---

### **Fostering Climate-Resilient Upland Farming Systems in the Northeast (FOCUS) 2.0 Project Design Report**

#### **Main report and annexes**

Mission Dates: 31 March – 18 April 2025

Document Date: 04/09/2025

Project No. 2000004677

Report No. 7262-IN

Asia and the Pacific Division  
Programme Management Department

## Map of the Project Area

The designations employed and the presentation of the material in this map do not imply the expression of any opinion whatsoever on the part of IFAD concerning the delimitation of the frontiers or boundaries, or the authorities thereof.

| <b>TSP</b>       | Technical Service Provider                              |
| <b>VFA</b>       | Veterinary Field Assistant                              |
| <b>VO</b>        | Village Organization                                    |
| <b>ZRP</b>       | Zau Resource Person                                     |
| <b>ZPDS</b>      | Zoram Poultry Development Society                       |

The following terms, some of which are commonly used within the State of Mizoram, are described below.

**Bana Kaih:** *Bana Kaih* is a state-endorsed handholding scheme in Mizoram that promotes close technical, financial, and institutional support to farmers and farming communities. It emphasizes coordinated planning, convergence of departmental services, and sustained capacity building to ensure successful adoption of improved agricultural practices and rural development interventions. FOCUS 2.0 is seen as a special purpose vehicle for delivering the *Bana Kaih*.

**Bank Sakhi:** A rural financial inclusion initiative under National Rural Livelihood Mission (NRLM) that empowers women from SHGs to serve as Banking Correspondents (BC Sakhis), providing doorstep banking services in underserved rural areas. **Sakhi** means **friend** in Hindi. In various government schemes, it refers to women facilitators or community workers who support grassroots-level implementation, such as Bank Sakhi (banking facilitator) or Pashu Sakhi (livestock extension worker).

**Kisan Credit Card:** The Kisan Credit Card (KCC) is a government-backed credit scheme in India designed to provide affordable and timely credit to farmers for their agricultural and related needs. Introduced in 1998 by the Reserve Bank of India (RBI) and National Bank for Agriculture and Rural Development (NABARD), the KCC aims to help farmers access short-term loans at subsidized interest rates.

**NESIDS (North East Special Infrastructure Development Scheme):** A central sector scheme launched in 2017–18 and restructured in 2022–23 into two components: NESIDS (Roads) and NESIDS (Other Than Roads Infrastructure). NESIDS provides financial assistance to North Eastern states for infrastructure projects in sectors like health, education, water supply, and connectivity. The scheme is fully funded by the central government and aims to fill infrastructure gaps in the region.

**Participatory Land Use Mapping and Planning (PLUMP):** Participatory Land Use Mapping and Planning is a bottom-up, community-driven process that enables rural communities (especially Indigenous Peoples, smallholders, women, and marginalized groups) to map existing land use, identify opportunities and constraints, and collaboratively develop land use plans that reflect social, economic, cultural, and environmental priorities. Core objectives of PLUMP are to empower communities to make informed decisions on land use and resource management; clarify and visualize land tenure arrangements, resource boundaries, and customary rights; reduce conflict over land and natural resources through transparent and inclusive negotiation; support environmental sustainability by identifying zones for conservation, cultivation, settlement, grazing, and reforestation; and inform investment planning—especially in projects involving infrastructure, land development, or agricultural intensification. The process and tools typically involved are:

(i) Community Mobilization & Awareness-Raising; (ii) Participatory Mapping Exercises (e.g. sketch maps, GIS-enabled mapping, or satellite imagery interpretation; identification of land use types); (iii) Resource Inventory & Use Analysis; (iv) Negotiation & Zoning; (v) Land Use Plan Formulation; (vi) Validation by the Community and Local Authorities; and (vii) Documentation and Integration into Local Planning Systems. The process is congruent with and supports Free, Prior, and Informed Consent (FPIC), gender and social inclusion, alignment with national land policies and decentralization frameworks, sustainability, and conflict sensitivity.

**Participatory Social Assessment (PSA):** According to IFAD, a Participatory Social Assessment is a structured analysis of social dynamics, institutions, and vulnerabilities that affect how different groups – particularly the poor, women, youth, and Indigenous Peoples – may benefit from or be excluded by a project. It is typically carried out during project design or early implementation, often as part of an SECAP (Social, Environmental and Climate Assessment Procedures) analysis. The purpose is to: (i) identify vulnerable and marginalized groups; (ii) understand power relations, gender dynamics, and social barriers; and (iii) inform targeting strategies, social inclusion measures, and safeguards. Outputs of a PSA may include social inclusion plans, gender action plans, Indigenous Peoples' frameworks, and Grievance Redress Mechanisms.

**Participatory Rural Appraisal (PRA):** PRA is a set of participatory tools and techniques used at the community level to enable local people to analyze their own situation, identify priorities, and contribute to planning. It is often applied during project identification or community mobilization and focuses on building local ownership and gathering bottom-up information. The purpose is to: (i) enable communities to express needs, resources, and challenges; (ii) support participatory planning and local empowerment; and (iii) complement technical design with local knowledge. Common tools for PRA include social/resource mapping, development of seasonal calendars, wealth ranking, and focus group discussions.

Key differences between PSA and PRA, as related but different approaches, are summarized below:

| Approach |                                                             |                                                      |
|----------|-------------------------------------------------------------|------------------------------------------------------|
| Aspect   | Participatory Social Assessment (PSA)                       | Participatory Rural Appraisal (PRA)                  |
| Focus    | Social structures, vulnerability, inclusion/exclusion risks | Local perceptions, needs, and development priorities |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                                          |                                                            |

| <b>Output</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Social analysis, action plans                            | Community development priorities, participatory maps, etc. |
| <p><b>PM-DevINE (Prime Minister's Development Initiative for North East Region):</b> A 100% centrally funded scheme launched in 2022–23 with an outlay of INR 660.0 million for the period 2022–26. PM-DevINE aims to fund infrastructure projects in alignment with PM GatiShakti, support social development, and enable livelihood activities for youth and women in the North Eastern Region. It focuses on addressing development gaps and is implemented by the Ministry of Development of North Eastern Region (MDoNER).</p> <p><b>Pradhan Mantri Gram Sadak Yojan (PMGSY):</b> a centrally sponsored scheme primary objective is to provide all-weather road connectivity to unconnected rural habitations (with populations of 500 and above in plain areas, and 250 and above in hilly, tribal, and desert regions), thereby enhancing access to essential services and promoting economic development in rural areas.</p> <p><b>Rashtriya Krishi Vikas Yojana (RKVY):</b> A centrally sponsored scheme promoting comprehensive agricultural development by incentivising states to boost public investment in agriculture and allied sectors.</p> <p><b>Tribes:</b> In Mizoram, "tribes" refer to the ethnically distinct Scheduled Tribes recognized under the Indian Constitution, who comprise the vast majority of the state's population. These include major Mizo groups and sub-tribes, such as the Lai, Mara, and Chakma, (amongst others). Each tribe maintains its own cultural practices, language, and customary laws, and several are governed under Autonomous District Councils (ADCs) (as seen in Lawngtlai District), established under the Sixth Schedule for decentralized administration and cultural preservation.</p> <p><b>Zau:</b> According to the State Government of Mizoram, <i>Zau</i> refers to an Agricultural Intensification Cluster, a localized, contiguous, and coordinated farming area where farmers collectively implement agricultural practices based on the agro-ecological zone and slope gradient. In the context of FOCUS 2.0, <i>Zaus</i> serve as the spatial and institutional units for synchronized production, input distribution, extension services, and market linkage, enabling economies of scale and convergence with government schemes, with a focus on implementing climate-resilient, market-oriented agricultural practices.</p> |                                                          |                                                            |

## In line with IFAD mainstreaming commitments, the project has been validated as:

☐ Be gender transformative ☒ Be youth sensitive ☐ Be nutrition sensitive ☐ Prioritize persons with disabilities ☒ Prioritize indigenous peoples ☒ Include climate finance ☒ Build adaptive capacity

## Executive Summary

**Who and What:** The *Fostering Climate Resilient Upland Farming Systems in the Northeast – Phase II* (FOCUS 2.0) aims to enhance the social, economic, and climate resilience of targeted rural households in Mizoram by strengthening market-driven agricultural value chains. The project builds on the achievements and lessons of FOCUS Phase I, expanding the scope from six to eleven districts and deepening impact through market integration, climate-smart intensification, and institutional convergence.

**Where and When:** FOCUS 2.0 will be implemented across all 11 districts of Mizoram over a six-year period (2025 to 2033), covering 700 villages and reaching 75,000 households (over 150,000 individuals), with at least 49% women and 15% youth participation. Based on Mizoram's census, which holds that 94% are tribal communities, project beneficiaries would be almost 100% tribal.

### How:

The project is structured into three interlinked components:

- **Component 1: Market Access and Enterprise Development** – enhances climate resilient rural infrastructures (CMCs, Farmers' Markets, Value Addition Hubs), incubates rural enterprises, and strengthens financial and digital ecosystems for producers.
- **Component 2: Agricultural Productivity and Climate Resilience** – supports Zau-based (cluster) farming systems and diversified livestock production through land development, climate smart agro-ecological practices, and veterinary services.
- **Component 3: Project Management, Convergence, and Knowledge Management** – ensures decentralized delivery, institutional integration, and evidence-based scaling through the SCRAM Society under the Planning and Programme Implementation Department

**Why:** Rural Mizoram faces persistent challenges: small and fragmented landholdings, low productivity, increasing climate change challenges, reliance on shifting cultivation, underdeveloped markets, and livestock vulnerability to diseases like African Swine Flu (ASF). FOCUS 2.0 responds by scaling successful models such as Zaus and linking them to structured markets and value chains, thus aligning with **Mizoram's Bana Kaih policy** and India's national priorities for inclusive and climate-resilient growth.

**Financing:** The total project cost is US\$ 84.1 million, with US\$ 45.7 million from IFAD, US\$ 14.4 million from the Government of Mizoram, US\$ 3.2 million from beneficiaries, and US\$ 10.4 million leveraged through convergence with centrally and state-sponsored schemes (e.g., MGNREGA, PMKSY, RKVY).

**Implementation:** The project will be implemented by the Society for Climate Resilient Agriculture in Mizoram (SCRAM) under the aegis of the Planning and Programme Implementation Department. The project will be led by a Chief Project Director from the Indian Administrative Service (IAS) cadre and a Project Director from the Department of Agriculture. Delivery will be decentralized through District Project Implementation Units (DPIUs), with convergence anchored at both the village and district levels.

## Chapter 1: Context

### 1.1 Project in brief

1. The Fostering Climate-Resilient Upland Farming Systems Project – Phase 2 (FOCUS 2.0) builds on the work of Phase 1 (2018–2024), which was the first externally aided project in Mizoram's agriculture and allied sectors. Implemented across six districts, the original FOCUS project introduced integrated farming systems, climate-resilient practices, livestock interventions, and early efforts in market access and institutional development. The endline evaluation confirmed strong potential for scaling up these models, which directly informs the second phase.
2. FOCUS 2.0 expands coverage to all 11 districts of Mizoram and aims to enhance the economic, social, and climate resilience of rural communities. The three interlinked components will focus on: (i) Component 1 on market access and enterprise development through climate resilient rural infrastructure, enterprise development and financial inclusion; (ii) Component 2 on enhanced, climate-resilient agriculture and livestock productivity through cluster-based production systems and natural resource management; and (iii) Component 3 on project management through strengthened project coordination, convergence with government schemes, knowledge management, and capacity building. With a duration of six years, the total project cost is US\$ 84.1 million<sup>[1]</sup>, including an IFAD loan of US\$ 45.8 million. The project will be implemented by the Society for Climate Resilient Agriculture in Mizoram (SCRAM) under the Planning and Programme Implementation Department, and aligns closely with both state and national priorities, including Bana Kaih, PM-DevINE, and NESIDS, ensuring strong convergence and sustainability.

### 1.2 National or Regional Context

Mizoram is a hilly state in Northeast India with 1.1 million population, of which over 94% belonging to Scheduled Tribes.<sup>[2]</sup> The

3. Mizoram is a hilly state in Northeast India with 1.1 million population, of which over 94 % belonging to Scheduled Tribes<sup>[4]</sup>. The state is highly literate, but remains economically vulnerable due to geographic isolation, limited infrastructure, impacts of climate change, and fragmented production systems. Although the agriculture sector contributes significantly to rural livelihoods, over 85% of landholdings are small or marginal, which leaves most farmers to work on rain-fed and low-yielding plots of land. The culture of shifting cultivation (jhum) continues to be prevalent, contributing to land degradation and unsustainable productivity cycles. Relatedly, the livestock sector faces persistent challenges, including high dependence on imported<sup>[3]</sup> pork, poultry and eggs, recurring outbreaks of African Swine Fever (ASF), limited access to quality veterinary services due to remoteness, and weak biosecurity. Demographically, Mizoram has one of the highest tribal concentrations in India, with eleven recognized diverse ethnic groups, but some (for instance, the Chakma and Bru), remain marginalized and underserved. Many reside in remote districts like Lawngtlai, Mamit, and Siahia, which have the lowest Human Development Index scores<sup>[4]</sup> in the state. Poverty remains a concern, with 27% of the population multi dimensionally poor (2021)<sup>[5]</sup>. Gender disparities persist, particularly for female-headed households with limited land, labour, or asset ownership.
4. The hilly state is endowed with rich biodiversity, dense forest cover, and a vibrant cultural heritage rooted in its Indigenous communities. However, the region is increasingly vulnerable to the impacts of climate change, including rising temperatures, irregular rainfall, and heightened occurrences of extreme weather events. These climate change pose severe risks to local ecosystems, agrarian livelihoods, and the socioeconomic stability of its Indigenous populations. Compounding these challenges are Mizoram's infrastructural constraints and difficult terrain, which hinder effective disaster response and long-term resilience-building efforts<sup>[6]</sup>.
5. Mizoram's rural economy continues to face enduring challenges with low agricultural productivity<sup>[7]</sup>, uncoordinated and unorganized value chains, limited financial inclusion, and inadequate infrastructure including market infrastructure. Cropping intensity remains low at 1.01<sup>[8]</sup>, reflecting minimal rabi cultivation and limited multiple cropping—primarily due to inadequate irrigation and continued reliance on traditional practices. Key commodities such as ginger, turmeric, broom grass, and pork have strong market demand but suffer from insufficient aggregation, value addition, and cold chain systems. Notably, over 60–70% of vegetables and fruits consumed in Aizawl are imported, underscoring missed opportunities for local producers. Livestock production remains fragmented and small-scale, with high feed costs and recurring disease outbreaks<sup>[9]</sup> undermining farmer confidence. These persistent constraints highlight the need for more resilient, organized, and bio-secure livestock production models linked to reliable veterinary services, structured markets, and aggregation infrastructure.
6. Mizoram's policy environment is increasingly supportive of rural transformation. FOCUS 2.0 responds to a compelling rural development need in Mizoram by supporting climate-resilient, market-led, and socially inclusive agricultural systems that align with both local development priorities and broader SDG commitments, notably: SDG1 (poverty reduction), SDG2 (food security and sustainable agriculture), and SDG13 (climate action). The project aligns with several key government strategies, including the *Bana Kaih* handholding policy<sup>[10]</sup> (focused on integrated rural support services), related Zau policy/guidance documents (on agricultural intensification through cluster development), and national flagship schemes such as PMKSY (irrigation), RKVY (agriculture growth), MGNREGA (asset creation and labour), and the National Livestock Mission. These alignments enable convergence, resource pooling, and scaling of successful models.

### 1.3 Strategic Alignment

7. **Alignment with Government of India and State Priorities:**
8. At the national level, the project complements the Government of India's agenda of doubling farmers' incomes, promoting market-led, climate-resilient agriculture, and developing tribal and hilly areas. It responds to the 2025 Union Budget and Vision for inclusive and sustainable development and aligns with India's National Adaptation Plan (NAP) and updated Nationally Determined Contributions (NDCs). It is synergistic with national flagship initiatives including PM-DevINE, NESIDS, PM-FME, and the Aspirational Districts Programme – schemes that strengthen connectivity, build rural infrastructure, and agro-enterprise development in Northeast. FOCUS 2.0 also aligns with Mizoram's state priorities outlined in the *Bana Kaih* (Handholding policy including Zau Cluster Policy), promoting integrated farming, enterprise development, and market access and will use existing community-governance and rural finance systems (including SCRAM and local cooperative platforms). The design also incorporates, under component 2, digital extension services for Zau Clusters and livestock producers (who will receive agromet, livestock related information and market pricing thereby improving productivity), which is closely aligned to the VISTAAR scheme launched by the Government of India to digitize and modernize agricultural extension services. VISTAAR implementation is in very nascent stages in Mizoram. The selected partner for rollout of the pilot in Mizoram (Digital Green) is also a partner for the national government and hence there is strong potential for this activity to support knowledge generation through lessons learnt from implementation at state level and support eventual scaled-up rollout of the national scheme in the state.
9. **Alignment with IFAD's Strategic and Corporate Priorities:**
10. FOCUS 2.0 advances the three strategic objectives of IFAD's Strategic Framework 2016–2025 (i) increasing the productive capacity of poor rural people, (ii) increasing their benefits from market participation, and (iii) strengthening the environmental sustainability and climate resilience of their economic activities. It also aligns with mainstreaming strategies for gender, youth, nutrition, and climate adaptation and upholds the Indigenous Peoples Policy via community institutions, participatory planning, and FPIC). The project contributes to multiple SDGs under the United Nations Sustainable Development Cooperation Framework (UNSDCF) 2023-2027: SDG 1 (No Poverty), SDG 2 (Zero Hunger), SDG 5 (Gender Equality), SDG 8 (Decent Work and Economic Growth), and SDG 13 (Climate Action).

