# **Financing summary**

Cooperating institution:

Initiating institution:	IFAD
Recipient:	Republic of Tajikistan
Executing agency:	Ministry of Agriculture
Total project cost:	US\$98.2 million
Amount of IFAD loan:	US\$6.75 million
Terms of IFAD loan:	Highly concessional: maturity period of 40 years, including a grace period of 10 years. Loan shall be free of interest but shall bear a fixed service charge payable semi-annually in the loan service payment currency, as determined by the Fund at the date of approval of the loan by the Executive Board.
Amount of IFAD Debt Sustainability Framework grant:	US\$6.75 million
Cofinanciers:	Food and Agriculture Organization of the United Nations (FAO), Committee for Environmental Protection (CEP), State Forest Agency (SFA)
Terms of cofinancing:	CEP: US\$0.89 million (in kind)
	SFA: US\$0.89 million (in kind)
	FAO: US\$0.16 million (in kind)
Contribution of borrower/recipient:	US\$15.9 million
Contribution of beneficiaries:	US\$4.5 million
Private sector:	US\$0.06 million
Financing gap:	US\$62.3 million
Amount of IFAD climate finance:	US\$13.01 million

IFAD

# **Recommendation for approval**

The Executive Board is invited to approve the recommendation contained in paragraph 68.

### I. Context

# A. National context and rationale for IFAD involvement National context

- 1. Tajikistan is a landlocked country with a population of 9,313,800 in 2020, of whom 74 per cent live in rural areas. It is the poorest of the former Soviet republics, with per capita gross domestic product (GDP) estimated at US\$874 in 2020. GDP was US\$8.12 billion in 2019, with 20 per cent coming from the agriculture sector. Remittances from Tajik nationals working abroad represent 28 per cent of GDP one of the highest rates in the world.
- 2. The National Development Strategy (2016-2030) aims to raise the living standards of the population. While poverty levels have substantially diminished in the past decade, driven down by labour earnings and remittances, Tajikistan has been classified as a low-income, food-deficit country since 2019.¹ There are concerns about the sustainability of the country's current remittance-based growth model. The COVID-19 pandemic had a significant impact on the economy, with real GDP growth slowing to 4 per cent in the first nine months of 2020 compared to 7.2 per cent in 2019.
- 3. **Poverty.** Poverty, calculated on the national poverty line, is at 26.3 per cent (World Bank), reaching 36.1 per cent in rural areas, with extreme poverty at 10.7 per cent.<sup>2</sup> Tajikistan defines poverty as monthly consumption of less than 162 Tajik somoni (TJS) (US\$14.34), vulnerability as less than TJS 230 (US\$20.37) and TJS 294 (US\$26.04) as middle class.<sup>3</sup>
- 4. **Agriculture and livestock sectors.** The agriculture sector accounts for 19.8 per cent of national GDP and provides 60.8 per cent of employment. Despite its critical importance, the agricultural resource base is characterized by limited arable land and a lack of investment in infrastructure, farm machinery and agricultural equipment.
- 5. **The livestock sector** plays an important role in the agrarian economy of Tajikistan. Climate change (with rising temperatures and decreasing water supply) is impacting livestock production (by reducing pasture availability, for example).

### Special aspects relating to IFAD's corporate mainstreaming priorities

- 6. **Gender.** Extreme poverty is marked by profound gender differences. Of all extremely poor households, about one third are led by women. Woman-headed households are 9 per cent of total households but account for 30 per cent of all poor households. The share of women working in the agriculture sector is high (75 per cent of all working women). Due to prevailing social norms, proactive measures need to be taken in order to ensure Tajik women are able to fully participate in rural societies. In Tajikistan, women only hold one in five parliamentary seats.
- 7. **Youth unemployment.** Youth unemployment (working age 15-24) stands at 20.9 per cent.<sup>6</sup> According to a World Bank study on addressing challenges to create

<sup>&</sup>lt;sup>1</sup> World Bank.

<sup>&</sup>lt;sup>2</sup> TajStat, 2020.

<sup>&</sup>lt;sup>3</sup> TajStat, 2015.

<sup>&</sup>lt;sup>4</sup> United Nations Development Programme (UNDP), 2015.

<sup>&</sup>lt;sup>5</sup> UNDP, 2020.

<sup>&</sup>lt;sup>6</sup> World Bank, 2020.

- more and better jobs in Tajikistan,<sup>7</sup> only 43 per cent of Tajikistan's total working-age population is in the labour force. The majority of those working hold low-quality jobs in the informal sector.
- **Nutrition.** Tajikistan is on course to meet global targets for reducing under-five 8. overweight and under-five stunting but is off course to meet targets for all other indicators for which adequate data is available.
- 9. Climate profile. Climate change is a serious concern because the country is highly exposed and has low adaptive capacity. The country's climate shows increasing dry spells, higher temperatures and significant inter-annual variability. Average temperatures are rising across the country.
- Climate vulnerability analysis. The climate vulnerability index analysis (including both climate and socio-economic variables) in IFAD's Social, Environmental and Climate Assessment Procedures shows high vulnerability throughout the country, with hotspots in the eastern and central parts of Khatlon Region and south-east of Sughd Region.
- Emission trends. In Tajikistan, 52 per cent of greenhouse gas emissions stem from agriculture, 28.5 per cent from energy, 10 per cent from industry and 9.5 per cent from waste. The vast majority of agriculture-related emissions (about 5.5 million tons of CO<sub>2</sub>e in 2018) comes from enteric fermentation and emissions related to poor manure management.8
- In line with Eleventh Replenishment of IFAD's Resources (IFAD11) mainstreaming 12. commitments, the project has been classified as:

  - ▼ Youth-sensitive

#### Rationale for IFAD involvement

- 13. The impacts of climate change and poor livestock husbandry practices pose enormous challenges to vulnerable rural populations and ecosystems. New stimuli and incentives are needed to transform current unsustainable practices in rural areas into productive and sustainable livelihoods. Productive systems must adapt to manage climate risks and to improve ecosystem services. The comparative advantages gained by IFAD through its portfolio in the country comprise:
  - (i) extensive track record of investing in vulnerable rural populations:
  - (ii) supporting access to improved collective management of natural resources; and
  - (iii) systematic strengthening and establishment of rural institutions for more efficient investment at community level.
- IFAD can leverage its experience from community investments in vulnerable rural areas and in the livestock sector using the methodology of community action plans (CAPs) (see below in "Lessons learned"). CAPs have proven successful in generating inclusive rural growth: they provide an effective platform for policy dialogue and reform. With support and cofinancing from the Green Climate Fund (GCF) and with synergies with other operations in integrated natural resources management, phase two of the project - Community-based Agricultural Support Project Plus (CASP+) - will build on IFAD's strengths at scale, with climate change now as the entry point.

#### В. **Lessons learned**

Since 2008, IFAD has invested US\$80 million in four projects in Tajikistan, directly benefiting 128,000 households. In the Khatlon Livelihoods Support Project, village organizations identified and implemented collective investments with project and village organization funds (following the adoption of participatory CAPs), leading to a 40 per cent increase in the household asset index. The CAPs methodology was also applied in the subsequent Livestock and Pasture Development Project (LPDP),

<sup>7</sup> World Bank, 2017.

<sup>&</sup>lt;sup>8</sup> Food and Agriculture Organization Corporate Statistical Database.

phases I and II, which established 400 pasture user unions to address land degradation and improve management of common pastures. The unions have been a remarkable success and have boosted villages' capacity to manage collective resource endowments sustainably, leading to a 15 per cent increase in pasture productivity on 74,592 ha of pastureland. This illustrated the project's value not just in terms of agricultural productivity but also for managing collective natural resources. The ongoing phase of the project is also based on the CAPs methodology.

- 16. Results were highly welcomed by the Government, and provided IFAD with a platform for knowledge generation and policy dialogue in view of CASP+ and its ambitions, especially with regards to adaptation to climate change and natural resource management.
- 17. Other key lessons from the portfolio highlight the importance of providing technical assistance to farmers and agribusinesses to inform their choices as regards climate-resilient technologies, enhanced access to equipment and improving the managerial capacities of livestock farmers.

## II. Project description

# A. Project objectives, geographical area of intervention and target groups

- 18. CASP+ broadens the geographical coverage and scope of the ongoing CASP project. The new intervention builds on lessons learned from IFAD's portfolio in the country and its successful experience of participatory initiatives with local communities.
- 19. The goal of CASP+ is to contribute to the country's shift towards sustainable, lowemission development pathways and climate-adaptive agricultural production practices. The development objective of CASP+ is to increase the resilience of ecosystems and livelihoods in rural areas affected by climate change.
- 20. **The project area** covers 21 districts, of which 16 are in the Khatlon Region, three in the Regions of Republican Subordination and two in Sughd Region. The main targets are poor communities and households whose livelihoods are severely affected by climate change.
- 21. **Targeting and social inclusion.** The project will apply a combination of self-targeting and direct targeting to reach 650,000 people including: (i) extremely poor men, women and youth living well below the poverty line; (ii) men, women and youth, living at subsistence and semi-subsistence level, and in particular those willing to engage in more commercial farming; and (iii) rural underemployed and self-employed youth.
- 22. Selection of beneficiaries will be conducted through: (i) a mobilization campaign; (ii) a means test; and (iii) involvement of local community leaders/committees, plus field verification.
- 23. Gender equality will be promoted and youth involvement will be mainstreamed in all project activities. To ensure that women and youth are adequately represented in project activities, context-specific studies and gender-sensitive training will be undertaken.

