المناسب لحالات الطوارئ المتكررة.
المخاطر الاجتماعية	منخفضة	استهداف المجموعات الضعيفة، والنساء، والشباب، والأشخاص ذوي الإعاقة.
تقييد استراتيجيات الشمول المالي من قبل مقدمي الخدمات المالية التجارية	مرتفعة	تطبيق الحكومة، والمصرف المركزي، وأصحاب المصلحة الآخرين تنفيذ استراتيجيات تنمية القطاع المالي من خلال إطار تنظيمي ومؤسسي تمكيني.
مخاطر حيازة الأراضي	متوسطة	مواصلة العملية التشاركية لتسجيل الأراضي وإصدار الشهادات.
مخاطر التنمية الريفية الشاملة	متوسطة	استراتيجيات استهداف محددة للمجموعات المستهدفة المختلفة؛ والمشاركة النشطة المبكرة؛ الحصص المخصصة: النساء (50 في المائة) والشباب (30 في المائة).
مخاطر إدارة المشروعات – تأخيرات الاستهلال	مرتفعة	ينبغي أن تضمن التدخلات المستقبلية: (1) استخدام أدوات التنفيذ الأسرع لاستهلال المشروعات، (2) الأموال الاستهلاكية، والتمويل بأثر رجعي، وما إلى ذلك.
المخاطر الإجمالية	متوسطة	

## Results management framework

Country strategy alignment	Related UNSDCF/SDG outcomes	IFAD Strategic Objectives	Key COSOP results			
			COSOP goal is to contribute to the transformation of the rural economy of Mozambique by enlarging the nutrition and agriculture linkages with broader focus on value chains and food systems, improving of the productivity and food security of rural households, by strengthening their resilience and capacity to adapt to environmental and climatic shocks.			
<p>Agenda 2025 and National Development Strategy 2015-2035 (ENDE): focus on improving the living conditions of the population through structural transformation of the economy and diversification of the productive base.</p>			Strategic objectives	Investments and non-financial activities for the COSOP period	Outcome indicators	Output indicators
<p><i>Strategic Plan for the Development of the Agricultural Sector (PEDSA 2022-2031): provides guidelines for strategic action and priority investments designed to transform the agrarian sector, namely: (i) increased production, productivity and competitiveness with engagement of the private sector; (ii) sustainable management of natural resources; (iii) improved business environment; and (iv) institutional strengthening and development.</i></p>	<p>Sustainable Development Goals: SGD 1; SDG 2; SDG 5; SDG 8; SDG 10; SDG 13; SDG 14 SDG 15</p> <p>UNSDCF (2022-2026):</p> <p>Strategic priority area 3: Climate resilience and sustainable use of natural resources</p>	<p>SO3: Strengthen the environmental sustainability and climate resilience of poor rural people's economic activities</p>	<p>SO1: Sustainable natural resource use management by the rural poor, to increase resilience to environmental shocks and the impacts of CC.</p>	<p>Lending/investment activities</p> <ul style="list-style-type: none"> <li>• Ongoing PROCAVA PRODAPE</li> </ul> <p>Indicative BCEDP AFRDP/PROPEIXE</p> <p>Non-lending/non-project activities</p> <ul style="list-style-type: none"> <li>• CLPE</li> <li>• Partnerships</li> </ul> <p>WWF FAO WB AFD EU</p>	<ul style="list-style-type: none"> <li>• CI 1.2.1: Households reporting improved access to land, forests, water or water bodies for production purposes. ## Key files

### Key file 1: Rural Poverty and agricultural sector issues (refers to chapter I C)

Priority Areas	Affected Groups	Major Issues	Action Needed
<b>Small producers' productivity and profitability</b>	Smallholders in agriculture and aquaculture  Small-scale and artisanal fishers	<ul style="list-style-type: none"> <li>• Food insecurity and malnutrition</li> <li>• Low level of use of improved inputs / tools / equipment in agriculture and fisheries</li> <li>• Weak performance of fish farming vis-à-vis the limited scope to expand production from capture fisheries</li> <li>• Poor access to knowledge, extension and other support services</li> <li>• Difficulty in accessing markets and poor market linkages</li> <li>• Limited access to credit and other financial services</li> <li>• High post-harvest losses due to poor harvesting, handling and preservation</li> <li>• Low level of resilience to climate shocks</li> </ul>	<ul style="list-style-type: none"> <li>• Promote irrigation (including through solar powered schemes) to reduce dependence on rain-fed agriculture</li> <li>• Assist implementation of measures for accelerated growth of fish farming</li> <li>• Expand access to financial products that enable producers to invest in modern equipment, inputs and technologies</li> <li>• Support improved access to know-how and support services through continued reform of public extension services and engagement of private sector</li> <li>• Support improved access to markets, through dissemination of market related information and development of market-related infrastructures</li> <li>• Assist investments in preservation, storage, agro-processing and value addition</li> <li>• Promote resilient production and marketing infrastructure and practices</li> </ul>
<b>Input supply, marketing and trading</b>	Smallholders in agriculture and aquaculture  Small-scale and artisanal fishers  Traders  Agribusiness	<ul style="list-style-type: none"> <li>• Poor access to inputs due to remoteness, limited competition and low crop / fish catch volumes and value</li> <li>• Under-developed supporting infrastructure</li> <li>• Market information missing or not easily accessible to small producers and other value chain participants</li> <li>• Local transport for produce not available or excessively expensive</li> <li>• Product quality often below market standards, especially internationally</li> </ul>	<ul style="list-style-type: none"> <li>• Improve rural infrastructure, including all-weather tertiary roads and electricity networks</li> <li>• Promote partnerships with private sector players to expand marketing infrastructure facilities</li> <li>• Promote linkages between farmer groups / associations and out-growers and other potential buyers; encourage fair competition between traders</li> <li>• Support provincial and district market information centres, radio broadcasts and other locally based sources of information</li> <li>• Develop financial products to support investments in rural transport capacity</li> <li>• Support quality improvements and product development</li> </ul>

<p><b>Environment, climate change and natural resource management issues</b></p>	<p>Crop and fish farming, livestock and fishing communities</p> <p>Extension and technical officers</p> <p>National and local governments</p>	<ul style="list-style-type: none"> <li>• Vulnerability to extreme weather events e.g., drought, floods and cyclones</li> <li>• Degradation of water and land resources</li> <li>• Environmental pollution</li> <li>• Pests and disease outbreaks</li> <li>• Inadequate early warning systems, weather and climate information</li> <li>• Low environment and climate risks awareness</li> <li>• Insufficient extension services and technical capacity</li> <li>• Low capacity to carry out environmental and social assessments and implement proper safeguard</li> <li>• Lack of resources to respond adequately to climate shocks</li> </ul>	<ul style="list-style-type: none"> <li>• Promote climate smart land, water and other natural resources utilization and management practices</li> <li>• Assist rehabilitation of degraded land and water resources</li> <li>• Support community-based management schemes and co-management initiatives</li> <li>• Monitor and control environmental pollution</li> <li>• Promote integrated pest and disease management approaches</li> <li>• Invest in early warning systems, weather and climate information dissemination</li> <li>• Promote awareness creation on environment and climate risks and their mitigation at national and local levels</li> <li>• Strengthen the capacity of technical staff and extension workers in climate smart technologies and practices</li> <li>• Develop and implement sound plans to prevent and mitigate against environmental and social risks</li> <li>• Provide resources for anticipating and mitigating the impact of climate changes</li> </ul>
<p><b>Policy, legal and institutional framework in support of agriculture and rural development</b></p>	<p>Crop and fish farming, livestock and fishing communities</p> <p>National and local governments</p> <p>Development partners</p>	<ul style="list-style-type: none"> <li>• Some key sectoral policies, strategies and plan require redesign or development</li> <li>• Limited access to land and other productive resources by disadvantaged groups</li> <li>• Sub-optimum levels of coordination of rural development initiatives</li> <li>• Lack of harmonization and/or overlap of rural development interventions</li> <li>• Uncertainty in roles assigned to provincial government bodies lead to some duplication of effort</li> <li>• Key regulatory provisions in support to smallholder producers still missing</li> </ul>	<ul style="list-style-type: none"> <li>• Improve policy dialogue national and local levels;</li> <li>• Assist Government to design or update policies, strategies and plans as well as the related implementation processes</li> <li>• Support implementation of campaign such as 'Terra Segura' and attribution of community user's rights in artisanal fisheries</li> <li>• Promote existing and/or new platforms for improved institutional coordination at all levels of implementation</li> <li>• Support implementation of institutional reforms at central, provincial and district levels, including those regarding decentralization</li> <li>• Support development of regulatory and guiding instruments for increased production and productivity of smallholders</li> <li>• Support government to structure intervention from humanitarian aid through emergency response and progress to market driven interventions</li> </ul>

		<ul style="list-style-type: none"> <li>Lack of structured processes in dealing with shocks and emergency response situations</li> </ul>	
<p><b>Gender, youth and other disadvantaged groups</b></p>	<p>Rural women and women headed households</p> <p>Young people</p> <p>People Living with Disabilities</p>	<ul style="list-style-type: none"> <li>Higher vulnerability levels of women, youth and other disadvantaged groups</li> <li>Lack of clear targeting strategies to reach out to women, youth and other disadvantages groups</li> <li>Inadequate representation of women and their interests in producers' groups and management committees</li> <li>Lower access to education, functional literacy and vocational training opportunities</li> <li>Limited opportunities for livelihood diversification and profitable activities</li> <li>Traditionally accepted norms constrain women's mobility and access / ownership of means of production</li> <li>Lack of productive assets</li> </ul>	<ul style="list-style-type: none"> <li>Promote community awareness creation on issues related to gender inequality and social exclusion</li> <li>Mainstream gender empowerment using the Gender Action Learning System (GALs) methodology</li> <li>Devise and implement targeting strategies to reach out to women, youth and other disadvantages groups; set clear targets for their inclusion in IFAD supported initiatives</li> <li>Assist women to ascend to leadership positions and representation of their interests in rural organisations</li> <li>Provide functional literacy and vocational training including marketing / business skills development</li> <li>Promote livelihoods diversification by improving women's and youth participation in trading / processing as well as in off-farm income generation opportunities</li> <li>Assist women to gain and maintain access to productive resources</li> <li>Develop inclusive approaches to improve access to financial services by women and young people</li> </ul>

<p><b>Rural enterprise financing</b></p>	<p>Smallholders crops and fish farmers</p> <p>Small-scale and artisanal fishers</p> <p>Traders</p> <p>Agribusiness</p>	<ul style="list-style-type: none"> <li>• Lack of harmonised policy and fragmentation of donor action in rural finance sector</li> <li>• Limited availability, accessibility and risk of production-oriented credit and other products</li> <li>• Rural financial services problematical, high cost</li> <li>• Limited tradition / development of savings / credit culture</li> <li>• Local microfinance industry facing serious risks of bankruptcy</li> <li>• Limited development of community-based financial institutions</li> </ul>	<ul style="list-style-type: none"> <li>• Assist setting of a strategic policy / legal framework and support innovative approaches in rural finance</li> <li>• Facilitate greater outreach of banks / financial intermediaries and support capacity building in rural enterprise financing</li> <li>• In conjunction with improved farming and fishing practices / technology, promote improved access to credit and other products</li> <li>• Incorporate financial awareness / control principles in farmer / fishers group training</li> <li>• Support development of community-based financial institutions through graduation and institutional development of saving and credit groups</li> </ul>
<p><b>Producers' organisations</b></p>	<p>Smallholders in agriculture and aquaculture</p> <p>Small-scale and artisanal fishers</p>	<ul style="list-style-type: none"> <li>• Low levels of organization of smallholder producers</li> <li>• Limited number of performing farmers' / fishers' organisations able to provide sustainable services to members</li> <li>• Low levels of formalisation and upper tiers organizations</li> <li>• Limited farmer organisation and voice in local / district governance</li> <li>• Lack of linkages between central and local levels, an imprecise policy agenda and low capacities to develop policy options</li> </ul>	<ul style="list-style-type: none"> <li>• Assist initiatives aiming at better organization of producers</li> <li>• Promote institutional building and develop capacities to provide services to members</li> <li>• Promote participation of producer's organisations in consultation platforms at local/national level</li> <li>• Assist producers' organizations to engage in policy dialogue and develop their own (policy) positions</li> </ul>

Priority Areas	Affected Group	Major Issues	Actions Needed
<p>Food security for 2.8 million food insecure rural people</p>	<p>Smallholder and landless rural population</p>	<ul style="list-style-type: none"> <li>• Production system remains vulnerable to shocks (climate and price).</li> <li>• Small scale production with limited access to improved inputs, technology and supporting services.</li> <li>• Low soil fertility.</li> <li>• Scarcity and volatility of water supply.</li> </ul>	<ul style="list-style-type: none"> <li>• Foster production systems, through improve technology and organization.</li> <li>• Support rain-fed production under good agricultural practices, with small scale irrigation.</li> <li>• Increase access to supporting services.</li> </ul>

Access to inputs	Rural population	<ul style="list-style-type: none"> <li>Limited access to quality inputs at affordable rate.</li> </ul>	<ul style="list-style-type: none"> <li>Improve extension services, advising on type and source of inputs.</li> <li>Work with agro-dealers to tailor products and payments to meet target group's needs.</li> <li>Support appropriate sector regulations.</li> </ul>
Access to output markets for produce	Small producer	<ul style="list-style-type: none"> <li>Lack of access to markets under remunerative conditions (e.g. clear pricing, quality requirements).</li> <li>Coordination along the commodity value chains weak.</li> <li>Absence of pro-active private sector (besides for Tobacco).</li> <li>Relatively weak degree of organization of farmers.</li> </ul>	<ul style="list-style-type: none"> <li>Increase coordination along value chains.</li> <li>Strengthen producers organizations.</li> <li>Partner with private sector on in- and output side and oversee that partnership agreements are beneficial for small producers (sustainable).</li> <li>Support appropriate sector regulations.</li> </ul>
Climate resilient rural road and irrigation infrastructure	Rural population	<ul style="list-style-type: none"> <li>Roads and bridges damaged by severe weather events, rendering access to/from rural areas more difficult.</li> <li>Irrigation schemes damaged by weather events and sedimentation</li> </ul>	<ul style="list-style-type: none"> <li>Investments in and appropriate, cost-efficient maintenance of rural roads/bridge.</li> <li>Investment in small/medium scale irrigation schemes.</li> <li>User-based management and maintenance of irrigation schemes.</li> </ul>
Access to secure saving	Rural population	<ul style="list-style-type: none"> <li>Absence of deposit-taking rural MFIs (only 2 of the MFIs take deposits).</li> </ul>	<ul style="list-style-type: none"> <li>Create market incentive for MFIs to establish deposit-taking business line.</li> </ul>
Sustainable extension service	Rural population and SMEs	<ul style="list-style-type: none"> <li>Lack of appropriate service provision for small producers/SMEs, smallholders and other VC actors.</li> </ul>	<ul style="list-style-type: none"> <li>Establish sustainable model of private sector service provision to address aforementioned issue.</li> </ul>

## Key file 2: Target group identification. Priority issues and potential response (refers to chapter I-C, III-C)

Typology	Poverty Levels and Causes	Coping Actions	Priority Needs	COSOP Response
Category A: subsistence and smallholder farmers, and traditional fishermen (60-70%);	<ul style="list-style-type: none"> <li>• Food insecure households</li> <li>• Few assets</li> <li>• Negligible access to micro-finance</li> <li>• Limited extension support</li> <li>• Operating at a subsistence level.</li> <li>• Highly vulnerable to endemic climatic and environmental shocks.</li> <li>• Women farmers have minimal access to off-farm income generating activities and are reliant on agricultural production</li> </ul>	<ul style="list-style-type: none"> <li>• Consumption of indigenous food sources</li> <li>• Sale of livestock</li> <li>• Migration to urban areas</li> </ul>	<ul style="list-style-type: none"> <li>• Cultivation of more climate resilient food sources (crops and aquaculture)</li> <li>• Increased biodiversity and ecosystem conservation</li> <li>• Integrated food systems</li> <li>• Technical assistance (production, marketing)</li> <li>• Access to credit</li> <li>• Improved security of land tenure (especially for women)</li> </ul>	<ul style="list-style-type: none"> <li>• Climate smart agricultural practices</li> <li>• Promotion of bio-diversity</li> <li>• Establish integrated food systems.</li> <li>• Rural finance mechanisms</li> <li>• Off-farm income generation opportunities</li> <li>• Dedicated targeting of assistance for women farmers and fishers and youth</li> </ul>
Category B: emerging and semi-commercial farmers (20-30%); and	Households with some assets and the potential to increase production and surpluses and to graduate to more commercial forms of farming	<ul style="list-style-type: none"> <li>• Use of savings and sale of assets during periods of hardship</li> </ul>	<ul style="list-style-type: none"> <li>• Enhanced agricultural production and diversification</li> <li>• Access to credit</li> <li>• Access to inputs</li> <li>• Technical assistance (business &amp; production, marketing)</li> <li>• Insurance</li> <li>• Improved access to markets</li> </ul>	<ul style="list-style-type: none"> <li>• Technical support to develop climate smart agricultural practices</li> <li>• Irrigation and soil- and water conservation</li> <li>• Value chain development</li> <li>• Access to rural finance</li> <li>• Training in business development and commercial farming systems</li> </ul>
Category C: farmer/community-based organisations, medium and small-scale enterprises, and agri-businesses (10-20%)	Established small-scale and commercial farming and fisheries enterprises with the potential to increase production and grow the rural economy.	Limited or no further investment in the sector.	<ul style="list-style-type: none"> <li>• Changes in marketing regulations</li> <li>• Greater access to finance</li> <li>• Access to markets</li> <li>• Improved rural infrastructure (roads, energy, storage facilities)</li> </ul>	<ul style="list-style-type: none"> <li>• Promote private sector service provision</li> <li>• Linkages to national and international markets</li> <li>• Engagement in national policy dialogues.</li> </ul>

- Support for aggregation with small scale farmers.