#### 11. Alignment with the COSOP:

12. Anchored in the COSOP 2018–2024 (extended to 2025) - inclusive value chains, climate-resilient livelihoods, and tribal empowerment – FOCUS 2.0 will help operationalise the forthcoming COSOP (2026–2033), for which the Ministry of Finance' Department of Economic Affairs (DEA) has already provided an overarching framework, which focuses on (i) job creation and private sector linkages, (ii) knowledge-based scaling, (iii) convergence with government schemes, and (iv) grassroots institutions to promote resilience, productivity, and diversification. FOCUS 2.0 will serve as an early operationalisation of these priorities in the Northeast.

#### 13. Positioning for Knowledge and Scaling:

14. The project aims to generate evidence to inform both state and national policy—particularly in areas such as cluster-based development (Zau model), decentralized rural finance, and hub-and-spoke market infrastructure. These models may offer useful learning for other hilly states and tribal regions in India, as well as for similar geographies globally through [South-South Triangular Cooperation \(SSTC\)](#).

#### 15. Partnerships:

16. SCRAM, which serves as a Special Purpose Vehicle for externally aided projects, was established under FOCUS will lead the implementation. The new phase will actively engage with line departments, research institutions, private sector actors, and financial institutions including Mizoram Rural Bank, Multipurpose Primary Agricultural Credit Cooperative Society, NABARD, and the National Insurance Academy (for insurance penetration and financial literacy). The project also proposes a Private Sector Roundtable to be institutionalised as a regular annual event to build investment pipelines and improve convergence with industry players.
17. By drawing on IFAD's long-standing engagement in Mizoram, Nagaland, Meghalaya, and other hilly states like Uttarakhand, Jammu and Kashmir, FOCUS 2.0 builds on valuable cross-learning to drive integrated, scalable solutions for inclusive rural transformation.

### 1.4 Portfolio and Lessons Learned

18. IFAD's partnership with the Government of India spans over four decades, with a current portfolio of US\$ 393 million across five projects in six states, including three in the Northeast. These projects emphasize tribal development, inclusive value chains, climate resilience, and strengthening rural livelihoods. In Mizoram, the FOCUS project laid a strong foundation for community mobilization, agricultural and livestock production, and early efforts toward market access and entrepreneurship development in remote, hilly regions. While Phase 1 achieved significant outreach and engagement, it highlighted the need for stronger integration between production systems and structured market access, as well as improved financial inclusion – critical lessons that shape the design of FOCUS 2.0. FOCUS is currently in its closure period and serves as the anchor for the new investment.
19. Lessons emerging from IFAD's engagement in India highlight the importance of integrated and locally grounded approaches to rural transformation<sup>[11]</sup>. Experience has shown that securing land tenure/long-term lease enables the poorest households to invest meaningfully in agriculture; that market access must be embedded from the first mile onward through scalable and tiered systems that evolve from basic aggregation to higher-value enterprise and trade<sup>1</sup>; and that entrepreneurship can be sustained, promoted, and scaled when supported through structured incubation beyond initial funding. Financial inclusion efforts have proven more effective when they leverage trusted local institutions, reinforcing the need for facilitative approaches that strengthen rather than crowd out existing financial systems. Experience also demonstrates the value of strong community mobilisation and the importance of strengthening existing institutions, rather than creating new parallel structures. These insights directly inform the design of FOCUS 2.0, which places convergence, market responsiveness, and institutional sustainability at its core.
  - **Land Tenure Security:** Experiences from projects like OPELIP<sup>[12]</sup> and FOCUS in Mizoram highlight the critical role of secure land tenure in enabling meaningful investments by landless households. In both cases, collaborative arrangements with traditional institutions such as Village Councils led to the allocation of land on lease for 10 years or more, creating a viable foundation for households to engage in settled agriculture. In Mizoram, this approach allowed landless groups to access land development, irrigation, and input support, translating tenure security into productive assets and improved incomes. Building on this, FOCUS 2.0<sup>[13]</sup> will continue to facilitate long-term land use agreements for vulnerable households through locally legitimate mechanisms.
  - **Agriculture Intensification Cluster Approach:** Experience from earlier projects highlighted the value of organizing production around spatially defined clusters to enable economies of scale, efficient resource use, and collective access to services and markets. Both in FOCUS<sup>[14]</sup> and OPELIP<sup>[15]</sup>, integrated approaches combining land development, irrigation, and coordinated crop planning within contiguous areas led to improved productivity and income outcomes. FOCUS 2.0 builds on these lessons by adopting a cluster-based production model (Zau Cluster) as the backbone for organizing inputs, services, and market integration through the hub-and-spoke framework.
  - **Market-led Production Systems:** A key lesson emerging from past projects<sup>[16]</sup> (LAMP and CSPE) is that production interventions must be aligned with market opportunities to ensure sustainability and income enhancement. In FOCUS, the limited integration between production and structured aggregation or market systems constrained the potential of otherwise successful community mobilisation and input support. Building on this, FOCUS 2.0 adopts a market-led approach where production planning is guided by market demand, and infrastructure is developed across a three-tiered system<sup>[17]</sup>: from cluster-level aggregation to block-level markets, and district-level hubs. This alignment is further supported by business development services grounded in market analysis, crop planning linked to NRM, and tailored package-of-practices training at different production stages
  - **Institutional Anchoring and Convergence through Decentralized Implementation:** A key lesson from FOCUS, OPELIP, and LAMP<sup>[18]</sup> is that a combination of new resources and existing institutional support is pivotal for effective delivery and

sustainability. Leveraging systems such as Village Councils, line departments, and local cooperatives allows smoother implementation, convergence with government schemes, and long-term anchoring. FOCUS demonstrated that a decentralised setup with dedicated staff at district and block levels improved community engagement and implementation quality. OPELIP showed how externally aided projects (EAPs) can serve as special purpose vehicle for convergence, policy innovation, and first-mile service delivery. FOCUS 2.0 reflects these insights through a leaner Project Implementation Unit (PIU) structure that blends seconded officials and technical specialists while embedding convergence and institutional integration from the first mile to the state level.

- **Enterprise Development through Incubation:** The Innovation Fund under FOCUS Phase 1 effectively supported local entrepreneurship, particularly for enterprises that added value to farm produce and created local employment, including for women. However, project reviews and completion assessments noted that the absence of structured incubation limited long-term growth and sustainability. Lessons from these reviews and new designs including REAP, JKCIP, LAMP<sup>[19]</sup> highlight the value of complementing grant support with mentoring, business planning, and access to finance. Lessons learned on access to finance for tribal as well as other vulnerable groups in Uttarakhand, Maharashtra and Madhya Pradesh are relevant for Mizoram. FOCUS 2.0 incorporates this by linking innovation funding with incubation services to foster viable, scalable rural enterprises.
- **Role of Livestock in Agricultural Transition:** Livestock serves as a crucial financial buffer during agricultural transitions, as observed in many IFAD-funded projects in India: OPELIP, LAMP, FOCUS, REAP, ILPS, and Nav Tejaswini. This diversification strategy enhances the resilience of farming households, safeguarding them against unforeseen challenges.
- **Strengthening Delivery Systems and Fiduciary Readiness:** A key lesson emerging from Phase 1 relates to the need for improved project operations, particularly in fiduciary and procurement systems. FOCUS 2.0 addresses this by strengthening district-level capacity through dedicated staffing, introducing an application-based accounting system for real-time financial monitoring, and enabling operational advances to the implementing agency (SCRAM) to manage delays in fund releases from the State Finance Department. These measures are expected to enhance transparency, financial discipline, and timely implementation across all levels.

## 1.5 Rationale and IFAD's comparative advantage

20. Smallholder farmers in Mizoram, particularly in climate vulnerable remote and hilly tribal areas, face persistent constraints that limit their transition to resilient, market-integrated production systems. Fragmented landholdings, low productivity, limited aggregation, and weak service delivery restrict economies of scale and undermine participation in value chains. Environmental degradation and climate variability further compound these vulnerabilities. Limited experience with externally aided projects (EAPs) has also challenged institutional capacity at the state and district levels. Although FOCUS Phase 1 laid important foundations by strengthening community groups, introducing climate-smart practices, and piloting market interventions, further investment is needed to scale and systematize these efforts.
21. The proposed phase builds on these foundations by embedding a spatially organised, cluster-based production strategy and introducing a tiered hub-and-spoke infrastructure to support aggregation, value addition, and enterprise development. Interventions are designed to reduce post-harvest losses, increase financial and digital inclusion, and strengthen last-mile delivery through community-based cadres. IFAD's continued engagement is aligned with the 2023 CSPE recommendation to scale up promising models in first-time states where foundational institutional capacity has been built.
22. IFAD is uniquely positioned to deliver on this agenda due to: (i) its track record in promoting market-led approaches and inclusive value chains for smallholders; (ii) its global and regional experience in tribal and upland contexts, particularly on climate-resilient agriculture and livestock systems; (iii) its successful community-based delivery and convergence models as seen in OPELIP and LAMP; (iv) alignment with national priorities such as infrastructure-led growth, digital agriculture, and financial access in underserved areas; and (v) its long-standing presence in North Eastern and hilly states—including Mizoram, Nagaland, Meghalaya, and Uttarakhand—which has enabled cross-learning and adaptation of successful models, such as the hub-and-spoke system developed under LAMP that informs FOCUS 2.0's infrastructure and market design. By anchoring its support in a convergence-driven, locally embedded framework, IFAD brings not just financing but a tested pathway to inclusive and sustainable rural transformation.
23. By anchoring its support in locally embedded systems and partnering with SCRAM and line departments, IFAD provides not only financing but a proven pathway for rural transformation with focus on convergence, climate resilience, inclusion (*youth and women specifically*), and institutional sustainability.

## Chapter 2: Project/Programme Description

### 2.1 Theory of Change

24. In Mizoram, nearly 48% of the population resides in rural areas<sup>[20]</sup>, with the majority engaged in smallholder farming on fragile hilly terrain with low productivity. Rising temperatures, erratic rainfall, and an increasing frequency of extreme weather events driven by climate change are placing growing pressure on agriculture and threatening the livelihoods of the state's predominantly Indigenous population. These households face longstanding barriers to market access, service delivery (including critical extension services supports), and productive asset-building<sup>[21]</sup>. Digital connectivity is also a challenge in some areas, further exacerbating accessibility. All of this, combined with limited employment opportunities and access to formal finance, leave the

rural Mizo population (particularly youth) with few options to break out of the poverty cycle. While Phase 1 of the FOCUS project covered six districts and laid the foundation for community mobilisation, livestock development, and enhanced agricultural productivity, many value chains remain disconnected from viable markets. Producers continue to rely on informal channels, experience high post-harvest losses, and lack access to critical infrastructure for aggregation, processing, and enterprise development.

25. FOCUS 2.0 responds to these challenges through two development pathways:
26. **Market Access and Enterprise Development Pathway:** FOCUS 2.0 builds on the existing production base of particularly those smallholder farmers and their clusters supported under Phase 1 of FOCUS which have reached a state of readiness – and pivots toward market integration through a three-tiered market infrastructure system which links Zau clusters to farmgate-level Collective Marketing Centres (CMCs), block-level farmers' markets, and district-level value addition hubs. Smallholder farmers and their clusters will be able to aggregate their produce, sort, grade, undertake primary and secondary processing, packaging and marketing. The project will also facilitate access to formal financial institutions for credit, insurance, and enterprise financing, particularly for women, youth, and landless households. By strengthening local cooperatives, leveraging public schemes, and working with technical partners, the project will promote financial literacy, risk mitigation tools, and co-investment models to support enterprise and household-level investment.
27. As these systems evolve, aggregation and processing gains will incentivise a shift toward commercially oriented farming. Enhanced access to finance and inputs will enable rural entrepreneurs to invest confidently, while trusted local institutions will help maintain continuity and participation. As producer groups and enterprises access better markets, incomes will rise, strengthen climate adaptation capacity, and asset-building will accelerate.
28. **Agricultural Productivity and Resilience Pathway:** To sustain the transition to a market-driven, resilient agricultural production system, the project will strengthen production systems by establishing or enhancing the Zau clusters – grounded in climate-resilient agroecology practices, sustainable natural resources management, irrigation, agroforestry, livestock services, and digital extension. Smallholder farmers and their clusters will be equipped with good agricultural practices and knowledge, through Farmer Field School (FFS). These soft and hard investments will increase productivity and supply consistency while promoting nature-based solutions and improved natural resource management. First-mile delivery teams and convergence with departmental schemes will ensure that support services reach the last mile effectively and equitably.
29. Ultimately, FOCUS 2.0 will improve economic resilience, strengthen climate adaptation, and enhance livelihood security for smallholder farmers across all 11 districts of Mizoram.
30. **Key Assumptions:**
  - Timely mobilisation of financial and human resources aligned with AWPB
  - Political and policy environment remains supportive to inclusive rural development
  - SCRAM maintains institutional capacity and mandate to lead convergence and delivery
  - Departments align around Zau clusters and value chain infrastructure
  - Producers shift behaviour in response to market access and income improvements
  - Climate variability remains within an adaptive range
  - No pandemic occurs during the next few years

## 2.2 Targeting Strategy

31. **Area of Intervention:**
32. FOCUS 2.0 will be implemented in 700<sup>[22]</sup> Villages in the 28 rural development blocks of 11 districts of Mizoram. The project will cover 5 new districts- Aizawl, Lunglei, Siahla, Lawngtlai and Hnahthial and along with six old districts of FOCUS – Mamit, Kolasib, Champhai, Khawzwal, Saitul and Serchhip. At least one Intensive Zau cluster will be planned in all the 700 villages of Mizoram. Districts performing poorly in development indices, and highly vulnerable to climate change, such as Lawngtlai, Siahla, and Hnahthial, will be prioritized in the project implementation.
33. **Social Targeting:**
34. The project is IP-focused and will include all the ethnic tribes of the state, who form 94.4<sup>[23]</sup> percentage of the total population of Mizoram, namely: Hmar, Lusei, Ralte, Lai, Marra, Paite, Chakma, and Raeng (Bru). The programme will work with 100 percent tribal groups who are dependent on agriculture and livestock for their livelihood, and will build on their knowledge of agro-biodiversity for dietary diversity and nutritional security.
35. The VCs and the Autonomous District Councils (ADCs), the statutory governing bodies that play a vital role in the administration, development, and dispute resolution at the village and district level, will be consulted in implementing the project activities to ensure the project is in line with the tribal cultural practices. The project will reach out to 75,000 households, amounting to a total of 150,000 individuals<sup>[24]</sup>.
36. **Economic Targeting:**
37. In terms of economic activities, the programme will focus on developing and upgrading market-oriented value chains of crops and

livestock identified and selected by the tribal communities, informed by the market studies, and in consultation with the sector experts and private sector actors Through Zau clusters, the project will promote an integrated farming system to increase the productivity of agricultural and horticultural crops while addressing local communities' diet and nutrition needs. This will be done by introducing/relocating a wide variety of the leafy vegetables and other NUS crops grown in jhum fields to the households' kitchen gardens, thus also reducing the risk of depletion of agro-biodiversity. The project will focus on promoting better agricultural practices for crops and livestock, increasing access to insurance and financial services, and promoting marketing of meat, egg products of goat, poultry, and pig. Constructing collective marketing centers (CMCs), value addition hubs, and farmers' markets at the cluster, block and district-levels<sup>[25]</sup> for product aggregation, sorting, grading, and packaging for further value-addition is a priority of the project, with a focus on improving market price of the products captured by farming households. With FOCUS 2.0 being an IP focused, gender-mainstreamed, youth-sensitive, and climate-sensitive project, activities involve promotion of women-led businesses, women and youth entrepreneurs.

38. "Poverty" is one of the key selection criteria for beneficiaries. The project will mainly target the "poorest of the poor" and "poor" people, with remaining beneficiaries falling within the "progressive poor" category (please see Table 2 for classification criteria). The condition of "cultivating jhum land for at least three years" will be applied for the selection of Intensive Zau clusters beneficiaries to get an assurance that the Zau land won't lay barren. FOCUS 2.0 will use the wealth ranking done by MzSRLM at the village level, using the social participatory assessment, as one of the key criteria for the beneficiary selection. Around 15 per cent of the targeted beneficiaries will be selected in the poorest-of-the-poor category, around 70 per cent in the poor category, and the remaining 15 per cent will be from the progressive poor category. Due to lack of availability of latest population and land data, the number and proportion of targeted beneficiaries under each category will be finalized after the PRA exercise conducted at the village level. The beneficiary selection process is further elaborated in section 3.7 of the PIM.