### **B.** Components, outcomes and activities

- 24. The project has three components: (i) strengthening public sector capacity for transformative, climate-resilient management of natural resources; (ii) investments in community capacity for adaptation and resilience to climate change; and (iii) strengthening livelihoods for enhanced resilience through market-based approaches.
- 25. Component 1. Strengthening public sector capacity for transformative, climate-resilient management of natural resources. The component will

- achieve: (i) strengthened capacities of relevant national institutions for climate-resilient natural resources management; and (ii) an enhanced enabling environment for climate-adaptive, inclusive and integrated management of pasture, forestry and livestock resources.
- 26. Component 2. Investments in community capacity for adaptation and resilience to climate change. The component will: (i) develop 400 climate-sensitive community action plans (CsCAPs) based on 21 district-level climate diagnostics; and (ii) implement the CsCAPs, benefiting 100,000 rural households.
- 27. **Component 3. Strengthening livelihoods for enhanced resilience through market-based approaches** aims to strengthen the capacities of smallholder farmers to identify and invest in climate-resilient and diversified production systems that link to local and national value chains, resulting in: (i) animal health services provided to 105,600 smallholder livestock farmers; (ii) productive alliances between livestock producers' groups and private wholesalers; and (iii) strengthened climate-resilient production and private sector linkages for 12,400 smallholder farmers.
- 28. CASP+ will be co-executed by the State Enterprise Project Management Unit, Livestock and Pasture Development (SEPMU) under the Ministry of Agriculture (MoA); the implementation group for the project (IGP) under the Committee for Environmental Protection (CEP); and the Food and Agriculture Organization of the United Nations (FAO).

### C. Theory of change

29. Tajikistan is highly vulnerable to climate shocks, which are affecting vulnerable ecosystems and populations living in rural areas, and exacerbating poverty levels and social exclusion. These are compounded by lack of climate perspective in community planning, livelihood choices and absence of market integration. Rising temperatures are threatening agricultural productivity and changing rainfall patterns, and consequently affecting cropping seasons and grazing patterns. The country needs to strengthen its ability to support a sustainable transformation to climate-resilient livelihoods and to invest in communities hit by climate shocks. Previous livestock projects have successfully introduced innovative "participatory and partnership-based" approaches, which build on customary use patterns and cooperation between pastoralists and farmers. CASP+ intends to lift key barriers to enhancing climate resilience among the rural population. In parallel, the project will maximize the potential of rural communities to sequester carbon by addressing issues of: (i) policy and governance of ecosystems; (ii) knowledge and capacities; and (iii) private entrepreneurship, linkages to markets and social inclusion.

### D. Alignment, ownership, and partnerships

- 30. **Alignment with Sustainable Development Goals (SDGs).** CASP+ will directly contribute to achieving SDGs 1, 2, 5, 12, 13 and 15. Specifically, the project will address SDG 1 (no poverty) and SDG 2 (zero hunger) via targeted investment in highly vulnerable communities to improve livelihoods in a climate-resilient manner. Enhanced livelihoods are set to be among the major results of the project.
- 31. **Alignment with national priorities.** CASP+ is included in the country work programme of the GCF's National Designated Authority and responds to national priorities linked to Tajikistan's nationally determined contributions (NDCs). CASP+ is also aligned with the Disaster Risk Reduction Strategy 2019-2030; the Water Sector Reform Programme 2016-2025; the draft Strategy for the Development of the Forestry Sector (2016-2030); the updated Pasture Law; the Comprehensive Programme for the Development of Livestock in the Republic of Tajikistan 2018-2022; and the National Agricultural Investment Plan 2021-2030 being finalized.
- 32. **Alignment with IFAD policies and corporate priorities**. CASP+ is aligned with the country strategic opportunities programme's overall goal of reducing rural poverty and enhancing food security, and its two strategic objectives. It will directly contribute to the Fund's three closely interlinked and mutually reinforcing

- strategic objectives, as stated in its Strategic Framework 2016–2025: (i) increase poor rural people's productive capacities; (ii) increase poor rural people's benefits from market participation; and (iii) strengthen the environmental sustainability and climate resilience of poor rural people's economic activities.
- 33. **Country ownership.** CASP+ responds to the needs of the country in terms of climate change adaptation and mitigation priorities, and contributes to the NDCs and National Strategy on Adaptation to Climate Change of the Republic of Tajikistan up to 2030, as well as their targets in terms of mitigation and adaptation.
- 34. **Harmonization and partnerships.** CASP+ will closely involve the MoA, CEP and FAO, strengthening collaboration between the Rome-based agencies at field level. CEP is a key partner in executing the project. It is well positioned to guide national and decentralized dialogue to enhance the climate sensitivity of the project's policy, regulatory and investment framework. Similarly, FAO has extensive experience of climate change globally, and is engaged with CEP on a climate finance readiness programme in-country, including the ongoing update of the NDC and other projects.
- 35. Moreover, the project will establish close collaboration with development partners engaged in climate actions in the country.

### E. Costs, benefits and financing Project costs

36. The total investment and incremental recurrent project costs, including physical and price contingencies, are estimated at some US\$98.2 million. Physical and price contingencies are below 1 per cent of total project costs. This is mostly due to the fact that investments associated with CsCAPs implementation and provision of grants, as well as financing of the productive alliances, represent around 75 per cent of the total project costs (expressed as a lump sum, no contingencies).

### Project financing and cofinancing strategy and plan

37. CASP+ will be financed by a loan and a Debt Sustainability Framework (DSF) grant, each of US\$6.75 million. FAO financing amounts to US\$0.16 million while the Government's contribution is in the form of tax relief worth US\$15.0 million. Beneficiaries will contribute US\$4.5 million. Additional contributions include in-kind payments from MoA of US\$0.90 million; US\$0.06 million from the private sector; US\$0.89 million from CEP; and US\$0.89 million from the State Forest Agency. There is an estimated financing gap of US\$62.3 million pending expected cofinancing from GCF in the amount of a US\$30 million grant and a US\$9 million loan. The GCF full funding proposal is expected to be approved during the second quarter of 2022.

#### **Disbursement**

- 38. The duration of CASP+ will be seven years. The ratio of investments to recurrent cost is 96:4. The main categories of expenditures under investment costs are civil works, goods, equipment and services, grants, training and workshops, technical assistance and studies. Under recurrent costs, main categories are salaries and allowances, and operating costs.
- 39. The project will have segregated but integrated systems of funds flow and budgeting and accounting to ensure a clear, verifiable audit trail. This will be ensured by establishing a designated account each for the IFAD loan, the IFAD grant, beneficiaries' contributions and government counterpart funds. Both SEPMU and IGP will maintain updated information on the use of all sources of funds in its accounting system.
- 40. Withdrawal applications will be prepared by the SEPMU and IGP using the revolving fund modality through submitting interim financial reports under the report-based mechanism.

### Summary of benefits and economic analysis

41. **Economic and financial analysis.** The base-case economic rate of return (ERR) is estimated at 22.4 per cent. The expected net present value discounted at 6 per cent is US\$143.4 million. The economic returns were tested against changes in benefits and costs and for various lags in realizing benefits. In relative terms, ERR is equally sensitive to changes in costs as in benefits. In absolute terms, these changes do not have a significant impact on ERR and economic viability is neither threatened by a 20 per cent decline in benefits nor by a 20 per cent increase in costs. In both cases, ERR remains well above discount rate. The project is therefore economically viable, justified, and recommended for financing from an economic point of view.

### Exit strategy and sustainability

- 42. There are several elements embedded in CASP+ investments that support its exit strategy and sustainability. Among them, a key consideration is that CASP+ represents the extension and natural evolution of past IFAD-funded projects and technical interventions. Those successful interventions opened up and improved pasture usage and related institutional capacities, responding to stimuli from the Pasture Law. CASP+ embeds into pasture investments other interlinked dimensions of agricultural development and adaptation to climate change.
- 43. CASP+ sustainability is ensured by: (i) involvement of counterparts in all investment activities at national and local levels; (ii) tailored and strategic capacity development of institutions and individuals; (iii) strengthening of policy and regulatory frameworks for improved governance; (iv) use of participatory approaches to ensure beneficiary ownership; and (v) a clear plan for operation and maintenance of all infrastructure, assets and equipment provided under the project.

### III. Risks

### A. Risks and mitigation measures

44. The country's risk rating continues to be high, with a corruption perception index score of 25, which placed Tajikistan 149<sup>th</sup> out of 180 countries in 2020. This underlines that corruption is a major issue in the country, which has been experiencing high inflation recently along with fluctuations in the local currency against the United States dollar.

Table 4
Overall risk summary

- · · · · · · · · · · · · · · · · · · ·		
Risk areas	Inherent risk rating	Residual risk rating
Country context	Substantial	Moderate
Sector strategies and policies	Moderate	Low
Environment and climate context	Substantial	Moderate
Project scope	Moderate	Low
Institutional capacity for implementation and sustainability	Moderate	Low
Financial management	Moderate	Low
Project procurement	Moderate	Low
Environment, social and climate impact	Moderate	Moderate
Stakeholders	Moderate	Low
Overall	Moderate	Low

45. Despite the high inherent country risk, the current financial management (FM) risk for ongoing projects in Tajikistan is rated between moderate and low, based on current FM arrangements executed by the project management unit (PMU) implementing the ongoing IFAD portfolio. CASP+ will also include the IGP under CEP, which does not have experience receiving and working with funds from IFAD

- directly. Accordingly, FM arrangements for this project should be customized to adapt the structures of the two implementing units.
- 46. The **technical and operational risks** facing the project are related to limited capacity and coordination at ministerial level. Lack of coordination is more pronounced among institutions dedicated to natural resources management. CASP+ will address these issues by strengthening the coordination and institutional capacity of key agencies dealing with mitigation and adaptation.
- 47. Under financial management, main risks are under the following risk control indicators:
  - (i) Organization and staffing. Risk: delays in recruiting key staff in the SEPMU and IGP. Inadequate onboarding plan for newly recruited staff who do not have experience of IFAD projects and requirements. Mitigation action:

     (i) recruit all key staff before project starts;
     (ii) all finance staff to complete IFAD e-course on FM arrangements;
     (iii) CEP to provide an onboarding plan before project starts.
  - (ii) **Internal control.** Risk: this, the first IFAD project in Tajikistan to include two PMUs, requires strong internal control measures among the units, NGOs, partner agencies and beneficiaries. Mitigation action: (a) include all relevant internal control guidelines and polices in the project implementation manual (PIM); segregation of duties, authorization processes, documentation, managing funds transferred to third parties, etc.; and (b) PMUs to be responsible for ensuring that proper internal control measures are in place among all project parties and for updating the PIM as necessary during project life.
  - (iii) **Accounting and financial reporting**. Risk: delays in submission of consolidated financial reports by both PMUs. Mitigation action: (i) latest version of 1C accounting software to be used by PMUs and IGP; (ii) autogenerated reports to be extracted from the accounting software; and (iii) PMUs to be responsible for consolidation of all financial reports.