**Key file 3: Organization matrix (strength, weaknesses, opportunities and threats analysis) (refers to chapter I-C, III-B, IV-B, C, G)**

Organization	Strengths	Weaknesses	Opportunities/Threats	Remarks
<b>Enablers</b>				
Ministry of Agriculture and Rural Development (MADER)	<ul style="list-style-type: none"> <li>• Strong presence throughout the country.</li> <li>• In-house expertise present.</li> <li>• Mandated to oversee agriculture interventions in the country.</li> <li>• Has an environment and safeguards cabinet.</li> <li>• Has a strong knowledge of land tenure</li> <li>• It is a key partner to IFAD as PROCAVA and REFP are under MDER</li> <li>• It has key knowledge of agricultural value chain development, and the relevance of this for land tenure</li> <li>• Government current priority to strengthening the extension network</li> </ul>	<ul style="list-style-type: none"> <li>• Limited extension services on the ground.</li> <li>• Limited resources vis a vis expected outputs.</li> <li>• Staff time required by the project may slow down other activities.</li> <li>• It is a big entity, and now has to coordinate activities with MITADER in regard to land tenure security</li> </ul>	<ul style="list-style-type: none"> <li>• synergies with other donor funded programs in the Ministry, particularly the SUSTENTA national programme</li> <li>• In-house expertise in agriculture, extension, irrigation, environment</li> <li>• slow delivery due to limited time and capacity. There is large scope for partnerships, especially in relation to value chain projects, where tailored land tenure interventions are necessary</li> <li>• MADER has better presence at Provincial and District level, and can facilitate the implementation of activities on NRM</li> <li>• Promote associations/union's of farmer groups into farmers' cooperatives</li> <li>• Promote inter-linking markets in value chain</li> <li>• Promote youth, and other marginalised groups involvement in agriculture</li> <li>• Information on agriculture and markets not up-dated</li> </ul>	<ul style="list-style-type: none"> <li>• New extension model being adopted in the country;</li> <li>• IFAD to continue focused on the most vulnerable ground leveraging from other structural investments at higher levels to serve the smallholder groups</li> </ul>
Ministry of Sea, Inland Waters and Fisheries (MIMAIP)	<ul style="list-style-type: none"> <li>• Legally mandated to oversee the development of the fisheries, aquaculture sector, and the whole blue economy in partnership with other sectors.</li> <li>• Ministry has departments to deal with specific aspects such as research and planning.</li> </ul>	<ul style="list-style-type: none"> <li>• Limited resources and staffing.</li> <li>• Weak coordination with the environment and agriculture ministries.</li> <li>• Limited expertise in aquaculture across the country.</li> <li>• Not as strong in presence in the inland</li> </ul>	<ul style="list-style-type: none"> <li>• The new Aquaculture Research Centre (CEPAQ) contribute to the aquaculture sector positively.</li> <li>• Aquaculture value chain is still underdeveloped and thus more investments are required, yet government has limited resources. PRODAPE is the first investment to the</li> </ul>	<ul style="list-style-type: none"> <li>• Investment in capacity building is important.</li> <li>• The recent reforms in the sector had negative influence in the extension network with the abolishment of IDEPA Delegations. ## Transition projections

The economy of Mozambique grew at an impressive rate exceeding 7 per cent per annum between 2001 and 2015 (one of the fastest growing economies in Sub-Saharan Africa), driven by large scale investment projects in the extractive sectors, public investments in infrastructure and significant support from donors. Since 2016, a series of factors has contributed to the economic slowdown including the i) so-called “hidden debt crisis”, which led to the suspension of direct donor support to the government budget until 2022; ii) the negative impacts of recurrent extreme weather events (7 cyclones between in 2019 – 2022<sup>27</sup>); iii) the effects of the COVID-19 pandemic; iv) the insurgency conflict in northern Mozambique and iv) more recently, in 2022, the Russia-Ukraine conflict. All of these factors have slowed down the socio-economic development significantly and have reversed some of the gains of poverty reduction, with the national poverty rate edging up from 62.8 per cent in 2019 to an estimate of 64.2 per cent in 2022.<sup>28</sup> The average annual per capita growth rate was negative (-0.5 per cent) between 2016 and 2020.

The compounding effects of COVID-19 and the Ukraine crisis, continue to increase global commodity prices significantly and exert a direct impact on Mozambique’s food availability as this country is highly import-dependent on many of its essential goods, (including oil, food, and fertilizer) from Ukraine, Russia, and Belarus. Mozambique depends on imports of 90 per cent of its wheat and sunflower seed oil needs, where the country imports approximately more than a third (39 per cent) of its wheat from Russia (31 per cent) and Ukraine (8 per cent)<sup>29</sup>. Wheat prices registered a 12per cent increase in September 2022 compared with the same period in 2021. In addition, overall inflation rate increased from 5.7 per cent in 2021 to 12 per cent in 2022 driven by higher fuel prices, food and transportation costs.

Notwithstanding the lingering after effects of the pandemic and more recent shockwaves triggered by the Ukraine conflict, the negative economic trend began to reverse in 2021, with the annual growth rate reaching 2.3 per cent. It is estimated to reach 4.9 per cent in 2023, and is expected to accelerate in the medium term, reaching 8 per cent in 2024, due to agricultural growth, favourable commodity prices, the resumption of the Total Energies-led LNG project and the commencement in 2023<sup>30</sup>, and the high level of the COVID-19 vaccination rollout. Vaccination coverage among the total population currently stands at 46 per cent and 93 per cent among adults over 18 years.<sup>31</sup>

Notwithstanding these positive trends, according to the World Bank, Mozambique remains at high risk of debt distress, although debt management is assessed to be sustainable in the short to medium term. Currency appreciation contributed to a drop in total public debt from 120 per cent to 106.4 per cent of GDP between 2020 and 2021. Mozambique is receiving 100 per cent grant financing in IFAD12 and is not eligible for loans (PBAS or BRAM).

Mozambique is still grappling with a military insurgency in parts of the gas-rich province of Cabo-Delgado; the four-year conflict has caused an estimated 4,000 deaths and displaced nearly one million people. About four million people are likely to face high levels of food insecurity as a result of the combined effects of climate shocks and the conflict, which is also threatening the economic potential of lucrative LNG investments in the area. The arrival of regional troops has helped stabilize the situation to a degree. The

<sup>27</sup> 2019 (Idai and Kenneth); 2020 (Chalane); 2021 (Eloise and Guambe); 2022 (Ana and Gombe)

government approved a reconstruction plan for the province, as well as the “Programa de Resiliência e Desenvolvimento Integrado do Norte de Moçambique” (PREDIN). The latter is a short- to medium-term approach to conflict prevention and conflict mitigation, social cohesion and resilience, intended for Cabo Delgado, Niassa, and Nampula provinces.<sup>32</sup>

**Table 1 - Projections for key macroeconomic and demographic variables**

Main Indicators		Projection				
		2023	2024	2025	2026	Avg. Total
Avg. GDP Growth <sup>33</sup>		4.9	8.2	5.1	13.9	8.0
Avg. GDP per Capita (USD)		578.91	624.27	648.12	728.71	645.0
Avg. Public Debt (% of GDP) <sup>34</sup>		102.59	99.8	97.47	83.97	96.0
Avg. Inflation Rate (%)		8.6	8.2	6.7	5.9	7.4
Rural Population (Million) <sup>35</sup>	Current (20.7million)	21.2	21.7	22.1	22.6	21.9
	Avg. Annual Growth Rate	2.93	2.93	2.93	2.93	2.9
<b>Private Sector enabling Environment</b>	IFAD's 2021 Rural Sector Performance Assessment (RSPA) overall score for Mozambique stands at 3.6, above the ESA average score of 3.0. The specific score for investment climate for rural business is 3.9, which measures the quality of countries' policies and institutions in the rural sector, for achieving rural development and rural transformation benefitting the poor.					
<b>Vulnerability to shocks<sup>36</sup></b>	The high vulnerability score of 0.517 and low readiness score of 0.269 Mozambique places it in the upper-left quadrant of the ND-GAIN Matrix with an overall score of 37.6. The country has both a great need for investment and innovation to improve readiness and a great urgency for adaptation action. Mozambique ranks 156 out of 192 countries in the ND-GAIN Country Index Rank.					

The following scenarios have been formulated, based on the medium-term expenditure frameworks (MTEF), from: (a) IMF Article IV medium term expenditure framework<sup>37</sup>; (b) Government of Mozambique medium-term fiscal scenario<sup>38</sup>; (c) WB Mozambique Economic Update<sup>39</sup>.

#### ➤ **Base Case Scenario.**

Medium-term prospects are foreseen to be positive, supported by the global gradual recovery, LNG and Agriculture developments. Growth is expected to accelerate in the medium term, averaging 5.7 per cent between 2022-2024. Assuming favourable weather conditions, agriculture will maintain a positive performance in the upcoming years due to continued investments in inputs. Recovery in global demand and commodity prices will continue to support export gains, and FDI inflows (mainly linked to LNG) will sustain investments.

Under this scenario, debt sustainability is expected to improve, with a debt trajectory reaching 80 per cent in 2024<sup>40</sup>, although still above of the average public debt ratio, as a

<sup>32</sup>

<sup>40</sup> <https://www.cabri-sbo.org/en/documents/medium-term-fiscal-scenariomacro-fiscal-table-2022-2024> - page 30

percentage of GDP. The Government is establishing a sovereign wealth fund to absorb the income from the oil and gas sectors, and this will further consolidate economic growth and macroeconomic stability. The debt distress situation will improve, however the country will remain as high-risk debt distress, and to ensure debt sustainability, the authorities will need to continue maintaining prudent and sustainable debt management practices.

In August 2022, the Government introduced the Economic Measures Package,<sup>41</sup> a series of reforms intended to stimulate economic growth, improve transparency and governance and ensure greater fiscal oversight and accountability. Potential exists to support government reforms to improve efficiency, effectiveness and financial accountability in IFAD funded programmes. Amongst the measures proposed in the package are several intended to stimulate growth in the agricultural sector and in the rural areas. These include Value added tax (VAT) exemption on imports of inputs for agriculture and electrification; lowering of corporate tax in the agriculture and aquaculture sectors (from 32 per cent to 10 per cent); and imposition of a 10 per cent tax on revenues, derived from natural resource extraction, which will be assigned to the provinces where extraction took place. These tax revenues are intended to finance infrastructure projects and development programmes, which are foreseen to have positive multiplier effects on the economy.

Should these measures be effectively implemented, this will also imply leveraging IFAD investments, particularly for the development of rural infrastructure to stimulate commercial investment in agriculture and aquaculture, while continuing to encourage Government to ensure that a significant proportion of revenue, generated by the extractive sector, is reinvested locally. An increase in foreign earnings, as a result of the sale of LNG, is likely to strengthen the national currency and has the potential to offset the rising costs of fuel, fertilizer, and imported food.

Due to the expected economic improvements, under this scenario, it is foreseen that the lending terms for Mozambique could change in the medium-to long term.

### ➤ **Low Case Scenario**

In the low-case scenario, a slow economy recovery will take place due to the restrictive and prolonged effects of COVID-19, the Ukraine crisis, the ongoing negative effects of the insurgency in Cabo Delgado, and recurrent extreme weather events. The domestic debt ratio will increase due to the fiscal deficit. GDP will have a moderate growth (around 4 per cent in 2024)<sup>42</sup>.

Domestic prices, particularly of food, will remain high due to the high costs of fuel, fertilizer, and imported food, all of which will affect the purchasing power of the poor, who on average, spend a larger share of their budget on food. The inflation rate is expected to drop by one percentage point during the projected period, to an average of 7.4 per cent. The Ukraine crisis is expected to disrupt supply chains, decrease household consumption, and postpone the implementation of development projects, further driving the most vulnerable populations into poverty and food insecurity. Due to higher inflation and weaker investment, the economy will be less attractive to foreign investments. This scenario anticipates continued debt unsustainability, and the Government's inability to acquire additional non-concessional loans, in addition to IFAD concessional loans.

Indeed, the low scenario suggests the risk that GoM may limit its international borrowing from IFIs for development projects, which are not in its priority list. The country's lending terms are expected to remain at 100 per cent DSF.

<sup>41</sup> Republic of Mozambique (2022). "Economic Acceleration Measures Package". Ministry of Economy and Finance.

<sup>42</sup> <https://www.cabri-sbo.org/en/documents/medium-term-fiscal-scenariomacro-fiscal-table-2022-2024>

### ➤ **High Case Scenario**

In the high case scenario, real GDP growth over the COSOP period is projected to reach around an average of 8 per cent, between 2023 and 2026, showing an important acceleration post-COVID-19<sup>43</sup>. The Government is expected to continue implementing prudent macroeconomic policy management and ambitious reforms, despite challenging conditions.

The IMF commended the Government for the policy actions to mobilize additional tax revenue and remove distortionary tax exemptions and commended the authorities for implementing a new public sector pay structure. Authorities are encouraged to continue reforms in tax administration and public financial management to underpin the efficient and transparent management of public resources. IMF welcomes the authorities' plans for transparent management of future LNG resources through a sovereign wealth fund and suggested adopting a fiscal rule to mitigate the impact of commodity price volatility<sup>44</sup>.

Downside risks remain high and could narrow growth to 1.9 per cent in 2022 if they materialize. The risks stem from the insurgency in the north, threatens the resumption of the LNGs projects in Cabo Delgado and further COVID-19 infection waves are considerable and could narrow the growth.

Overall, the Mozambique medium term economic projections are relatively positive taking into account recent developments in the extractive sector and the growth trends following COVID-19 and a series of environmental shocks. This is projected to continue for the period 2023–2027. However, LNG developments are expected to reinforce the current extractive-centric growth model with limited local linkages and job creation. Mozambique needs to unleash growth in non-extractive activities, promoting a more interconnected and competitive economy that shares growth more equitably. The country has strong potential to diversify its growth model, developing commercial agriculture and a competitive services sector focusing on the backbone services of ICT, telecom, transport, and logistics. This shift will require some fiscal space to invest in physical and human capital and greater private sector participation in non-extractives sectors. As part of IFAD CLPE and based on the ongoing analytical work carried out by partners such as World Bank, FAO, CGIAR, etc., dialogue should leverage an analysis of how the proposed projects (smallholder agriculture and fisheries in the target areas) would contribute to the country's GDP, its social stability, the dependence on food imports, and the fiscal balance.

#### **Introduction**

1. The Social Environment and Climate Assessment Procedures (SECAP) Review Note details the analysis of the social and environmental and climate change risks and opportunities of SECAP. The note outlines the contextual background and recommends risk management and opportunities maximisation. The review note has been produced mainly using literature review of national policies, strategies and relevant programmes and initiatives, as well as field visits and surveys. The social, environment and climate change analysis also draws on the national commitments and targets from the multilateral conventions. The data and information based on statistical data reviews from various secondary sources, including the government country reports, legal, institutional, policy, and programme documents. Furthermore, the study includes a review of IFAD strategy papers, action plans and reports from other multilateral agencies and development partners, and findings from consultations with key stakeholders in-country and virtually.

#### **Part 1 - Situational analysis and main challenges**

2. Mozambique suffered from two consecutive years of El Niño-related drought, which had a negative impact on agriculture production and agricultural livelihoods. The country is also prone to other natural disasters, including cyclones and floods, which can disrupt the country's economic development. Since 2016, the combination of the hidden debt crisis, the tropical cyclones that affected the Central and Northern parts of the country in 2019, and more recently, the COVID-19 pandemic in 2020 and the Russia-Ukraine Conflict Mozambique experienced in 2022 slowed down growth significantly. The average annual per capita growth rate was negative (-0.5 per cent) between 2016 and 2020. The negative trend reversed in 2021, with the rate reaching 2.3 per cent, and it is estimated to reach 3.7 per cent in 2022. The

impact of these events on growth has affected the wellbeing of the Mozambican population, and specially rural poor who were hit hard.

### **Socio-economic situation and underlying causes**

3. Poverty. Even though Mozambique has managed to reduce poverty in all forms measured during the last 15 years, with significant improvements in rural and in every province, with reduced economic gap between women and men, large pockets of poverty remain with high levels of vulnerability. 12.4 million people are still living in monetary poverty. Poverty reduction was less effective in certain geographical areas and for certain groups, which resulted in rising inequality. People in rural areas (79 per cent) and central/northern provinces in general – but Zambezia and Nampula too (50 per cent) – lag behind in terms of resources, opportunities, and choice. All service delivery are less accessible and/or of lower quality in rural areas and in central/northern provinces.
4. Another reason for the stagnation in poverty reduction include macroeconomic volatility in recent years. This coupled with weather shocks driven by climate change, stagnant agriculture production in the Centre and North of the country (which constitute an important source of livelihoods for most Mozambicans living in rural areas) and the COVID-19 containment measures have hampered employment and households' earnings. The ongoing Russia-Ukraine conflict adds to the above-mentioned challenges faced by the poor with higher prices of fossil fuels, edible oils, and wheat - food products on which the country is a net importer.
5. **Food Security.** Over 70 per cent of the population lives in rural areas, where agriculture is the main source of household food security, livelihoods, employment and income. The sector employs 80 per cent of the workforce and is the main source of income for more than 70 per cent of the population. Yet food insecurity remains a major issue for people living in rural areas. More than half of all households live below the poverty line. Moreover, agriculture production at the household level is often not sufficient to maintain food security. According to Mozambique latest food security outlook report (August 2022), many households face increased food insecurity mainly attributed to drought, floods and conflicts (Cabo Delgado). Many have difficulties in accessing basic needs, specially access to food become a major problem due to limited income. It is reported that many poor rural households apply coping strategies in terms of the diversity of their diet and frequency of meals, which is a critical measure of nutritional security.
6. In addition, Mozambique is a country prone to weather related shocks that further jeopardize food security and nutrition in certain areas. Mozambique ranks third among African countries most exposed to multiple weather-related hazards and suffers from periodic cyclones, droughts, floods and related epidemics. For instance, due to Cyclone Idai that hit the country in March 2019, hundreds of rural communities experienced food shortages and were plunged into a nutrition crisis. Six weeks later, Cyclone Kenneth made landfall in northern Mozambique.
7. **Agriculture.** Agriculture is of central importance to Mozambique's economy, but it is largely at the subsistence level. Mozambique is largely an agrarian country with well-developed agriculture corridors (the Pemba – Lichinga, Beira, Zambezi, Nacala, Maputo and Limpopo agricultural corridors), forestry and a marine fisheries sector. Mozambique has around 36 million hectares of fertile and arable land, but only 16 per cent of land suitable for farming is currently cultivated. Productivity is low, reliance on food imports is high, and much of the population is food-insecure and malnourished. Most farms are small, family-run, and mainly subsistence. The main crops are maize (29 per cent), cassava (13 per cent), sorghum (11 per cent), beans

(9 per cent) and rice (5 per cent). All the four main corridors (Maputo-Limpopo; Beira; Nacala; and Pemba-Lichinga) will be drivers of the rural transformation, boosting the crops and dynamic of their development area. The Beira and Nacala corridors, are key for inland countries and Mozambique imports and exports. For the Maputo-Limpopo corridors, the Government is establishing (with the support from PROCAVA), the ‘Limpopo Agri-Economic Zone’, the first agriculture and agro-industry free zone which will improve the comparative advantage of this corridor.