39. **Table 2. Socioeconomic targeting & classification criteria by category**

| Socioeconomic Categorization                                        | Classification Criteria/Thresholds                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|---------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Poorest-of-the-Poor</b><br>(referred as "landless" in the FOCUS) | <ul style="list-style-type: none"> <li>· HHs do not have temporary pass and land settlement certificate for any land other than residential plot <b>and</b> depend on accessing tenurial rights to jhum plot via the lottery allocation system</li> <li>· have participated in the jhum land cultivation in the last three years continuously,</li> <li>· depend on wage labour as primary or secondary source of income,</li> <li>· do not have any family members working in the government, and</li> <li>· fall within the lowest category in the wealth rank conducted by MzSRLM</li> </ul> |
| <b>Poor</b>                                                         | <ul style="list-style-type: none"> <li>· having land ownership of less than 2 Ha, either temporary land pass or agricultural land settlement certificate (LSC) or homestead land settlement certificate (LSC) other than residential plot;</li> <li>· practicing agriculture cultivation in the last three years continuously</li> <li>· falling under "median" category in the MzSRLM wealth ranking,</li> <li>· do not have any family members working in the government</li> </ul>                                                                                                           |
| <b>Progressive Poor</b>                                             | <ul style="list-style-type: none"> <li>· who has land ownership of 2-5 Ha land as temporary pass or land settlement certificate for land other than residential plot</li> <li>· practicing commercial agricultural/ horticulture/ livestock rearing for last three years at least</li> <li>· higher rank in the MzSRLM wealth ranking</li> </ul>                                                                                                                                                                                                                                                |

#### 40. Target Groups:

41. FOCUS 2.0 will target 49% of women and 15% of youth<sup>[26]</sup> participation in the project's capacity-building activities, livelihood, and market-based value chains. This percentage accurately represents the proportion of each group in relation to Mizoram's total population. The collaboration with MzSRLM for implementing the project activities, especially using their community-based institutions, cluster-level federations (CLF) for launching the project activities, would ensure inclusion and effective participation of women beneficiaries, as rural women are the sole target beneficiaries of MzSRLM programmes. In Mizoram rural tribal societies, women are burdened with triple responsibilities of domestic and care work, farm labor, and marketing of the produce. Hence, the project will ensure participation of men in the meetings and trainings for shared household responsibilities and reduction in

women's workload. Inclusion of single women and female-headed households, which comprises 23 percent of the total HHs in Mizoram[27] will be ensured by involving them in the project implementation processes- beneficiary selection through PRA exercises, to activity selections. Youth will be encouraged to participate in some of the activities, such as Farmers' market, CMC, promotion of Zau Resource Persons and Paravets, food-processing units, marketing of animal products such as egg, meat, because of their mobility, technology proficiency, and their inclination towards market and innovation. The project baseline will capture the needs, concerns, and aspirations of youth and will incorporate the findings in the project activities (further details and situational analyses are available in the PIM Appendix 12). The ethnic religious minorities, especially Chakma and Raeng (locally known as Bru), who are isolated and are performing poorly in many development indices, will be mainstreamed and included in the project activities through the village targeting approach by covering all the villages in the state. Communication and training products would be produced in different ethnic tribe languages to bridge the communication gap and ensure their effective inclusion. Details on characteristics of each ethnic group in Mizoram targeted by the project is provided in the PIM.

| <b>Table 3: Population (number and percent) of Tribes in Mizoram</b> |                             |                       |

## 2.3 Project/Programme Objectives

42. FOCUS 2.0 has an overarching goal of contributing to the economic prosperity and enhanced climate resilience in rural Mizoram. The Project Development Objective (PDO) is to enhance the social, economic, and climate resilience of targeted households across the State of Mizoram, India, through strengthened agricultural value chains. Component 1 (Market Access and Enterprise Development) is designed to contribute to the outcome of enhanced market access and value addition with reduced post-harvest losses, and Component 2 (Agricultural Productivity and Climate Resilience) is designed to contribute to the outcome of enhanced climate-resilient crop and livestock productivity.
43. The project adopts an integrated, area-based approach to strengthen climate-resilient agriculture and livestock productivity, while enabling market access and enterprise development for smallholder farmers, their organizations, and enterprises across all 11 districts of Mizoram. Building on lessons from FOCUS, it is structured around Agricultural Intensification Clusters (Zaus) [29] and aligned closely with the Government of Mizoram's flagship *Bana Kaih* (handholding) policy, which promotes synchronized, market-oriented, and sustainable farming systems. Zaus serve as spatial and institutional anchors for targeted investments in land development, water management, and production systems, while ensuring convergence with key centrally and state-sponsored schemes across agriculture, horticulture, animal husbandry, and rural connectivity.
44. **Component 1**, which aims to create a robust and inclusive market ecosystem that enables rural producers to generate sustainable income through improved market access, enterprise development, and financial institutions, has the following expected outcomes:
  - 50% of households engaged in transactions with structured or formal markets
  - Creation of employment opportunities by project-supported enterprises
  - Improved access to rural financial and digital services
45. The development pathway begins with the mobilization and strengthening of producer institutions, including Zau groups, SHGs,

and FPOs, many of which were supported under FOCUS. By linking these groups to a tiered hub-and-spoke rural infrastructure system (Collective Marketing Centers (CMCs) at village level, Block-level Farmers' Markets, and District-level Hubs), farmers can achieve value addition and aggregation. The activities under this Component ensure that crops and livestock products have efficient pathways to markets, helping to reduce post-harvest losses and improve price realization. The physical infrastructure is complemented by business development services, with the development pathway culminating with the creation of commercially viable, community-anchored enterprises that can engage competitively in state and regional markets.

46. **Component 2**, which drives the transition of rural households from low-productivity and climate-vulnerable subsistence systems toward sustainable, market-oriented agricultural and livestock production, has the following expected outcomes:
  - Sustainable intensification of climate-resilient agricultural production and increased crop productivity
  - Improved production of market-oriented livestock products
47. The development pathway begins with cluster-based planning, centering on Zaus (Agricultural Intensification Clusters) as the foundational unit for synchronized, climate-smart farming. These clusters are designed to facilitate collective production, input use, and extension, making them ideal entry points for resource optimization and convergence with state support. Livestock production is enhanced through structured support for piggery, poultry, and goat rearing, with investments in disease control, biosecurity, and community-based veterinary services. Activities both integrate natural resource management and targets marginalized households to ensure equity and sustainability. Increased productivity feeds into the market and enterprise systems established under Component 1, completing a development pathway that enhances both household resilience and economic opportunities.
48. **Component 3**, which is focused on project management, has the following expected outcome:
  - Effective M&E and knowledge management practices in place
49. **Anchoring Market-Led Production through a Hub-and-Spoke Model:** FOCUS 2.0 adopts a climate resilient market-led production system anchored in a hub-and-spoke model that connects production areas to markets in a structured, phased and scalable manner. Components are anchored by this model, with the system beginning at the field level with Zau clusters (Component 2), which are synchronized production zones where farmers work collectively to increase scale and productivity. From there, the produce moves through a three-tiered market access structure (Component 1): (i) Collective Marketing Centres (CMCs) at the village or cluster level, acting as the first point of sale and aggregation at the farmgate; (ii) Block-level Farmers' Markets, supporting local aggregation and semi-retail and wholesale trade; and (iii) District-level Hubs, providing facilities for higher-order value addition like processing, packaging, and cold storage. Each tier offers opportunities for value addition and enterprise engagement, in addition to facilitating market access. To support this system, the project also strengthens access to finance, promotes rural enterprise development, and integrates digital tools for real-time access to market information, weather advisories, and training content – even in the most remote areas.
50. **Outreach & Duration:** The project has an outreach target of 75,000 households<sup>[30]</sup>, benefiting a total of 150,000 individuals (of which, 50% would be women, and 15% of which would be youth). It is designed for a duration of six years (2025-2031), including the time up to completion and the period of six months for administrative closure.

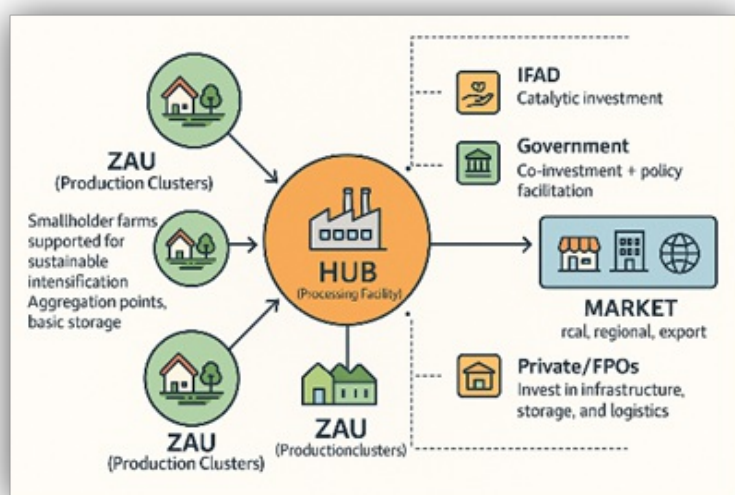

## 2.4 Component, Sub-component and Activities

51. The objective of Component 1 is “Enhanced Market Participation of Rural Households”, as measured through three sub-component outcomes (detailed below). Specifically, the project aims to significantly increase the number of rural households transacting through structured or formal markets such as Farmer Producer Organizations (FPOs), co-operative societies, and enterprises. By the end of the project, at least 40,000 rural households (more than 50% of targeted households) are expected to be engaged in formal market transactions.

### **Outcome 1.1: Households engaged in transactions with structured or formal markets**

- *Output 1.1.1: Improved market access for agriculture, horticulture and livestock products*
52. **Description:** Sub-component 1.1 (Market Infrastructure) of FOCUS 2.0 aims to address a foundational bottleneck in Mizoram's agriculture and allied sectors: the lack of structured and value-chain-aligned market infrastructure. Despite significant production of high-value commodities such as ginger, turmeric, Mizo chilli, banana, broom grass, and horticultural fruits, the state's market ecosystem remains fragmented due to dispersed production, challenging terrain, and limited access to aggregation and trading points. This sub-component proposes a tiered hub-and-spoke infrastructure model to connect producers to markets, reduce post-harvest losses, and enhance participation in local and inter-state value chains. By investing in Collective Marketing Centres at the village level, Farmers' Markets at the block level, and multi-functional Value Addition Hubs at the district level, the project seeks to improve producer margins, enable private sector engagement, and create inclusive market eco-systems that benefit both supply- and demand-side actors.
  53. **Activities:** Under Component 1.1, the project will invest in a tiered climate resilient market infrastructure system designed to connect producers with both local and external markets through an integrated hub-and-spoke approach. This includes the development of Collective Marketing Centres (CMCs), block-level Farmers' Markets, district-level Value Addition Hubs, and a detailed feasibility and design study to ensure that infrastructure investments are demand-driven, spatially efficient, and aligned with commodity flows and market potential. Together, these interventions aim to strengthen last-mile aggregation, facilitate all season connection with market, improve producer-buyer linkages, and catalyze private sector participation across the value chain. Key activities include:

- **Feasibility Study and Market Infrastructure Planning:** District and block-level assessment to identify infrastructure gaps, map production clusters, and avoid duplication with existing warehouses and facilities through convergence with relevant departments.
- **Establishment of 300 Collective Marketing Centres (CMCs):** First-point aggregation facilities at the village/cluster level, equipped with basic infrastructure such as weighing scales, tarpaulin, and grading tables, managed by Village Councils, SHGs or FPOs.
- **Construction of 13 Block-level Farmers' Markets:** Semi-wholesale and retail markets with infrastructure for vegetables, fruits, eggs, and livestock sales; complying with all the necessary safeguards as per local and national compliances, and storage, located near key transport corridors.
- **Development of 5 District-Level Value Addition Hubs:** <sup>[31]</sup> Multi-functional hubs equipped with facilities for second order value addition, bulk aggregation, grading, drying, packaging, cold storage, and incubation/training, operated by FPOs/private players under PPP.
- **Establishment of Poultry Slaughter and Processing Facility in Aizawl (Aibawk Block):** Development of a centralized poultry slaughter, chilling, and processing facility under a PPP model, with capacity for 500–1,000 birds/day, providing market access to broiler farmers, supporting food safety regulations, stabilizing producer prices, promoting organized waste management, and enabling expansion of value-added poultry supply chains across Mizoram.
- **Construction of 300km of link roads as first-mile connectivity:** Improving connectivity between production clusters (Zaus) to CMCs (including suspension bridges and ropeways where needed)

54. Table 6: Component 1.1 Output Indicators and Targets

| Output Indicators                                                                                                                                   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Target                                                   |
|-----------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------|
| Collective Marketing Centres (CMCs) established at village/cluster level<br><i>(In Logframe: "Marketing facilities constructed/ rehabilitated")</i> | CMCs will act as the first-point aggregation facilities at the farmgate level, ranging between 500 to 1,000 sq. ft. These centres will be strategically located in clusters with over 100 households. Managed by Village Councils (VCs) or Farmer Producer Organizations (FPOs), they will be equipped with essential infrastructure like weighing scales, tarpaulins, and grading tables to facilitate quality sorting, transparent transactions, and collective sales. | 300 CMCs constructed and operational across key villages |
| Block-level Farmers' Markets constructed and operational<br><i>(In Logframe: "Storage facilities constructed/ rehabilitated")</i>                   | Farmers' Markets will serve as semi-retail and wholesale markets, strategically located along transport corridors such as State and National Highways. These markets will support intra-state trade of perishables and livestock and will include amenities such as storage facilities, drainage, sanitation, livestock sections, and parking zones. They will also act as supply nodes to urban centres like Aizawl and relay commodities to higher market tiers.       | 13 Farmers' Markets constructed (1 per 2 blocks)         |

| Output Indicators                                                                                                                | Description                                                                                                                                                                                                                                                                                                                                                                                                                                 | Target                                                                                   |
|----------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------|
| Multi District-level Value Addition Hubs established<br><i>(In Logframe: "Processing facilities constructed/ rehabilitated")</i> | These district-level hubs will serve as centralized platforms for bulk aggregation, value addition (drying, slicing, cold storage, packaging), and institutional marketing. They will also host incubation activities and training, and act as points for private sector engagement. Operated under a Public-Private Partnership (PPP) model, they will be managed by high-performing FPOs or private enterprises through lease agreements. | 5 district-level Hubs constructed and managed by FPOs/private players                    |
| Catalytic investment in scalable models for hub expansion                                                                        | The five hubs established under FOCUS 2.0 will serve as demonstration models, catalysing further investment. The project aims to scale these hubs to all 11 districts through convergence with other schemes (e.g., central government or Northeast Council).                                                                                                                                                                               | Model hubs in 5 high-potential districts, expansion to all districts through convergence |
| Farm link roads and last-mile connectivity developed<br><i>(In Logframe: Length of roads (km))</i>                               | To ensure seamless movement of produce from farms to markets, the project will invest in approximately 300 km of farm link roads, including earthen roads, bridges, and ropeways. These will connect production clusters (Zaus) to CMCs and higher-tier markets.                                                                                                                                                                            | 300 km of farm link roads and connectivity infrastructure developed                      |

55. *Phase II Improvements:* FOCUS 2.0 responds to gaps in downstream market integration, issues of up-scaling, and misalignment between production geography and infrastructure planning by redesigning the market ecosystem based on a hub-and-spoke model with clearer institutional roles, private sector engagement through leasing arrangements, and a strategic infrastructure investment approach that prioritizes access, functionality, and connectivity. Key changes include:

- Linking production clusters (IFCs) or Zaus to market-integrated infrastructure
- Hub-and-spoke model for infrastructure
- Public-Private Partnership (PPP) for infrastructure management
- Clear leasing authority and asset ownership structure
- Commodity prioritization and location planning based on data and demand
- Stronger first-mile connectivity
- Integrated livestock infrastructure
- Connect farmers with markets in all seasons

56. These enhancements reflect a shift toward commercialisation, value chain integration, improving resilience to seasonal climatic impacts, and sustainability, ensuring that public investments in infrastructure unlock tangible benefits for both producers and market actors.

### **Outcome 1.2: Employment opportunities created by project supported enterprises**

- *Output 1.2.1: Rural producer organization supported to engage in profitable value chains*
- *Output 1.2.2: Improved capacity of enterprises to engage in profitable value chains*

57. *Description:* The primary objective of Component 1.2 is to foster the development of a vibrant, market-oriented rural enterprise ecosystem that operationalizes and sustains the market infrastructure created under Component 1.1. The sub-component aims to enhance the commercial capacities of Farmer Producer Organizations (FPOs), Self-Help Groups (SHGs), Multipurpose Primary Agricultural Credit Cooperative Society (M-PACs), rural entrepreneurs, and other community institutions to drive aggregation, value addition, processing, and market linkages. Specifically, Component 1.2 will: (i) strengthen the institutional and operational capacity of rural community organizations to manage Collective Marketing Centres (CMCs), Farmers' Markets, and District Hubs under performance-based agreements; (ii) support preferably youth- and women-led rural enterprises through structured incubation and co-investment grants, promoting innovations in digital solutions, agri-processing, logistics, and marketing; (iii) facilitate the aggregation, processing, and marketing of diversified production surpluses generated under Component 2, ensuring seamless integration between production and markets; (iv) promote partnerships between rural enterprises and private sector actors to enhance market penetration, quality standards, and business development; and (v) Increase the volume and value of agricultural products processed and marketed through structured value chains, leading to enhanced rural incomes and expanded inter-state trade opportunities

58. *Activities:* Under Component 1.2, the project will invest in building a vibrant rural enterprise ecosystem that operationalizes and sustains the market infrastructure developed under Component 1.1. This will be achieved by supporting and strengthening of Farmer Producer Organizations (FPOs), Self-Help Groups (SHGs), Multi-Purpose Agriculture Cooperatives (M-PACs), and rural entrepreneurs engaged in priority value chains. Enterprise support will be closely aligned with the commodity prioritization conducted during project design and further refined through a detailed block-level intercropping and production system study under Component 1.1. Integrated crop-livestock enterprises will be promoted to maximize value capture at the community level. Key activities include:

- Selection and Performance-Based Engagement of FPOs
- Technical Support Providers (TSPs) Deployment
- Enterprise Strengthening and Institutional Development
- Provision of Blocked Grants for Enterprise Investment
- Incubation Fund for Rural Entrepreneurs
- Promotion and Facilitation of GI Branding (Post-Midterm)
- GI-based Branding, Packaging, and Eco-Certification (Post-Midterm)
- Facilitation of Private Sector Linkages
- Enterprise Monitoring and Performance Evaluation

59. The activities follow an overall path of: Selection → Capacity → Financing → Branding → Market Linkages → Performance Tracking.