### B. Environment and social category

48. The project is considered as in category B and is not expected to have any significant adverse environmental or social implications. Environmental risks associated with activities such as construction of agricultural infrastructure or rehabilitation of rural roads will follow the environmental laws of Tajikistan, or IFAD environmental and social policy, whichever are more stringent. Tajikistan has a well-developed legal and regulatory environmental framework.

### C. Climate risk classification

49. The CASP+'s climate risk classification is high and it is expected to be highly sensitive to climate risk patterns, which are likely to compound existing food security, energy security and poverty challenges. CASP+ will aim to reduce the vulnerability of the rural poor to those risks and project funds have been allocated to ensure the climate adaptation and resilience of both infrastructures and people's livelihoods. Furthermore, a GCF proposal is being developed in parallel and may reinforce project adaptation and mitigation activities.

### D. Debt sustainability

50. The 2020 joint World Bank/International Monetary Fund debt sustainability analysis indicates that Tajikistan's overall risk of debt distress remains high. By the end of 2020, external debt in the country has reached a record US\$6.6 billion. Reported nominal GDP was at US\$2.3 billion in December 2020. In the first half of 2021, GDP grew at an annual rate of 8.7 per cent after the 2020 economic slowdown. The increase of exports and the price of precious metals was key in supporting a strong

economic rebound. However, the economy is still strongly affected by the consequences of COVID-19.

### IV. Implementation

### A. Organizational framework

- 51. CASP+ will operate under the leadership of MoA (lead project agency). The SEPMU under MoA will have overall responsibility for project coordination, oversight and reporting to IFAD and the Government, including liaising closely with other implementing agencies. The latter comprise the IGP under CEP, playing a leading role on climate change policies and strategies, and FAO, which will provide specific technical support on specific activities with GCF financing.
- 52. A **project steering committee (PSC)** will be constituted at national level with overall responsibility for providing strategy and policy guidance, ensuring that project objectives are achieved. The PSC will be co-chaired by MoA and CEP, and will liaise with the Coordinating Council on GCF to assess how to strengthen and build on current GCF investments in the country.
- 53. **District governments and jamoats (communes)** are expected to play an important role at village level in coordination and in helping to raise awareness about the project among key stakeholders. They are also expected to help incorporate climate vulnerability assessments in local development planning, based on district diagnostics.

### Financial management and procurement.

- 54. Each PMU will have well-structured FM team headed by qualified finance managers before the project starts. SEPMU will be responsible for the overall financial management of the project. The project will align its core FM processes with the country's systems and IFAD requirements as follows:
  - **Flow of funds.** For the IFAD loan and grant, an initial advance will be provided to the project account to meet expenditures for the first six months of implementation. For the counterpart funds and cofinancing, the project will estimate annual requirements and include these in the annual workplan and budget (AWP/B).
  - **Budgeting.** SEPMU will consolidate the project budget following a bottom-up approach based on the participation of all project parties. The consolidated AWP/B will be submitted for approval 60 days before the start of the financial year.
  - **Internal controls.** Robust internal controls will be established to protect project funds against any financial impropriety. The FM team will conduct monthly budget versus actual variance analyses, bank reconciliations, random inspections of NGOs and partner agencies' field work, to prevent, detect and rectify compliance gaps in implementation.
  - **Reporting.** The project will submit interim financial reports indicating progress against components/categories vis-à-vis the AWP/B. These documents will be presented on a quarterly basis to justify used funds and to withdraw further advances from the loan and grant accounts.
  - **Internal audit.** An internal auditor reporting directly to the PSC will be hired to conduct an internal audit on all project activities and to ensure compliance with the recommendations of the supervision missions, external audit, and other directives issued by the government, etc.
- 55. The **Public Procurement Law** (PPL) of 2006, as amended on April 16, 2012, is the major legal instrument regulating public procurement in Tajikistan. The PPL does not contain a clear provision exempting public procurement financed by international financial institutions from the PPL. For this reason and because of

- other shortcomings with the PPL, CASP+ will adopt the IFAD procurement guidelines.
- 56. **Governance.** The CASP+ design has introduced a clear mechanism to ensure good governance of the activities between the three implementing agencies. The SEPMU acting through MoA will implement the project jointly with CEP and FAO. Good governance will be assured by overall operational accountability and transparency; financial management; procurement of goods and services; environmental governance; gender equality; and mechanisms for complaints and remedies.

# B. Planning, monitoring and evaluation, learning, knowledge management and communication

- 57. Main planning tools comprise the logical framework, including indicators at output, outcome and impact levels selected among the core indicators of IFAD and the GCF (based on the relevant Performance Measurement Framework). The SEPMU will review and update the logical framework during project start-up and fine-tune the AWP/B, amending data and information with results from the baseline survey and subsequent household surveys.
- 58. **The monitoring and evaluation system** for CASP+ will build on the existing georeferenced system set up for the ongoing LPDP-II and CASP. Managed by the SEPMU, it is provided with a management information system that allows sex and age disaggregation of data and poverty profiling of households. Also recorded is information on education status, livestock ownership patterns, livestock yields, pasture use and management practices, and asset base and employment. The logical framework will be informed by baseline, midterm and completion surveys.
- 59. **Learning and knowledge management** are essential elements of CASP+, supporting a climate-sensitive paradigm shift in policies and investments, and increasing resilience and poverty reduction patterns.
- 60. All the interventions, data and results generated will be effectively communicated and disseminated to different stakeholders and beneficiaries at the national and district level. Specialized services will be contracted to implement gender-sensitive communication campaigns to promote participation and awareness-raising, and to strengthen the project's partnerships.

### Innovation and scaling up

61. CASP+ is the first IFAD project in Tajikistan that has climate change as the entry point for investment support and the only one in the country that promotes climate change adaptation combined with potential carbon sequestration on a large scale. It presents a number of innovative approaches and investments, including the use of climate evidence to support planning and decision-making at local level. Other innovations include geo-referencing of all investments to ensure appropriate monitoring; promotion of climate-adaptive techniques and technologies for agriculture and livestock production; and promotion of market-based approaches to stimulate the private sector's engagement in rural areas.

### C. Implementation plans

### Implementation readiness and start-up plans

62. CASP+ will be implemented by the existing SEPMU embedded in the MoA, the IGP to be established within CEP, and FAO. Terms of reference for complementary staff and specialists are included in the PIM, facilitating an early selection and readiness when the project begins. The process of recruiting coordinators and other specialists required for early implementation, as foreseen in the procurement plan, should start immediately upon ratification of the financing agreement.

### Supervision, midterm review and completion plans.

63. IFAD, as an accredited entity to the GCF, will supervise CASP+. A midterm review (MTR) will be carried out during the fourth year after project start-up. It will assess

- implementation progress and the likelihood of achieving the project's development objectives.
- 64. A project completion review will be undertaken by the Government of Tajikistan in close coordination with IFAD at the end of the project to take stock of project effectiveness, lessons learned and results.

# V. Legal instruments and authority

- 65. A project financing agreement between the Republic of Tajikistan and IFAD will constitute the legal instrument for extending the proposed financing to the borrower/recipient. A copy of the negotiated financing agreement is attached as appendix I.
- 66. The Republic of Tajikistan is empowered under its laws to receive financing from IFAD.
- 67. I am satisfied that the proposed financing will comply with the Agreement Establishing IFAD and the Policies and Criteria for IFAD Financing.

### VI. Recommendation

68. I recommend that the Executive Board approve the proposed financing in terms of the following resolution:

RESOLVED: that the Fund shall provide a loan on highly concessional terms to the Republic of Tajikistan in an amount of six million seven hundred and fifty thousand United States dollars (US\$6,750,000) and upon such terms and conditions as shall be substantially in accordance with the terms and conditions presented herein.

RESOLVED FURTHER: that the Fund shall provide a grant to the Republic of Tajikistan in an amount of six million seven hundred and fifty thousand United States dollars (US\$6,750,000) and upon such terms and conditions as shall be substantially in accordance with the terms and conditions presented herein.

Gilbert F. Houngbo President

### **Negotiated financing agreement:**

# "Community-based Agriculture Support Project 'plus' (CASP +)"

(Negotiations concluded on 18 November 2021)
Loan No:
Grant No:
Project name: Community-based Agriculture Support Project 'plus' (the "CASP+" or the "Project")
The Republic of Tajikistan (the "Borrower/Recipient")
and
The International Fund for Agricultural Development (the "Fund" or "IFAD")
(each a "Party" and both of them collectively the "Parties")

### WHEREAS:

- **A.** The Borrower/Recipient has requested a loan and a grant from the Fund for the purposeof financing the Project described in Schedule 1 to this present financing agreement (the "Agreement");
- **B.** The Project's financing from IFAD is designed to consist of two parts: i) a loan and grant described under Section B of this Agreement; and ii) IFAD's potential financing allocation to the Borrower/Recipient for the period 2022-2024 which is yet to be determined by IFAD's Executive Board (the "EB"). If the EB confirms the potential financing allocation, its financing terms would be set as 100% grant;
- **C.** Other than the IFAD financing further described in preamble B above, the Project's financing has been designed with the inclusion of international donor financing from the Green Climate Fund (the "GCF");
- **D.** It is envisaged that IFAD with the Borrower's support, submits an application for financing to the GCF, and that GCF accepts to provide financing to IFAD for the implementation of the Project in the amount of USD 30 million grant and USD 9 million loan;
- **E.** For avoidance of doubt, IFAD's intentions stated herein in regard of the second part of the Fund's financing for the Project and GCF financing for the Project shall not be construed as a commitment or agreement to provide said financing to the Borrower/Recipient; and
- **F.** The Borrower/Recipient has undertaken to provide additional support, financially or in kind that may be needed to the Project.