8. Next in importance are cash crops: peanuts, sesame seeds, cotton, tobacco and cashews. In general, the agriculture sector’s performance is characterized by low levels of production and productivity due to numerous challenges. These include the adverse impacts of climate change and climate variability (droughts, floods, emergent crop and livestock pests/diseases); lack of availability and access to quality inputs and technologies; soil degradation and low fertility; poor capacity for disease surveillance and control; inadequate veterinary services; insufficient extension services and poor linkages between extension and research; and ineffective value chain and marketing development. The development challenge for the country is to harness this agricultural potential and transform subsistence industry into productive, competitive and sustainable agriculture, and to increase processing and value addition, contributing to food security and better nutrition, and increasing family incomes in rural areas.
9. **Gender** Women in Mozambique are positioned below men, in terms of rights, resources, and opportunities; their gendered responsibilities as the primary caregivers for children and of the household translate into daily, often unpaid, responsibilities, such as the collection of firewood or preparation of food for household members. Women are overrepresented in the informal sector and many more women work in agriculture. One underlying reason for this is likely to be related to the sharp difference in education between women and men, as well as traditional and discriminatory practices. Gender inequalities in the inheritance of land are rampant, despite the legal framework which firmly guarantees equal inheritance rights. Women own 28 per cent of privately-owned land in Mozambique compared to men who own 72 per cent. In addition, women only manage 70 per cent of those plots that they own, and that women are more likely to manage plots in household areas. In cases where women do manage women-owned plots of land, they typically do not grow the main cash crop for the household, and they do not use complicated or advanced production techniques. Where land is owned jointly, men are given decision-making authority over the land and its use, and polygamy further constrains individual women’s access to and control over resources.
10. There is a large disparity in women’s and men’s representation in local institutions, authorities, and provincial assemblies. Most extension agents or workers responsible for local economic development trainings and processes are male, which can mean that they prefer to pass on information only to men due to conscious or unconscious gender bias.
11. At household levels, men tend to control household financial resources, often only a small percentage of household income is used to benefit the entire household, including providing sufficient food, health and education for children. As Mozambique is a largely agrarian country, women’s access to land, finance and technologies, including access to essential services and trainings remain crucial to achieving gender parity in economic development. Offering female-led economic empowerment programs can overcome some of the inherent gender biases that limit women’s participation.
12. **Youth.** Young people in Mozambique are having to face the challenges posed by the harsh realities involved in securing formal and decent employment. Most of them are resorting to the informal labour market which predominates in the Mozambican economy. The youth unemployment rate is at 41.7 per cent. Young women suffer

from the highest level of unemployment, a situation reinforced by their under representation in socioeconomic and political structures. It is estimated that around 87 per cent of Mozambican youth are employed in vulnerable jobs, mainly in subsistence agriculture or in the informal sector.

13. **Marginalised groups.** The most vulnerable groups in Mozambique are people with less assets like land, less support from family members, low economic diversification and occasional employment, often female-headed households, adolescent girls and women, children and elderly. Female headed households are more likely to work in agriculture, have less secure access to land, to be self-employed in the informal sector, and to have less formal education. There are groups in society that are more likely to be marginalized, and hence have even more difficulties in benefitting from opportunities: LGBTQI persons, persons with HIV/AIDS, persons in prostitution, persons with drug abuse, the mentally ill, and people with disabilities. People living in central and northern parts of the country, women, and vulnerable and marginalized groups are more affected by environmental degradation and disasters.
14. **Nutrition.** Malnutrition in childhood and pregnancy has many adverse consequences for child survival and long-term well-being. The consequences of malnutrition is a significant concern for Mozambique where 6 per cent of children under-five are acutely malnourished or wasted and 43 per cent of children under five are stunted (have low height-for-age), around 2.1 million (out of 4.8 million) stunted children. Mozambique is one of the countries in Africa with the highest rates of child malnutrition.
15. Poor diet quality that is not diverse enough in terms of fats, high quality protein and micronutrients, resulting in insufficient micronutrient intake has contributed to high levels of child stunting. In the rural areas in the northern part, which also has the highest levels of stunting—households consume mostly maize with additional food groups, such as oils/fats and green leafy vegetables consumed as infrequently as 2–3 days per week. Poor diet has also contributed to high levels of micronutrient deficiencies, such as anemia, which affects 69 per cent of children under five years and 47.9 per cent of women of reproductive age. Inadequate infant and young child caring and feeding practices also contribute to the high prevalence of undernutrition. The prevalence of minimum acceptable diet among breastfed infants 6–23 months is also low, at only 15 per cent.
16. In Mozambique, malnutrition rates become progressively higher from south to north. Stunting is over 50 per cent in the northern provinces of Nampula and Cabo Delgado, while it is lower than 30 per cent in the provinces of Maputo and Gaza. Six out of Mozambique’s 11 provinces have a very high level of stunting among children under-five. Differences in stunting levels can also be seen according to maternal education and wealth levels; stunting ranges from 27 per cent among children whose mothers and or caregivers have a secondary education or higher to 47 per cent among those whose mothers and or caregivers have no education. Similarly, 24 per cent of children in the highest wealth quintile are stunted, while 51 per cent of children in the lowest wealth quintile are stunted. The associations between stunting with wealth quintile helps demonstrate that high poverty is an important factor, but there are other factors contributing to these poor nutrition outcomes in Mozambique. Inadequate quality and quantity of food consumption among children, adolescent girls, pregnant and lactating mothers, including poor infant and young child feeding and caring practices, limited knowledge of nutrition and about balanced diets are contributing factors to acute malnutrition.
17. Childbearing begins early in Mozambique and can have long-term nutritional consequences. Between the ages of 15–19 years, 46.4 per cent of adolescent girls had begun childbearing. This has serious consequences because, relative to older mothers, adolescent girls are more likely to be malnourished and have a low-birth-weight baby who is more likely to become malnourished.

18. Affordability of diet is major issue that is associated with low income, limited employment opportunities, and high price of food. Around 54 per cent of households in Mozambique are not able to purchase a nutritious diet that meets minimum nutrient needs. It also estimated that the daily cost of a nutritious diet was more than four times the cost of an energy-only diet. The households that cannot afford a nutritious diet seem to be concentrated in the same provinces where stunting prevalence is the highest, and specifically in the northern half of the country in the provinces of Cabo Delgado and Nampula. Gaza and Manica are outliers: Gaza has high non-affordability and lower stunting than the national average, while Manica has low non-affordability and high stunting. Even so, as evidenced in provinces like Manica, affordable nutritious foods is only part of the solution to multi-sectoral problems such as stunting.

### **Environment and climate context, trends and implications**

19. **Environment and natural resources.** Mozambique is located in the Eastern Coastal zone of Southern Africa and ranges and its terrestrial ecosystems are dominated by the Miombo and Mopane woodlands in the west, southwest and the Zambezi Valley. The grasslands, wooded savannas, and bush lands of the dry areas are found in the south. Montane ecosystems comprise of evergreen forests, afro-alpine grasslands, shrub-lands, and moorlands. Extensive wetlands and freshwater ecosystems are varied and include rivers, natural lakes and artificial lakes. Coastal and marine ecosystems include sandy beaches, vegetated coastal dunes, coastal lakes, swamps, Mangrove forests, sea grass beds, and coral reefs along the northern coast.
20. Mozambique is endowed with numerous natural resources and mineral deposits including large coal deposits, iron ore, natural gas, gold, limestone, hydropower, sea salt, titanium, diamonds, uranium etc. The country's natural forests and woodlands cover 43 per cent of the land area and host varied biodiversity and unique landscapes. Forests are critical to the country's social, environmental and economic well-being. The country has a land mass of 82.36 million hectares of land, of which 13.7 per cent is crop land, 45 per cent dry forest, 37 per cent grasslands and fallows, 2 per cent wetlands, 0.3 per cent mangroves and 1.3 per cent comprised of others e.g. rocks. The agriculture sector accounts for about 24 per cent of the country's GDP and employs 80 per cent of the population, largely smallholder farmers in rural areas. Much of the agriculture sector is rainfed, with irrigated land being primarily along rivers<sup>45</sup>.
21. **Major land uses.** Agriculture is the main form of land use, followed by pasture land, forest cover, arable land, and permanent crops respectively. Rapid deforestation is the main driver of land use change, with slash and burn contributing to about 65 per cent of the forest cover loss<sup>46</sup>. Deforestation is exacerbated by overreliance on fuel wood as the main source of energy, particularly in rural areas.
22. Over 42 per cent of the land area in Mozambique is degraded, with 19 per cent in active degradation, including desertification in the arid and semi-arid areas of the country. Between 2000-2016, the country lost 207,272ha lost to land degradation. Land degradation is highest in the provinces of Manica, Nampula, Sofala and Zambezia, with detrimental impacts to agricultural ecosystems, crop production and

<sup>45</sup> African Development Bank (2021). Climate Investment Funds- PPCR Business Development for Resilience Program. AfDB.

<sup>46</sup> World Bank (2018). Forests of Mozambique – a snapshot.  
<https://www.worldbank.org/en/news/infographic/2018/12/12/forests-of-mozambique-a-snapshot>

food security. The agriculture sector is highly vulnerable to severe land degradation through deforestation. Adverse environmental challenges are experienced as a result of migration to urban and coastal areas, leading to increased pollution of water sources, land and soil. Artisanal mining is also a leading cause of degradation of water, soil and biodiversity resources<sup>47</sup>.

23. **Biodiversity.** Mozambique has a large diversity of flora and fauna, with over 5500 plant species and 5500 plant species, including national parks and forests as well as fisheries. About 300 of these species are in the IUCN Red List, thus require dedicated protection. The primary threats to biodiversity and ecosystem services are deforestation, land and ecosystem degradation, unregulated harvesting of valuable species, and introduction of invasive plant and animal species. Insecure land tenure and weak policy implementation pose serious challenges to the sustainable management of natural resources.
24. **Water resources.** Lake Malawi is Mozambique's major fresh lake, while rivers Zambezi and Limpopo are the main rivers and the Indian Ocean is the key water shed. The country has 217.1 billion cubic meters of renewable water resources<sup>48</sup>. Mozambique faces three major challenges to its water resources. These are increased incidences of drought, floods, and saltwater intrusion along its 2700 km coast line due to sea level rise. Human induced water resources degradation caused by industrial, agricultural and domestic waste discharge into water bodies, deforestation, poor water and land use practices are likely to exacerbate the situation. Artisanal mining also contributes to erosion and siltation in some parts of the country.
25. **Blue economy resources:** Mozambique has an abundance of blue economy resources (coastal, marine, fisheries, aquaculture). The blue economy contributes to about 4 per cent of the GDP. Increase in sea level is expected to contribute to erosion and flooding of coastal ecosystems and land. In freshwater ecosystems, salt water intrusion is likely to lead to losses in fish populations, poor water quality, and destruction of fishing infrastructure and equipment. Human induced challenges include overfishing and overstocking, depletion of mangroves, illegal fishing, poor water quality and quantity management, pollution, lack of clear biophysical guidelines on development of inland aquaculture, and limited capacity to implement existing laws and regulations<sup>49</sup>.
26. **Soil erosion.** Estimates show that Mozambique losses approximately 349 million tons of soil per year, with a mean loss per hectare of **about** 4.4 tons. The main causes of soil erosion include inappropriate farming practices, deforestation and loss of vegetative cover, mining, overstocking and overgrazing, flooding and cyclones etc.
27. Investments in integrated natural resources management, nature-based solutions, ecosystem based approaches and sustainable land management practices, sustainable management of blue economy **resources**, innovative financing models e.g. carbon trading, will be key for Mozambique in addressing environmental challenges described in this section.

<sup>48</sup> CIA (2022). CIA Factbook – Mozambique. <https://www.cia.gov/the-world-factbook/countries/mozambique/#environment>

<sup>49</sup> FAO (2019). Fishery and Aquaculture Country Profiles. Mozambique (2019). Country Profile Fact Sheets. In: FAO Fisheries and Aquaculture Department [online].

28. Agro-ecological zones (AEZs) of Mozambique. Mozambique has 10 AEZs (see figure 1). AEZ I (R1), is the semi-arid Southern region and covers districts of Maputo Province and Gaza Province. Annual rainfall ranges between 500-800mm with major crops being maize, groundnuts, cowpeas, and cassava. AEZ II (R2) is the semi arid coastal Southern region, that covers Maputo, Gaza Provinces and the entire Inhambane Province. Annual rainfall ranges from 500 to 800 mm, with groundnuts, cowpeas, sweet potatoes, maize, rice and cassava being the main crops.
29. AEZ III (R3) is arid and covers the northwestern districts of Maputo and Inhambane Provinces, and the central and northern districts of Gaza Province. Annual rainfall varies between 400-600-mm. Sorghum, millet, cattle and goats keeping are common. Prolonged drought spells are common.
30. AEZ IV (R4) is the mid-elevation central region and covers Manica Province and central-western districts of Sofala Province. Annual rainfall ranges from 1000-1200 mm. Common crops grown include sorghum, cowpeas, maize and cassava. AEZ V (R5) is the coastal central region, covering south eastern districts of Manica Province, southern and coastal districts of Sofala Province, and the coastal southern and central districts of Zambezia Province. Annual rainfall ranges from 1000-1400 mm, with sorghum, millet, cassava, cowpeas, cashew, maize, rice and cotton being the key crops. AEZ VI (R6) is dry semi-arid and covers the southern and south eastern districts of Tete Province, the northwestern districts of Sofala Province, and the southwestern districts of Zambezia Province. Annual rainfall is between 500 and 800 mm, and millet and sorghum are the main crops. Livestock keeping is also common in this region.

31. AEZ VII (R7) is the largest and covers the central districts of Tete Province, the western and central-northern districts of Zambezia Province, inland districts of Nampula and Cabo Delgado Provinces, and Niassa Province. The region receives 1000-1400mm of rainfall annually, with maize, sorghum, cassava, groundnuts, cowpeas, cashew, and cotton being the main crops. AEZ VIII (R8) covers the northeastern coastal districts of Zambezia Province and the coastal districts of Nampula and Cabo Delgado Provinces. Annual rainfall is between 800-1200mm, with maize, millet, cassava, rice, and cashew being the key crops. AEZ IX (R9) is the smallest AEZ and includes the central-northern districts of Cabo Delgado Province.

AEZ X (R10) is the high-altitude region, consists of the western districts of Manica Province, the northern districts of Tete Province, the northwestern districts of Zambezia Province, the southwestern districts of Nampula Province, and the central-western districts of Niassa Province. It receives more than 1,200 mm of rainfall annually, with a rainy season running from November to April. The main crops in High-Altitude region are maize, common beans, potatoes, and millet<sup>50</sup>.

32. **Natural disasters.** Mozambique has a high vulnerability to severe droughts, cyclones, and floods particularly in the southern and central provinces. Around 60 per cent of the population in Mozambique lives along the coast line, making them exposed to climate-related hazards such as tropical cyclones, recurring droughts, coastal and inland flooding. In 2019, Cyclones Idai and Kenneth caused severe floods resulting in US\$3 billion worth of losses and damages. El Niño-related drought events have historically occurred every 3 to 4 years in Mozambique, primarily in the central and southern regions

<sup>50</sup> FEWS NET (2018). Mozambique – staple food market fundamentals. USAID. [https://fewsn.net/sites/default/files/documents/reports/MFR\\_Mozambique\\_edited\\_formatted\\_20181108\\_508%20Compliance.pdf](https://fewsn.net/sites/default/files/documents/reports/MFR_Mozambique_edited_formatted_20181108_508%20Compliance.pdf)

33. The combined impacts of floods, droughts, cyclones, food insecurity, conflicts in the North etc. have to date increased the vulnerability of about 8million people (e.g. in Sofala, Manica, Tete, and Zambezia, Cabo Delgado, Maputo, Gaza, and Inhambane). In 2021, the global index for risk management ranked Mozambique 10<sup>th</sup> in exposure to natural and human hazards, and very highly in lack of adaptive capacities. The country integrated context analysis (ICA) conducted by WFP in 2017 revealed that high food insecure risk regions are mainly located in arid and semi-arid provinces of central and southern parts – Tete, Sofala, Manica, and Inhambane provinces<sup>51</sup>.
34. **Climate change.** Mozambique ranks third among African countries most exposed to multiple extreme weather events, natural disasters and the impacts of climate change. These include droughts, floods, cyclones, heat waves, etc. The country ranks 10<sup>th</sup> Globally in exposure to natural disasters and extreme weather events. Mozambique’s high vulnerability is exacerbated by its geographic location and terrain due to its long coastline, extensive land area below sea level, and the confluence of many transnational rivers into the Indian ocean<sup>52</sup>. High poverty levels, overreliance on rainfed agriculture, human induced forest and land degradation, low adaptive capacities and weak early warning systems further aggravate the situation.
35. Climate change, natural disasters and extreme weather will continue to devastate livelihoods, food security and well being of rural populations if action is not taken. Mozambique seeks to promote a low carbon development pathway powered by a green economy and to enhance resilience building among communities. In 2020, Mozambique submitted its updated Nationally Determined Contributions (NDCs) to the United Nations Framework Convention on Climate Change (UNFCCC). The NDCs seek to reduce 40 million tCO<sub>2</sub>eq of greenhouse gas emissions between 2020 and 2025 through mitigation measures such as renewable energy, low carbon agricultural practices and scaling up Reduction of Emissions from Deforestation and Degradation (REDD+). Adaptation measures in agriculture also feature in the NDCs and focus on resilience building in the agriculture, strengthening the early warning system and increasing the adaptive capacities of vulnerable people among others.
36. **Climate trends.** Historical trends show that since the 1960s, the average rainfall decreased by 3.1 per cent (2.5mm per month) per decade. Variations have been observed across regions, with the Northern provinces (e.g. Cabo Delgado, Niassa, Nampula and Zambezia) experiencing higher rainfall (over 2,000mm). High rainfall variability is found in the Central regions, and in the South, persistent droughts and floods. The rainfall season is from October to May, with November to May showing the highest rainfall. Provinces in the South, largely Maputo, Gaza and Inhambane receive lower rainfall, the lowest being about 500mm.
37. Mozambique’s mean annual temperatures range from 25 to 30 °C in summer, from 15 to 21 °C in winter, with extreme temperatures the summer of above 40 °C in some regions<sup>53</sup>. Mean temperatures countrywide went up by a mean of 0.9°C (0.15-0.16°C per decade) since 1960. Increases in maximum temperature are mainly experienced between October to November and February to March, with increases more apparent in the West and South parts of the country e.g. Inhambane, Gaza

<sup>51</sup> African Development Bank (2021). Climate Investment Funds- PPCR Business Development for Resilience Program. AfDB.

<sup>52</sup> Dutch Sustainability Unit (2015). Climate Change Profile - Mozambique. Netherlands Commission for Environmental Assessment.