60. **Table 7: Component 1.2 Outputs and Targets**

| Output                                                                                                        | Description                                                                                                                                                             | Target                                                                                     |
|---------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------|
| Beneficiaries with new jobs/employment opportunities<br>(In Logframe: "CI 2.2.1" and related indicators)      | Rural jobs created through incubation-supported enterprises and market ecosystem investment                                                                             | 4,000 new jobs (of which 2,000 women, 600 youth, 4,000 Indigenous Peoples)                 |
| Rural producer organizations supported<br>(In Logframe: "CI 2.1.3" and related indicators)                    | Rural Producer Organizations (FPOs, M-PACs, SHG federations) mobilized for value chain aggregation and commercial activities linked to CMCs, Farmers' Markets, and Hubs | 5 RPOs supported, comprising 2,500 members (50% women; 30% youth; 100% Indigenous Peoples) |
| Rural enterprises accessing business development services<br>(In Logframe: "CI 2.1.1" and related indicators) | Rural enterprises (MSMEs, youth/women entrepreneurs) accessing business services such as incubation, marketing, and product development                                 | 40 enterprises supported with tailored business development services                       |

61. *Phase II Improvements:* FOCUS revealed critical gaps between infrastructure and enterprise development, with weak integration between production clusters (e.g., Zaus) and market facilities. Value chain development remained fragmented due to limited aggregation models and weak business capacities among FIGs and FPOs. While some innovations, like Mizo Chilli processing, showed promise, broader enterprise support was introduced too late to scale effectively. FIGs lacked commercial viability without scale, and FPOs received delayed, short-term support, limiting their sustainability. Moreover, farmers transitioning from jhum to settled agriculture increasingly required organized, market-facing institutions and stronger post-harvest and processing systems. These lessons have directly shaped Subcomponent 1.2, which now focuses on strengthening rural enterprises, early FPO support, and integrated value chains. Key changes include:

- Enterprise-Centric Approach
- Structured Enterprise Support Instruments Co-Riding with Private Sector (blocked grant financing; incubation grants).
- Competitive Selection of Entrepreneurs
- Stronger Focus on Value Chain Commodities
- Direct Linkages to Production Clusters
- Aggregation and Scale
- Market Infrastructure Utilization
- Private Sector Partnerships

### **Outcome 1.3: Improved access to rural financial and digital services**

- *Output 1.3.1: Increased coverage of financial service providers in project areas*

62. *Description:* Component 1.3 of FOCUS 2.0 (Financial and Digital Ecosystem) strengthens the enabling environment to support the enterprise and market development (Components 1.1: (Market Infrastructure and 1.2: Enterprise Development). Components 1.1 and 1.2 build the physical and institutional foundations for value chain growth, while Component 1.3 addresses critical barriers to financial inclusion, digital readiness, and risk management. It equips rural actors with essential tools like credit access,

insurance mechanisms, and digital systems to enable them to operate effectively. Through financial literacy initiatives, ICT-supported beneficiary profiling, and piloting of innovative financial products, this subcomponent ensures that rural producers and enterprises are not only linked to markets but also empowered to participate in them meaningfully and sustainably.

63. *Activities:* Under Sub-component 1.3, the project will strengthen the financial and digital ecosystem to support the commercialization of rural value chains developed under Components 1.1 and 1.2. This activity is closely aligned to the Virtually Integrated System To Access Agricultural Resources (VISTAAR) scheme launched by the Government of India to digitize and modernize agricultural extension services, the implementation of which is still in the very nascent stages in Mizoram. This subcomponent expands access to finance, insurance, and digital services for FPOs, SHGs, M-PACs, Zaus, livestock producers, and rural entrepreneurs. Activities include development of a project-linked credit window, credit facilitation for KCCs, insurance pilots, digital profiling, and targeted training in financial and digital literacy. These efforts will be tailored to priority commodities and integrated farming systems and delivered through partnerships with financial institutions and specialized Technical Support Providers. Key activities include:

- Project-Linked Credit Window through Mizoram Rural Bank (MRB)
- Kisan Credit Card (KCC) Facilitation through Bank Sakhis
- Digital Profiling of Producers and Enterprises (Digital MIS for Market Infrastructure Enterprises)
- Financial Literacy and Digital Finance Capacity Building
- Design and Piloting of Customized Insurance Products
- **Entry Point Activity:** Digital Information Access Point (screen/TV with internet connectivity) in each target village (INR 100,000).[\[32\]](#)

64. **Table 8: Component 1.3 Outputs and Targets**

| Output                                                                                                                                  | Description                                                                                                                                                      | Target                                                                |
|-----------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------|
| Households reporting using rural financial services<br>(In Logframe: "CI 1.2.5" and related indicators)                                 | Households actively using formal financial services such as savings, loans, digital wallets, and insurance products through project facilitation                 | 12,000 households (16% of total, covering approx. 24,000 individuals) |
| Financial service providers supported<br>(In Logframe: "CI 1.1.6" and related indicators)                                               | Partner banks, MFIs, and digital service providers engaged to design and deliver outreach strategies, financial products, and services tailored to rural clients | 3 financial service providers supported                               |
| Persons trained in financial literacy and/or use of financial products and services<br>(In Logframe: "CI 1.1.7" and related indicators) | Rural community members, especially women, youth, and IPs, trained in understanding and using formal financial and digital tools                                 | 700 persons trained (50% female, 30% youth, 100% Indigenous Peoples)  |

65. *Phase II Improvements:* Under FOCUS, financial inclusion, insurance uptake, and digital literacy among rural producers remained limited, constraining enterprise growth and resilience. Credit linkages either did not work or were absent, insurance products were poorly adopted, and digital profiling systems were absent, making it difficult to track and support value chain actors. These gaps are now addressed through structured financial empowerment (literacy, credit linkages, etc.), risk management (insurance products), and digital integration. Key changes include:

- Project-Linked Credit Window through Mizoram Rural Bank (MRB)
- Integration of Insurance into Value Chain Development
- Systematic Kisan Credit Card (KCC) Facilitation
- Digital Profiling of Producers and Enterprises
- Financial Literacy and Digital Finance Capacity Building

#### 2.4.2 Component 2: Agricultural Productivity and Climate Resilience

66. The objective of Component 2 is sustainably improved productivity of crop and livestock products, and increased incomes of agriculture households. Together with component 1.0, it is structured to provide comprehensive support to farming households

to: (i) perform demand-driven, sustainable<sup>[33]</sup> enhancement of climate-resilient crop and livestock production;<sup>[34]</sup> (ii) improve access to markets and increase value addition of crop and livestock products; and (iii) promote enterprise development and access to finance.

**Outcome 2.1: Sustainable intensification of climate-resilient agricultural production and increased crop productivity**

- Output 2.1.1: Area supported for climate-resilient agricultural production and increased crop productivity
- Output 2.1.2: Digital extension services strengthened

67. *Description:* Sub-component 2.1 of FOCUS 2.0 aims to sustainably enhance climate-resilient agricultural production and increase crop productivity. It focuses on increasing crop productivity through the sustainable intensification of climate-resilient agriculture, anchored in a landscape-based approach to land and water management. The subcomponent promotes coordinated cropping within targeted clusters (*Zaus*), where investments in soil health, water conservation, and natural resource rehabilitation are integrated with support for improved farming practices. By restoring and preserving the ecological functions of farming systems, this subcomponent aims to enhance agricultural output while safeguarding the long-term viability of the land, biodiversity, and local ecosystems

68. *Activities:* Under sub-component 2.1, climate resilient crop production will be enhanced in the area through land development for non-zau households; and development of Zaus (Phai Zau (lowlands) and Zo Zaus (uplands)) for selected resource poor and vulnerable farming households. Land development for non-zau households will be done through levelling, bunding and application of soil amendments to reduce acidity and will focus on mid and uplands to ensure in situ soil and moisture conservation which will enable more secure crop production. In addition, they will be part of Farmer Field Schools, that are conducted with Zau groups to learn and adopt agro-ecological farming techniques and will receive digital extension messages and response to queries. Development of Zaus: Zaus are contiguous patches of land (15-30 Ha.) that will be supported with bunding/terracing, irrigation and bund plantation and will be operated on the "small-farmer-big-field" concept of growing only 2-3 crops in a season in a synchronized manner to reach scale of production to enable easier access to markets and reduce risks. Catchment area that supplies water to the zau for irrigation will be treated with appropriate soil and water conservation measures to sustain water flow.

69. **Table 9: Component 2.1 Outputs and Targets**

| Output (Indicator)                                                                                                                                                       | Target                                  |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------|
| Land brought under climate-resilient management (ha) <sup>[35]</sup> (In Logframe: CI 3.1.4)                                                                             | 18,550                                  |
| Area under Agriculture Intensive Clusters (Zau) production (ha)<br>(In Logframe: "Land brought under new Zau clusters" and "Area supported under existing Zua clusters") | 16,500<br>[4,500 new + 12,000 existing] |
| Number of households covered under Zaus<br>(In Logframe: "Land brought under new Zau clusters" and "Area supported under existing Zua clusters")                         | 21,000<br>[9,000 new + 12,000 existing] |
| Number of Zau groups set up <sup>[36]</sup>                                                                                                                              | 700                                     |
| Area developed outside of Zau clusters (ha) (in Logframe as written)                                                                                                     | 10,000                                  |
| Number of farmers reached with agricultural advisory services through digital platforms (in Logframe as written)                                                         | 30,000 (of which, 50% women, 30% youth) |

70. *Phase II Improvements:* Experience from FOCUS highlighted that NRM activities are impactful only when linked to livelihoods, and that land development and input support must be paired with intensive training, technical assistance, and access to finance. Productivity and market access improved when farmers were organized into synchronized production clusters, such as the successful IFS-CADA model<sup>[37]</sup>, which informed the Government's Zau-based *Bana Kaih* policy. Land allotment through group models proved more acceptable to Village Councils. Sustainable irrigation and community asset management require collective action and strong group cohesion. External input adoption was limited due to cost, risk aversion, and poor access in remote areas. The project also learned that engaging through established SRLM institutions (e.g., CLFs, VOs) and investing in dedicated Zau Resource Persons (ZRP) is more effective than working directly with individual FIGs. Key changes include:

- Linking NRM to Livelihoods

- Focused Interventions through Land Development and Zaus
- Providing Intensive Support for Zau Groups
- Promoting Local, Agro-Ecological Inputs
- Adapting Agro-Ecology for Mizoram's Non-Cattle Context
- Identifying & Engaging Village-Based Zau Resource Persons (ZRP)
- Utilizing Farmer Field Schools and Digital Extension Pilots <sup>[38]</sup> Leveraging SRLM Institutions for Zau Support

## **Outcome 2.2: Improved production of market-oriented livestock products**

- *Output 2.2.1: Increased capacity of households to manage livestock production*

71. *Description:* Sub-component 2.2 aims to enhance environmentally sustainable livestock production by supporting pig breeding, backyard and broiler poultry, goat and egg production, disease management (especially African Swine Flu (ASF)), natural resource management (fodder, water) and first-mile service delivery (building on existing institutions/service providers). This subcomponent plans to reach 35000 HH engaged in livestock rearing to enhance their income and capacity for sustainable production. The project will work with the larger goal of capacity enhancement of the state to produce and provide wholesome, adulteration-free livestock products to consumers. The project activities will not only enhance climate resilience to the agrarian family income but also contribute largely to food and nutrition.
72. *Activities:* Under sub-component 2.2, livestock production will be enhanced in the area by supporting the enabling environment for (livestock) production and providing production support activities for pork, broiler poultry, goat meat, and eggs. Activities pertaining to the creation of market access & incubation support for animal husbandry activities are covered under Component 1. On the livestock production side, key activities include:
- Enabling environment support for pig production via: Boar Semen Stations, Disease Management Systems (including ASF), supports for pig-rearing households for biosecurity/hygiene measures, and support to piggery households on feeding management.
  - Production support activities for pork, broiler, goat meat and eggs

### **73. Table 10: Component 2.2 Outputs and Targets**

| Indicators                                                                              | Target    |
|-----------------------------------------------------------------------------------------|-----------|
| Number of brown eggs produced annually through project-supported layer farms            | 5,670,000 |
| Percent of Artificial Insemination (AI) resulting in successful delivery of piglets (%) | 70%       |
| Number of piglets born through AI (number)                                              | 350,000   |
| Number of HH supported with Pig Rearing (breeding, fattening, and AI services)          | 35,000    |
| Number of HH supported with poultry bird rearing (layer and broiler)                    | 2,300     |
| Number of HH supported with goat rearing (breeding and fattening)                       | 400       |
| <b>Additional Activity Indicators for Physical Progress Reports (not in Logframe)</b>   |           |
| No of HH benefited by the General Support for Supplements and ASF tool kit              | 35,000    |
| No of HH benefited by Boar Semen Station                                                | 35,000    |
| No of Pig Breeding HH                                                                   | 700       |
| No of Pig Fattening HH                                                                  | 7000      |

| Indicators                                            | Target |
|-------------------------------------------------------|--------|
| No of HH Benefited by the Poultry Processing Facility | 1500   |
| No of HH engaged in Broiler Production                | 1400   |
| No of HH engaged in Brown Egg Production              | 900    |
| No of Boar Semen Station functional                   | 12     |
| No of Satellite Boar Semen Storage Functional         | 20     |
| No of AI Technicians trained                          | 88     |
| No of CAHW functional                                 | 350    |

74. *Phase II Improvements:* FOCUS highlighted the need for robust risk mitigation against ASF, including local surveillance, safe disposal, and insurance-backed recovery for pig farmers. It demonstrated the potential of Boar Semen Stations as revenue-generating enterprises and the importance of integrated value chain approaches for backyard poultry, pig, and goat rearing. ASF outbreaks underscored the need to diversify into alternative meat sources like poultry and goat. The project also invested in building knowledge through extensive farmer training and developed a lasting network of Community Animal Health Workers (CAHWs), including women, to deliver last-mile veterinary services. Key changes include:

- Piloting the production of brown eggs and goat meat production at the community level for scaling
- Improving the status of pork production, through 700 in-state breeders (28,000 piglets annual supply)
- Strengthening the state's Pig Artificial Insemination (AI) network
- Enhancing the capacity of the state to handle ASF, with initiatives at the village level to the apex level.

75. Market-related improvements are covered under Component 1 (e.g. enhancing the market access for the livestock farmers; increasing private partnership in meat processing, input production like feed, and chicks through incubation support; scaling the production of broiler meat through farming, slaughter and processing facilities).

76.

## 2.5 Sustainability, Scaling Up and Exit Strategy

77. FOCUS 2.0 is designed with a strong emphasis on long-term sustainability, institutional ownership, and scalability of results. Beyond achieving time-bound outputs, the project aims to embed resilient systems, strengthen local institutions, and create scalable models that can inform future programs in Mizoram and beyond. This chapter outlines the strategy for sustaining project results, handing over responsibilities, and scaling up successful models beyond the duration of IFAD financing.

### 78. Project Outcomes Linked to National Policy Goals:

79. FOCUS 2.0 is closely aligned with the development priorities of the Government of Mizoram, including the Bana Kaih (Handholding Policy), the Zau cluster policy for agricultural intensification, and convergence with centrally sponsored schemes such as PMKSY, RKVY, and the National Livestock Mission. These alignments ensure that the project contributes directly to long-term government programmes and policy frameworks, extending impact beyond the project's duration. Institutional integration is reinforced through the Project Steering Committee (PSC) and district-level platforms, which include key line departments and provide a mechanism for coordinated implementation.

### 80. Sustainability of Results and Handing-Over Strategy:

81. The project avoids a “*build-then-handover*” model by ensuring early and continued community ownership of all interventions. Specifically, project-financed assets and services are developed through participatory processes, with clear plans for community-led management and cost recovery. Key sustainability elements include:

- Zau clusters institutionalized as operational units for production and market coordination, supported by trained Zau Resource Persons (ZRPs).
- Livestock service systems, including Boar Semen Stations, Community Animal Health Workers (CAHWs), and Artificial

Insemination (AI) technicians, structured around community-based models with linkages to the Department of Animal Husbandry and Veterinary (AH & Vety).

- Market infrastructure, including Collective Marketing Centres (CMCs), Farmers' Markets, and Hubs, operated through public-private or community-managed models with built-in business and maintenance plans.
- Capacity development of farmer groups, producer organizations, and local service providers embedded throughout implementation to ensure ownership, continuity, and skills transfer.
- Use of technology and digital systems to enhance productivity and reduce scaling costs.

82. *Operations and maintenance (O&M) responsibilities are assigned from the outset, with handover embedded in the planning and construction processes.*

### 83. **Scaling-Up and Scaling-Out Strategy:**

84. Scaling will occur both vertically—through integration into policy and public budgets—and horizontally, by replicating successful models across districts. Scaling efforts will follow three pathways:

- **Policy mainstreaming:** Successful models (e.g., *Zaus*, Small Farmers–Large Fields, livestock clusters) will be integrated into state guidelines and sector programs.
- **Budgetary replication:** Convergence with existing government schemes will facilitate continued financing for project-initiated interventions.
- **Knowledge dissemination:** Lessons learned will be documented and shared through M&E, knowledge platforms, and partnerships with research institutions, allowing wider uptake.