The Fund has agreed to provide financing for the Project;

**NOW THEREFORE**, the Parties hereby agree as follows: **Section A** 

1. The following documents collectively form this Financing Agreement: this present document (the "Agreement"), the Project Description and Implementation Arrangements (Schedule 1), the Allocation Table (Schedule 2) and the Special Covenants (Schedule 3).

- 2. The Fund's General Conditions for Agricultural Development Financing dated 29 April2009, amended as of December 2020, and as may be amended hereafter from time to time (the "General Conditions") are annexed to this Agreement, and all provisions thereof shall apply to this Agreement. For the purposes of this Agreement the terms defined in the General Conditions shall have the meanings set forth therein, unless the Parties shall otherwise agree in this Agreement.
- 3. The Fund shall provide a loan (the "Loan") and a grant (the "Grant") (together referred to as the "Financing") to the Borrower/Recipient, which the Borrower/Recipient shall use to implement the Project in accordance with the terms and conditions of this Agreement.

### **Section B**

- 1. A. The amount of the Loan is six million seven hundred fifty thousand UnitedStates Dollars (USD 6 750 000).
- B. The amount of the Grant is six million seven hundred fifty thousand United States Dollars (USD 6 750 000).
- 2. The Loan is granted on highly concessional terms, and shall be free of interest but shall bear a fixed service charge as determined by the Fund at the date of approval of the Loan by the Fund's Executive Board, payable semi-annually in the Loan Service Payment Currency. The Loan shall have a maturity period of forty (40) years, including a grace period of ten (10) years starting from the date of approval of the Loan by the Fund's Executive Board.
- 3. The principal of the Loan will be repaid at four and half per cent (4.5%) of the total principal per annum for years eleven (11) to thirty (30), and one per cent (1%) of the total principal per annum for years thirty-first (31) to forty (40).
- 4. The Loan Service Payment Currency shall be in United States Dollar (USD).
- 5. The first day of the applicable Fiscal Year shall be 1 January.
- 6. Payments of principal and service charge shall be payable on each 15 April and 15 October.
- 7. There shall be four (4) Designated Accounts in United States Dollars (USD), for the exclusive use of the Project, two (2) for the Loan and two (2) for the Grant for the use of the Project Management Unit ( the "PMU") already existing under the IFAD funded Livestock and Pasture Development Project and the Implementation Group for the Project under the Committee for Environmental Protection under the Government of the Republic of Tajikistan (the "CEP"). The Borrower shall inform the Fund of the officials authorized to operate the Designated Accounts.
- 8. There shall be four (4) Project Accounts in Tajikistan Somoni (TJS) to receive funds from the Loan and the Grant designated accounts, two (2) for the Loan and two(2) for the Grant .
- 9. The Borrower/Recipient shall provide counterpart financing for the Project in an

amount equivalent to approximately one million six hundred twenty one thousand United States Dollars (USD1 621 000) in the form of VAT exemption of goods, works, and services as well as customfees, subject to the Borrower/Recipient's relevant regulations in place.

### **Section C**

- 1. The Lead Project Agency shall be the Ministry of Agriculture (the "LPA").
- 2. The following are designated as additional Project Parties: (i) the Committee for Environmental Protection under the Government of the Republic of Tajikistan (the "CEP"); and (ii) the Food and Agricultural Organisation of the United Nations (the "FAO").
- 3. A Mid-Term Review will be conducted as specified in Section 8.03 (b) and (c) of the General Conditions; however, the Parties may agree on a different date for the Mid-Term Review of the implementation of the Project.
- 4. The Project Completion Date shall be the seventh (7<sup>th</sup>) anniversary of the date of entry into force of this Agreement and the Financing Closing Date shall be 6 months later, or such other date as the Fund may designate by notice to the Borrower/Recipient.
- 5. The procurement of goods, works and services to be financed from the proceeds of the Financing shall be in accordance with the applicable Fund's procurement guidelines and handbook as they may be amended from time to time.

### Section D

1. The Fund will administer the Financing and supervise the Project.

### Section E

- 1. The following are designated as additional grounds for suspension of this Agreement:
  - (a) The Project Implementation Manual (the "PIM") and/or any provision thereof, has been waived, suspended, terminated, amended or modified without the prior agreement of the Fund and the Fund, after consultation with the Borrower/Recipient, has determined that it has had, or is likely to have, a material adverse effect on the Project.
- 2. The following are designated as additional (general/specific) conditions precedent to withdrawal:
  - (a) The IFAD no objection to the PIM shall have been obtained.
  - (b) Key Project staff has been appointed as per the relevant section in Schedule 1 of this present Agreement.
- 3. This Agreement is subject to ratification by the Borrower/Recipient. In accordance with Section 13.01 of the General Conditions (Entry into Force) this Agreement shall enter into force after the ratification by the Borrower/Recipient.
- 4. The following are the designated representatives and addresses to be used for any communication related to this Agreement:

For the Borrower/Recipient:

### Schedule I

### I Project Description

1. Project Area and Target Population. The Project shall be implemented in districts selected based on climate vulnerability including social, environmental and climatic and infrastructure parameters of Soghd, Khatlon and the Region of Republican Subordination. The main **target group** consists of poor communities and those households whose livelihood is severely affected by climate change. Specifically, CASP+ benefit for the following groups: (i) the rural extremely poor population living below thepoverty line; (ii) subsistence and semi-subsistence rural population, in particular those willing to move to more commercial farming; and (iii) rural underemployed and self- employed youth.

- 2. Goal. The Goal of the Project is to contribute to the country's shift towards low emission sustainable development pathways and climate-adaptive agricultural production practices.
- 3. Development objective. The development objective is to increase resilience of ecosystems and adaptation of livelihoods in rural areas affected by climate change. The Project will achieve the objective by strengthening public sector capacity for transformative climate-resilient governance of natural resources, improving community planning and access to investment resources for ecosystem management and climate adaptation, supporting through market-based approaches the diversification of livelihoods as an element of climate resilience.
- 4. *Components*. The Project shall consist of the following four (4) components, the details of which will be further described in the Project Implementation Manual (the "PIM"):
- 4.1 **Component 1**: Strengthening public sector capacity for transformative climateresilient management of natural resources. The component has two sub-components:
- 4.1.1 Strengthened capacities of relevant national institutions for climate-resilient natural resources management. The Project will: i) develop capacities of public institutions on climate resilient ecosystem management; ii) introduce combined remote and participatory natural resources monitoring and management; iii) enhance technical capacities of national livestock institutions; iv) support research and academia institutions to improve climate resilient ecosystem management; and v) provide support to selected private sector actors for technical innovations that can support climate adaptation.
- 4.1.2 Support the enabling environment for climate adaptive, inclusive and integrated management of pasture, forestry and livestock resources. The Project will: i) support an inclusive and integrated policy dialogue; ii) provide technical assistance for review of livestock and pasture related regulatory frameworks; iii) support the introduction of relevant monitoring- and decision-making tools; and iv) support the government's capacity to coordinate and monitor green investments.
- 4.2 **Component 2**: Investments in community capacity for adaption andresilience to climate change. The component has two sub-components:
- 4.2.1 Develop district level climate diagnostics and Climate sensitive Community Action Plans (the "CCAPs"). The Project will: i) develop District Climate Resilience Diagnostics covering the Project Area; ii) establish or strengthen relevant local institutions; iii) develop CCAPs including relevant subprojects; and iv) strengthen local institutions' capacity to monitorand evaluate CCAPs.
- 4.2.2 *Implement CCAPs.* The Project will implement the CCAPs' investment plans following the division into various types of investments defined in the PIM, including

i) pasture management investments; ii) climate resilient infrastructure investments, iii) community agriculture equipment for productivity improvement; and iv) forestry investments.

- 4.3 **Component 3:** Strengthening livelihoods for enhanced resilience through market based approaches. The component has three sub-components:
- 4.3.1 Provide services to smallholders related to artificial insemination and animal health to increase livestock productivity. The Project will: i) improve the genetic potential of smallholder farmers' livestock; ii) support delivery of private animal health services; iii) improve animal productivity and health by supporting relevant institutions, and by providing trainings; and iv) support adoption of climate resilient innovative technologies.
- 4.3.2 Establish productive alliances between livestock producers' groups and private aggregators. The Project will: i) identify market and business opportunities; and ii) provide financial and technical inputs in support ofbusiness partnerships for selected livestock commodities.
- 4.3.3 Strengthen climate resilient production practices and private sector market linkages. The Project will: i) create and strengthen the capacity of Common Interest Groups (CIGs); and ii) manage and invest underthe CIG matching grant programme.
- 4.4 **Component 4.** *Project Management.* This component shall providefinancing for the overall management of the Project

### II. Implementation Arrangements

### A Organization and management.

- 5. The Lead Project Agency. The Ministry of Agriculture will be the Lead Project Agency for the Project (the "LPA").
- 6. Project Steering Committee (the "PSC").
- 6.1 Establishment and composition: The PSC will be co-chaired by the Ministry of Agriculture, and the Committee for Environmental Protection. Members of the PSC will include: the Ministry of Economic Development and Trade, the Ministry of Finance, the State Committee on Investment and State property management, the Food Security Committee under the Government of the Republic of Tajikistan, the State Forest Agency, the State Committee on Land Management and Geodesy, the Tajik Academy of Agricultural Sciences, the Agency for Land Reclamation and Irrigation, and Committee of the Emergency Situations and Civil Defense under the Government of the Republic of Tajikistan. Development partners committed to climate-adaptive strategies and mitigation will participate as observers. The PSC will also coordinate with the Coordinating Council on the Green Climate Fund to assess how to strengthen and build on the on-going GCF investments in the country.
- 6.2 Responsibilities of the PSC. The PSC shall provide overall guidance for the implementation of the Project activities at the national level and shall be responsible for the approval of the AWPBs as well as other key policy decisions. The PSC does not have direct management responsibility.
- 7. The Project Management Unit (PMU).
- 7.1 Core activities. The already existing PMU under the IFAD funded Livestock and

Pasture Development Project, shall have overall responsibility for Project implementation, coordination, oversight and reporting to IFAD and the government including liaising closely with Committee for Environmental Protection and FAO. Other PMU core responsibilities include inter alia: (i) procurement, financial management, disbursement, accounting, auditing and financial reporting, (ii) managing the performance of the partner national organizations responsible for implementation of specific Project activities; (iii) shortlisting, evaluating, contracting and managing the performance of service providers, (iv) overall Project monitoring and evaluation (M&E), (v) preparing the consolidated Annual Work Plan and Budget (the "AWPB") and submitting it to IFAD for approval; and (vi) maintaining a results-based system of assessing the performance of the partner organizations.