<sup>53</sup> Mavume, A.F.; Banze, B.E.; Macie, O.A.; Queface, A.J. (2021). Analysis of Climate Change Projections for Mozambique under the Representative Concentration Pathways. Atmosphere 2021, 12, 588. <https://doi.org/10.3390/atmos12050588>

and Maputo<sup>54</sup>. The central parts of the country are more prone to floods and cyclones, followed by the North and South, while the Southern part is more prone to droughts

38. Overall, over the past 20 years, the intensity and frequency of droughts, floods and cyclones has increased. Between the years 1956-2016, the country experienced 11 droughts, 24 floods, 15 tropical cyclones, 20 epidemics and 2 earthquakes<sup>56</sup>. The two Category 4 cyclones that hit Mozambique in March (Idai) and April (Kenneth) 2019, as well as the floods in Cabo Delgado, Zambezia, Tete, Sofala and Manica Provinces in December 2019 and January 2020 affected approximately 150,000 people, including smallholder farmers. These disasters also lead to extensive crop and livestock losses, including destruction of property and infrastructure in rural areas. Future projections show that the country will continue facing increasingly stronger and frequent extreme weather events with devastating impacts to the economy, food security and livelihoods of people.
39. **Climate projections.** Projections show that all provinces of Mozambique will experience annual increases in mean temperature. By 2060, mean temperature is projected to increase by at least 1.45°C, with the months of October to December experiencing increases of 2.0–2.1°C, compared to the historical average. The landlocked parts of the country will experience more warming while the coastal areas will experience less temperature variations. The frequency and intensity of days of extreme heat as well as droughts are also expected to increase.
40. Precipitation projections show that by 2060, mean monthly precipitation and total annual precipitation will be reduced in all Provinces and total rainfall at the onset of the rainy season in the months of October, November and December is predicted to be reduced from 24 to 11.5 mm/month, 67 to 45 mm/month, and 162 to 140 mm/month. These trends may indicate possibility of delayed rainy seasons or reduced durations of rains relative to historical trends, with a projected overall reduction of 131mm of rainfall between the historical and future scenarios<sup>57</sup>. The frequency of days of heavy rainfall is also expected to increase, leading to increased floods. Models also reveal that the frequency of tropical cyclones is likely to reduce but the intensity of these cyclones will increase<sup>58</sup>. Figures 2 and 3 show projected temperature and precipitation trends under various scenarios, including RCP 4.5 and 8.5<sup>60</sup>.

<sup>60</sup> World Bank (2022). Mozambique. <https://climateknowledgeportal.worldbank.org/country/mozambique/climate-data-projections>

41. **Impacts of climate change.** With these projections, climate change is likely to result in disruptions of familiar seasonal trends, increased water and heat stress and reduced growing seasons, thereby affecting overall food security. Mozambique is also likely to face declining annual production/productivity of staples such as maize, beans and cassava, due to a reduction in the suitability of some areas, thereby impacting on food security. Climate resilient crops such as sorghum and cow peas will be less affected and will thus provide alternatives to traditional staples on areas that become unsuitable. The provinces of Niassa, Cabo Delgado and Nampula will have negligible or positive changes to crop suitability while the arid southern provinces of Maputo, Gaza and Inhambane, as well as the northwestern province of Tete, are predicted to experience negative impacts on virtually all crops. With regards to livestock, goats are projected to be the most resilient followed by layer poultry, with cattle showing low resilience. Some adaptive measures will need to be considered such as increasing shading, herding in higher altitudes or shifting species towards breeds and species more adapted to warmer temperature and higher humidity levels such as goats.

42. **Adaptive capacities.** Based on an assessment of climate change adaptive capacities of communities done by the University of Capetown, Maputo, Gaza and Manica provinces were characterised by the highest adaptive capacities, while Niassa, Zambezia and Nampula were likely to have the lowest adaptive capacities. Table 1 below provides a summary of the adaptive capacities of provinces, while table 2 provides adaptive measures.

**Table 1: Adaptive capacities of provinces in Mozambique**

	Adaptive Capacity Indicator Category				Adaptive capacity score	Adaptive capacity rank
	Adoption of improved agricultural practices	Access to alternative income	Access to agricultural information	Education		
<b>Contribution to Index</b>	<b>50%</b>	<b>17%</b>	<b>17%</b>	<b>17%</b>		
Cabo Delgado	3.2	39.9	62.7	22.4	22.4	7
Gaza	5.5	58.5	64.9	18.6	26.4	2
Inhambane	8.5	40.6	63.9	18.9	24.8	5
Manica	10.4	36	69.1	16.2	25.4	3

Maputo	9.2	61.1	91.1	28.6	34.7	1
Nampula	3.3	33.2	61.4	14.9	19.9	10
Niassa	5.4	40.9	57.3	13.3	21.3	8
Sofala	4.1	51.1	6.7	18.6	23.8	6
Tete	14.1	36.4	52.6	18.5	25	4
Zambezia	2.2	37.2	70.4	10.9	20.9	9

Table 2: Recommendations for adaptation measures – crops and livestock

Crop/Livestock	Production/Productivity Impact	Overall production suitability	Remarks	Recommendations
<b>Maize</b>	Moderate decrease for short maturing varieties and severe for long maturing varieties	Moderate to good for short maturing varieties	Severe production and economic impacts for long maturing varieties	Increase access to locally adapted cultivars; promote early maturing varieties; promote climate resilient practices, promote diversified cereals production
<b>Groundnuts</b>	Minor to moderate decreases	Extensive suitability	Useful option for climate resilient farming systems	Promote drought tolerant and locally adapted varieties; promote within diversified and intercrop systems; invest in post-harvest processing facilities
<b>Cow Peas</b>	Minor to moderate decreases	Extensive suitability	Inhambane, Maputo and Tete more vulnerable to losses. Cabo Delgado, Niassa and Nampula to remain unchanged and highly suitable	Promote as a climate resilient legume; identify target areas for increased production; promote as food for humans and livestock
<b>Beans</b>	Moderate to high decreases	Likelihood of unsuitability	Sofala, Zambezia, Tete and Niassa provinces more vulnerable	Identify and promote locally appropriate cultivars
<b>Sorghum</b>	Minor decreases Inhambane, Gaza, Tete and Manica will be more vulnerable to decreases	Considerably suitable	More resilient than other cereal crops	Identify and promote locally adapted cultivars; promote change in dietary perceptions and preferences
<b>Cassava</b>	Likely to decrease	Northern and Central provinces to remain suitable.	Likely to be a useful option for climate-resilient	Increased access to quality, virus-free planting material of improved varieties; increased access to facilities and equipment for processing

		Inhambane, Gaza and Maputo may become increasingly marginal	farming systems	fresh cassava; and improved capacity of farmers to monitor and respond to common pests and diseases
<b>Livestock</b>	Likely to decrease for cattle varieties that are not locally adapted	Locally adapted cattle or small stock more suitable	Widespread degradation of grazing resources and persistent overgrazing and the impact of droughts to impact suitability	Promote adaptable cattle breeds and small stock

## Part 2 -Institutions and legal framework

### Institutions

43. Nutrition improvements depend on many sectors, and translating food security and consumption impact into nutritional status often requires improvements in agriculture, environment, finance, trade, health, sanitation, education, including ability and understanding of improved caring and feeding practices. Coordination with other sectors will maximize the likelihood of nutrition impact from agriculture. Inclusive multi-stakeholder processes and approaches that bring in diverse perspectives, including indigenous knowledge, cultural insights and science-based evidence to enable stakeholders to understand and assess potential trade-offs and to design investment options that deliver against multiple public goods across these various systems. This will need to be accompanied by far more concerted effort to coordinate activities, monitor progress more closely and greater accountability from all players across the food system. The following are the most important institutions and partners that need to be engaged and enhanced collaboration and coordination may be required:

- National Council for Nutrition and Food Security (Conselho Nacional de Segurança Alimentar e Nutricional or CONSAN)
- Ministries of Agriculture, Health, Education, Environment, Finance, Trade
- USAID, GAIN, World Bank
- WFP, UNICEF, WHO

44. Gender equality and women empowerment, including youth inclusion also depend on collaboration, coordination and partnership of multiple sectoral ministries, including different partner institutions. In particular, the following entities are important to engage:

- Ministry of Gender, Children, and Social Action
- MINEDH Ministry of Education and Human Development The National Council for the Advancement of Women (CNAM)
- Commission on Gender, Social and Environmental Affairs
- JICA, USAID, World Bank
- UNWOMEN, UNFPA, ILO
- MISAU Ministry of Health
- MITADER Ministry of Land, Environment and Rural Development

- MITESS Ministry of Labor, Employment and Social Security

### Policy and regulatory frameworks

45. The national policies and strategies outline importance of tackling poverty, food insecurity and malnutrition through the harmonized and integrated approach. The documents identify critical target groups, sets out strategic objectives, outlines specific interventions and key progress indicators, and identifies which institutions will assume primary responsibility for achieving results. The national priorities also ensure that rural smallholder have better access to technology, knowledge, productive assets, and are supported through different livelihoods interventions with special focus on creating decent employment, generating income, empowering young men and women. Mozambique's commitment to improving food security and nutrition is outlined in the following documents, which are aligned with the government's Agenda 2025:
- National Development Strategy (Estratégia Nacional De Desenvolvimento [ENDE]) 2015–2035;
  - Government's Five-Year Plan (Plano Quinquenal do Governo [PQG]) 2020–2024;
  - Multisectoral Action Plan for the Reduction of Chronic Undernutrition (PAMRDC) (2011);
  - Agriculture Development Strategy (Plano Estratégico de Desenvolvimento do Sector Agrário [PEDSA]) 2011– 2020 (currently under extension);
  - Green Revolution Strategy (ERV);
  - National Strategy for Food Security and Nutrition (ESAN III);
  - National Plan for Food Security and Nutrition (PASAN II);
  - Nutritional Rehabilitation Program (PRN);
  - National Strategy for SBCC in the context of Nutrition;
  - Mozambique's Multisectoral Action Plan for the Reduction of Chronic Undernutrition (PAMRDC).
46. The government has instituted the National Development Policy (ENDE) and the National Youth Policy (NYP). ENDE places emphasis on developing the agriculture, fisheries, industrial diversification, infrastructure, extractive industry, and tourism sectors; it is aimed at stimulating overall economic growth, and thus benefits youth. The NYP focuses on expanding economic opportunities for youth through employment and entrepreneurship and as well as mainstreaming youth issues into government plans and policies.
47. **Environment and Climate.** Mozambique drafted the National Climate Change Strategy and strengthened the Inter-Institutional group working on climate change, which is a representative committee of the public and private sector, civil society, and academia. MITADER has established its climate change unit which aims to support the Ministry in planning and implementation of activities which contribute to coping and dealing with climate stressors in the agriculture sector. The Mozambique agriculture sector Technical Analytical Network (TAN) also known as the Local Technical Analytical Network (LTAN) was established. Its aim is to provide technical analytical support and capacity development to the Mozambique Strategic Analysis and Knowledge Support Systems (MOZAKSS) Node, Ministry of Agriculture and Rural Development, and the agriculture sector at large.
48. Mozambique has several policies, strategies and action plans addressing climate change and natural disasters. These include the National Climate Change Adaptation and Mitigation (ENMC) (2013-2025), National Adaptation Plan (NAP) Roadmap (2020-2025), and the Master Plan for Risk and Disaster Reduction (2017-2030). The

ENMC articulates provides a set of strategic actions to ensure a more prosperous, resilient and sustainable future.

49. The National Climate Change Adaptation and Mitigation Strategy (NCCAMS) identifies adaptation and the reduction of the climate risk as a national priority and presents eight strategic actions aimed at creating resilience and reducing the climate risk in the communities, ecosystems and national economy. The eight strategic actions are aimed at; reducing climate risk, water resources, agriculture, fisheries and food security and nutrition (SAN), social protection, health, biodiversity, forests and infrastructure. The country intends to update its National Adaptation Plan (NAP) in the medium (2020 to 2025) and long (2026 to 2030) terms. Therefore, from 2020 to 2025, the country intends to increase its resilience at the provincial level and to include adaptation in provincial planning. Monitoring and Evaluation: The Government of Mozambique has approved the National System to Monitor and Evaluate Climate Change and this will be used for the Measurement, Reporting and Verification (MRV) of the adaptation actions. This system is currently being tested and will be functioning before 2020 and onwards.
50. **Nationally Determined Contributions.** The country submitted its updated Nationally Determined Contributions (NDCs) to the United Nations Framework Convention on Climate Change (UNFCCC) in 2020. The NDCs seek to reduce 40 million tCO<sub>2</sub>eq of greenhouse gas emissions between 2020 and 2025 through mitigation measures such as renewable energy, low carbon agricultural practices and scaling up Reduction of Emissions from Deforestation and Degradation (REDD+). Adaptation measures in agriculture include resilience building in the agriculture, livestock and fisheries sectors; strengthening the early warning system, efficient water resources management and increasing the adaptive capacities of vulnerable people.
51. **Land Degradation Neutrality (LDN).** As part of its commitment to the UNCCD, Mozambique in 2021 committed to reverse forest and land degradation by 2030 and to have 62 per cent of its energy being renewable within the same time frame.
52. **Convention on Biodiversity CBD).** The National Action Plan of Biological Diversity (NBSAP) of Mozambique (2015-2035) seeks to reverse the degradation of biological diversity and ensure sustainable utilisation of biological resources. The plan seeks to enhance sustainable management of biological resources in the agriculture, livestock, aquaculture, forestry and wildlife sectors. The plan also seeks to foster integrated management, conservation, benefits sharing, including fair and equitable use of biological diversity. This will be achieved through investments in conservation, training, financing and partnerships.

### **Programmes and partnerships**

53. A National multi-stakeholder platform for nutrition: Technical Food and Nutrition Multisectoral Group (Government and partners) and Nutrition Partners Forum was created in 2013 for better synergies for joint programmes and coordination, including partnerships.
54. In 2018, the Ministry of Gender, Children, and Social Action through Institute of Social Action increased its budget for social protection by 22.3 per cent to cater for vulnerable children and women through various programmes. Mozambique has developed and approved the MultiSectoral Action Plan for the Reduction of Chronic Malnutrition which aims to reduce chronic malnutrition in children aged 0-5 years, from 43 per cent to 30 per cent in 2015 and 20 per cent in 2020 (MISAU et.al, 2011).

55. The Ministry of Education and Human Development is implementing the National School Feeding Program and aims to reduce in a sustainable way the negative impact of food insecurity and malnutrition in the education sector. Furthermore, The Government has deliberated on the gender strategy for the agriculture sector, 2016-2025 which aims to increase the level of women's participation in the sector.
56. Youth empowerment was enhanced through creating credit facilities for the youth, provide training programmes for youth entrepreneurs in rural communities and provision of scholarships to pursue studies in the field of agriculture. In addition, MADER developed a Flagship Programme for Youth and Women Empowerment in Agriculture in Northern and Central provinces of Mozambique.
57. In addition to the above programmes and its interlinkages, the COSOP needed to also identify the key strategic partnership, the most strategic and realistic ones to support the achievement of the strategic objectives. In particular, partnerships with farmer organizations/associations will need to be sought during the implementation of COSOP.
58. **Environment and climate.** IFAD will work with relevant agencies in the Ministry of Land and Environment to strengthen the national disaster and early warning system as well as the climate and weather information systems and work with partners to strengthen capacities at national, regional and project levels. The partnership with the Africa Risk Capacity (ARC) will be strengthened to enhance access to climate insurance for smallholder farmers and to build local capacities.
59. The programs under the COSOP will continue to scale up ongoing national efforts to promote REDD+ to restore degraded land and forests as well as access to carbon markets. Opportunities to explore PPP arrangements for biodiversity conservation and private sector engagement in conservation efforts e.g. through the existing BioFund being promoted by the World Bank, AFD as a payment for ecosystem services approach, will be scaled up under this COSOP to enhance the sustainability of the conservation and ecosystem restoration interventions
60. As a mandatory aspect of safeguards, all new projects under this COSOP be required to comply with IFAD's SECAP 2021 guidelines. The projects will also be required to develop grievance redress mechanisms to address grievances and conflicts at various levels, and stakeholder and beneficiary engagement plans that will provide guidance on the participation and engagement of beneficiaries and stakeholders, as well as develop tools to enable beneficiaries and stakeholders to provide feedback and to monitor project delivery.
61. In recognition of the need to strengthen environmental, climate and social risk management related capacities within the PMUs, government agencies and among implementing partners, the projects will invest in provision of dedicated environment and climate specialists and/or technical assistance through local/international consultants to support the development of safeguards studies and integration of the mitigation measures into the PIM and project delivery mechanisms. Training on SECAP procedures and national safeguards processes will be provided by IFAD at pre-implementation during projects' start up phases and during their implementation cycles where necessary. Strong collaboration with the national environmental management authorities will be key to managing risks and enhancing monitoring and compliance. Monitoring at PMU level and with implementing partners will be strengthened by embedding safeguards indicators in their M&E frameworks and encouraging reporting on progress in quarterly or annual reports of the PMUs.

### Part 3 - Strategic recommendations

62. It is important to ensure that IFAD's all operations in the country explicitly address underlying causes related to poverty, food insecurity and malnutrition, address gender inequality, and prioritize investment towards youth inclusion, gender transformative and nutrition-sensitive actions.
63. **Nutrition.** There is need to enhance investments that improve productivity and increase production diversification with greater attention to promoting more varieties of vegetables, fruits, legumes, nuts, combined with better diversity of staples and at the same time promote environmentally friendly practices and biodiversity conservation. It may be desirable to diversify the sources of those key nutrients as much as possible through integrated farming system that is combined crop production, livestock and fisheries. Improved value chain and market access will be essential for making nutrient-rich foods available, accessible, acceptable and affordable. The value chain and marketing can support the creation of decent employment for youth and women. Better and inclusive financial access specially for the most marginalized groups (i.e. youth, women, PWDs, IDPs) can also generate better economic and social benefits for tangible results. There are opportunities for increasing nutritionally smart investments.
64. **Gender.** Reducing gender gaps in women's participation in economic development and promoting gender equality will be central to unlocking the country's full inclusive growth potential. To this end, a holistic approach is required, by focusing, among others, on: (i) increasing employment opportunities with life skills development; (ii) bridging the gap in agricultural productivity by ensuring women have equal access to key productive agricultural inputs, technology and expanding access to finance; (iii) a multi-pronged approach to increase women's security and decrease GBV and IPV, is needed.
65. **Youth.** There is a need to involve youth and create opportunities for them to access finance, receive capacity building, have decent job possibilities, and engage in value chain and marketing.
66. **Targeting.** The IFAD targeting strategy strongly emphasis on the importance of inclusion and living no one behind. IFAD will continue to focus on rural people who are poor and vulnerable but who have the potential to take advantage of improved access to assets and opportunities for increasing agricultural production and productivity through environmentally sustainable practices, value chain and marketing development and rural income-generating activities. For those who cannot take advantage immediately, who are often the poorest and most marginalized such as young men and women, PWDs, and others, the investment will promote a gradual approach to facilitate their access to resources and enable them to benefit from interventions.
67. Mainstreaming gender, youth, nutrition and environmental and climate issues in the operationalization of the targeting process in COSOP is very important with clear targeting and implementation mechanism to ensure that investments accommodate the needs and priorities of the target group and are based on the analysis of their socio-economic characteristics, assets, livelihoods, geographic distribution and their interests. The targeting will be disaggregated by (i) socio-economic status and livelihood profiles; (ii) food and nutrition insecurity; (iii) environmental degradation and climate vulnerability; (iv) vulnerability coping mechanisms; and (v) agricultural and income-generating activity potential.
68. **Environment and natural resource management.** Investments in sustainable natural resources management will be key in addressing the challenges of land and

forest degradation as well as overexploitation of natural resources. All projects within this COSOP will be environment mainstreamed. There are opportunities to invest in integrated natural resource management, sustainable management of blue economy resources, nature based solutions such as sustainable land management practices, biodiversity and mangrove conservation, payment for ecosystem services models, as well as greening of value chains through efficient and green technologies, practices and innovative financing models (e.g. carbon trading, biodiversity funds, etc.) and green jobs.