85. Digital systems developed under the project, such as beneficiary profiles, digital service records, and enterprise tracking, will enhance the government's ability to monitor and scale similar initiatives beyond project financing.

86. **Institutional Strengthening for Long-Term Impact:** The project is implemented through the Society for Climate Resilient Agriculture in Mizoram (SCRAM), housed within the Planning and Programme Implementation Department. Leadership from a Chief Project Director (IAS) enables cross-sectoral coordination and convergence. The institutional arrangements are designed not only for project delivery but also for long-term rural development planning and execution by the Government of Mizoram. By embedding ownership across all levels (i.e.: government, community, and private sector), FOCUS 2.0 establishes durable systems and capacities to sustain and expand its impact long after project closure. *The project's exit strategy rests on three pillars: institutionalisation of models within state systems, financial sustainability through convergence and cost-sharing, and community ownership supported by trained local cadres and service providers.*

## 2.6 Project financing

### 87. **Project Costs**

88. The project costs were developed in close consultation with staff of the state government and all other stakeholders of the project on the basis of a(n): (i) 6-year project implementation period from FY 2025/26 to FY 2030/31; (ii) local inflation rate of 4%, which was used to compute the price contingencies<sup>[39]</sup>; (iii) current exchange rate of INR 85.5 for 1 US\$; (iv) 18% tax for most of the cost items; and (v) physical contingency rate of 2%. Expenditure and Disbursement Accounts are in line with the IFAD standardization of expenditure categories based on circular IC/FOD/02/2013.

89. The total project cost, inclusive of taxes and duties, amounts to US\$ 87.4 million over a six-year implementation period. All costs are estimated based on currently prevailing prices in Mizoram, India. Project costs are presented by component in Table 11. Project financing, including 5% contingencies by component, are: US\$ 22.7 million for Component 1 – Market access and enterprise development (26.0 percent of project costs); US\$ 49.3 million for Component 2 – Agricultural productivity and climate resilience (56.4 percent of project costs); and US\$ 15.4 million for Component 3 – Project Management, Convergence and Knowledge Management.

90. **Table 11: FOCUS 2.0 costs by component (and subcomponents) and financier (US\$ thousands)**

|                                                                    | Govt. of Mizoram |             | IFAD          |             | Beneficiary Contribution |            | Centrally Sponsored Schemes |             | State Sponsored Schemes |            | Banks        |             | Financing Gap |             | Total         |              |

91. An IFAD loan will finance US\$ 45.78 million (52.3%) of the total project costs. The counterpart funding by the Government of

Mizoram is US\$ 14.46 million (16.5%), and the beneficiary contribution is US\$ 2.87 million (3.3%). The project will leverage US\$ 6.96 million (8.0%) from formal financial institutions. Key schemes will be leveraged through convergence, including (but not limited to): MGNREGA, RKVY, PMKSY, and NRLM (etc.). The total convergence leveraged will be 6.15 million (7.0%) through the centrally and state sponsored schemes. It should be noted that the current financing estimates include a financing gap of US\$ 11.21 million (12.8%) as compared to estimates in the Project Concept Note (PCN). Mizoram plans to bridge this gap progressively through a mix of sources, including: (i) State counterpart funds, (ii) Centrally- and State-sponsored schemes (CSS/SSS), (iii) Domestic institutions like NABARD, (iv) Regional grants (e.g., NEC), and (v) Possibly additional IFAD financing through future PBAS allocations. The filling of the financing if through IFAD PBAS during implementation will be determined subject to internal procedures and subsequent Executive Board approval. Inclusion of this financing gap in the PDR provides the necessary flexibility for resource mobilisation without requiring restructuring of the project.

93. The project components and subcomponent cost distributed annually over the project period is presented in Table 13. The 1st year takes 13.2% of the budget and the 6th year 4.0%. By midterm of the project in FY 2027/28 the budget is expected to have disbursed in range of 72.5% of the total costs.

| 2. M&E and Knowledge Management                                    | 708           | 621           | 265           | 134           | 103          | 385          | 2,216         |
| <b>Subtotal</b>                                                    | <b>2,789</b>  | <b>2,689</b>  | <b>2,392</b>  | <b>2,483</b>  | <b>2,352</b> | <b>2,697</b> | <b>15,400</b> |
| <b>Total PROJECT COSTS</b>                                         | <b>11,575</b> | <b>22,725</b> | <b>29,124</b> | <b>14,307</b> | <b>6,185</b> | <b>3,537</b> | <b>87,453</b> |

95. Project financing/co-financing strategy and plan:

96. The project is planned to be implemented over a six-year period. The project estimated cost is US\$ 87.45 million, including US\$ 45.78 million (52.3%) from IFAD financing, US\$ 14.4 million (16.5%) from Government Counterpart funds investment, USD 2.87 million (3.3%) from beneficiary contribution, US\$ 6.16 million (7.0%) from other convergence (centrally sponsored and state sponsored schemes of line departments) and US\$ 6.96 million (8.0%) from formal financial institutions. Additionally, a financing gap of US\$11.21 million (12.8%) will be addressed during the project implementation. The project's legal documents will include retroactive financing provisions for an approximate US\$ 1 million to finance consultancy contracts from February 1, 2025 until entry into force. Consultants will prepare AWPB and other procurement documents for the initial year of program activities. In addition, consultants will be responsible for other arrangements necessary to start program activities immediately after entry into force of the program.

97. Disbursement:

98. The GoM will pre-finance project expenditures. On a quarterly basis, the project will submit WAs to IFAD via Federal MOF to reimburse IFAD's share of project expenditures. Additionally, the option to advance to the Designated Account (DA) will be available if the project requires advances from IFAD. In this instance, the project will submit Withdrawal Applications (WAs) to replenish the DA quarterly, based on cash forecasts for the upcoming two quarters, adjusted for the quarter end cash balances.

99. Pre-financing and Designated Accounts/Project Accounts:

100. Government of Mizoram will pre-finance project expenditures and request reimbursement from IFAD every quarter. DEA/CAAA (MoF) will maintain the project Designated Account (DA) at the federal level and use it to transmit funds from IFAD. A Project Account (PA) will be maintained by FOCUS 2.0 PIU in a commercial bank operating in Mizoram with existing online banking services. FOCUS 2.0 PIU will have a specific sub-account of the PA for each DPIU. Once all supporting documents sent by project partners are approved by Chief Project Director (CPD) or DPIU Manager, the FOCUS 2.0 PIU or DPIUs will release funds from centralized PA account/sub-account. There will be no advances to line departments.

#### 101. Cost categories:

102. The FOCUS 2.0 will have (i) Works, (ii) Consultancies and Training, (iii) Equipment and Materials, (iv) Grants and Subsidies and (v) Operating costs, including Salaries and Allowances categories. For the IFAD loan, the ratio of recurrent expenditures to total IFAD project financing is 11.5 percent, which is within the 15 percent limit. The project management costs are 10.1 percent of the total costs, which is also within the recommended threshold of 15%. Experience from FOCUS phase 1 implementation (covering 272 villages across 6 districts) has shown that significantly higher project management costs are required to effectively reach villages in Mizoram. Under FOCUS phase 1, project management expenses accounted for 23.4% of the IFAD loan and 37.8% of the Government of Mizoram's counterpart contribution.

#### 103. Interim Financial Reporting (IFR):

104. Report-based disbursement modality will be applied to request funds from IFAD. The FOCUS 2.0 PIU will submit consolidated quarterly IFRs within 30 days from the end of the relevant quarter. CAAA (MoF) will submit a WA for reimbursement for the IFAD's share of the amount spent each quarter.

105. At the request of the GoM, a sum equivalent to US\$ 1.0 million is provisioned as retro-active financing for meeting the following specific expenditures that are related to the project: (i) undertaking all preparatory works such as staff recruitment, recruitment of services providers and cost of project staff salaries; (ii) purchasing of critical office equipment for the SPIU and DPIUs; (iii) identification of agencies for developing and installing software for MIS, Tally accounting software, digital extension, etc.; and (iv) capacity building of SPIU and DPIU staff. Expenditures for retroactive financing, to be pre-financed by the government, should be pre-authorised by IFAD and will only be eligible for expenditures incurred from February 1, 2025, until project enters into force. SCRAM SPIU will have to submit a separate withdrawal application for all eligible expenditures incurred between 1 February 2025 and the date of project effectiveness. Additionally, startup advance provisions will be integrated into the project financing agreement to reduce the risk of funding shortfalls during the initial phase of project implementation.

#### 106. Supporting documentation:

107. The most recent IFRs will be attached to each WA. IFAD may ask for additional supporting documents as deemed necessary. The disbursement arrangements will be governed by the Project Financial Management and Financial Control Arrangements Letter (FMFCL) issued by IFAD.

## 2.7 Economic and Financial Analysis

108. The main direct project benefits are increased and more diversified incomes of the targeted beneficiaries in the project area from profitable and climate-resilient production systems. Specifically, this will result from: (a) improved market access through the development of marketing and storage facilities; (b) support to large scale enterprises; (c) improved and climate resilient cluster-based agriculture production; and (d) improved livestock production. A total of approximately 75,000 households will be supported through the project interventions. This includes approximately 16,000 households from the first phase of the predecessor project (FOCUS). This includes approximately 7,500 households benefiting directly from market access and enterprise development activities under Component 1. Component 1 will also include 10,000 households benefitting from improved access to agriculture credit, but these households will overlap with production activities under Component 2. Component 2 will benefit 41,000 households through land development and cluster-based approaches and another 35,000 households through livestock promotion activities. Given that the rural population of Mizoram is approximately 110,000 households, it is expected that the project will reach out to approximately 70 percent of these rural households, with many households receiving support from multiple interventions.

109. Based on the above outreach numbers, the economic analysis is based on representative farm and enterprise models that include crop models for the cluster and non-cluster beneficiaries, livestock models for pig breeding and pig rearing, goat breeding, broiler and layer poultry, enterprise models for value addition and individual enterprises. These farm models cover the different practices across the various project districts and have been collected using data from the respective line departments. Using the results of the one-hectare budgets, gross margins were calculated for each of the models in the with-project and without-project situation. Further, to calculate the annual stream of incremental benefits, the analysis makes additional assumptions regarding the phasing of project benefits. The analysis shows that there would be an adoption rate of 60 percent, to account for any drop offs in the long term. The detailed results have been presented in Annex 5 (EFA), and a summary of the financing models and their benefits are presented Table 14.

#### 110. Table 14: Summary of Key Financial Models under FOCUS 2.0

| Sl. No. | Description | Investment areas | Total Investment per unit (INR) | Incremental annual returns per unit (INR) | Outreach (HH) | Other benefits |
|---------|-------------|------------------|---------------------------------|-------------------------------------------|---------------|----------------|
|         |             |                  |                                 |                                           |               |                |

|    |                            |                                                             |            |            |        |                                                                                                      |
|----|----------------------------|-------------------------------------------------------------|------------|------------|--------|------------------------------------------------------------------------------------------------------|
| 1  | Hubs                       | Machinery, working capital                                  | 11,500,000 | 7,505,000  | 5      | Full time job opportunities of at least 10 jobs per enterprise/hub                                   |
| 2  | Enterprises                | Machinery, working capital                                  | 3,500,000  | 831,000    | 40     |                                                                                                      |
| 3  | Market access through FPOs | Working capital                                             | 5,000,000  | 1,503,372  | 1,000  | Market access to at least 1,000 farmers per FPO including reduction in losses along the supply chain |
| 3  | Poultry slaughter          | Machinery, working capital                                  | 18,460,000 | 8,787,000  | 1      | Market access to 1500 farmers                                                                        |
| 4  | Boar semen stations        | Human Resource, Machinery, elite boars & working capital    | 10,040,000 | 12,618,400 | 12     | AI services to 35,000 HHs                                                                            |
| 5  | Pig breeding               | Shed, sow                                                   | 250,500    | 98,675     | 700    | Improved supply of pig meat, Promotion of biosecurity against ASF                                    |
| 6  | Pig fattening              | piglets                                                     | 68,000     | 29,080     | 7,000  |                                                                                                      |
| 7  | Goat breeding              | Shed, doe                                                   | 171,000    | 105,500    | 400    | Supply of kids, support to steep land stabilisation in steep areas                                   |
| 8  | Poultry - layer            | Housing, chicks, feed (working capital)                     | 178,500    | 105,500    | 900    | Improved supply of local meat and eggs                                                               |
| 9  | Poultry - broiler          | Housing, chicks, feed (working capital)                     | 218,400    | 117,500    | 540    |                                                                                                      |
| 10 | Non - Zau                  | Land stabilisation                                          | 25,000     | 35021      | 20,000 | Climate resilience, land degradation mitigation                                                      |
| 11 | Zau - existing             | Land stabilisation, irrigation and water source protections | 125,000    | 90831      | 12,000 |                                                                                                      |
| 12 | Zau - new                  |                                                             | 200,000    | 74889      | 9,000  |                                                                                                      |

111. The economic internal rate of return (EIRR) of the Project over a 20-year period for the base case is 27.9 percent with a net present value (NPV) of US\$ 41.6 million at a discount rate of 12 percent. The results of the sensitivity analyses showed that only under the extreme conditions of: (a) project costs increasing by 40 percent and benefits decreasing by 40 percent; and (b) project costs increasing by 20 percent and benefits decreasing by 20 percent, along with a delay in project benefits by 2 years, does the EIRR reduce to below 12 percent i.e. becomes economically unviable.

## Chapter 3: Organisation and Management

### 3.1 Organisational set-up and Governance

112. The institutional systems and capacities established under the earlier phase of the Society for Climate Resilient Agriculture in Mizoram (SCRAM) will serve as the foundation for Phase II. Given the elevated significance of FOCUS 2.0—particularly its mandate to function as a Special Purpose Vehicle (SPV) for implementing the state's Handholding Policy (Bana-Kaih)—the Planning and Programme Implementation Department (P&PID) will serve as the lead implementing agency in this phase. Phase II

will retain the three-tier implementation structure (State, District, and Village levels), facilitating decentralized planning and ensuring effective delivery. FOCUS 2.0 further strengthens this structure with emphasis on:

- Financial management and procurement systems
- Environmental and social safeguards
- Stronger convergence mechanisms at district and community levels
- Elevating inter-departmental coordination and strategic alignment

113. The implementation framework continues to rest on two core pillars:

- **Governance** — through structured committees at the State, PIU, and District levels chaired by Government officials, ensuring policy oversight and inter-departmental alignment.
- **Management** — through the SCRAM PIU, District Project Implementation Units, and community-level bodies, ensuring decentralised, community-led implementation.

Governance mechanisms ensure policy guidance, cross-sectoral alignment, and institutional accountability. FOCUS 2.0 builds on and significantly strengthens the original governance architecture from FOCUS. In addition to the details provided here, FOCUS 2.0 organizational charts and a matrix of related responsibilities (divided by component/key activities) are provided within Chapter 4 and the Appendices of the Project Implementation Manual (PIM).

#### **State Level Governance:**

**State Level Project Steering Committee/Governing Council (GC):** At the State level, the project will be overseen by a high-level Governing Council, now chaired by the Hon'ble Chief Minister of Mizoram. The Principal Adviser-cum-Additional Secretary, Planning and Programme Implementation Department (P&PID) will serve as the Member Secretary. The membership has been significantly expanded to reinforce cross-sectoral convergence and ensure coordinated support from all relevant departments and institutions. Members will include:

- All concerned Ministers
- Vice Chairman, Mizoram State Planning Board (MSPB)
- Vice Chairman, Mizoram State Policy Coordination Committee (MSPCC)
- Adviser to the Chief Minister (Finance and Planning)
- Chief Secretary
- Finance Commissioner
- All concerned Administrative Secretaries, including the State Nodal Officer, MGNREGA, and the State Mission Director, Mizoram State Rural Livelihoods Mission (MzSRLM)

This broadened composition reflects the project's multi-sectoral approach, enabling strategic oversight, policy alignment, and institutional accountability across key focus areas such as livelihoods, infrastructure, agriculture, and natural resource management.

**Project Management Committee (PMC):** The second tier of governance, i.e., the PMC, will continue to play a central role in overseeing operational planning and implementation. The PMC will now be chaired by the Principal Adviser-cum-Additional Secretary, Planning and Programme Implementation Department (P&PID), with the Chief Project Director, SCRAM, serving as Member Secretary. The PMC is tasked with ensuring effective inter-departmental coordination for smooth programme delivery.

#### **Improvements from Phase I include:**

**Expanded Composition of the PMC:** The composition of the PMC has been broadened in FOCUS 2.0 to reflect the expanded mandate and mirror the inclusivity of the Governing Council. Members will now include:

- All concerned Heads of Departments (HoDs)
- Managing Director, Mizoram Agricultural Marketing Board
- Principal Scientist, Mizoram Science, Technology & Innovation Council
- Principal Scientist, Mizoram Remote Sensing Application Centre (MIRSAC)
- Mission Director, MGNREGA
- Chief Executive Officer, Mizoram State Rural Livelihoods Mission (MzSRLM)
- Chief Executive Officer, Mizoram Startup Mission
- Team Lead, Programme Implementation, Monitoring & Evaluation Unit, State Institute for Transformation

This expanded structure reinforces cross-sectoral collaboration and strengthens coordination between technical, innovation, market, and grassroots implementation entities.

**Strategic Participation for Policy Alignment:** To further embed the project within the state's overarching policy and planning framework, the PMC will also include representation from the Mizoram State Policy Coordination Committee (SPCC). This enhanced participation is expected to: (i) ensure stronger alignment between project interventions and state-wide development strategies, particularly the Bana-Kaih Handholding Policy; and (ii) facilitate effective convergence and coordinated implementation across sectors, especially for complex and cross-cutting initiatives.