- 7.2 Component activities The PMU shall implement i) elements of subcomponent 1.1 comprising support to PMT, support to National Veterinary Authority, support to State Enterprise for Animal Breeding and Artificial Insemination, and support for innovations with research institutes and private sector; ii) elements of subcomponent 1.2 comprising improvement of the Pasture Law, improvement of veterinary legislation, and capacity building of relevant government staff; iii) elements of subcomponent 2.1 comprising dissemination of the diagnostic, establishment and strengthening of local institutions, CCAP development and monitoring; iv) elements of subcomponent 2.2 comprising CCAP implementation for all types of investments except forest investments; v) elements of subcomponent 3.1 comprising support for breed improvements, support to private veterinarians and related institutions and provision of trainings, support for innovation; vi) elements of subcomponent 3.2 comprising identification and financing of market and business opportunities, and support to CIGs.
- 8. The CEP Implementation Group for the Project (the "IGP").
- 8.1 Core activities. IGP will have a focus on Project activities in relation to climate change policies and strategies, and forestry activities. IGP will also ensure: (i) the coordination and accountability for effective performance of the combination of its own staff and technical inputs from the government's technical agencies, public organizations and Project's contracted service providers in the implementation of the activities for which IGP is responsible; (ii) the M&E of its own activities, including monitoring of the related performance indicators, assembly and dissemination of information for knowledge management, and the related reporting both to its own management and in a synthesized form to the PMU, and (iii) the Procurement and Financial management of all its activities including disbursement, accounting, auditing and financial reporting.
- 8.2 Component activities: The CEP shall implement i) elements of subcomponent 1.1 comprising support to forestry department, support to activities on natural resource management, support to research and academia institutions; ii) elements of subcomponent 1.2 comprising stock taking and mainstreaming of climate adaptive practices, workshops, green economy strategy and related capacity building of ministry staff, iii) elements of subcomponent 2.1 comprising district climate resilience diagnostic, promotion of forestry activities and establishment and strengthening of related local institutions, implementation of forestry investments iv); and elements of subcomponent 2.2 comprising implementation of forestry investments.
- 9. Food and Agricultural Organisation of the United Nations (FAO)
- 9.1 Core activities. FAO will be providing specific technical support and execution of defined activities with GCF financing. FAO will also ensure: (i) the coordination and accountability for effective performance of the combination of its own staff and technical inputs from the government's technical agencies, public organizations and Project's contracted service providers in the implementation of the activities for which IGP is responsible; (ii) the M&E of its own activities, including monitoring of the related performance indicators, assembly and dissemination of information for knowledge

management, and the related reporting both to its own management and in a synthesized form to the PMU, and (iii) the Procurement and Financial management of all its activities including disbursement, accounting, auditing and financial reporting.

9.2 Component activities: FAO will implement: i) elements of subcomponent 1.1 comprising capacity development on carbon accounting tools for land use and livestock, and on the animal breeding strategy revision; and ii) elements of sub-component 3.1 including farmers fields schools (FFS) preparation and roll out and strengthening private veterinaries' services.

### B. Project Implementation Manual (the "PIM")

- 10. Preparation. The Borrower/ Recipient shall prepare, in accordance with terms of reference subject to no objection by the Fund, a PIM, which shall include, among other arrangements: (i) institutional coordination including composition of PSC, and day-to-day execution of the Project; (ii) Project budgeting, disbursement, financial management, procurement monitoring, evaluation, reporting and related procedures; (iii) detailed description of implementation arrangements for each Project component, and (iv) such other administrative, financial, technical and organizational arrangements and procedures as shall be required for the Project.
- 11. Approval and Adoption. The PMU shall forward the draft PIM to the Fund for comments and no-objection. The PMU shall adopt the PIM in the form approved by the Fund, and the PMU shall promptly provide copies thereof to the Fund. The Borrower/Recipient shall carry out the Project in accordance with the PIM and shall not amend, abrogate, waive or permit to be amended, abrogated, or waived, the aforementioned manual, or any provision thereof, without the prior written consent of the Fund.

### C. Supervision

12. A Mid-Term Review (the "MTR") shall be conducted to assess the progress, achievements, constraints and emerging impact and likely sustainability of the Project and make recommendations and necessary adjustments for the remaining period of disbursement. The MTR shall be carried out jointly by the Borrower/ Recipient and the Fund.

### Schedule 3

### Allocation Table

1. Allocation of Loan/Grant Proceeds. (a) The Table below sets forth the Categories of Eligible Expenditures to be financed by the Loan/Grant and the allocation of the amounts to each category of the Financing and the percentages of expenditures for items to be financed in each Category:

	Category	Loan Amount Allocated (expressed in USD)	Grant Amount Allocated (expressed in USD)	Percentage
I.	Civil Works, Goods, Equipment and services	6 075 000	4 266 000	100% net of taxes, beneficiariesand private sector contribution
II.	Training, Workshops & Travel		135 000	100% net of FAO* contribution
III.	Technical Assistance & Studies		147 000	100% net of FAO* contribution
IV.	OperatingCosts		1 527 000	100%
Unal	located	675 000	675 000	
тот	AL	6 750 000	6 750 000	

<sup>\*</sup>FAO – Food and Agriculture Organization of the United Nations

- (b) The terms used in the Table above are defined as follows:
  - (i) Category I " Civil Works, Goods, Equipment and services" includes inter alia costs of goods, equipment & inputs to grant beneficiaries and cost of accounting software and office equipment; and
  - (ii) Category IV "Operating costs" includes inter alia costs of salaries and allowances and other operating costs for running SEPMU and CEP offices.
- (c) Unallocated proceeds: It is expected that proceeds falling under the Unallocated category, as shown in the table above, will be allocated in the course of Project implementation in a proportion whereby a minimum of 85% will be towards category I

#### Schedule 3

### Special Covenants

### I. General Provisions

In accordance with Section 12.01(a)(xxiii) of the General Conditions, the Fund may suspend, in whole or in part, the right of the Borrower/Recipient to request withdrawals from the Loan/Grant Account if the Borrower/Recipient has defaulted in the performance of any covenant set forth below, and the Fund has determined that such default has had, or is likely to have, a material adverse effect on the Project:

- 1. Within 6 months of entry into force of the Agreement, the Project will procure and install a customize accounting software as it is the practice in IFAD on-going supported projects, to satisfy International Accounting Standards and IFAD's requirements.
- 2. Planning, Monitoring and Evaluation. The Borrower/Recipient shall ensure that (i) a Planning, Monitoring and Evaluation (the "PM&E") system shall be established within twelve (12) months from the date of entry into force of this Agreement.
- 3. Anticorruption Measures. The Borrower/Recipient shall comply with IFAD Policy on Preventing Fraud and Corruption in its Activities and Operations.
- 4. Sexual Harassment, Sexual Exploitation and Abuse. The Borrower/Recipient and the Project Parties, if applicable, shall ensure that the Project is carried out in accordance with the provisions of the IFAD Policy on Preventing and Responding to Sexual Harassment, Sexual Exploitation and Abuse, as may be amended from time to time.
- 5. Use of Project Vehicles and Other Equipment, if applicable. The Borrower/Recipient shall ensure that all vehicles and other equipment transferred to or procured under the Project are dedicated solely to Project use.
- 6. *IFAD Client Portal (the "ICP") Contract Monitoring Tool*. The Borrower/Recipient shall ensure that a request is sent to IFAD to access the project procurement Contract Monitoring Tool in the IFAD ICP. The Borrower/Recipient shall ensure that all contracts, memoranda of understanding, purchase orders and related payments are registered in the Project Procurement Contract Monitoring Tool in the IFAD ICP in relation to the procurement of goods, works, services, consultancy, non-consulting services, community contracts, grants and financing contracts. The Borrower/Recipient shall ensure that the contract data is updated on a quarterly basis during the implementation of the Project.
- 7. Compliance with the Social Environmental and Climate Assessment Procedures (SECAP). The Borrower/Recipient shall ensure that the Project will be implemented in compliance with IFAD's SECAP and more specifically that the following measures shall be taken.

Environment and Social Safeguards. The Borrower/Recipient shall ensure that: (a) all Project activities are implemented in strict conformity with the Borrower/Recipient's relevant laws/regulations; (b) Project activities give special consideration to the participation and practices of ethnic minority population in compliance with IFAD's Policy on Indigenous Peoples (2009), as appropriate; (c) proposals for civil works include confirmation that no involuntary land acquisition or resettlement is required under the Project. In the event of unforeseen land acquisition or involuntary resettlement under the Project, the Borrower/Recipient shall immediately inform the Fund and prepare the necessary planning documents; (d) women and men shall be paid equal remuneration for work of equal value under the Project; (e) recourse to child labour is not made under the Project; (f) the measures included in the Gender Action Plan prepared for the Project are

undertaken, and the resources needed for their implementation are made available, in a timely manner; and (g) all necessary and appropriate measures to implement the Gender Action Plan to ensure that women can participate and benefit equitably under the Project are duly taken.