69. **Climate adaptation and mitigation.** Projects within this COSOP will explore opportunities to invest in climate adaptation and mitigation measures guided by the NDCs and NAP, as well as national climate related policies and strategies. All projects will be 100 per cent climate mainstreamed and will be climate focused (40 per cent of total project costs will go towards climate adaptation and mitigation). Some measures that will be explored will include the promotion of small-scale irrigation technologies, water harvesting and efficient water utilisation, climate and weather information systems, index based insurance and digitisation of payouts, strengthening local adaptation plans, early warning systems, agroforestry and afforestation, drought tolerant and short maturing crop species, climate resilient livestock breeds, climate proofing infrastructure, renewable energy (solar, biogas) and climate smart agricultural practices, carbon farming and trading among others.
70. Supplementary funds will be sought from the Global Environment Facility (GEF), the Green Climate Fund (GCF) and the Adaptation for Smallholder Agriculture Plus (ASAP+), private sector windows of IFAD, GCF and the GEF to complement the Loan portfolio. Already, Mozambique has been included in the IFAD GCF ASAP+ project, which is at proposal development stage, and the funds are expected to benefit PROCAVA.

### Lessons learned

71. Gender and inclusive targeting. Projects need to invest more in lessening women's heavy workloads, overcoming traditional norms and the gender-based division of labour, accessing financial services, and heightening inclusion in value chains. Pro-poor gender- and youth-sensitive targeting should be enhanced and harmonized throughout the country programme, and its monitoring should be improved. The successful graduation approach for ultra-poor people should be scaled up.
72. Food insecurity and malnutrition. Future investments should enhance support for sustainable and diversified production systems, combined with irrigation and water saving technology, including livestock and fisheries, value chains and market access. Evidence shows overall positive results of the diverse interventions in production, marketing and consumption of various foods with proper feeding and caring practices and with strong behavior change and communication has improvement in household and individual dietary intake.
73. **Diversify production.** Agriculture must not only produce enough calories to feed hungry population but must also produce a diversity of food that nurture human health and support environmental sustainability. Alongside dietary shifts, agricultural support need to be re-oriented towards a variety of nutritious foods that enhance biodiversity.
74. **Food systems approach.** Enlarging the nutrition and agriculture linkages with broader focuses on value chains, food environments and consumers' behavior is aligned with the attention that food systems for nutrition has gained in the past years. Indeed, the food supply chain can impact diets and nutrition by affecting the nutritional quality of the available food. Food environments, which refer to the

contexts in which consumers engage with the food systems, influence their dietary preferences and nutritional status. Consumer behavior influences food choices, comprising preparation and intra-household food allocation.

75. **Environment and climate.** Mozambique is highly vulnerable to climate change, extreme weather events and natural disasters. Land and forest degradation exacerbate the situation. As such, every project ought to have a strong focus on strengthening climate adaptation and resilience building, mitigation actions, strengthening of early warning systems, integrated natural resource management and nature-based approaches to ecosystem management and sustainable utilisation of natural resources.

### **Strategic orientation**

76. COSOP is aligned with government priorities with regards to the mainstreaming gender, youth, nutrition, environment and climate. It is also aligned with the key UN strategic document framing its contribution to the Government's national development priorities and actions as laid in the Government's Five-Year Plans known as the Programa Quinquenal do Governo (PQG) and inspired by the vision set in the Sustainable Development Goals (SDGs) and other global agendas and priorities. It will contribute to reduction of rural poverty, food insecurity and malnutrition in the country through harmonized integrated approach with great collaboration and closer cooperation with different stakeholders.

### **Strategic actions and targeting**

77. Pro-poor gender and youth-sensitive targeting strategies will be further enhanced and harmonised throughout the IFAD Country Programme. More particularly, IFAD will sharpen its methods to target ultra-poor populations through graduation programming and supporting smallholders through pro-poor value chain development, interventions sensitive to gender and youth-specific challenges and opportunities. Key empowering features based on the adoption of household methodologies and capacity-building measures will promote gender equality and increase participation and voice of youth in household and community affairs. Targeting effectiveness will be monitored using gender, youth, persons with disabilities-disaggregated indicators, and participatory monitoring and evaluation measures.

### **Monitoring**

78. Monitoring systems with specific indicators for climate, social and environmental conditions will need to be set up at programme level under the COSOP. To enable monitoring, an M&E budget will need to be set up for each programme. A participatory monitoring process is recommended, including representatives of leadership structures at the local level and representatives of all significant target groups. Issues that pertain to targeting, environmental and climate, social issues, gender inequality, people with disabilities, youth and poor people, and nutrition should be discussed. The inputs from the discussions can be integrated into project management documents to enhance projects performance.

## Fragility assessment note

### Introduction.

1. IFAD defines fragility as “a condition of high vulnerability to natural and man-made shocks, often associated with an elevated risk of violence and conflict. Weak governance structures along with low-capacity institutions are a common driver and consequence of fragile situations. Fragile situations typically provide a weaker enabling environment for inclusive and sustainable rural transformation and are characterized by protracted and/or periodic crises, often with implications for smallholder agriculture and food security”.
2. In 2022<sup>61</sup> Mozambique was relisted in the World Bank List of Fragile and Conflict-affected Situations. Exposure to cyclic extreme climate events (including cyclones, seasonal floods and droughts in the south), COVID-19 and insecurity in the northern part of the country are the main causes of the country’s fragility scenario.
3. Addressing fragility is critical for the delivery of Strategic Objectives (SOs) as outlined in the COSOP. In order to do so, it is important to clearly understand the drivers of the conflict and how it affects smallholders’ producers who are the primary target group of IFAD investments in the country.
4. This note draws on fragility assessments prepared by the Government of Mozambique and its development partners and is supplemented by IFAD’s own assessment of the impact of fragility of the rural poor, as experienced in the implementation of its supported projects in the country.

### Country context

5. **Man-made conflicts.** As shown by its recent history, Mozambique has been plagued by man-made conflicts. Mozambique acquired its independence through a guerrilla war. The war ended with a ceasefire agreement in 1974, resulting in a negotiated independence in 1975.
6. A few years later, from 1977, a new war was fought between the national army and Renamo forces. This war ended in 1992 and, following this in 1994, Mozambique embraced democracy and organized the first multiparty general elections. The effects of these wars can be observed even today.
7. More recently, since 2017, the province of Cabo Delgado has been facing an insurgency perpetrated by armed groups with links to Jihadism. The attacks expanded geographically and increased in intensity in 2020. This prompted the

---

<sup>61</sup> <https://thedocs.worldbank.org/en/doc/9b8fbd62f7183cef819729cc9073671-0090082022/original/FCSList-FY06toFY22.pdf>

Government to request external support. Despite progress made in containing the insurgency, it has expanded into the neighbouring provinces of Niassa and Nampula.

8. The attacks resulted in thousands of deaths, looting and destruction of public, private sector and household properties and the displacement and loss of livelihoods. It is estimated that the conflict has left 1.3 million people in urgent need of humanitarian assistance.
9. **Natural disasters.** Mozambique is one of the most risk-prone countries in the world, ranking third among African countries most exposed to multiple weather-related hazards and the impact of climate change. The country is subject to environmental events including floods, droughts, cyclones, coastal erosion, rising water levels, and soil salinization.
10. The National Institute for Management of Disasters (INGD) reported that during the last 35 years up until 2016, there were 75 declared disasters in the country consisting of 13 drought events, 25 floods, 14 tropical cyclones and 23 epidemics. The regional El Niño-induced drought emergency of 2015-2016 was the worst in 35 years.
11. More recently, the country faced increasingly stronger and frequent extreme weather events with devastating impact to the economy and livelihoods of people. The two Category 4 cyclones that hit Mozambique in March (Idai) and April (Kenneth) 2019, as well as the floods in Cabo Delgado, Zambezia, Tete, Sofala and Manica Provinces in December 2019 and January 2020 affected approximately 150,000 people.
12. Disasters can cause loss of human and animal life, field crops, stored seeds, agricultural equipment/materials, and their supply systems (e.g., infrastructure), thus disrupting not only the immediate growing season but also future seasons. In rural areas, smallholders strongly rely on natural resources and have no alternative source of income or employment, making them more vulnerable to a crisis.

### **Assessment of fragility**

13. There are four main drivers of fragility: (i) medium-intensity conflict; (ii) rural poverty linked to weak agricultural productivity and regional inequalities; (iii) weak institutions and governance; as well as (iv) high vulnerability to natural disasters and climate.
14. *Medium-intensity conflict.* The conflict escalation in Cabo Delgado, which started in 2017, has resulted in the displacement of more than 800,000 people and more than 1000 deaths. Different assessments shows that the lack of rural connectivity, the perception of exclusion and marginalization of the rural population, especially women and youth, and weak management of expectations deriving from the

implementation of large-scale projects in rural settings are the main causes of the conflict. The Government has been receiving military support from Rwandan and SADC forces, and the situation has improved significantly during the last months.

15. *Rural poverty linked to weak agricultural productivity and regional inequalities.* The fragile situation of rural households is exacerbated by the incidence and depth of poverty. Data computed from the population census confirms that the northern provinces have the highest rates of multi-dimensional poverty. Rural areas display higher levels of absolute poverty than the urban centres. Women and youth face higher problems in accessing economic opportunities due to lack of assets, prevalence of illiteracy and lower levels of education/vocational training, gender-based violence and traditionally accepted cultural norms.
16. *Weak institutions and governance.* There is a need to strengthen the capacity government institutions at all levels: national, regional, district and the community. There is also a strong need focus on private sector involvement, PPPs and the creation of transparent and competitive markets that will help beneficiaries engage in sustainable business that can be weaned off external support. The ongoing decentralization process and duplication of roles and responsibilities of government structures at provincial level is affecting the smooth implementation of development projects and should be improved.
17. *High vulnerability to natural disasters and climate.* Mozambique is a country prone to climate hazards. Evidence shows that disasters have disproportionately impacts on the poor and vulnerable, who are least able to cope with shocks, be they natural or man-made. Climate and conflict events will continue to adversely affect food security and livelihoods and, if not properly prevented and/or mitigated, are likely to bring an increasingly higher number of people below the poverty line.

### **Proposed response**

18. The action of IFAD-supported programs and projects under the new COSOP will be guided by principles for engaging in areas of Fragile and Conflict-affected Situations, notably: (i) risk management and resilience; (ii) focus on root causes; (iii) gender mainstreaming and targeting; (iv) institution-building to promote trust and social cohesion; (v) flexible and responsive resources, instruments and approaches; (vi) strategic and complementary partnerships; (vii) results measurement and learning. Experience has shown that setting aside project funding for price and physical contingencies to allow for rapid response interventions is key for restoring livelihoods. Building from its corporate mandate and responsibilities, IFAD will work with Government and other partners to ensure that support actions are well structured all the way, starting from humanitarian and emergency type of response progressing into transitional interventions and leading to resumption of development assistance. This approach will, in particular be applied in areas affected by conflict.
19. On Climate and Adaptation, the IFAD focus will be on reinforcing the communities resilience, readiness and adaptation and the introduction of innovative approaches to deal with the recurrent extreme weather events. The high vulnerability score of

0.517 and low readiness score of 0.269 Mozambique places it in the upper-left quadrant of the ND-GAIN Matrix with an overall score of 37.6. The country has both a great need for investment and innovation to improve readiness and a great urgency for adaptation action. Mozambique ranks 156 out of 192 countries in the ND-GAIN Country Index Rank.

20. The IFAD operations in the conflict area (Cabo Delgado), are in response to the Government 'Northern Mozambique Reconstruction Plan – PREDIN' and is incorporated as part of the UN joint response to the northern Mozambique reconstruction.
21. In line with the stabilization of the security situation, and return of the communities to the home Districts, project operations will be reinforced in the province, with the reinforcement of the PROCAVA and REFP northern regional units, as well as the PRODAPE/IDEPA delegation in Cabo Delgado. With more resources in the region and province in particular, the interventions to reinforce the communities resilience to the shocks will be achieved. Around USD 30.0 million will be directly invested in the Cabo Delgado during the next 3-5 years through IFAD supported projects, and these investments will benefit mainly Internal Displaced People and other members of the community.
22. A specific project was designed in collaboration with ILO (through REFP), on 'Decent Work for Youth in Northern Mozambique', which is working with youth IDPs and other members of the community to get access to self and wage employment, through trainings into vocational centres and linkages with PRODAPE, PROCAVA interventions, as well as REFP for financing.
23. In areas where the security situation is still a threat, the Government will consider using third party agencies or NGOs to assist the vulnerable groups.
24. As part of the new project design process (PROPEIXE), a Fragility/Conflict assessment was carried out for the northern Mozambique to inform the suitable project interventions in its contribution for the livelihoods and peace building.
25. IDPs/returnees Targeting. Selection of IDP/returnee households from IDPs within targeted areas in the North (Cabo Delgado and Nampula) will consider e.g. social protection registries, as well as community-based targeting process to select beneficiaries. This will be adapted to prioritize those households most at risk of climate change, as well as households that are likely to be poorer and more food insecure (e.g. large households, women-headed, those with children), and households which are vulnerable to fragility risks, such as those with at-risk youth. IFAD interventions will specifically target returnees in Mocimboa da Praia district in order to support the return and reconstruction process, and contribute to conflict prevention by addressing key socio-economic drivers of fragility, particularly among youth. Collaboration and coordination with other humanitarian and development

agencies will be in place, in line with UN Coordinating response in the North of Mozambique and to enhance a harmonized targeting approach. Selection criteria will be clearly defined in close collaboration with stakeholders and potential beneficiaries. Where working with IDPs in host communities, the project will ensure equal inclusion of both and proper mechanisms to minimize conflict.

## COSOP preparation process

1. The COSOP preparation process was led by the IFAD Country Programme Team in Mozambique, in collaboration with PMI, ECG, FMD and GPR. The participatory process began in 2021 with the 2018-2022 COSOP Review process (CRR) mission, which assessed progress, results and lessons learnt.
2. The following consultations were undertaken at national level during the period 10-21 October 2022: (i) workshops, meetings and group discussion sessions with the key government agencies involved in the proposed COSOP thematic areas and PMTs; (ii) meetings with key private and non-government stakeholders, including apex farmers' organisations, apex private sector organizations, the apex microfinance organization, civil society organizations; iii) Meetings with UN, donor and other development partners, and iv) academia.
3. The final draft RB-COSOP was submitted for in-house review at IFAD Headquarters in Rome, together with observations and suggestions from external reviewers. This process involved a peer review, an OSC review, and a Quality Assurance process managed by Operational Strategy and Policy Guidance Committee Secretariat (OSC). Eastern and Southern Africa Division (ESA) addressed the comments emerging from the in-house review process in a revised RB-COSOP draft.

### COSOP approval

4. The COSOP draft as amended through the IFAD review process was shared with the COSOP formulation team and the Government for their formal endorsement. A stakeholder's workshop to present the final draft COSOP by the Country Team was carried out, a brief discussion and an endorsement of the strategy by the participants and Government was done. Subsequently it was shared with the IFAD for review and endorsement. Comments have been addressed and included in the RB-COSOP prior to submission to the OSC. The final document will be submitted to the IFAD Executive Board for review in its session of April 2023.