#### **District-Level Governance:**

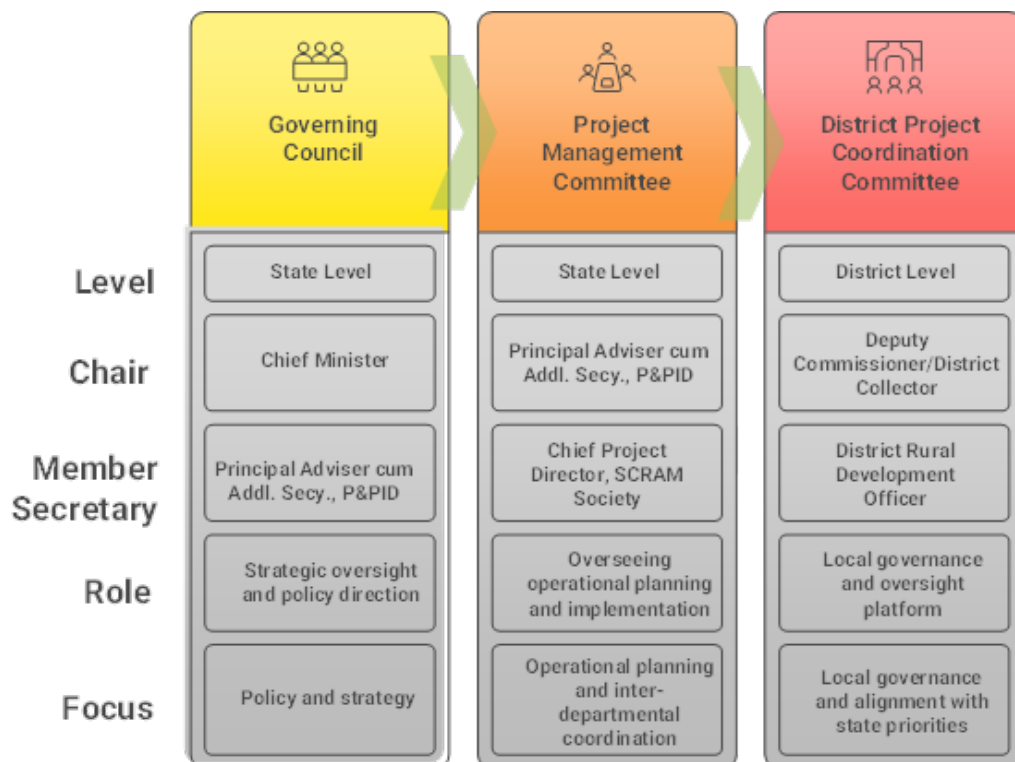

To streamline governance and reinforce convergence at the district level, the earlier District Level Coordination Committee (DLCC) will be subsumed into the existing District Planning Committee (DPC) chaired by the Deputy Commissioner. This shift eliminates the need for a separate governance layer while leveraging an established institutional platform for oversight,

alignment, and inter-departmental coordination.

The DPC will act as the primary forum for strategic review and convergence of project activities and may be convened as and when required, ensuring flexibility and responsiveness to local needs. In alignment with the broader financial ecosystem, representatives from NABARD and the Lead Bank will be invited to participate in DPC meetings, as relevant.

A key institutional best practice from Phase I—maintaining a standing agenda item for community feedback—will be continued under FOCUS 2.0. This mechanism will allow farmers and community-based organizations to share concerns and recommendations directly with district authorities, reinforcing the project's commitment to participatory planning, grassroots accountability, and adaptive delivery.

114. The overall governance structure of FOCUS 2.0 is summarized below:

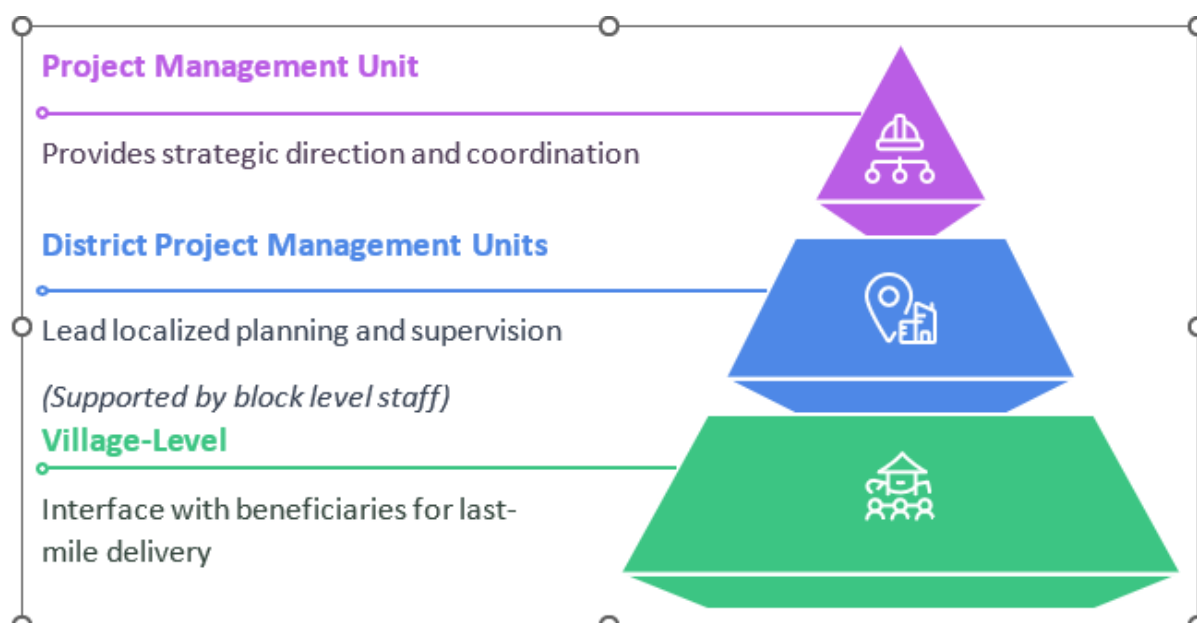

115. Figure 2: GOVERNANCE STRUCTURE

#### 116. Project Management:

117. Project management of FOCUS 2.0 covers three key functions: (i) operational planning; (ii) technical execution; and (iii) results-based monitoring. Phase II builds on the existing institutional framework by strengthening core implementation structures and clarifying leadership roles to enhance efficiency and responsiveness. Implementation follows a three-tier structure:

- **State Project Implementation Unit (SPIU)** – The SPIU will be headed by the Chief Project Director, an officer at the Joint Secretary level, and seconded by the Project Director, an officer at the Deputy Secretary level. Officers at the level of Deputy Director will be deputed from stakeholder departments through an application-based process; any vacant positions thereafter will be filled through departmental nominations. All other SPIU staff will be engaged on a co-terminus basis. The SPIU will provide strategic direction, technical oversight, and interdepartmental coordination.
- **District Project Implementation Units (DPIU)** – The DPIU will be headed by the Deputy Commissioner of the respective district and seconded by the Project Director, DRDO. DPIUs will be housed within the District Rural Development Office (DRDO) and will be supported by co-terminus project staff as well as DRDO-assigned personnel (clerical, engineering, and support staff). DPIUs will lead localized planning, implementation, supervision, and ensure convergence with district-level institutions.
- **Village-level institutions and community-based staff** – including CLFs, VOs, and Zau Resource Persons – serve as the interface with beneficiaries and ensure last-mile delivery.

118. Figure 3: Project Management Levels

119. **Executing Agency:** The Planning and Programme Implementation Department (P&PID) will serve as the lead implementing agency for FOCUS 2.0, reflecting the project's elevated role in driving cross-sectoral convergence and its alignment with state-wide development priorities. The State Project Implementing Unit (SPIU), housed within the SCRAM Society, will be responsible for day-to-day implementation.
120. Project funds—including IFAD loan proceeds, grant resources, and the Government of Mizoram's counterpart contribution—will be channelled from the state budget to the SCRAM Society, which will continue to serve as the financial and administrative conduit for project operations.
121. The SCRAM Society, through the SPIU and DPIUs, will be responsible for fund allocation, planning, execution, monitoring, and reporting, in accordance with the Project Design Report (PDR) and Project Implementation Manual (PIM). With the expanded governance structure, redefined leadership roles, and enhanced implementation capacity, FOCUS 2.0 is positioned to deliver more integrated, accountable, and results-oriented execution.

### 3.2 IFAD Supervision

122. Implementation Department, serves as the implementing agency for FOCUS 2.0. IFAD's supervision will provide both oversight and implementation support to ensure results, compliance, and alignment with government strategies and programmes.
123. **Supervision Missions:**
124. Annual Supervision Missions (SMs) will be conducted jointly by IFAD and the Government of Mizoram. These missions will assess project performance, alignment with government priorities, fiduciary compliance, safeguards, and progress against the results framework of IFAD. IFAD will field multi-disciplinary teams including technical specialists, financial management and procurement experts, safeguards, and M&E professionals. The first supervision mission will take place towards the end of the first year of implementation. Over the six-year project period, six Supervision and Implementation Support Missions are planned. Supervision will also contribute to knowledge management and adaptive learning, course-correction, supporting innovation and continuous improvement.
125. **Implementation Support Missions (ISMs):**
126. Targeted ISMs may be conducted in response to emerging implementation needs, risks, or technical gaps. These may focus on specific areas such as procurement, safeguards, climate resilience, rural finance, or enterprise development. The planning and scope of ISMs will be determined in consultation with SCRAM Society and the Government of Mizoram.
127. **Annual Work Plan and Budget (AWPB) Review:**
128. The Annual Work Plan and Budget will be prepared by SCRAM Society and submitted to the Governing Council (GC), chaired by the Chief Secretary of Mizoram, for endorsement. Following GC approval, IFAD will review and issue its no-objection through OPEN-System<sup>[40]</sup>. The AWPB will serve as the basis for implementation planning, fund release, and procurement actions each year.
129. **Mid-Term Review (MTR):**
130. A Mid-Term Review will be undertaken at the beginning of the fourth year to assess project achievements, institutional effectiveness, and likelihood of achieving development objectives. The MTR will review: (i) the performance of SCRAM Society and its convergence with key departments; (ii) progress in infrastructure utilisation, cluster-based production, and aggregation;

(iii) uptake and support systems for enterprise incubation and rural finance; (iv) effectiveness of first-mile service delivery; and (v) overall fiduciary and safeguards performance. MTR findings will inform any adjustments to project design, targets, or exit strategies to ensure timely and sustainable outcomes.

#### **131. Project Completion Review:**

132. As the project nears closure, SCRAM Society will lead the preparation of a draft Project Completion Report (PCR) capturing project performance, outcome achievements, and sustainability measures. The PCR will be informed by an independent third-party endline survey, in addition to internal monitoring data. This will be followed by a formal Project Completion Review, jointly conducted by IFAD and the Government of Mizoram. The review will consolidate lessons for future programmes and inform institutional pathways for scale-up.

### **3.3 Planning, Monitoring and Evaluation**

133. The M&E system of FOCUS 2.0 has been designed as a decision-support and learning mechanism, drawing on key lessons from FOCUS to address gaps in household-level tracking, feedback loops, and disaggregated reporting. Anchored in IFAD's Results and Impact Management System (RIMS), the system will ensure real-time performance monitoring, adaptive learning, and evidence-based decision-making throughout the project lifecycle.

134. The project's Logical Framework underpins a three-tiered system (output, outcome, and impact monitoring) and enables refinement of implementation approaches through periodic internal reviews, annual strategy workshops, and partner consultations. Results data will be used to test assumptions in the Theory of Change and adjust implementation strategies. Key performance trends that are flagged through outcome surveys and MIS dashboards will inform the Annual Work Plan and Budget (AWPB) and course-corrective actions by the SPIU.

#### **135. Institutional Structure for M&E:**

136. At the state level, and under the Deputy Project Director Convergence (Planning), the M&E function is led by a Manager (M&E) and directly supported the Assistant Manager (MIS & Data Analysis). In addition, the Manager (M&E) works closely with the: (i) Manager (Knowledge Management & Communications); and (ii) Manager (Gender & Capacity Building) and the two Assistant Managers (SECAP), to ensure accurate reporting on Gender and SECAP within the overall project M&E (please refer to PIM Appendix 4 for the institutional charts). At the district-level, teams include one Assistant Manager (Planning, MIS, and SECAP) per district, who coordinate with block-level staff and the various cadre of Zau Resource Persons (ZRPs) to ensure data flow. The structure facilitates integration of gender and youth data, SECAP compliance, and harmonization of reporting across components.

#### **137. Results Impact and Management System (RIMS) & Project MIS:**

138. The project will implement a comprehensive baseline survey within six months of start-up to establish the socio-economic profile of target groups, including modules on land ownership, empowerment, production practices, value chain participation, and environmental baselines. Core Outcome Indicator (COI) surveys (baseline, midterm, endline), will track intermediate outcomes, support adaptive management, satisfaction level of project beneficiaries with project activities and implementation arrangements and inform midterm and completion reviews. An independent endline survey will evaluate long-term impact against baseline conditions and validate key indicators from the project log frame. The MIS will serve as the backbone of the M&E system, enabling household-level tracking of physical and financial progress. Integrated with a Remote Sensing/Geographic Information System (RS/GIS) developed in partnership with MIRSAC, the MIS will allow geo-tagging of project assets, spatial monitoring of Zau clusters, and map-based reporting. It will feature interactive dashboards, offline data entry, automated cleaning protocols, and built-in log frame management. Reports will be auto-generated to align with IFAD's Operational Results Management System (ORMS) and RIMS indicators. The M&E framework also includes the provision of an independent agency to monitor bio-physical indicators such as soil erosion, stream flow, etc. to capture the impact of land development practices.

139. To ensure quality and inclusiveness, data collection will be disaggregated by gender, youth, and indigenous groups. Partnerships with SHGs under Mizoram State Rural Livelihoods Mission (MzSRLM) and regular backstopping by field staff will enable localized data gathering. Additional thematic studies will explore priority areas such as soil erosion reduction, climate adaptation, and enterprise development.

140. M&E insights will directly shape AWPB formulation and strategic reviews. These will be coordinated by the PIU in consultation with technical specialists and district teams and aligned with government budgeting cycles. The project will host an annual learning and strategy session to review data trends, reassess risks, and update implementation plans.

141. The Manager M&E will work closely with the Manager Gender & Capacity Building to oversee capacity-building programs to strengthen M&E competencies across the project hierarchy. These will cover MIS use, results tracking, data validation, and reporting. Capacity support will be provided to implementing partners to ensure ownership and sustainability of the M&E system beyond the project.

142. All M&E data will feed into Progress Reports, the Midterm Review (MTR), and the Project Completion Report (PCR), ensuring transparent documentation of achievements and lessons learned. The system is designed not just to monitor activities but to support continuous learning, strengthen institutional capacity, and embed accountability across project operations.

### **3.4 Knowledge Management and Country Level Policy Engagement (CLPE)**

143. Knowledge management (KM) and policy engagement are integral to FOCUS 2.0's strategy for scaling, adaptation, and sustainability. KM is viewed not as a parallel activity but as an operational lever that shapes decision-making, strengthens

convergence, enables evidence-based adjustments, and informs policy at state and national levels.

#### 144. Knowledge Generation and Use:

145. The project will generate practical, actionable knowledge across its components: (i) implementation of the Zau cluster model, (ii) three-tiered hub-and-spoke market systems, (iii) rural finance models with partners like Mizoram Rural Banks, M-PACs, the National Insurance Academy etc, and (iv) digital and community-based service delivery. Case studies, technical notes, policy briefs, GIS-linked visuals, and media outputs will capture lessons, innovations, and failures—particularly in relation to gender, youth, and traditional knowledge.

146. The M&E and KM Unit in the PIU will coordinate these efforts, led by a DPD Convergence (Planning) in collaboration with thematic leads and technical service providers. A detailed Knowledge Action Plan will be developed in the first year and embedded in the PIM.

#### 147. Policy Engagement at State and Country Level:

148. FOCUS 2.0 will serve as an operational testing ground for the Government of Mizoram's Zau Policy, providing implementation models, institutional mechanisms, and field-tested adaptations before the policy is scaled by line departments. SCRAM Society, as the nodal agency, will generate early evidence on convergence, production planning, and land use under the Zau model. This real-time policy incubation places FOCUS 2.0 in a unique position to shape policy refinement.

149. Similarly, the hub–market–CMC model is a novel approach to enhancing market access in tribal and hilly geographies. Its operational rollout, supported by MIS and GIS tracking, will inform infrastructure and value chain planning in similar states. Lessons will be channelled into policy notes, exposure events, and strategy reviews.

150. The collaboration with institutions such as the National Insurance Academy, Mizoram Rural Bank, and M-PACs will contribute to national discussions on expanding rural finance in underserved regions. These efforts include innovations in financial literacy, insurance penetration, last-mile service delivery, and claim facilitation—especially in livestock and agriculture—creating evidence for policy and regulatory improvements. Private sector engagement will also be catalysed through the organization of a Private Sector Roundtable, with efforts made to operationalise the first event before project start-up. This is expected to become an annual feature to crowd in investment, stimulate dialogue, and showcase replicable enterprise models.

#### 151. Regional Knowledge Contribution and SSTC:

152. FOCUS 2.0's work on cluster-based production and market integration in hilly contexts will contribute to India's policy thinking, and also to global learning through IFAD platforms. Its pioneering models offer significant potential for South-South and Triangular Cooperation (SSTC), particularly with Southeast Asian countries facing similar terrain and structural challenges.