The Key Project Personnel include: PMU Project Director, PMU Financial Manager, PMU Project Coordinator, PMU Procurement Officer, IGP Project Coordinator, IGP Financial Manager, and IGP Procurement Officer, and any other staff and consultants that are hired by the PMU and IGP to support the project who are determined to be Key Project Personnel by IFAD. In order to assist in the implementation of the Project the PMU and IGP unless otherwise agreed with IFAD, shall employ or cause to be employed, as required, key staff whose qualifications, experience and terms of reference are satisfactory to IFAD. Key Project Personnel shall be seconded to the PMU and IGP in the case of government officials or recruited under a consulting contract following the individual consultant selection method in the IFAD Procurement Handbook, or any equivalent selection method in the national procurement system that is acceptable to IFAD. The recruitment and dismissal of all Key Project Personnel is subject to IFAD's prior review. Key Project Personnel are subject to annual evaluation and the continuation of their contract is subject to satisfactory performance. Any contract signed for Key Project Personnel shall be compliant with the national labour regulations or the ILO International Labour Standards (whichever is more stringent) in order to satisfy the conditions of IFAD's updated SECAP. Repeated short-term contracts must be avoided, unless appropriately justified under the Programme's circumstances.

Country Context		Substantial	Moderate
Political Commitment		Substantial	Moderate
Risk:		Substantial	Moderate
There is a risk that a Tajikistan's political developments result in delays or the	potential		
reversal of key political decisions and commitments that underpin the project's			
Furthermore, there is a high risk that Tajikistan's government would decline fu			
agreements with IFAD if the current financing terms remain. The worsened ec	onomic		
situation is likely to affect the level of political commitment of the country in a r			
IFAD may lose the ground for other donors with more favourable debt sustaina	ability		
framework			
Mitigations:			
IFAD needs to customize its development approach in Tajikistan. There is roo	m for	1	
harmonizing approaches with other donors intervening in the country. Softene		1	
terms will be key for a sustained partnership with this country.			
Governance		Substantial	Moderate
Risk:		Substantial	Moderate

There is a risk that Tajikistan exhibits governance failures that may undermine project implementation and achievement of project development objectives. Under these circumstances, chances are that the resources allocated to the project activities may be diverted for purposes other than those initially intended. Even where there is purposeful use, the efficiency will be impacted.  Mitigations:  The mitigation measures include regular follow-up of project implementation and management, capacity building and auditing. The capacity building activities include trainings, awareness raising, and participation in forums for sharing knowledge and best practices. Policy dialogue may also help in incentivizing government to take corrective measures.  Macroeconomic  Substantial  Moderate  Risk:

measures. Substantial Moderate
Macroeconomic Substantial Moderate
Gastarina   massace
Magraph and in policing wight underwise accomment apparety to mobilize accomment
Macroeconomic policies might undermine government capacity to mobilize counterpart funding, and significantly impacting market dynamics of value chains. From IFAD
perspectives, the perceived risks include the country's eventual defaulting on debt service.
Mitigations:
Working out realistic debt sustainability framework with the country, and supporting the
government in implementing the necessary reforms aiming to reinvigorate private sector
development and to restore a diversified sustainable business and investment environment.
Fragility and Security  Substantial  Moderate
Risk: Substantial Moderate
Tajikistan is vulnerable to natural and man-made shocks including civil unrest, conflict,
and/or weak governance structures and institutions. Tajikistan is afflicted with problems,
such as poverty, food scarcity, limited freshwater resources, a high rate of debt, and limited
employment opportunities among others. Weak governance and limited government capacity
to address these problems coupled with exacerbated economic crisis risk to generate
destabilization, unrest, and youth migration in search of remunerative employments in
neighbouring countries.
Mitigations:
Policy options placing focus on: (1) capacity-building of local stakeholders to build resilience
and (2) increased efforts in measures to mitigate fragility in the country and improve the
quality of life of all Tajiks.
quality of life of all Tajiks.     Moderate       Sector Strategies and Policies     Moderate

	I	1
CASP+ will mitigate this risk by supporting an inclusive approach for project decision making		
and monitoring. It envisages substantial capacity development, including training where		
required and on-the-job learning opportunities, embracing all relevant institutions, and		
monitor implementation closely including via georeferencing Mitigation measures include continued and strengthened donor coordination and policy dialogue with government as a		
whole, and with key ministries; sustained and enhanced capacity building, and periodic		
reassessment of capital investment needs by the Government. These measures will help the		
country in its attempts to organize its economy for growth, and to capacitate its public institutions for sound delivery of public and investment projects. The government is		
undertaking many reforms aiming at solidifying institutions and improving the quality of		
governance and decision-making.		
Environment and Climate Context	Substantial	Moderate
Project vulnerability to environmental conditions	Substantial	Moderate
Risk:	Substantial	Moderate
No.	Substantial	Woderate
Available estimates suggest that 82.3 percent of all land and 97.9 percent of agriculture land		
(including pastures) in the country suffer some level of erosion (high to medium erosion in		
88.7 percent of this land). This contributes to landslides, which affect 36 percent of Tajikistan		
territory and 11 percent of its population. The risk factors include the negative contribution of		
IFAD project activities in increasing greenhouse gas emissions and land degradation.		
Climate change related hazards have a substantial impact in the project area and may		
hamper the project results. Losses have proven to be substantial and to affect the capacity of		
rural population to develop sustainable livelihoods pattern.		
Mitigations:		
CASP+ will mitigate this by generating opportunities for disaster risk reduction (typically,		
forestry and pasture investment, including in specific hot spots identified in collaboration with		
the Committee on Emergency and Civil Defence). Investments in climate adaptive and more		
resource efficient agricultural practices are expected to result in positive outcomes. These		
developments will also enhance the resilience of rural households to climate change and		
reduce their vulnerability to extreme weather events.		
Project vulnerability to climate change impacts	Substantial	Moderate
Risk:	Substantial	Moderate
To "listers in the country of country in Country I Asia Climate and in the		
Tajikistan is the most vulnerable country in Central Asia. Climate projections predict a		
worsening of the above-mentioned trends and events with significant impacts on these		
ecosystems and consequently on eco-system services, people's livelihood and the economy.  The risk factors include IFAD projects failure to address issues of drought, degradation of		
pasturelands, lack of fodder, food insecurity, water scarcity, inundation/mudslides, erosion,		
etc., all of which contributing to exacerbate poverty.		
Mitigations:		
Miligations.		
The projects explore income-generating options beyond livestock to gradually reduce grazing		
pressure on pastures and mitigate the impact of climate change by establishing Pasture User		
Unions to manage the common pastures. They also provide financing and technical		
assistance to encourage and nurture new economic activities through which the most		
vulnerable of the rural society – mainly women – can build and develop additional sources of		
income as a safety net.		
Project Scope	Moderate	Low
Project Relevance	Moderate	Low
Risk:	Moderate	Low
CASP+ is relevant to the national development priorities as it comes under the framework of		
the National Development Strategy 2016-2030. On demand by the Government, this project		
will upscale the positive outcomes and impacts achieved by KLSP and LPDP. It will		
contribute in stimulating inclusive economic growth and reduction of poverty in rural		
communities. It will further improve access of communities to productive infrastructure and		
services leading to sustainable agricultural production and equitable returns.		
Mitigations:		
g		
- W		
To mitigate the eventuality of CASP becoming irrelevant, IFAD must ensure that		
implementation stays on track to achieving the development objective.		1.
Technical Soundness	Moderate	Low
Risk:	Moderate	Low
IFAD's current country program consists of the Livestock and Pasture Development Project I		
and II and CASP I. These projects focus on income diversification and promote alternative		
sources of income to diversify household economies. The effective implementation of these		
projects will lead to established socio-economic resilience, enhanced women's nutritional		
I DIDIECIS WIII IEAO IO ESIADIISTIEO SOCIO-ECONOMIC TESINENCE. EURANCEO WANTEN S TRIBUNIOS		

status and incomes. Under this section, the risk factors include the lack of appropriate implementing agency, the lack of qualified human resources, and poor quality of coordination		
of activities limiting the effectiveness of projects delivery.		
Mitigations:		
In order to reduce the likelihood of these risks to occur, IFAD must make sure terms of		
reference about the profile of the implementing agency are clear enough, and to collaborate		
closely with the government of Tajikistan in the selection process. Additionally, it will be of		
utmost importance to ascertain that the government adheres to IFAD procurement rules and		
procedures.		
Institutional Capacity for Implementation and Sustainability	Moderate	Low
Implementation Arrangements	Moderate	Low
Risk:	Moderate	Low
The low capacities of decentralized institutions in charge of critical activities may hamper the		
success of the community investment. In Tajikistan, public institutions are usually poorly		
equipped, lack qualified personnel, and have insufficient financial resources. Here the risk		
relates to the absence /lack of trained /qualified staffs, which leads to difficulties in effective		
delivery of projects (poor targeting, poor financial and procurement management, poor		
quality of data management, etc.).		
Mitigations:		
Capacity building and institutional support should not be limited to training and grants		
providing. Mentoring programs, fixed-term, in-house international or national experts, an on-		
call international expert, institutional twinning and partnerships, short-term expert coaching,		
and study tours can all be effective ways of capacity building. These capacity-building		
activities should be participative and inclusive of women and youth to the extent possible. To		
improve project governance and efficiency, a national Project Steering Committee will be setup, providing overall guidance and project consistency, and maintain oversight of the		
Project's Annual Work Plans and Budgets. The experienced Project Management Unit		
(PMU) will be responsible for overall project implementation as Leading Agency, jointly with		
pre-selected additional implementing partners.		
Monitoring and Evaluation Arrangements	Moderate	Low
Risk:	Moderate	Low
The CSP M&E system has a three-level structure, consisting of output monitoring, outcome		
monitoring and impact evaluation. A logical framework was established at design with the		
three layers of indicators. The AWPBs provide the targets for first level monitoring. PMU is		
responsible for regular data collection and reporting as project activities roll out. The M&E		
related risk factors include the likelihood of data not being properly or timely collected. Data		
collected may not be representative of outputs and outcomes due to miscalculation or		
tallying issues. Data must also be adequately disaggregated. Furthermore, risks at this level		
may also be about the qualification of the project M&E specialist, and their overall use of		
appropriate tools.  Mitigations:		
mitigations.		
IFAD must make sure that capacity-building trainings are provided to assist project M&E staff		
with, and that the data collection tools in use are in conformity with IFAD guidelines. Regular		
missions must do fact checking to ensure data quality and reporting. Regular assessment need to be carried out in order to determine and apply corrective measures.