### 5. List of Individuals interviewed

Name	Organization	Title
Frederico Cunha	MEF – National Directorate of Economic Policies and Development	Head of Department of Public Investment
José Luís	MEF – National Directorate of Economic Policies and Development	Economist
Acácio de Sousa	MEF – National Directorate of Treasury	IFAD Focal Point
Emília Coutinho	MEF – National Directorate of Public Debt	Head of Repartition of Public Debt
Miguel Mandlate	MEF – National Directorate of Public Debt	Technician

Dina Guambe	MEF – National Directorate of Economic Policies and Development	Head Department of Strategic Planning – Member END review team
Sérgio Panguane	MEF – National Directorate of Economic Policies and Development	Technician
Paulo Zibia	MEF – National Directorate of Economic Policies and Development	Technician
Amosse Bule	MEF - CEDSIF	Technician
Dário Dilamo	MEF - PNUD	Consultant supporting the END review
Humeide André	MADER – National Directorate of Cooperation and Markets	Head of Department
Joel Menete	MADER – National Directorate of Cooperation and Markets	Technician
Valdemiro Munguambe	MADER – National Directorate of Cooperation and Markets	Technician
Nélio Zunguze	MADER – National Directorate of Planning and Policies	Head of Department
Anísio Chemane	MADER – National Directorate of Local Economic Development	Head of Department
Hélio Neves	MADER – Fund for Agricultural promotion and Rural Extension	Head of Department
Daniel Mate	MADER- PROCAVA	National Coordinator
Rufino Duvane	MADER - REFP	National Coordinator
Wilson de Sousa	MADER – National Irrigation Institute	Head of Department
Delfim Vilissa	MADER – National Irrigation Institute	General Director
Fredson Patria	MADER – National Directorate of SHF promotion	Head of Department
Saquina Mucavel	MMR	Executive Director
Graciete Madime	MMR	Financial Officer
Isaías Mondlane	MIMAIP - National Sea Institute	Chairman
Paula Santana Afonso	MIMAIP - IDEPA	General Director
Anselmo Chivinde	MIMAIP – National Directorate of Marine Policies	National Director
Felismina Antia	MIMAIP – National Directorate of Cooperation	National Director
Caldas Chemane	MIMAIP – PROAZUL	Consultant
Ana Lurdes Coane	MIMAP – InoM	Representative
Florentina Mandlate	MIMAP- InoM	Representative
Tomé Capece	MIMAIP - PRODAPE	Project Coordinator
Momed Valá	MIC – Cereals Institute (ICM)	General Director
Jorge Dante	MIC – Commodity Exchange BMM	Administrator

Júlio Daute	MIC – Internal Commerce Directorate	Deputy Director
Francisco Sambo	MTA – National Directorate of Planning and Cooperation	National Director
Judwiga Massinga	MTA – National Directorate of Climate Change	National Director
Alexia Mutisse	MTA - National Directorate of Planning and Cooperation	Head of Department
Joaquim Langa	MTA – National Directorate of Land and Territorial Planning	National Director
Olga Chicanja	MTA – National Directorate of Land and Territorial Planning	Head of Department
Dinis Massinga	MTA – National Directorate of Land and Territorial Planning	Lawyer
Inácio Novela	MTA – National Directorate of Land and Territorial Planning	Head of Department
Eusébio Tuimitikile	MTA – National Directorate of Land and Territorial Planning	Technician
Hernani Coelho da Silva	FAO	Resident Representative
Margarida Cocho	WFP	Head of Programmes
Chiara Arie	WFP	Deputy Head of Programme
Christian Grassini	WFP	CC Officer
Francesco Rubino	ILO	CTA
Jaime Comiche	UNIDO	Resident Representative
Leonildo Munguambe	UNIDO	Programme Officer
César Tique	AfDB	Agriculture and Rural Development Specialist
Ana Zandamela	AfDB	Senior Operations Analyst
Luis Muchanga	UNAC	Executive Coordinator
Bartolomeu António	UNAC	Head of Department of Rural Development
Nelson Manuel	UNAC	Head of Department of Training and transparency
Simão Cumo	UNAC	Head of Department of Administration and Finance
Ricardo Rossi	EU Delegation	Team Leader – Resilience and Climate Change
Daniel Levassor	EU Delegation	Agriculture and Blue Economy Manager
Carlos Mate	Norway Embassy	Agriculture and Food Security Advisor
Clarisse Barbosa	Norway Embassy	Fisheries Advisor

Sérgio Dista	FCDO-UK	Head of Private Sector
Vânia Dava	FCDO-UK	Private Sector Advisor
Mary Hobbs	USAID	Director – Resilient Economic Growth Office
Jessie Snaza	USAID	Agriculture Team Leader
Paula Pimentel	USAID	Agriculture Advisor
Elsa Mapilele	USAID	Agribusiness Advisor
Hélène Verrue	AFD	Project Officer
Lindsey Partridge	Canada High Commission	Head of Cooperation
Ashraf Hassanein	Canada High Commission	Head of Cooperation
Elsa Nhantumbo	Canada High Commission	Development Officer
Horacio Morgado	Canada High Commission	Technical Specialist – Sustainable Economic Growth
Miguel Rombe	Canada High Commission	Economic and Development Officer
Vasco Manhiça	CTA	Vice-President
Hernani Mussanhane	CTA	Vice- President – Agrarian Associations
Evaristo Madime	CTA	President of Industry Area
Arlindo Duarte	CTA	Vice President - Industry
Pilona Chongo	CTA	President of Agribusiness
Abdul Naico	CIP	Country Manager
Maria Andrade	CIP	Principal Scientist
Rogério Chiunde	UEM - FAEF	Dean
Kawazuma Kohei	JICA	Head of Agriculture and Fisheries
Matsui Yousi	JICA	Director Nutrition
Kyoko Sakurai	JICA	Nutrition Officer
Edson Marina	JICA	Programme Officer
Katia Perreira	ORM	External Relations and Fund Raising Officer
Mariam Abbas	ORM	Researcher and member of Board of Directors
Margarida Martins	ORM	Head of Administration and Finance
António Souto	AMOMIF	Chairman
Isabel Lubrino	AMOMIF	Board Member
Eduardo Videira	WWF	Senior Marine Officer

Rodrigo Fernandes	WWF	Coordinator of Marine Projects
Santiago Goicoechea	UN - RCO	Senior Economist
Gaspar Guambe	GAIN	Country Director
Rafael Nzucule	GAIN	Manager of SUN Business Network
Diva Dessai	GAIN	Policy Advisor
Paulo Mole	AGRA	Country Representative
Doris Becker	GIZ	Head of Private Sector and Finance
Bjoern Hecht	GIZ	Manager – Private Sector
Haggai Mario	ADIN	Coordinator – Economic Programmes Division
Tomás Rosada Villamar	World Bank	Senior Agriculture Economist
João Moura	World Bank	Climate and Resilient team

## South-South and Triangular Cooperation Strategy

### I. Introduction

1. This annex on SSTC highlights sectors of relevance and provides, in section IV, options for interventions that could be undertaken. It builds on the cross-cutting approach of the COSOP 2018 – 2022; as well as lessons learned during its implementation. Prepared with reference to in-country consultations with key stakeholders including officials of the Government of Mozambique, national and international development partners, NGOs, members of civil society; it has also benefited from the knowledge and experience of colleagues in the IFAD ICO in Maputo.

### II. Opportunities for rural development investment promotion and technical exchanges

2. The following areas have been identified as important opportunities for the Fund's programme, to be expanded in the section below:
  - a) Development of market intermediaries such as Farmers' Organizations (FOs), whose capacities need continual support and strengthening.
  - b) Collaboration with local communities to sustain and rehabilitate farm roads and related infrastructure.
  - c) Sustainable management of natural resources, including technology on animal fodder and small-scale irrigation; also partnership with the private sector.
  - d) Biodiversity conservation, including technical assistance with spatial planning and data tools to support information gathering on community boundaries, wildlife presence, and the location of relevant infrastructure.
  - e) Expansion of financial services to smallholder farmers, underpinned by an ecosystem of effective regulatory and policy frameworks.
  - f) Support to the private sector, including Public-Private and Producer Partnerships to increase commercialisation and aggregation.

### III. SSTC engagement rationale

3. Mozambique's international cooperation strategy promotes partnerships based on solidarity and mutual respect. In its external engagement, the country seeks to advance a development-focused agenda through cooperation and multilateralism; a strategy that reflects the guiding principles of SSTC. To this end, Mozambique actively pursues internal and external collaboration with a diverse range of partners, looking to harness these engagements to address its development challenges, especially in the mining, industry, fisheries and agriculture sectors.

### IV. Partnerships and initiatives

4. Partnerships are a complementary modality which can help in filling identified capacity gaps and tackling the challenges identified in the COSOP.
5. Capacity building of Farmers Organisations (FOS). These need a strong framework of continuous training, incorporating mentoring, refresher courses and practical demonstration. Time-bound training provided for their establishment will only have

a short-term effect. The Training of Trainers approach supports the continuous formation of a group of individuals to assist the FOs on a graduation pathway, toward formally registered rural enterprises.

6. The SFOA Programme has transformed FOs across the continent into stable and accountable organisations with regional and sub-regional networks. An initiative of interest could be the "Peasant University", a long-term training tool for FO leaders who can participate in conferences on current topics. This initiative could be supported by educational institutions such as the Eduardo Mondlane University, which is interested in transferring its years of research into practical rural extension and outreach.
7. Public-Private-Producer Partnerships (4Ps). Engagement with the private sector can improve access to external investments and generate market opportunities for the FOs. With the continued support of the **Netherlands Development Organisation (SNV)**, the 4Ps model can be expanded, with learning opportunities from **Benin** through the Agricultural Development and Market Access Project (PADAAM) or from **Nigeria** where the internationally recognised Commodity Alliance Forum (CAF) has aggregated producers, input dealers, credit suppliers and processors. A stated area of need from the private sector is how to reduce the conditionalities imposed by established banks, which greatly curtails the favourable consideration of most smallholder farmers for loans and other financial instruments. Lessons learned from implementation of the projects in the countries indicated above will be valuable.
8. Infrastructure maintenance. Routine maintenance of roads, particularly earth roads, increases their longevity. In **Nigeria**, The Climate Change Adaptation and Agribusiness Support Programme in the Savannah Belt project has organised, trained and equipped Community Development Associations (CDAs) for regular maintenance (labour-based) and rehabilitation of farm roads. A similar model, integrating the participation of local governments and mobilizing the youth, will benefit the rural communities in Mozambique, improving their access to markets and reducing the distance to water sources. The local authorities in Mozambique can learn from this model through a study tour to Nigeria.
9. Natural resource management. **Kenya** could offer substantial knowledge here, in view of the many IFAD interventions addressing water resource management, particularly through drip irrigation systems. A successful South-South collaboration was established with Ethiopia for the adoption of this technology. **Mauritania**, also benefiting from IFAD support in natural resource management, saw the introduction of solar panels as cost-effective add-ons to water pumping systems. A combination of the two technologies will address the challenge relating to cost-effective irrigation systems in Mozambique. Technology transfer and knowledge exchange activities can be organised with the two countries for their adoption.
10. **ICARDA** has developed multiple production methods for climate adaptive fodder, and can be a partner of choice for training on fodder management practices and their long- term benefits for the environment.

11. Biodiversity conservation. The establishment of coordination platforms such as the National Administration of Conservation Areas (ANAC) reflects increased commitment at all levels to improve water and land usage and protect wildlife. However, misaligned objectives, complex internal dynamics and lack of ownership are challenges. A triangular partner, such as the **GIZ**, could facilitate policy dialogues for institutional strengthening and governance.
12. SSTC could also support access to spatial planning and data collections tools. IFAD's Participatory Small-scale Irrigation Development Programme II in **Ethiopia** has developed an online Management Information System (MIS) connected to a geo-map interface, and seeks opportunities for scaling it up.
13. Other collaborations on biodiversity conservation can be explored. Bee-keeping as an industry can be an approach to restore rapidly declining mangrove forests, cut down for household energy. Valuable knowledge from beekeeping associations in **Algeria**; and in-country partnership with the Agence Française de Développement, which has successfully introduced bee-keeping around national parks and game reserves in Mozambique to reduce the incidence of poaching and other activities inimical to conservation could be explored.
14. Rural Finance. **Brazil**, already a strong partner, could provide technical assistance and policy dialogue to the rural finance sector. The country has seen a remarkable expansion of Community Development Banks (CDBs), which provide financial services including microloans and capacity-building activities to small-scale entrepreneurs. The need is for an intermediary level of support to rural finance, working with the IPEME (Institute for Promotion of Small and Medium Enterprises). The institutional entry points for policy dialogue and knowledge exchange could be the **Brazilian Cooperation Agency (ABC)** or the **Brazil Africa Institute (IBRAF)**.

## V. Conclusion

15. The opportunities identified for the new Mozambique COSOP can complement the interventions planned for the upcoming IFAD strategy in the country; to be expanded as the programme is implemented. It is also important to note Mozambique's potential as an SSTC provider. Successful application of the Gender Action Learning System (GALS), for example, has empowered women to take decision-making positions in Farmer Organisation. This achievement, already promoted by donors and partners, can be one of its offers for knowledge exchange with countries in the sub-region and the continent as a whole.

## Financial management issues summary – Appendix VIII

COUNTRY	Mozambique	COSOP	
<b>A. COUNTRY PORTFOLIO PERFORMANCE</b>			
<b>Country – FM KPIs:</b>			
FM Inherent Risk:	<b>High</b>		
Country Disbursement Ratio (rolling-year)	10.40%		
Outstanding Ineligible Expenditure			
Outstanding Advances (Projects in Expired Status)	154,843 USD		
Applicable PBAS cycle:	IFAD12		
PBAS Available allocation:	49.3 million USD		
<p><b>Outlook<sup>62</sup>/ Debt sustainability.</b>  Economic growth is projected to increase in 2022, with the strengthening economic recovery despite the worsening international economic environment and rising commodity prices, reflecting a strong vaccination campaign and full lifting of COVID-related restrictions in July 2022. Inflation has risen to double digits, driven by global fuel and food prices and tropical storms that impacted domestic food supply in the second quarter. Fiscal developments in 2022 are broadly aligned with expectations, with strong revenue and contained spending. Large liquefied natural gas (LNG) investments are driving the current account. The first LNG project started production in November 2022. The government continues to build institutions and capacity to manage public resources efficiently. These include: i) applying appropriate fiscal rules and institutions for LNG resources; ii) addressing concerns around governance, transparency, and corruption; and iii) enhancing equality of opportunity and greater social inclusion. The Medium-Term Debt Strategy (MTDS), published in July, aims to increase the share of external financing, and lengthen maturities of domestic debt. According to program targets and debt sustainability, the government plans to seek external financing exclusively on concessional terms. On May 9, 2022, under Article IV consultation, IMF approved a three-year arrangement under the Extended Credit Facility for Mozambique for US\$456 million. In 2022, Mozambique will also benefit from a concessional project loan from the World Bank of US\$200 million to support digitalization and, for 2023, the GoM has started negotiating a new concessional project loan of US\$200 million to support the economic reactivation package. As per latest IMF/WA DSA analysis conducted in 2020, further confirmed during the first IMF review in December 2022, Mozambique is in debt distress. IFAD12, Mozambique will receive 100 per cent DSF financing and is not eligible for PBAS or BRAM loans.</p>			
<p><b>Governance.</b>  In 2021, the TI Corruption Perception Index for Mozambique scored 24 (+1 point vs PY) which places the country in 147th position out of 180 countries. According to the World Bank report “Mind the Rural Investment Gap, December 2019”, corruption is a brake on economic growth. Mozambican companies cite corruption as a major Constraint for their activities because (i) they are asked to make informal payments to obtain public services; (ii) must pay bribes to obtain electricity or water connections and permits related to new constructions; (iii) must pay bribes to obtain import or operating licenses; (iv) many companies face the need to pay bribes to secure government contracts. In 2018, the demand for bribes has increased and is above average corruption levels recorded, both globally and in sub-Saharan Africa.</p>			
<p>According to 2021 CPIA<sup>63</sup> rating, Mozambique is a medium-to-low policy performer (score 3.1, flat vs PY) and ranks 24th out of 40 sub-Saharan countries (avg. score 3.1). Weaknesses persist in Public Sector Management and Institutions, in particular under Transparency, Accountability, and Corruption which is the indicator recording the lowest score (2).</p>			
<p><b>PFM/PEFA Assessment<sup>64</sup>.</b>  According to most recent PEFA assessment conducted in 2019 (and released in 2021), only 13 per cent of the indicators show solid performance level (B and B+), whereas 52 per cent indicators perform in line with the baseline level (C and C+). Main strengths relate to (i) good practices in budget scrutiny by the Assembly of the Republic, (ii) the proper budget preparation process, (iii) revenue administration, (iv) quality of access processes to e-SISTAFE records, which guarantee the integrity of financial data. Weaknesses (D score) are in (i) procurement (less than 60 per cent of value acquisitions use competitive methods), (ii) lack of a system for monitoring arrears (stock of late payments representing 11 per cent and 22 per cent of aggregate expenditure) (iii) transfers to subnational governments and (iv) external audit (with a coverage on institutions that represent less than 50 per cent of public expenses/revenues).</p>			
<p>External Audit of public finances is conducted by the Tribunal Administrativo (TA), using ISSAI standards, which has unrestricted access to the necessary information, which produces audit reports submitted, in a timely manner, to the Assembleia de Republica (AR) for the exercise of external scrutiny (within 4-6 months). However, TA recommendation are not timely implemented by Government. The accounting standards used to prepare the Government's financial reports, namely for the General State Account, are consistent with the</p>			

<sup>62</sup> [IMF-Mozambique ECF Review - December 2022](#)

<sup>63</sup> [CPIA Africa 2022 - World Bank.](#)

<sup>64</sup> [PEFA assessment 2021](#)

existing legal framework in the country, produce consistent reports, and their use is publicized. However, they are not aligned with the IPSAS nor are any differences with them made explicit. On the other hand, Internal Audit is operational in all central government entities. Annual internal audit programs exist and almost all (90 per cent) of audits scheduled in 2018 were completed by the Inspectorate-General of Finance (IGF). In most cases (> 50 per cent) a response from entities audited is provided.

In December 2022, the IMF reported that improvements in expenditure management, budgetary planning, and financial programming are underway. Public procurement stages were added to the electronic financial administration system (e-SISTAFE), and suppliers are now required to show valid commitment notes before delivering goods and services (MEFP). Ensuring that more spending is executed within e-SISTAFE will improve control, avoid over-commitment at the spending entity level, improve predictability and oversight, and reduce scope for extrabudgetary arrears. The government plans to integrate all spending within e-SISTAFE by end-2022 and establish limits on quarterly expenditure commitments (to be operationalized through a quarterly Treasury Budget). This reform will be implemented through the budget execution circular for the 2023 budget. The authorities will establish a cash management committee by end-2022 and map all public sector bank accounts (MEFP). The new financial programming and budgetary planning tools will be operationalized in e-SISTAFE and implemented in all spending units by end-December 2022. The authorities will fully integrate climate resiliency criteria in public investment planning and project selection over time.

<sup>1</sup>Corporate Disbursement Ratio Methodology considers ASAP, AFD, IFAD, KFW and SPA financing sources only.

#### Update on On-going Portfolio.

- (i) The closure of two projects, PROSUL and PROMER is pending on the refund of outstanding advances. As per IFAD communication dated December 2022, future disbursements to ongoing projects' designated accounts will be conditioned upon the receipt of the refund
- (ii) Quality and timeliness of audit has been less than satisfactory in FY 2021-2. Action plans are in place to improve audit quality and to strengthen projects' alignment to international accounting standards.
- (iii) Two RPSF grants managed by PROCAVA are due to be closed. The ICO is following up for the justification of advances provided and for the RPSF audit.

#### Use of Country Systems.

**Organisation** (on-country system). The projects are partially staffed by government personnel, with some staff recruited specifically for the project. Involvement of some government staff in the LPA (e.g. for approvals)

**RISK:** limited experience on management of development projects.

**MITIGATION:** Competitive recruitment for key staff at PMU, capacity building for seconded staff at field level.

- Budget** (on-country system). AWPB is submitted to Ministry of Finance for inclusion into the budget for each financial year. This is done for purposes of approval of funds through e-SISTAFE, which is the government financial management information system (IFMIS). Projects' budgets are subject to budget ceilings, and are booked into the e-SISTAFE in order to get authorization for expenditure. Overall, the IFAD and Government cycles are not fully harmonized. The Government approves its national budget in September in the parliament and IFAD in November. Due to planning and budget requirements (e-SISTAFE), projects use to prepare a provisional budget for the Government cycle to be approved, and after the approval from IFAD, a request is made to the Ministry of Finance for the revision according to the IFAD approved budget. Budget is prepared with a bottom up approach at district level, within the ceiling provided, then consolidated at PCU.