#### 153. Community-Level Knowledge Exchange:

154. Building on innovations from projects like MLAMP, FOCUS 2.0 will introduce Community Talk forums—peer-led, field-based knowledge sessions where progressive farmers, CAHWs, or rural entrepreneurs share their experiences with others in the cluster. These events will create a culture of bottom-up learning and social proofing of new ideas. Local dialect content will be used wherever possible.

#### 155. Dissemination Channels:

156. A multi-platform dissemination strategy will include:

- An interactive project website with dashboards, GIS visuals, and learning materials
- Quarterly newsletters, policy briefs, infographics, and short videos
- A YouTube<sup>[41]</sup> channel to enable cross-cluster peer learning and visibility beyond the state
- Strategic engagement with local and national media
- Biannual stakeholder workshops and learning events
- Contribution to IFAD knowledge platforms and rural policy networks

#### 157. Roles, Resources, and Systems:

158. The SCRAM-led KM unit will be staffed with the DPD Convergence (Planning), and supported by a: (i) Manager for M&E (further supported by an Assistant Manager for Data Analysis/MIS); (ii) Manager for KM & Communications; and (iii) Manager for Gender & Capacity Building (further supported by two Assistant Managers for SECAP). TSPs will contribute technical documentation. Additional resources will support third-party studies, communications tools, and digital engagement. KM will be integrated into the Supervision and Governing Council reviews, ensuring feedback loops across levels.

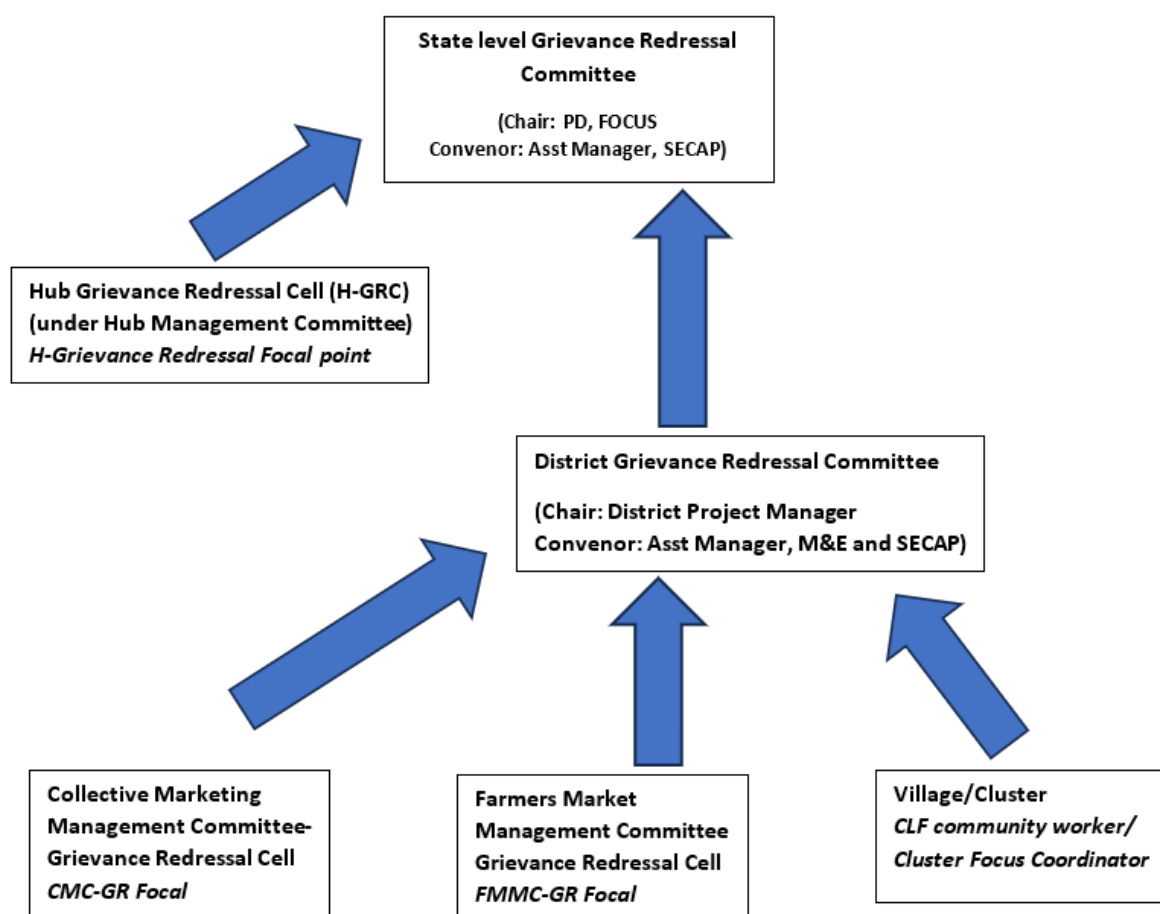

### 3.5 Target group engagement

159. **Target Group Engagement:** The institutional canvas for FOCUS 2.0 will be broadened to include several new partners across government departments and agencies, the non-government sector and the traditional institutions. The guiding principle of FOCUS 2.0 will be to leverage existing opportunities for collaboration, partnerships, skill and resource sharing through active convergence with these agencies and their ongoing programmes. Planning and Programme Implementation Department will serve as the lead implementation agency, strong partnerships will be formalised with several line departments that have the expertise required in meeting the objectives of the project. In addition to the Department of Agriculture, Department of Horticulture and Department of Animal Husbandry and Veterinary (which are integral to the project), new partnerships will be forged with the

Mizoram State Rural Livelihood Mission to capitalise on their impressive institutional network at the grassroots level for forging the 'last mile' bridge and delivery mechanism with communities. Partnership with Directorate of Commerce and Industry attains importance as fundamental thrust of the project is to strengthen market linkages through value chain development. In addition, Department of Irrigation and Water Resources, Soil Conservation, Environment Forest and Climate Change are additional departments who will be important partners. These partnerships will help improve coordination and complementarity while laying the ground for the project's exit strategy and long-term sustainability. Among other government agencies, strong partnerships will be explored with NABARD, NeDFi and NEC for convergence of schemes and programmes in rural financing and infrastructure. Technical partnerships are proposed with the Mizoram Science and Technology Council, particularly the Geospatial and Climate Change units. Collaboration with MiRSAC is critical for identification of Zau clusters and also the PLUMP exercise that is proposed in the FPIC process. Similarly, collaboration will be explored with the Horticulture Department of Mizoram University for technical expertise. A strategic partnership is proposed with SELCO, a national non-government organisation specialising in non-conventional energy and presently working in Mizoram, to leverage their experience in the energy sector and strengthen the project's objective of providing energy solutions for Component 1 while meeting the fundamental goal of promoting climate resilience. At the community level, partnerships will be forged with the Cluster Federations set up by MzSRLM in the context of product aggregation, storage and processing for value chains, while at the village level, Village Councils and Village Organizations (VOs) will be critical partners for the smooth implementation of project activities. The stakeholder engagement plan, therefore, must be broad, multi-pronged and continuous given the wide spectrum of stakeholders that need to be sensitised and pro-actively engaged for establishing effective collaboration and ensuring compliance to SECAP requirements.

160. After the initial consultation meetings and based on the framework of collaboration and roles each group of partners are expected to play, a series of awareness raising events and consultation meetings are proposed for elaborating the roles expected of them and the interventions in which their contributions will be sought as implementation partners. SECAP concerns and the risks identified will form integral part of the consultations for enhancing sensitivities of the partners on the SECAP concerns and the risks involved. These consultation meetings will be held with government departments, agencies and technical partners. At the community level, SECAP concerns and risks will be discussed during the planning meetings, and these will be integral part of meetings with Hub committees, the Farmers Market Management Committees, the Collective Market Management Committees, the Cluster level Federations, the Village Organisations, the Village Councils, the Zau groups, Animal Husbandry groups and the non-Zau Farmers groups.
161. **Phase II Improvements:** Based on a best practice institutionalized during FOCUS (Phase I), FOCUS 2.0 will formalize and maintain a standing agenda item for community feedback across all districts. This mechanism allows farmers and community-based organizations to present concerns and recommendations directly to district authorities, reinforcing the project's commitment to participatory planning, grassroots accountability, and responsive programme delivery.
162. **Grievance Redress Mechanism (GRM):** Grievance redressal mechanisms usually require a grievance to be registered in writing. While this may be the case universally, in Mizoram (and indeed among most tribal communities in northeast India) community members shy away from registering a formal, written grievance or complaint, preferring instead to discuss the matter verbally within traditional fora or even between the involved parties. A cultural sensitivity and respect for this tradition must be demonstrated, therefore, while designing the Grievance Redressal Mechanism for FOCUS 2.0
163. Given the structure of FOCUS 2.0, with Component-specific institutional arrangements to best operationalize interventions, it is expected that the needs and interests of stakeholders may not overlap. Although some overlaps cannot be ruled out, stakeholders involved in project activities under each component are expected to differ despite coming from the same village or locality. Under the first component, FPOs, SHGs and rural entrepreneurs will be the major actors at the village level. Under the second component, Zau Cluster members, non-Zau members, and livestock and poultry farmers are the main stakeholders/beneficiaries (fundamentally, small-holder farming households together with the Village Organization and the traditional Village Council). Youth are expected to form an important constituent of the first group, while female-headed households and single mothers could be members in both, depending on their interests and ability. Given the differentiated needs and interests anticipated, the FOCUS 2.0 GRM follows a two-tiered structure summarized in Figure 4 and detailed further in the ESCMF (please see ESCMF appendix). The project also has a plan to address any grievances related to SEAH, with details in the ESCMF appendix.

**Figure 1: Schematic flowchart of proposed Grievance Redressal Mechanism for FOCUS 2.0**

164. Figure 1: Schematic flowchart of proposed Grievance Redressal Mechanism for FOCUS 2.0

### 3.6 Strategic partnerships

165. The institutional canvas for FOCUS 2.0 will be broadened to include several new partners across government departments and agencies, the non-government sector, and the traditional institutions. The guiding principle of FOCUS 2.0 will be to leverage existing opportunities for collaboration, partnerships, skill and resource sharing through active convergence with these agencies and their ongoing programmes.

166. While the Planning and Programme Department will serve as the lead implementation agency, strong partnerships will be formalised with several line departments that have the expertise required in meeting the objectives of the project. In addition to the Department of Agriculture, Department of Horticulture and Animal Husbandry and Veterinary (which are integral to the project), new partnerships will be forged with the Mizoram State Rural Livelihood Mission to capitalise on their impressive institutional network at the grassroots level for forging the 'last mile' bridge and delivery mechanism with communities. Partnership with Directorate of Commerce and Industry attains importance as fundamental thrust of the project is to strengthen market linkages through value chain development. In addition, Department of Irrigation and Water Resources, Soil Conservation, Environment Forest and Climate Change are additional departments who will be important partners. These partnerships will help improve coordination and complementarity while laying the ground for the project's exit strategy and long-term sustainability.

167. Among other government agencies, strong partnerships will be explored with NABARD, APEDA, MIFCO, NeDFi and NEC for convergence of schemes and programmes in rural financing and infrastructure. Technical partnerships are proposed with the Mizoram Science and Technology Council, particularly the Geospatial and Climate Change units. Collaboration with MiRSAC is critical for identification of Zau clusters and the Participatory Land-Use Mapping and Planning (PLUMP) exercise that is proposed as part of the FPIC process. Similarly, collaboration will be explored with the Horticulture Department of Mizoram University for technical expertise and for incubation services. A strategic partnership is proposed with SELCO, a national non-government organisation specialising in non-conventional energy and presently working in Mizoram to leverage their experience in the energy sector and strengthen the project's objective of providing energy solutions for Component 1 while meeting the fundamental goal of promoting climate resilience. At the community level, partnerships will be forged with the Cluster Federations set up by MzSRLM in the context of product aggregation, storage and processing for value chains, while at the village level,

Village Councils will be critical partners for the smooth implementation of project activities.

### 3.7 Financial Management

#### 168. Programme Risks and mitigation measures

169. The mission evaluated the financial management (FM) arrangements for FOCUS 2.0 in Mizoram during March-April 2025. It determined that the inherent FM risk is substantial, primarily due to potential weaknesses in staff capacity and internal controls that could affect the maintenance of adequate accounting records, as well as challenges associated with managing and coordinating 11 District Project Management Units (DPMUs).

#### 170. Risk Mitigation Measures

171. The project team should undertake the following actions to ensure that solid FM arrangements are in place before the project enters into force:

- Engage the current Tally software vendor and external consultants, if necessary to complete the customization of the accounting software for the new project. Additionally, provide training for existing DPMU and PMU staff.
- Engage Internal Audit consultants to finalize the revisions of the Project Implementation Manual (PIM) and Financial Management Manual (FMM) for the new project.
- Complete the competitive selection and engagement of adequately qualified and experienced FM staff for PMU and DPMUs.

172. Additionally, external consultants will be engaged to conduct semi-annual internal audits. The project's legal documents will incorporate retroactive financing provisions to cover expenditures incurred from February 1 2025 until the project's entry into force. This approach aims to facilitate the project team's implementation activities as early as possible.

#### 173. Financial Management

174. *Funds Flow and Disbursement:* Government of Mizoram will pre-finance FOCUS 2.0 expenditures and request reimbursement from IFAD every quarter. The advance for the project will be provided by the State Government through the Central Treasury when needed. However, an advance from IFAD option will be included in the project legal documents in the event that the state government encounters challenges in allocating funds for the project in a timely manner. DEA/CAAA (MOF) will maintain the project Designated Account (DA) at the federal level and use it to transmit funds from IFAD to Mizoram Treasury, which will transfer IFAD funds to the Project Account (PA) to be maintained by PMU. PA at PMU will be maintained in a commercial bank operating in the State with existing online banking services. PMU will have a specific PA sub-account for each DPMU to monitor adequate budget allocations and control spending. Once all supporting documents sent by project partners are approved by the heads of PMU or DPMU, the PMU/DPMU will release funds to project beneficiaries and contractors. The project will submit to IFAD quarterly WAs to reimburse IFAD's share of project expenditures. Report-based disbursement modality will be applied to request funds from IFAD. The PMU will submit consolidated quarterly IFRs within 30 days from the end of the relevant quarter. CAAA (MOF) will submit WA for reimbursement for IFAD's share of the amount spent each quarter. There will be no advances to line departments.

175. *Staffing:* The PMU HQ SCRAM will be staffed with one Deputy Director Seconded from Finance and Account Services of the State, supported by an Assistant Finance Manager and two Assistant Accountants. Each DPMU will have an Assistant Manager Finance position. Additionally, an external consulting firm will provide support to the finance team at HQ to maintain the Tally system, train PMU and DPMU staff on Tally, reconcile accounts, close monthly financial reports, and generate consolidated financial statements.

176. At each DPMU Assistant Manager (Finance) will have the support of a dedicated Assistant (Accounts & Procurement) to aid in both financial and procurement tasks. All procurement at the district level will be managed or overseen by the Finance Unit

177. *Planning and Budgeting:* FOCUS 2.0 budgeting will be fully integrated into the overall government budgeting process. The PMU HQ finance team will prepare initial budget estimates and submit them to the Agriculture Department of Mizoram for inclusion in the government's annual budget. Budget execution control will be managed in the government's CFMS. In addition, the PMU will generate monthly budget execution reports and provide analysis. The PMU finance team will also collect data from project partners and DPMUs, prepare consolidated FOCUS 2.0 budgets in IFAD-approved formats, and agree on them with IFAD. The draft AWPB, split by components, categories, and sources of funds, will be sent to IFAD 60 days before the start of the relevant financial year.

178. *Internal control:* Financial operations and transactions related to FOCUS 2.0 will adhere to the internal approval procedures established by the Mizoram government. Additionally, FOCUS 2.0-specific internal controls and policies will be incorporated into the Project Implementation Manual (PIM) and the Financial Management Manual (FMM).

179. The finance teams at both the PMU and DPMU levels will be responsible for collecting comprehensive supporting documents from project partners prior to releasing funds. PMU HQ will establish an electronic filing system to store all supporting documents from the DPMUs for easy access and reference.

180. Given the limited capacity of government internal audit units, external consultants will perform a semi-annual internal audit of the project operations.

#### 181. PIM and FMM will be revised to include the following essential controls

- DPMUs will have sub-accounts under the main account of PMU HQ, with all sub-account activities controlled by PMU HQ.
- Mandatory monthly closing of accounts in Tally and reconciliation will be enforced.
- If a DPMU fails to complete adequate reconciliation or provide necessary supporting documents for any transaction, their bank accounts will be blocked until the issues are resolved.
- Google Drive or Dropbox services will be used for uploading and storing supporting documents for each transaction.
- Advances will not be issued to line departments; instead, funds will be transferred directly to beneficiaries and suppliers by DPMUs upon receipt of all required supporting documents. Advances to suppliers and project beneficiaries will be provided upon the submission of necessary supporting documents to HQ PMU (SPMU) and DPMUs. These documents can include a signed contract with suppliers and contractors with advance payment provisions, as well as reports from village-level organizations that justify the advances to project beneficiaries for activities such as land development at the village level.
- Finance staff at HQ PMU and DPMUs will be safeguarded from undue pressure from senior project staff and government officials. They will have the right to decline payments if full supporting documents are not provided for any payment request. The CPD will ensure that finance staff are protected from retaliation and unnecessary pressure.
- The finance units of the SPMU and DPMUs will deduct amounts from employees' salaries if advances are not cleared within two weeks after the completion of relevant events, such as business travel or other activities, provided that there is prior approval from the PD or SPD for the relevant report and request.