CEP:		

2- Currently not all the staff of financial department is hired		
3- Not all CEP staff have completed the IFAD training, FMS had in previous years.		
4- CEP does not undertake staff performance evaluations / do not identify areas of		
improvement (and training needs).		
5- No set of the Manuals and Guidelines		
6- Staff has previous experience working with international donors' projects.		
Mitigations:		
SEPMU:		
1-For current projects, SEPMU is managing the financial aspects properly and has been		
rated from satisfactory to highly satisfactory. LPDP II is closing in September 2021 which will		
be before the start of CASP+.		
2- For this new project, PMU should ensure that the finance manager allocates 50% of her/his time to CASP+. In addition three additional staff in the Financial Department in order		
to ensure the right level of the internal control and obedience with the IFAD procedures		
(accounting specialist and Finance officer/consultant).		
CEP:		
- The structure of CEP should include at least one finance manager, one		
finance/disbursement officer and one accountant working on CASP+ project. CEP should		
carefully plan the training process of on-boarding staff. It is recommended to have a		
probation period of two month for the Finance Department staff. Financial Manuals,		
Guidelines and Plans have to be developed, approved, signed, and updated accordingly.		
Both:		
1- PMU/CEP should carefully plan the training process of on-boarding staff. Financial		
Manuals, Guidelines and Plans have to be developed, approved, signed, and updated		
accordingly.  2- All new finance staff should take IFAD FM e-learning course within one month of		
recruitment/project start-up. Course is available in Russian.		
3- Capacity building plans on IFAD procedures to be supported by Russian speaking		
consultants as applicable and available.		
4- PMU/CEP should establish the performance evaluation system and ensure that project		
staff are evaluated on annual basis.		
5- IFAD anti-corruption policy should be part of new staff induction.		
Project Budgeting	Moderate	Low
Risk:	Moderate	Low
Current PMU practice: The first step in the Annual Budgeting process is a review of financial		
plan. Therefore before the beginning of each financial year, PMU staff review and revise as

This will avoid reporting and analysing variances that have not yet been reflected in an updated AWPB. It also ensures that planning data remain realistic so that variance analysis remains meaningful. Significant and material changes (as opposed to minor adjustments) in the financial plan require Government and IFAD approval and may require updating of the Project legal agreements and Project Cost Tables.  The Annual Budget is broken down by quarter to take into consideration the seasonality of cash flows. The Project includes in its Annual Budget tables a current summary financial plan. Additionally, PMU budgets are to be prepared in accordance with the IFR format, including disbursement categories, components and activities, financiers, account codes and are to be divided by quarters. They are to be in line with the Project Implementation Plan.  The detailed Annual Budget provides a basis against which to compare actual results. The Annual Budget is the document that provides a basis for monitoring the financial aspects of the Project and identifying areas that require corrective action. The PMU should bear in mind that the annual budget should be tightly linked to procurement plans and physical targets. Budgetary processes are closely monitored by Finance Manager Specialist and Finance Consultant, who are responsible for presenting the draft PMU budget for a given year. The procurement specialist, while working on the procurement plans, has to take into consideration financial information provided by the Chief Accountant (e.g., cash flow). The process of detailed budgeting for the Annual Budget for the coming financial year begins in last quarter of current year.  Mitigations:  1- The budgeting process for current SEPMU		
plan. Therefore before the beginning of each financial year, PMU staff review and revise as necessary the financial plan for changes due to: delays in expenditures, assumptions, line items, activities, etc. In this way the Annual Budget for the coming year will reflect changes in the budget. This will avoid reporting and analysing variances that have not yet been reflected in an updated AWPB. It also ensures that planning data remain realistic so that variance analysis remains meaningful. Significant and material changes (as opposed to minor adjustments) in the financial plan require Government and IFAD approval and may require updating of the Project legal agreements and Project Cost Tables.  The Annual Budget is broken down by quarter to take into consideration the seasonality of cash flows. The Project includes in its Annual Budget tables a current summary financial plan. The process of detailed budgeting for the Annual Budget for the coming financial year begins in last quarter of current year.  Mitigations:  1- The budgeting process for current SEPMU		

6- Minutes of the meetings for the monthly meetings at each unit and for the quarterly meetings for both units to be documented and filed properly.		
Project Funds Flow/Disbursement Arrangements	Moderate	Low
Risk:	Moderate	Low
SEPMU:  1- SEPMU has experience disbursing from IFAD funds through the imprest account. Current projects are using the Direct payment method for USD payments due to difficulties in hard currency payments in the country.  2- IFAD is the only source of the funds for the current projects.		
<ul> <li>3- For CASP+ project there will be other sources of funds from international donors such as GCF and FAO which are currently under revision.</li> <li>CEP:</li> <li>1- No experience in disbursing from IFAD funds.</li> <li>2- Existing projects have WB loans which are disbursed in USD and have experienced exchange minimum rate losses (USD to TJS)</li> <li>3- Delays in receiving government contributions. Bills are not paid on time sometimes. This is</li> </ul>		
mainly since the accrual system and the prepayment system for utilities is not applied in Tajikistan.  4- Delays in receiving community contributions related to matching grant mechanism (with impact on project disbursements).		
Mitigations:		
SEPMU/CEP:  1- Beneficiaries will not receive funds directly instead goods, equipment and infrastructure facilities to be distributed to them, this will reduce the risk of flow of fund.  2- 1C software eliminates exchange rate risks, timely bank reconciliations have to be performed on the regular basis. Proposed 1C Accounting Software has cash flow forecasting module which is relied on to determine the local currency cash need daily. Project funds are kept in the USD account until needed, limiting exposure to exchange rate fluctuations. The PAID stamp has to be used for the supporting documents.		
<ul> <li>3- Existing projects have reasonable disbursement rates and PMU is well experienced in the IFAD disbursement process.</li> <li>4- Each unit should open separate bank account for each finance instrument and for each financier to ensure tractability of funds.</li> </ul>		
5- Contrary to previous projects, for CASP+, report based mechanism to be explored to be used for the project instead of replenishment of the imprest fund. Under report disbursement method, project will be withdrawing based on submission and clearance of IFRs.		
Project Internal Controls	Moderate	Low
Risk:	Moderate	Low
1-Training on the importance of the internal control should take place 2- Manuals and Guidelines on internal controls are weak. It is suggested to hire additional internal audit specialist to ensure that there is a decent level of internal control. 3- IFAD projects are subject to ex-post review by the Accounts chamber and by the Agency for State Financial Control and Fight with Corruption of the Republic of Tajikistan.		
Mitigations:		
1- Beneficiaries will not receive funds directly instead goods, equipment and infrastructure facilities to be distributed to them, this will reduce the risk of flow of fund.  2- Hiring staff for the financial department (experienced and educated) is crucial part to make sure there is proper level of the segregation. FMS currently performs most of the duty which decreases the level of internal control and increases the level of material misstatement.  3- The Financial Manual has to be developed in order to document detailed controls related not only to PMU but also activities on the project field especially matching grants.  4- The Financial Manual to document detailed controls related to payments/disbursements to smaller implementing partners/ community grant payments/disbursements.  5- Procure the service of an independent internal audit firm to perform an annual review of project activities for both PMU & CEP. The audit plan should focus largely on the activities of the smaller implementing agencies which is contracted by the PMU. This firm to report to the project steering committee to ensure independence		
Project Accounting and Financial Reporting	Moderate	Low
Risk:	Moderate	Low
1- 1C software is used by both CEP and SEPMU. These systems are not integrated. 2- Accounting software of smaller implementation agencies are not integrated with PMU and transactions are recorded manually by the PMU based on monthly reports provided by the implementing agencies. Advances are monitored to ensure timely justification of underlying expenses. 3- The PMU is using an outdated version of 1C (7,7) and there is a risk that technical support will not be available. (CEP is using the most recent version 8,3)		
4- Need to accurately record and account for in-kind contributions.		

5- Annual financial statements and reports to be as per IFAD and the followed accounting		
To Annual inalicial statements and reports to be as per if AD and the followed accounting		
standards.		
6- Lack of regular monitoring of consolidated performance among both parties.		
7- As GCF and FAO are potential co-financiers, there is a risk that donors reporting		
requirements are not met and complied with.		
Mitigations:		
SEPMU:		
1- Require PMU to fill the vacancy of the Internal Auditor before project start-up.		
2- Before the project start PMU to upgrade the 1C to 8.3 version		
3- Before the project starts IFRs templates to be updated in the accounting software to		
facilitate withdrawal process since the project is planned to be using report based		
disbursement.		
4- SEPMU prepares consolidated financial reports for the purposes of monitoring and		
reporting to IFAD (IFRs and AFS).		
5- Consolidated financial reports to be submitted on quarterly basis to IFAD		
CEP:		
1- CEP to fill the vacancy of the Internal Auditor before project start-up.		
2- CEP team to complete the IFAD FM e-learning course within 2 months of project start-		
up.fore the project starts IFRs templates to be updated in the accounting software to facilitate		
withdrawal process since the project is planned to be using report based disbursement.		
3- Before the project starts IFRs templates to be updated in the accounting software to		
facilitate withdrawal process since the project is planned to be using report based		
disbursement.		
Both:		
1- Financial statements/reports to include, but not to be limited to,: budget vs. actual		
comparison, DA statements & Reconciliations, WA statement, sources and uses of funds		
statements per categories and per components and financiers, cash receipts and payments		
statement, fixed asset schedule and disclosure of in-kind contribution.		
2- Both SEPMU and CEP to monitor the performance of the components for which they are		
responsible.		
3- PDR, LTB and the finance manual to include details that cover additional reporting		
requirements for co-financiers.		
Project External Audit	Moderate	Low
_ <i>'</i>		
Risk:	Moderate	Low
As nor the level legislative environment IFAD projects in Tailkisten are not sudited by the		
As per the local legislative environment, IFAD projects in Tajikistan are not audited by the		
Account Chamber of the Republic of Tajikistan which is the Supreme audit body in the		
country, instead private audit firms are contracted after completion of the tendering process.