**RISK:** the lengthy authorization process from Ministry of Local Authorities to recalibrate district budgets, when needed, may impact on low execution rate.

**MITIGATION:** (i) early start of budget consolidation, (ii) sharp scrutiny for realistic estimates, (iii) effective budget-module installed at IFMIS to monitor deviations.

- Accounting/reporting:** (on-going full migration to country systems). Mozambique is slowly transitioning to accrual accounting, albeit more in the private than in the public sector, and donor-financed projects are using cash basis of accounting. Government system E-SISTAFE is used to manage payments. E-SISTAFE is the mandatory accounting system across PFM, however in terms of reporting capacity for donor financing it has shown limitations, including Chart of Account alignment, limited reporting by project and source of financing. As part of an ongoing pilot, the system is being customised to accommodate IFAD's requirements, implementation is expected to begin in early 2023. In the meantime,

*PROCAVA and REFP are using off-the-shelf accounting software, whereas PRODAPE is doing manual accounting (Excel).  
RISK: manual accounting exposed to systemic human errors and unreliable reporting.  
MITIGATION: (i) Customization of E-SISTAFE almost completed (CoA, minimum reporting, transaction reporting); (ii) training to users.*

- **Treasury** (on-country system). *Funds from IFAD are received in the DA held with the Bank of Mozambique (country's central bank). There is also a FOREX/Transitory Account which is managed by the Treasury National Directorate in which funds are converted to local currency and made available in e-SISTAFE. All projects' withdrawal applications are subject to final approval by the Bank of Mozambique.*

*RISK: late replenishment at provincial level.*

*MITIGATION: ensure GoM does not impose justification-thresholds to subsequent advances from PCU to provinces.*

- **Audit** (transitioning to on-country system). *An Internal Audit unit is generally established at the LPA. External Audit is the responsibility of the supreme audit institution, the Tribunal Administrativo. IFAD projects will start to be audited by the Tribunal Administrativo starting with FY 2022*

- *RISK: delays due to translation process causing late submission of audit reports*

- *MITIGATION: early engagement of TA for inclusion in the Auditor's work-plan.*

## Procurement risk matrix – part A country level

Based on MAPS II – ASSESSMENT OF NATIONAL PROCUREMENT SYSTEM **FOR MOZAMBIQUE**

OECD Pillar I – Legal, Regulatory and Policy Framework					
Indicator  # and Sub-Indicator #	Sub-Indicator Description <sup>65</sup>	Findings regarding possible non-compliance with IFAD PPF	Inherent Risk of non-compliance with Project Objectives & IFAD PPF	Proposed Mitigation measure/s	Net Risk
1	The public procurement legal framework achieves the agreed principles and complies with applicable obligations.				
1(a)	Scope of application and coverage of the legal and regulatory framework	The Regulamento covers the procurement of goods, works and services, including consulting services for all public bodies except SOEs which develop their own regulations. This leads to fragmentation of the PP legal framework and may impinge on transparency.	H	Use IFAD Procurement Guidelines	H
1(b)	Procurement methods	QCBS selection method and Framework Agreements not included in the Regulamento.  Request for Quotations and Direct Contracting can be used when the previous or the same procurement process has failed because all bidders were disqualified. This can lead to abuse by contracting authorities.	H	Follow IFAD Guidelines on Selection Methods.  Avoid use of DC/SSS and if there is strong justification for its use, seek IFADs NO.	H

<sup>65</sup> The Indicators and Sub-Indicators are extracted from OECD-MAPS II of 2017 in order to harmonise with other MDBs and to save time and effort in conducting Part A assessments in case a recent MAPS II assessment has been conducted for the borrower's country system. The criteria to be applied in assessing each Sub-Indicator are those of OECD-MAPS II.

1(c)	Advertising rules and time limits	<p>The Regulamento does not require the publication of the procurement plan.</p> <p>Extension of time frames in the case of international competition not covered.</p> <p>There is no requirement for publication of open tenders in at least a newspaper of wide circulation or on a unique Internet official site where all public procurement opportunities are posted.</p>	H	<p>Ensure publication of GPNs on all planned activities.</p> <p>Follow IFAD Procurement Guidelines with respect to extension of time, definition of time frames and wide publicity of procurement opportunities.</p>	H
1(d)	Rules on participation	<p>High bid security requirement, including for consultants.</p> <p>Foreign firms required to have a representative in the country. This may have an impact on their participation in procurement processes.</p>	H	<p>Use IFAD Guidelines and template.</p> <p>NB: The concerns on high bid security and local representation have been addressed in the updated Regulamento nº. 79/2022 which will come into effect 3 months after publication (i.e June 2023 - For Bid security the new law has increased the thresholds for and for lower values it provides the option of a Bid Security Declaration.).</p> <p>The public will be able to access Procurement Plans from MEF)</p>	H
1(e)	Procurement documentation and specifications	<p>No provision for use of functional specifications in the Regulamento.</p> <p>Although the Regulamento prohibits the use of brand names, it does not require the recognition of</p>	H	<p>Use the most appropriate type of specification depending on the requirement.</p> <p>Where the item cannot be described without using a brand name, always</p>	H

		standards that are equivalent when neutral specifications are not available.		recognize equivalent standards.  NB: The two issues have been addressed in the new law.	
1(f)	Evaluation and award criteria	The Regulamento is silent on disclosure of confidential information on examination, clarification and evaluation of bids	H	Ensure evaluators are sensitized on maintaining confidentiality during the evaluation and award process and that they always sign the IFAD Declaration of Impartiality and confidentiality. NB: Confidentiality has been addressed in the new law.	H
1(g)	Submission, receipt and opening of tenders	The Procurement Regulation does not contain specific provisions on records of proceedings for opening of proposals in case of consulting services and the disclosure of sensitive information regarding bids.	S	Ensure that bids are opened within reasonable time of bid closing time and bid opening minutes are maintained. Further, ensure that those involved in the adjudication process commit in writing to keep sensitive information on the process confidential.  Note: This has also been addressed in the new law.	S
1(h)	Right to challenge and appeal	The Regulamento does not provide for: i) an administrative body independent of the contracting authority for the review of procurement appeals/complaints. ii) detailed procedures for submitting complaints, iii) , for deciding on complaints, and iv) the remedies that may be granted.	H	Use IFAD Procurement Guidelines and SBDs which contain detailed protest and appeal procedures.	H

		The Procurement Regulation is silent with respect to the publication of applications for Hierarchical Appeal and related decisions			
1(i)	Contract management	The provisions of the Procurement Regulation on the extension of contracts for goods and services (Article 112(3)) are written in a broad manner and may lead to arbitrary limitation of competition.	H	Specifying the grounds based on which extensions of contracts for goods and services can be granted.	H
1(j)	Electronic Procurement (e-Procurement)	The regulation for e-procurement has not been adopted.	S	Use IFADs end-to-end procurement system.  NB: New law provides for an e-procurement strategy.	S
1(k)	Norms for safekeeping of records, documents and electronic data.	Although the Manual contains a specific section on archiving which lists the main documents to be kept in the procurement records, information on what should be archived/kept in the procurement records is also contained in other sections of the Procurement Manual.  There are not established security protocols to protect records.	S	Maintain a consolidated list of the procurement records in the specific section of the Project Implementation Manual (PIM) dedicated to procurement record keeping.  Establish specific protocols in the PIM to protect records	S
1(l)	Public procurement principles in specialised legislation	Each SOE develops its own procurement regulations resulting in a “fragmentation” of the public procurement legal framework which may impinge on transparency.	H	Use the IFAD Procurement Guidelines to ensure transparency, effectiveness and equity of procurement outcomes.	H
2	<b>Implementing regulations and tools support the legal framework</b>				

2(a)	Implementing regulations to define processes and procedures conditions	Implementing rules are not issued and/or updated in a timely manner	S	Use the IFAD Handbook which has detailed procedures for all the procurement processes.	S
2(b)	Model procurement documents for goods, works and services	The current version of SBDs in use were drafted in 2016. An update process is ongoing and it is expected to be finalized by end of March 2023. All the categories are not acceptable to IFAD as they have several gaps which need to be included such as lack of policies or clauses on sexual harassment, exploitation and abuse; Lack of clauses on Money laundering and terrorist financing; abnormally low bids; SECAP performance; ESMP; Self-certification form.	M	Continue use of IFAD SBD templates	M
2(c)	Standard contract	Current version is from 2016 and have some gaps, for example lack of SECAP and SHEA policies.	M	Use IFAD contract templates.  Standard contract being updated together with the SBDs.	M
2(d)	User's guide or manual for procuring entities (insert link to manual if possible)	The Procurement Manual has some inconsistencies instructions in some parts (for example regarding debarment) which are contrary to what is provided for in the Procurement Regulation.  The Procurement Manual is not updated in a timely manner.	M	Develop the procurement section of the PIM with up to date procedures for the procurement process which are acceptable to IFAD and seek a NO for their implementation.	M
<b>3</b>	<b>The legal and policy frameworks support the sustainable development of the country and the implementation of international obligations</b>				

3(a)	Sustainable Public Procurement (SPP)	<p>The Procurement Regulation allows for sustainability considerations to be taken into account in certain stages of the procurement cycle. However, it is silent with regard to the incorporation of sustainability considerations in all stages of the procurement cycle. There is no SPP implementation plan in place.</p> <p>The Procurement Regulation does not contain specific provisions which require a well-balanced application of sustainability criteria to ensure value for money.</p>	S	Follow the IFAD guidelines on SECAP and sustainability.	S
3(b)	Obligations deriving from international agreement	<p>No specific public procurement obligations deriving from Mozambique's membership of SADC.</p> <p>However, the Regulamento allows international organizations carrying out projects financed by multilateral financing institutions or from an official cooperation agency when their conclusion requires the adoption of specific procurement rules.</p>	M	Project to use the Special Regime of the Regulamento.	M
Consolidated findings for Pillar I		Pillar I has gaps/weaknesses that impact competition and transparency.	H		H
<b>OECD Pillar II – Institutional Framework and Management Capacity</b>					
4	<b>The public procurement system is mainstreamed and well-integrated with the public financial management system</b>				

4(a)	Procurement planning and the budget cycle	Necessary resources provided by Treasury on a timely basis and multi-annual commitments not monitored; consistent update of procurement plans not done for the budget planning purpose.	H	Prepare procurement plans aligned to annual work plans, ensure there are adequate fund before execution and monitor their implementation on a regular basis.	H
4(b)	Financial procedures and the procurement cycle	Approval and certification of payment processes are not followed especially for works contracts. Penalties for delays are not paid.	H	Make payment only after works are certified by Contract Managers. Implement contract terms and conditions including triggering penalties in case of delays.	H
<b>5</b>	<b>The country has an institution in charge of the normative/regulatory function</b>				
5(a)	Status and legal basis of the normative/regulatory institution function	The Procurement Regulation does not specify in a clear manner which institution/level in MEF is vested with normative/regulatory function in the field of public procurement including drafting, amending/revising the public procurement legal and regulatory framework and Regulations.	H	Maintain regular consultations with the MEF to stay informed of any changes in the regulations.	H
5(b)	Responsibilities of the normative/regulatory function	UFSA Training Program does not contain in-depth procurement integrity training. There is no professionalization of the procurement function.	H	Ensure procurement officer/s and the PMU staff are trained on integrity and ethical issues and prohibited practices. Procurement staff to enroll for BuildPro certification.	H

5(c)	Organisation, funding, staffing, and level of independence and authority	UFSA does not have the appropriate authority consistent with its regulatory body functions and it is not adequately resourced to effectively discharge its responsibilities.	H	Ensure that the PMU has adequate procurement staff capacity to carry out project procurement functions.	H
5(d)	Avoiding conflict of interest	Addressed/met	L	Sign declarations of impartiality and confidentiality	L
<b>6</b>	<b>Procuring entities and their mandates are clearly defined.</b>				
6(a)	Definition, responsibilities and formal powers of procuring entities	Number of procurement entities (UGEAs) not clear and the regulamento is silent on their approval authority and accountability for procurement transactions.	H	Define clear roles and accountabilities for procurement staff. Establish clear financial delegation of authority in the PMU.	H
6(b)	Centralized procurement body	Fragmentation of procurement for recurrent goods, especially for medicines and textbooks.	S	Aggregate procurement requirements for similar items to benefit from scale and ensure value for money.  NB: Issue of fragmentation has been addressed in the new law by requiring aggregation in procurement planning.	S
<b>7</b>	<b>Public procurement is embedded in an effective information system</b>				
7(a)	Publication of public procurement information supported by information technology	There is no centralized portal and published information is fragmented and not sufficient and comprehensive enough to monitor public procurement outcomes and performance. The UFSA portal does not have comprehensive and updated information	H	Ensure procurement information regarding procurement plans, tenders, protests and challenges, contracts, and contract amendments is updated and comprehensive enough to monitor public procurement	H

				outcomes and performance.	
7(b)	Use of e-Procurement	End to end e-procurement is not available in Mozambique, technical assistance needed to establish and elaborate on e-procurement system and a capacity building strategy and road map.	H	Use the IFAD end to end system.	H
7(c)	Strategies to manage procurement data	Only general information on procurement methods and values is available on UFSA website. There is no system in place managing data for the entire procurement process to allow for comprehensive analysis of trends, level of participation, efficiency and economy of procurement and compliance with requirements	S	Maintain comprehensive records/information to analysis of trends, efficiency and economy of procurement and compliance with IFAD requirements.	S
<b>8</b>	<b>The public procurement system has a strong capacity to develop and improve</b>				
8(a)	Training, advice and assistance	Training Programme is not updated, advice to UGEAs is limited and there is weak support at the decentralized level.	H	Ensure PMU procurement staff are regularly trained and possess the appropriate skills to undertake their responsibilities.	M
8(b)	Recognition of procurement as a profession	Procurement is not a profession and the certification program although designed is not approved and implemented.	S	Recruit procurement specialist/s with experience in public procurement and project procurement experience. Obtain additional training on IFAD procurement	S

				Guidelines and Policies.	
8(c)	Monitoring performance to improve the system	No consistent performance monitoring system. While Procurement methods at the national level are monitored by UFSA there is no comprehensive performance monitoring system at national and UGEA level	H	Have in place a performance monitoring system with key performance indicators to measure procurement outcomes.	H
Consolidated findings for Pillar II		There is lack of consistent enforcement of the legal and regulatory framework	H		H

<b>OECD Pillar III – Public Procurement Operations and Market Practices</b>					
<b>9</b>	<b>Public procurement practices achieve stated objectives</b>				
9(a)	Procurement Planning	Procurement decisions not based on market analysis and risks. There are no realistic market prices and no sufficient knowledge to apply sustainability criteria and methodology.	H	Adopt a risk-based approach to procurement planning. Train procurement staff on sustainability and SECAP.	H
9(b)	Selection and contracting	The procurement method not always justified. Not all awards are published as per <i>Reglamento</i> . The sustainability criteria and methodology are not fully disseminated and understood by users.	S	Use appropriate methods for each procurement case ensuring competition, transparency, equity and value for money. Create awareness on sustainable procurement among stakeholders. Incorporate sustainability criteria and requirements in tenders and	S

				contracts respectively.	
9(c)	Contract management in practice	Weak contract management with several implementation gaps in supervision, payment of invoices, quality control, preparation of contract amendments, and coordination among various units involved.	H	Ensure an effective contract administration and management system. Keep an updated record of all contracts in CMT.	H
<b>10</b>	<b>The public procurement market is fully functional</b>				
10(a)	Dialogue and partnerships between public and private sector	Lack of comprehensive engagement with the private sector and/or communication/training programs from the private sector perspective.	S	Sensitize private sector on how to do business with the project.	S
10(b)	Private sector's organisation and access to the public procurement market	There are no mechanisms in place to address private sector constraints and boost the private sector participation.	S	Engage the sector on a regular basis by providing timely information on available or upcoming procurement activities.	S
10(c)	Key sectors and sector strategies	UFSA strategy is not explicitly linked to strategic sectors, as identified by the Government, hence there are not sector related risks and opportunities assessments	M	Do market scoping/analysis for commonly used items and services and establish the opportunities and risks prevalent in the Projects source market(s).	M
Consolidated findings for Pillar III		There is a risk of lower competition and inefficiency in the procurement process due to limited access to information by market participants.	H		H

<b>OECD Pillar IV – Accountability, Integrity and Transparency of the Public Procurement System</b>					
<b>11</b>	<b>Transparency and civil society engagement strengthen integrity in public procurement</b>				
11(a)	Enabling environment for public consultation and monitoring	The consultation process in both breadth and depth is not systematic and there are no capacity building programs tailored to other stakeholders than UGEAs	H	Engage the private sector on how to do business with the project including sensitization on bidding opportunities/requirements and IFAD prohibited policies. Encourage transparency and accountability and be open to scrutiny by stakeholders including the civil society	H
11(b)	Adequate and timely access to information by the public	Information is scattered and therefore not easily accessible.	S	Maintain centralized information repository/portal and ensure it is readily available to stakeholders.	S
11(c)	Direct engagement of civil society	No provision in the bidding documents allowing other than bidders to participate in the public stages of the procurement process.	M	Allow other stakeholders like vendors and civil society to participate in procurement for observation and monitoring purposes.	M
<b>12</b>	<b>The country has effective control and audit systems</b>				
12(a)	Legal framework, organisation and procedures of the control system	TA includes procurement in its compliance audits however resources (funding and procurement expertise) is lacking for carrying out consistent audit and effective follow up.	H	N/A	H

12(b)	Co-ordination of controls and audits of public procurement	Internal controls performed by provincial and local inspectorates and there is no evidence that internal and external audits are conducted at least annually	H	Ensure the project is audited annually by external independent auditors.	H
12(c)	Enforcement and follow-up on findings and recommendations	There is no consistent follow up on the implementation of the recommendations. Availability of resources is a critical issue; need for more cooperation.	H	Ensure matters arising from the audit are addressed in a timely manner	H
12(d)	Qualification and training to conduct procurement audits	There are not sufficient auditors trained/or support available for procurement audit and to ensure a uniform interpretation of the audit findings	H	Ensure auditors are competitively selected and that the appointed auditors have adequate skills to undertake comprehensive audit of procurement activities.	H
<b>13</b>	<b>Procurement appeals mechanisms are effective and efficient</b>				
13(a)	Process for challenges and appeals	No legal provisions on the enforceability of the appeals body decisions. No information available on the complaints/appeals (including enforced decisions).	H	N/A	H
13(b)	Independence and capacity of the appeals body	there is no independent appeals body at administrative level.	H	N/A	H
13(c)	Decisions of the appeals body	There are no normas complementares guiding the decision-making process of the appeal body.	H	N/A	H

14	<b>The country has ethics and anti-corruption measures in place</b>				
14(a)	Legal definition of prohibited practices, conflicts of interest, and associated responsibilities, accountability and penalties	Prohibited practices are defined and the associated responsibilities. However, there is no definitions on Anti-Money Laundering and Terrorist Financing, and Sexual Harrassment, Exploitation and Abuse (SHEA).	M	Incorporate IFAD policies on prohibited practices and on SHEA in all bid documents.	M
14(b)	Provisions on prohibited practices in procurement documents	The updated version of the bidding documents (SBD) and standard contracts have not been issued yet.	M	Incorporate IFAD policies on prohibited practices and on SHEA in all bid documents.	M
14(c)	Effective sanctions and enforcement systems	There are no implementing rules/ <i>normas complementares</i> for debarment issued by UFSA as per Art. 281.2 of the <i>Reglamento</i> . While the intent is for UFSA to debar the language in the <i>Reglamento</i> is sometimes confusing.	H	Project to follow the IFAD Guidelines in the anti-corruption policy following the 'Agreement for Mutual Enforcement of Debarment Decisions' as per the IFAD Policy on Prohibited Practices.	M
14(d)	Anti-corruption framework and integrity training	Perception is low regarding the effectiveness of the implementation of anti-corruption regulations.  Implementing units do not consistently report the cases the anti-ethical and illicit practices as required in the <i>Reglamento</i> .	H	Where necessary consistently apply sanctions for violation of integrity requirements and publize them.	H
14(e)	Stakeholder support to strengthen integrity in procurement	There is no consistent oversight of procurement from the CSOs as third party monitor. There is no evidence that private sector	H	IFAD project to publicise procurement opportunities to ensure wide availability of public procurement information	H

		companies have internal compliance measures.		which can in turn spur effective participation by stakeholders (citizens, private sector and civil society).	
14(f)	Secure mechanisms for reporting prohibited practices or unethical behaviour	No information on the enforcement of the whistle blower protection act to determine its effectiveness and the level of protection of the whistleblowers.	S	Project to encourage anonymous reporting of unethical practices. Where source is disclosed, keep it confidential.	S
14(g)	Codes of conduct/codes of ethics and financial disclosure rule	No systematic monitoring of COI in procurement. No information about financial disclosures by procurement officials. No reporting of beneficial ownership.	H	Ensure that evaluators disclose COI, and if any recuse themselves. For those where there is no conflict, they should sign declarations to that effect prior to commencement of evaluations.	H
Consolidated findings for Pillar IV		There is risk of potential increase in corruption due to lack of comprehensive information on public procurement to enable civil society and citizens' participation in monitoring public procurement activities.	H		H
<b>Consolidated findings at country level based on the assessments above of OECD Pillars I-IV</b>		<b>[to be determined by the SPO]</b>	<b>[to be determined by the SPO]</b>	<b>[to be determined by the SPO]</b>	<b>[to be determined by the SPO]</b>

## Integrated country risk matrix

Integrated Country Risk Matrix			
Risk type	Inherent risk	Residual risk	Mitigation measures
<b>Country context</b> <i>The risks to the achievement of COSOP strategic objectives stemming from a country's context.</i>	Substantial	Substantial	
<b>Political commitment</b> <i>The risk that a country's political developments (i.e. upcoming elections, impending changes in government, high political instability/turnover/uncertainty, changing political priorities) result in delays and/or in a reversal of key political decisions and commitments (including approval and implementation of laws and regulations, and timely counterpart funding) underpinning the success of IFAD's engagement in the country</i>	Substantial	Substantial	<p>Due to the insurgency conflict in the northern Mozambique, the IFAD country team will seek continued engagement with the relevant ministries and contact persons to foster better coordination the implementing agencies. This will ensure efficient cooperation pertaining to planning, coordination and implementation of the project. In addition, IFAD is promoting a gradual expansion approach (aligned with UNDSS recommendations) of all project operations in the conflict affected areas.</p> <p>The ongoing gradual decentralization process and the establishment of dual Government Leadership structures at Provincial level (Provincial Governor - Elected and Secretary of State – Appointed) impacted negatively on the project's efficiency. In addition, according to the law, during the next elections (2024), this model will be further decentralized at District level. IFAD resources are implemented using a decentralized model through the Government budget and financial management system (e-SISTAFE), therefore reinforcing the use of national systems, as well as strengthening the capacity of the institutions at all levels. The IFAD support to the decentralization process will be hybrid, maintaining its support to the Government, as well as focusing on private sector and community based institutions.</p> <p>Interventions to community level with provision of strong support to improving agricultural productivity, market linkages and inclusive rural finance are also critical. In particular work with poor rural people (women and youth) to enable them grow and sell more food, increase their incomes, including capacity building that enables them to determine the direction of their own lives.</p> <p>Engage, support and strengthen the National Audit Office (Tribunal Administrativo) for regular auditing of IFAD supported investments, in accordance with the International Standards of Supreme Audit Institutions (ISSAI).</p> <p>Strengthen and reinforce the use of national systems, particularly e-SISTAFE (Government Financial Management System).</p>

Integrated Country Risk Matrix			
Risk type	Inherent risk	Residual risk	Mitigation measures
<b>Governance</b> <i>The risk that the country can suffer from governance breakdowns (lack of/weak political checks and balances; lack of/weak public auditing systems; lack of/weak transparent information on government rules, regulations, and decisions; lack of/weak standards to prevent fraud and corruption; lack of/poor quality/transparency of allocation of resources for rural development) which can negatively affect the achievement of COSOP's strategic objectives.</i>	High	Substantial	<p>Through the implementation of IFAD's "Framework for Operational Feedback from Stakeholders: Enhancing Transparency, Governance and Accountability", inclusive governance, transparency and accountability in development processes, including in associated grievance redress mechanisms, will be fostered. Information about the existence and functioning of such mechanisms will be made readily available to all stakeholders. Further, information regarding whistle-blower protection measures, and confidential reporting channels will be widely accessible in order to receive and address grievances appropriately, including allegations of fraud and corruption, and sexual exploitation and abuse.</p> <p>Institutional capacity-building at all levels and strengthening governance of programme stakeholders, particularly in the context of decentralization.</p>
<b>Macroeconomic</b> <i>The risk that macroeconomic policies (monetary, fiscal, debt management/sustainability, trade) are overall fragile, unsustainable, and/or vulnerable to domestic or external shocks, thus resulting in high inflation, low foreign exchange reserves, large fiscal deficits and debt distress. This could lead to government inability to mobilize counterpart funding, and to an overall adverse impact on market dynamics of value chains, (market prices and profit margins for IFAD's target groups)</i>	Substantial	Moderate	<p>According to the World Bank, Mozambique remains in at high risk of debt distress, with debt assessed to be sustainable in a forward-looking sense. Currency appreciation supported a drop in total public debt from 120 to 106.4 % of GDP between 2020 and 2021. The debt distress situation will improve, however the country will remain as high-risk debt distress, and to ensure debt sustainability, the authorities will continue maintaining prudent and sustainable debt management practices.</p> <p>Taking into account the country's debt unsustainability, last programme financing has been negotiated to be 80% as grant and 20% as loan on highly concessional terms. Currently, the financing terms are at 100% DSF grant.</p> <p>IFAD will continue its supporting the production and productivity increases and build sustainable and market-oriented value chains, as well as macro-economic stability.</p>
<b>Fragility and security</b> <i>The risk that the country is vulnerable to natural and man-made shocks including civil unrest, conflict, and/or weak governance structures and institutions.</i>	Substantial	Substantial	<p>Project designs will include contingency mechanisms, which are more flexible and timely, that can be incorporated in the projects.</p> <p>This mechanism will ensure the reduction of the project and beneficiary vulnerability to future climatic hazards. It constitutes a programmatic window for the integration of preventive and response measures and corresponding allocation of additional dedicated funding.</p>
<b>Sector strategies and policies</b> <i>The risks to the achievement of COSOP strategic objectives stemming from a country's sector-level strategies and policies.</i>	Substantial	Substantial	<p>Continue to engage IFAD to the in-country Policy Dialogue, with the Ministry of Agriculture, Fisheries, Finance and others and bring to the attention of the Senior Management the relevance of the country strategies and objectives.</p>

Integrated Country Risk Matrix			
Risk type	Inherent risk	Residual risk	Mitigation measures
<b>Policy alignment</b> <i>The risk that a country's strategies and policies governing the rural and agricultural sector are not sufficiently pro-poor and/or aligned to IFAD's priorities (e.g. on land, environment, climate, gender, indigenous peoples, nutrition, youth, private sector engagement), undermining IFAD COSOP strategic objectives.</i>	Substantial	Substantial	Leverage on Development Partners Group and IFAD country office in Mozambique to remain engaged with the MADER and restore country-level policy dialogue in a structured manner and support the design of sectoral strategies with clear milestones and indicators.
<b>Policy development and implementation</b> <i>The risk that the country's strategies and policies governing the rural and agricultural sector lack a sound evidence base, are not representative of rural peoples' organization's views, are not adequately resourced or supported by legal/regulatory frameworks, and/or are unsustainable, thus undermining the achievement of COSOP strategic objectives.</i>	Substantial	Moderate	IFAD projects will increasingly support the decentralization and deconcentration by providing resources at the district and community level, strengthening both the state, private sector and grassroots institutions. Interventions to community level with provision of strong support to improving agricultural productivity, market linkages and inclusive rural finance are also critical. In particular work with poor rural people (women and youth), to enable them to grow and sell more food, increase their incomes, including capacity building that enables them to determine the direction of their own lives.
<b>Environmental, social and climate context</b> <i>The risk that existing or possible future social, environmental and/or climate conditions and events may have adverse effects on food and nutrition security, agricultural productivity, access to markets, and/or the incidence of pests and diseases, resulting in increased vulnerability or deterioration of IFAD's target populations' livelihoods and ecosystems. And/or the risk that activities aimed at achieving COSOP strategic objectives may cause threats to biodiversity, cultural heritage, indigenous peoples, labour standards and working conditions, community health and safety, and/or lead to increased pollution, inefficient use of resources, and/or physical and economic resettlement.</i>	High	Substantial	<p>IFAD Interventions will analyse and minimise negative impacts through Environmental and Social Impact Assessments (ESIAs), site-specific Environmental and Social Management Plans (ESMPs) in line with IFAD's SECAP guidelines and Mozambique's legislation and decrees. The proposed structure for the Project Management Unit (PMU) has a provision for an environmental and social safeguards specialist who will be trained on IFAD's SECAP procedures to make sure that the project is complying with all the safeguards issues.</p> <p>In Blue and Green economies, IFAD will promote good practices by strengthening national regulations and guidelines to reduce potential negative impacts of agriculture, fisheries and aquaculture at farm level, revegetation and afforestation of degraded forestlands, adequate siting and use of appropriate technology in the development of irrigation schemes. Soil erosion control measures will include gully, bench terraces, use of gabions, stabilization of banks of canals, grass strips, sensitise farmers against use of fire to prepare the land and provide alternative mechanisms e.g. conservation agriculture and development of community-based natural resources management plans. Modern bioenergy technologies can offer a wide range of solutions that are appropriate to rural domestic energy needs (e.g. for cooking on Flexi-biogas) or to energy demand for productive uses (e.g. water pumping for irrigation). The promotion of renewable energy has the potential to diminish reliance on fossil fuels.</p> <p>Mainstreaming of adaptation measures – climate smart agriculture, resilient infrastructure, etc – throughout portfolio;</p> <p>Enhanced climate and weather information systems;</p>

Integrated Country Risk Matrix			
Risk type	Inherent risk	Residual risk	Mitigation measures
			Establish a climate contingency, as part of the project budget for timely response in case of any recurrent emergency
<b>Financial management</b>  <i>The risk that COSOP activities are not carried out in accordance with the provisions of IFAD's financial regulations and that funding is not used for the intended purpose with due regard to economy, efficiency and effectiveness.</i>	<b>Substantial</b>	Moderate	Public procurement stages were added to the electronic financial administration system (e-SISTAFE), and suppliers are now required to show valid commitment notes before delivering goods and services (MEFP). Ensuring that more spending is executed within e-SISTAFE will improve control, avoid over-commitment at the spending entity level, improve predictability and oversight, and reduce scope for extra budgetary arrears.
<b>Organization and staffing</b>  <i>The risk that the level of development of the accountancy profession in the country is low, hence causing a short supply of professionally-qualified and well-trained personnel that can be engaged during project implementation</i>	<b>Substantial</b>	Moderate	Provision of retainer consultant backstopping support to the country teams. Conducting regular implementation support Missions, as well as regular capacity building of the staff.  Provision of regular training and capacity building to the Government and PMUs in Financial Management.
<b>Budgeting</b>  <i>The risk that national budget approval cycle is inefficient affecting prompt availability of resources to externally funded projects</i>	<b>High</b>	Substantial	Budget performance analysis should be extracted periodically for use in internal decision making as well as reporting to IFAD as part of interim financial reporting (IFRs).
<b>Funds flow/disbursement arrangements</b>  <i>The risk that funds from multiple financiers disburse with delay due to cumbersome treasury arrangements or are diverted to finance fiscal deficit or economic shocks</i>	<b>Substantial</b>	Moderate	Going forward, it is likely that portfolio implementation will be accelerated. Project should also prepare cashflow forecasts every quarter and submit to IFAD as part of the interim financial reporting.  Regular trainings to the PMTs, Ministry of Finance and Bank of Mozambique should take place to ensure that all are in the same level of understanding of the new disbursement arrangements.
<b>Country internal controls</b>  <i>The risk that country systems, such as internal audit, are not adequate and may not provide appropriate control over IFAD resources, leading to the inefficient or inappropriate use of project resources</i>	<b>Substantial</b>	Moderate	Ensure that Government deploy regular internal audits to the projects operations.  From 2022 onwards, project audits will be undertaken by the "Tribunal Administrativo" – National Audit's Office.
<b>Accounting and financial reporting</b>  <i>The risk that country accounting and reporting systems are not adequate, leading to inaccurate or non-timely submission of financial information for decision-making</i>	<b>Substantial</b>	Moderate	Customization of E-SISTAFE almost completed (CoA, minimum reporting, transaction reporting); (ii) training to users.  Ensure the use of the Interim Financial Reports (IFR) for better disbursement forecast;  Ensure the updating of project PIMs in compliance with the Financing Agreements provisions and FM manuals

Integrated Country Risk Matrix			
Risk type	Inherent risk	Residual risk	Mitigation measures
<b>External audit</b>  <i>The risk that the supreme audit institution is not independent, capacitated or able to timely perform and submit the audit of IFAD-financed operations, leading to possible misrepresentation of the financial results or lack of proper oversight.</i>	<b>Substantial</b>	Moderate	From 2022 onwards, project audits will be undertaken by the "Tribunal Administrativo" – National Audit's Office.
<b>Procurement issues</b>  <i>The risk of non-compatibility of project/programme procurement operations with the IFAD Project Procurement Framework (IFAD-PPF) and risk that inefficient or non-transparent procurement processes impact the achievement of the project/programme's intended objectives (outcomes and outputs).</i>	<b>High</b>	Moderate	
<b>Pillar I. Legal, regulatory and policy framework</b>  <i>The risk that the implementing regulations that supplement and detail the provisions of the procurement decree are not updated regularly to allow adequate implementation of the decree and/or to address the identified gaps such as opportunities for the use of Direct Contracting (DC) and other less competitive methods that impact on competition and result in poor procurement outcomes, the unavailability of updated Standard Bidding Documents (SBDs) and operating guidelines for use by procurement implementing units.</i>	<b>High</b>	Moderate	<p>The project to use IFAD procurement Guidelines and Handbook to ensure competition among market participants until a time when the GoM SBDs are updated to a level that is acceptable to IFAD for use in IFAD-funded projects.</p> <p>Avoiding the use of DC since it is highly regulated and can only be used in exceptional circumstances as provided in the IFAD Procurement Guidelines and Procurement Handbook.</p>
<b>Pillar II. Institutional framework and management capacity.</b>  <i>The risk that inefficient and inconsistent enforcement of the legal framework will result in poor procurement outcomes due to lack of adequate authority and resources for the lead procurement agency (UFSA) and the lack of professionalization of the procurement units/workforce.</i>	<b>High</b>	Moderate	<p>Provide capacity building support to the GoM for improved public procurement administration and to enhance the efficiency and effectiveness in:</p> <ul style="list-style-type: none"> <li>i) strengthening of the technical capacity of the procurement units to carry out effective public procurement;</li> <li>ii) professionalizing procurement through capacity-building programs; and</li> <li>iii) enforcement and performance monitoring;</li> </ul> <p>In the short term, procurement specialists in IFAD-funded projects should enrol in the IFAD procurement certification programme for project procurement BUILDPROC to enhance their skills.</p> <p>Implement regular review of NOTUS dossiers, CMT updates and the use of the IFAD integrated end to end procurement system.</p>

Integrated Country Risk Matrix			
Risk type	Inherent risk	Residual risk	Mitigation measures
<p><b>Pillar III. Public procurement operations and market practices</b>  <i>The risk that poor planning and lack of a strategic approach to procurement, for both recurrent and more complex procurement and weak contract management, quality control and late payment of invoices will negatively impact value for money.</i></p>	High	Moderate	<p>Adopt a rigorous planning and strategic approach to procurement, for both recurrent and more complex procurement. Ensure regular monitoring of implementation of planned activities, explaining significant delays and their causes, updating/upgrading the procurement plan as necessary.</p> <p>Building the capacity of PMU and users/technical units to plan and manage contracts using a risk-based approach; strengthening supervision and quality control.</p> <p>Registering all contracts on CMT and keeping contract data/status updated on a regular basis.</p>
<p><b>Pillar IV. Accountability, integrity and transparency of the public procurement system.</b>  <i>The risk that there may be loss of trust of the public procurement system by the stakeholders, in particular the bidders and private sector due to the absence of an effective enforcement of non-judicial dispute resolution mechanism (no independent appeals body at administrative level), non-implementation of audit findings/recommendations, and lack of comprehensive information on public procurement on a centralized portal to facilitate effective public and civil society participation.</i></p>	High	Moderate	<p>IFAD project to publicise procurement opportunities to ensure wide availability of public procurement information which can in turn spur effective participation by stakeholders (citizens, private sector and civil society), for example by publishing procurement plans and General Procurement Notices well in advance of procurement time, inviting the public to observe tender opening sessions, publishing bid awards and debriefing unsuccessful bidders.</p> <p>Arrange Business Opportunity Seminars to sensitise the private sector on how to do business with IFAD projects, how to participate and submit tender documents, how to register at the Cadastro/tender register, conditions for pre-qualification/post qualification.</p>