Legal and Regulatory Framework	Low	Low
Risk:	Low	Low
Nish.	LOW	LOW
The national procurement manual does not sufficiently reflect the current procurement		
legislative framework and no contract management manual exists. Despite the development		
of a draft new law, there is need for further improvement in the area of tenders' definition,		
complaint resolution and following international standards. In addition, only one Standard		
Bidding Document is available for customization and adoption based on the type of		
procurement and method, and SBD does not include a standard contract form.		
Mitigations:		
The project procurement sections of the PIM, was updated to mitigate the inconsistency of a		
national procurement manual. Use of and compliance to IFAD Procurement Guidelines and		
Procurement Handbook will be a critical mitigation measure.		
Accountability and Transparency	Substantial	Moderate
Risk:	Substantial	Moderate
According to Public Expenditure and Financial Accountability Assessment, the current		
mechanism for administrative complaints resolution is not independent and a single tier of		
complaints risks to reduce its effectiveness The independence of Public Anticorruption		
entities is weak and all fall under the executive body. The risk that accountability,		
transparency and oversight arrangements are inadequate to safeguard the integrity of project		
procurement and contract execution, leading to the unintended use of funds or execution of		
project procurements outside of the required time, cost and quality requirements.		
Mitigations:		
The terms, procedures, and responsibilities as clearly specified in the IFAD Policy on		
preventing fraud and corruption in its activities and operations will be strictly followed and		
their observation supervised by IFAD. IFAD's Anti-corruption hotline will be disseminated in		
all bidding documents.		
Capability in Public Procurement	Low	Low
Risk:	Low	Low
Mar.	LOW	LOW
While the PMU has a long and solid history of procurement under IFAD financed projects, for		
the additional implementing agency CEP (and its Project Implementation Group) it will be the		
first project. This may entail some initial delays.		
Mitigations:		
Continuous capacity development of PMU and CEP will be provided, to ensure timely		
procurement. CEP's large volume of procurement is envisaged to start from year two and		
three, which leaves sufficient time for CEP to develop internal capacity and fill any		
competency, skills and knowledge gaps on IFAD procurement procedures. PMU and CEP		
will mobilize an additional procurement specialist/assistance.		
Public Procurement Processes	Moderate	Low
Risk:	Moderate	Low
There is a latent risk of limited participation of bidders, due to envisaged fee for the bidding		
documents (NCB/ICB). The general limited procurement expertise is invested in AWPB		
preparation needs to be addressed to ensure embedding sufficient time for with		
procurement. A risk of non-transparent proceedings is present due to evidence of not sharing		
minutes of bid opening process under ICB/NCB and not publicizing awards (NCB).		
Mitigations:		
The possibility of submitting a free electronic version of the hidding decreased to the		
The possibility of submitting a free electronic version of the bidding document to the		
participants will be considered. During CASP+ implementation, all implementing agencies will prepare the AWPB in consultation with the Procurement Officer. The procedures of		
' '		
dissemination of bid opening minutes and publication of awards will be rigorously		
implemented to mitigate risks non-transparent proceedings. Capacity development provided to the implementing agencies in the initial stages of the project will ensure that procurement		
documentation is in line with the standard forms agreed with IFAD – especially for CEP		
which is at the first experience of IFAD-financed operations.		
Environment, Social and Climate Impact	Moderate	Moderate
Biodiversity Conservation	Moderate	Moderate
Risk:	Moderate	Moderate
1100	Moderate	Moderate
A stocktaking by the World Bank states that Tajikistan has the unfortunate distinction of		
being the country that is the most vulnerable to climate change in Europe and Central Asia,		
because of its relatively high exposure, high sensitivity, and very limited capacity to adapt to		
climate change. The country faces a huge challenge of making the most of its limited		
resources to address climate threats while also promoting economic and social development.	L	1

Also, the risk of mismanagement of pasturelands or misuse of water resources is		
perceptible, as most stakeholders lack the required skills and knowledge.		
Mitigations:		
The CACD registrated to reduce reserves as proping lands, and to reserve actual		
The CASP project seeks to reduce pressure on grazing lands, and to preserve natural		
resources and biodiversity. To this end, the project requires that for each activity, an environmental impact assessment be carried out, as well as mitigation measures defined		
before the activity is approved. The project intervention districts and villages are all		
sensitized to minimize the negative environmental effects of all their activities under the		
project, and to present plans for compensating or mitigating any such occurrences.		
Resource Efficiency and Pollution Prevention	Moderate	Moderate
Risk:	Moderate	Moderate
Mor.	Woderate	Moderate
In Tajikistan, pollution is further exacerbated by deforestation leading to desertification of		
some areas. Available estimates suggest that 82.3 percent of all land and 97.9 percent of		
agriculture land (including pastures) in the country suffer some level of erosion (high to		
medium erosion in 88.7 percent of this land), poorly adapted farming practices, with intensive		
agriculture activity on slopes, excessive use of pesticides and fertilizers for some commercial crops, poor irrigation practices (e.g. seepage losses, siltation, 60-80 percent water use		
inefficiency, water logging) causing water erosion in 97 percent of farmland and salinization		
in 16 percent of irrigated lands. Risk resulting from environmental degradation include		
threats of soil pollution and nitrate contamination of surface waters, and landslides, which		
affect 36 percent of Tajikistan territory and 11 percent of its population.		
Mitigations:		
g		
The most of the control of a depth of and a collection and a collection of the colle		
The project integrates adaptive and resilient activities as well as mitigation measures in its		
intervention. With low level of income and education, most project beneficiaries lack the skills		
for developing adaptation measures. The project helps them build their capacities, so that		
they are able to apply recommended corrective measures.	Low	Lour
Cultural Heritage  Risk:	Low	Low
KISK:	Low	Low
The project has no threats to or the loss of resources of historical, religious or cultural		
significance.  Mitigations:

	1	
The overall implementation will factor-in procedures and protocols to proactively ensure high		
standards of minimization of health risks related to the ongoing pandemic. Specifically this		
will entail reducing movements in-country and international travel to a minimum (yet adapting		
to its possibility in case of lowering health alerts), ensuring social distancing measures in		
place in community mobilization, trainings and dialogues, monitoring and as appropriate		
contribute to the availability and use of equipment and supplies to communities, service		
providers (such as hydro-alcoholic gel, masks, etc).		
Physical and Economic Resettlement		No risk
		envisaged - not
		applicable
The project and its sub-projects will not require resettlement		
Greenhouse Gas Emissions	Moderate	Low
Risk:	Moderate	Low
Tajikistan's total GHG emissions represent 0.02 percent of global GHG emissions. 52.0		
percent of Tajikistan's carbon equivalent emissions originate from agriculture, mostly from		
livestock related activities.		
Mitigations:		
To address the issue of climate change, CASP+ adopts a comprehensive approach to		
climate change adaptation with a focus improved ecosystems management, including		
improved pasture and forests – coupled with improved livestock husbandry practices, which		
ultimately will increase carbon sequestration. These measures are implemented through		
Climate-sensitive Community Action Plans, as under close follow-up from both IFAD		
supervisory body and the PMU and the overall oversight on climate change mitigation from CEP.		
	Lliab	Madarata
Vulnerability of target populations and ecosystems to climate variability and hazards	High	Moderate
Risk:	High	Moderate
The high proportion of the population depending on natural resources (with over 66 percent		
of people engaged in agriculture); the high food vulnerability (with two thirds of the		
agricultural production depending on irrigation and 5 percent of territories under cereal crops		
depending on precipitation); and the high level of gross agricultural output losses caused by		
disasters (annual losses attributable to climate events of one third of all losses), confirm the		
significant vulnerability of target populations. Climate change will inevitably cause overall		
environmental deterioration in rural areas through mass agricultural land degradation,		
deteriorated soil quality and decreased natural soil fertility.		
Mitigations:		
The degree of vulnerability of target population associated with the deteriorated ecosystems		
justify climate change intervention either embedded in IFAD projects, or intervening in		
partnership with Tajikistan government.		
Stakeholders	Moderate	Low
Stakeholder Engagement/Coordination	Moderate	Low
Risk:	Moderate	Low
raion.	Moderate	2017
Under the overall responsibility of the MoA and CEP, CASP+ seeks to improve the assets		
and incomes of selected rural communities, including smallholder farmers, small rural		
processing enterprises, input suppliers and service providers, and the rural unemployed by		
improving production in terms of building/renovating key infrastructure, capacity		
enhancement, provision of improved services and innovative technologies. Project support		
would be targeted, demand-driven and participatory. The key risk factor here is about		
stakeholders' lack of interest or failure to take ownership of the project's activities and		
results. This situation may stem from a poor quality of project management and delivery		
approach. If this happens, the sustainability of the project's outcomes will be compromised.		
Such risk factors are unlikely, as the project very much aligns with the country priorities.		
Mitigations:	<u> </u>	
muyuuono.		
As mitigation measures, it will be important to regularly follow-up and make sure the project		
reaches out to the right targeted groups. An annual outcome survey will be a good practice		
to ascertain that targeted populations do participate in project activities, and take ownership		
for achievements.		
Stakeholder Grievances	Low	Low
Risk:	Low	Low
INON.	LOW	LOW
During the design, the relevant stakeholders were consulted and there is a low risk of		
stakeholders disagreeing with the way project resources are allocated as per design, PIM		
and due processes.		
Mitigations:		
~		

The project has developed a sound grievance redress mechanism, consistent between all financiers and for all implementing agencies. The project will work with stakeholder platforms that include a wide range of stakeholders to coordinate the allocation of project resources, make decisions and adjust activities. This will reduce the potential for grievances and ensure	
that the mechanism is clear and accessible to all project parties.