## 182. Accounting systems, policies, procedures, and financial reporting

183. The PMU HQ will complete the customization of an advanced cloud-based version of the Tally accounting software to facilitate accounting record-keeping and financial reporting for FOCUS 2.0. This customization will be finalized by May 30, 2025, and will enable the automatic generation of consolidated Interim Financial Reports (IFRs). The project will adhere to Indian National Accounting Standards when preparing financial statements and reports.

184. *External Audits:* The State-level Comptroller and Auditor General (CAG) office of Mizoram will be responsible for auditing the project's annual financial statements to promote the use of country systems in India. The Mizoram CAG office aims to issue audit reports within six months following the end of the financial year. While there may be delays in the issuance of these reports due to the local CAG's limited resources and other prioritizations, the project will actively collaborate with the State CAG to ensure timely delivery of audit reports.

185. *Country systems:* Government staffing, budgeting, funds flow, accounting and audit standards, and local SAI (CAG) will be used to implement FOCUS 2.0.

## 3.8 Procurement

186. At the national level, there is no public procurement law in India. Mizoram has notified its Public Procurement Rules, 2020, which outline procedures for procurement of goods, works, and services. While aligned in principle with IFAD's framework, gaps remain, such as the lack of standard bidding documents, debarment provisions, and community procurement templates. Therefore, FOCUS 2.0 will follow the IFAD Project Procurement Framework, and use the community procurement guidelines from FOCUS with the necessary updates.

187. Under FOCUS, procurement challenges were noted like limited capacity at the district level and delegation of procurement to community institutions without adequate support. A procurement capacity assessment for FOCUS 2.0 rated the procurement risk as substantial. To mitigate this, a dedicated procurement team will be deployed at both state and district levels, with: (i) one Manager Procurement, supported by one Assistant Manager Procurement and one Assistant Procurement at SPIU level; and (ii) one Assistant Manager per DPIU (except in Aizawl, which will be covered by the SPIU).

188. Extensive capacity building will be undertaken. IFAD will provide training on the Procurement Handbook (2020), planning, and contract management using the OPEN portal, along with additional support through national training institutes and IFAD procurement capacity development programme (BuildProc)

189. All implementation partners and line departments involved in IFAD-financed activities or convergence will adhere to the IFAD procurement framework. Procurement will be audited regularly by internal and external auditors reporting to the Chief Project Director. The project will also comply with IFAD's anti-corruption (<https://www.ifad.org/en/anticorruption>) and SEA/SH policies and designate an independent authority for investigating procurement-related complaints.

190. An indicative procurement plan for the first 18 months is provided in the PIM (Appendix 3a) along with a Procurement Manual (Appendix 3b). This will be finalized and submitted via the OPEN portal upon project start. Community procurement will be led by a ZRP (or related community resource person) and procurement committees, with support from Assistant Managers for Procurement and Finance. District teams will consolidate procurement needs and submit work plans to the PIU for integration into the overall AWPB and procurement plan. Plans will be updated semi-annually and require IFAD approval. Non-compliant procurement will not be eligible for financing.

191. Standard IFAD bidding documents will be used for contracts in the approved procurement plan. National shopping at SPIU/DPIU levels will be conducted through the GeM portal. Procurement methods and thresholds will follow the risk-rated Project Procurement Arrangements (PPA) issued to the Lead Project Agency which shall include oversight mechanism for SECAP risk associated with Project Procurement..

192. A contract management system will be implemented using IFAD's Contract Monitoring Tool (ICP-CMT). All contracts will be entered and updated by the procurement team. Exceptions or cost overruns will be escalated to the Project Directors.
193. In case of disputes, resolution procedures in the contract or national law will apply; IFAD will not serve as arbitrator. A grievance redress mechanism will be available through the project website, building on the ESGRM model.
194. IFAD may declare misprocurement if contracts are awarded or modified outside of agreed procedures. The issuance of a no-objection does not preclude this. The project's procurement risk remains rated as substantial. IFAD will conduct procurement reviews during supervision missions, covering startup activities, procurement operations, and real-time tracking via the contract monitoring system.

### 3.9 Risks and Risk Management

195. The overall project risk probability is rated Moderate, with a Moderate residual impact on project implementation, assuming the mitigation measures outlined below are implemented. The FOCUS 2.0 project has considered a comprehensive set of risk categories spanning contextual, institutional, fiduciary, environmental, and stakeholder dimensions.

#### 196. Contextual Risks

- **Country Context, Political Commitment, and Governance:** These are rated Low, with residual risks remaining Low. Mizoram's peaceful environment, recent electoral stability, and strong policy alignment at the state level (e.g., the 2024 Handholding Policy) provide a conducive environment for implementation. While national elections may temporarily delay project approval at the central level, the project has already been included in the Government of Mizoram's EAP priority list.
- **Macroeconomic Risks:** Rated Moderate with a residual risk of Low, given India's positive economic outlook and growth trajectory. The project's interventions are expected to further strengthen local economic resilience.
- **Fragility and Security:** Mizoram has remained free from insurgency and major unrest. However, considering recent unrest and political volatility in neighbouring countries including Bangladesh and Myanmar, there is an increased need for vigilance. While the internal situation remains stable, the risk of external spillover has led to the risk being assessed as

#### 197. Sectoral and Policy Risks

- **Sector Strategies and Policy Alignment:** Rated Low with residual risks also Low, owing to strong alignment with both national (e.g., PM-DevINE, NESIDS) and state-level policies (e.g., Bana-Kaih). Institutional anchoring through the PSC and convergence mechanisms will ensure continued alignment.
- **Policy Development and Implementation Risks:** While rated Moderate, residual risks are reduced to Low through the appointment of a Convergence Officer and increased departmental secondments, ensuring better integration at all levels.

#### 198. Environmental, Social, and Climate Risks

- **Environmental and Climate Context:** The risks from environmental degradation and climate variability are Moderate, with residual risks managed to Low through integrated natural resource management, spring-shed development, climate-smart agriculture, and last-mile infrastructure (e.g., link roads, ropeways).
- **Social and Safeguards Risks:** Risks related to Indigenous Peoples, labour conditions, and potential physical or economic resettlement are Moderate, mitigated to Low through robust FPIC processes, participatory planning, and safeguards embedded in project design (including a potential Resettlement Action Plan where applicable).
- **Greenhouse Gas Emissions and Biodiversity:** Risks are Moderate but residual impacts are Low, addressed via sustainable livestock systems, conservation practices, and promotion of indigenous species.

#### 199. Institutional Capacity Risks

- **Implementation Arrangements:** Rated Low, with residual risks remaining Low. The project builds on FOCUS's existing structure through SCRAM and strengthens technical capacity by deploying IAS leadership and specialized staff.
- **Monitoring and Evaluation:** While currently Moderate, this is mitigated to Low through an upgraded MEL system, enhanced staffing, and district-level support for KM, MIS, and safeguards.

#### 200. Fiduciary Risks

- **Financial Management:** Risks in project organization, budgeting, and funds flow are rated Substantial, with residual risks remaining Substantial. These stem from limited availability of qualified FM professionals and structural delays in funds disbursement. Mitigation includes competitive recruitment, adoption of Tally ERP across DPIUs, use of online banking modules, and legal provision for advance payments.
- **Procurement:** All procurement-related risks (processes, capacity, transparency, accountability) are rated Substantial. Residual risks remain Substantial despite the adoption of IFAD's 2020 Procurement Guidelines and tools such as the OPEN. Intensive training, third-party oversight, and proactive publication of procurement data will be implemented to address these risks.

#### 201. Stakeholder Engagement Risks

- **Stakeholder Coordination and Grievances:** Rated Moderate, with residual risks lowered to Low through structured engagement plans, quarterly multistakeholder meetings, and expanded grievance redress mechanisms including online ESGRM platforms and district-level helpline

### 3.10 Implementation Readiness

202. FOCUS 2.0 builds on the institutional structure and lessons from the earlier phase while addressing known risks related to delayed start-up, inter-departmental coordination, and fund flows. The readiness approach integrates legal, operational, financial, and institutional preparations to ensure a smooth transition from project approval to execution.

203. **Table 15** (at the end of this section) provides a comprehensive **Readiness Action Plan** which covers the period from June 2025 to January 2026. This includes: (i) finalization of Terms of Reference (ToRs) and appointment of key staff across the State Project Implementation Unit (SPIU) and District Project Implementation Units (DPIUs); (ii) initiation of procurement processes for Technical Service Providers (TSPs), goods, and systems (including IT and vehicles); (iii) launch of baseline surveys, environmental and social safeguard assessments, and participatory planning processes; and (iv) mobilization of key stakeholder platforms, including community-level groups and implementing partners(v) MoU/A to be signed with the concerned line departments and state agencies. The Government of Mizoram will formally request the Department of Economic Affairs (DEA) to initiate loan negotiations, after which legal clearances and financing agreements will be finalised. The project will be incorporated into the state budget to facilitate the timely release of counterpart funds.

#### 204. Start-up Financing:

205. To pre-empt cash flow constraints during the early implementation phase, the project will make use of IFAD's Start-up Advance Facility, allowing for a withdrawal of funds upon loan entry into force, prior to fulfilment of the conditions precedent to withdrawal. This financing will support essential early-stage activities like finalization of the Project Implementation Manual (PIM), customizing accounting software (Tally), conducting baseline assessments, and onboarding core staff.

#### 206. Coordination with Government Planning and Budgeting Cycles:

207. The project is closely aligned with the Government of Mizoram's fiscal planning calendar. The first Annual Work Plan and Budget (AWPB) and 18-month Procurement Plan are provided in the PIM (Appendix 3a) and will be finalized prior to implementation, in consultation with relevant departments and with IFAD no-objection. These documents will serve as the operational backbone for the first 18 months and will be updated annually. Draft AWPBs will be submitted to IFAD at least 60 days prior to the beginning of each fiscal year, as per the Financing Agreement. Quarterly financial reviews will monitor cost variances and adjust projections, while cloud-based accounting and document storage systems will facilitate transparent reporting and fund tracking across all DPIUs. The financial management system (based on Tally software) will automatically generate Interim Financial Reports (IFRs) and support real-time budget execution tracking.

#### 208. Readiness for SECAP Compliance:

209. The Environmental and Social Climate Management Framework (ESCMF), which includes Free, Prior and Informed Consent (FPIC) protocols and the Grievance Redress Mechanism (GRM), and related SECAP Review Note have been attached to this PDR to support readiness of social/environmental/climate risk mitigation measures and SECAP compliance. The process depicted within the ESCMF for SECAP compliance will be followed prior to the disbursement of funds for community-level activities. The ESCMF and related safeguards documents follow both IFAD policy and the national regulatory context of the Government of India and the State Government of Mizoram, and are embedded within the project MIS, M&E, and bidding/contracting documents.

#### 210. Dependence on Institutional Agreements:

211. FOCUS 2.0 does not anticipate delays stemming from legal or regulatory changes; however, a few critical institutional arrangements will be formalized post-approval. These include signing of Memoranda of Understanding/Agreements (MoU/As) between the SCRAM Society (as the Lead Project Agency) and relevant line departments and state agencies for better convergence on-ground, as well as partnerships with research institutions and private sector actors. A Private Sector Roundtable will be organized during the readiness phase to support co-investment and PPP-based delivery models in agri-enterprise and infrastructure development. In line with the *Bana Kaih* handholding policy and Zau policy for agricultural intensification, the project has built-in convergence mechanisms for aligned delivery of services with existing government schemes such as PMKSY, RKVY, and the National Livestock Mission.

**Table 15: Readiness Action Plan**

| #                                        | Key Activities                                                                                                                       | Action                                                                                                                                                      | Responsibility | Months |      |     |     |     |     |     |      |

(

12. 11% PVTG household had improved access to land/forests for production purposes
13. The project mobilised 5673 landless households into 274 FIG and helped secure 3176 Ha. of land for 4169 households. The other HHs were supported with livestock
14. IFS CADA approach includes land development (mainly bench terracing) in about 20-50 ha of contiguous land, provision of irrigation, better planting material and agriculture link road. Together, these interventions are expected to lead to a compact area that can form the centre for high productivity and production. This approach provides scale to the traditional IFS approach in addition to better resource utilisation, enhanced productivity, and improved farm sustainability. The project helped secure access to land for tenures ranging from 5 to 20 years for 4169 landless households and helped them with land and water resources development.
15. In OPELIP, Agriculture Intensification Clusters were introduced for the first time in PVTG areas, traditionally dominated by individual, subsistence-level cultivation. These clusters enabled farmers within common command areas to adopt coordinated cropping patterns, manage shared irrigation infrastructure, 591 Agricultural Intensification Clusters (AICs) were formed, benefiting 15,213 HHs
16. CSPE (p. 45) observed that many IFAD-supported projects in India lacked structured market linkage mechanisms and that underutilization of aggregation and processing infrastructure was often due to weak forward and backward linkages. It recommended a systems-based approach to market access, anchored in robust planning and spatial coherence
17. The 2023 supervision mission of the LAMP project noted that the Government of Meghalaya has institutionalized a cluster-based approach to agricultural development. It has evolved this into a hub-and-spoke model, linking organized producer groups and Integrated Village Cooperative Societies (IVCS) with higher-level PRIME Hubs for aggregation, value addition, and market access
18. Source: Supervision Mission LAMP report 2023, 2022, PCR OPELIP, CSPE
19. JKCIP - Competitiveness Improvement of Agriculture and Allied Sectors Project in Jammu and Kashmir, LAMP- Incubation Support through PRIME Hubs, and so in REAP - Rural Enterprise Acceleration Project
20. Census (2011)
21. 35% of population deprived of any form of productive assets – [Multi-Dimensional Pverty Index](#)
22. According to the 2011 census, Mizoram has 829 villages. However, after 2011, many village councils under Aizawl and Lunglei districts have been notified as NACs (Notified Area Councils), and that explains the reduction in the total number of villages
23. Agriculture census, 2011
24. Although the outreach based on calculations of households in rural Mizoram would indicate an outreach of 156,872 households, ( a total of 303,661 individuals), those households may include double counting re: benefitting interventions, and therefore the project is taking a conservative number based on counting certainty at the time of design.
25. Each of these nodes will be integrated within the broader hub-and-spoke framework while also functioning as independent points for aggregation, sales, and value addition
26. According to 2011 census, 49 percent of total population of Mizoram are women and 11.2 percent of population belongs to 18-23 years category. The targeting percentage reflects the population of Mizoram
27. NFHS 5 (2020-2021)
28. Mizoram Population data is of Census, 2011. Collected from Economic Survey of Mizoram, 2024-25 [economic-survey-2024-2025.pdf](#)
29. Full details on Zau/Agricultural Intensification Clusters can be found in the Glossary of Key Terms or [Handholding Policy](#)
30. As per the project's logical framework, a total of 75,000 HH would be reached, amounting to an approximate 300,000 individuals (household members).
31. The selection of five district-level value addition hubs is guided by budgetary considerations and IFAD's catalytic approach, which emphasizes piloting scalable models. Demonstrating success through these hubs is expected to crowd in further public and private investment for wider replication across the state
32. As part of the digital ecosystem interventions, each target village will be equipped with a digital information access point in the form of a large screen or television with internet connectivity, installed at the Village Council (VC) or Village Organization (VO) office. This will serve as a multipurpose community resource to display real-time market information, weather base info, project-related updates, grievance redressal mechanisms (GRM) through a continuous ticker like number or email id, training modules, and other relevant content. As an entry-point activity, this intervention is designed to build confidence of the community by visibly demonstrating the project's commitment to transparency, inclusion, and knowledge sharing. Over time, it will form the foundation for a more integrated digital ecosystem at the grassroots, facilitating improved communication, remote extension, e-learning, and digital service delivery in coordination with service providers and technical support agency
33. A strong natural resources management (NRM) approach will underpin enhancement of both livelihoods
34. Project will support agro-ecological farming technologies that is based on Low External Input Sustainable Agriculture (LEISA) principles
35. Land development for non-zau farmers (10,000 ha), existing zau (12000 ha), new zau (4500 ha)
36. 400 existing phai zaus (WRCs) and 300 new zo zaus (upland)
37. In FOCUS the IFS approach includes land development (mainly bench terracing) in about 20-50 ha of contiguous land, provision of irrigation, better planting material, agriculture link road. Together, these interventions are expected to lead to a compact area that can form the centre for high productivity and production. This approach provides scale to the traditional IFS approach in addition to better resource utilisation, enhanced productivity, and improved farm sustainability
38. Potentially partnering with Digital Green (DG) for digital extension services. DG has a global Letter of Intent (LoI) with IFAD

and is currently implementing a pilot project in Nigeria. They have active projects in 11 states of India and will develop Mizo language capabilities for localised extension services for FOCUS 2.0

- 39. Base rate of inflation as targeted by the India's Central Bank through its monetary policy
- 40. OPEN is IFAD's online Project Procurement End-to-End reporting system. It supports both borrowers and IFAD throughout the entire procurement lifecycle—from planning through to contract closure—by tracking key stages of procurement processes and contract implementation in IFAD-financed operations

| <b>Development Objective</b><br>Enhance the income and climate resilience of rural households in Mizoram through market-driven value chain interventions in agriculture and allied sectors | Percent increase in gross margins for farmers in the targeted value chains                                     |          |          |            | Third party survey    | Baseline, Mid, and End-line Surveys | PMU/External Agency | Gross margin refers to the difference between gross income (sales revenue) and variable costs of production, expressed as a percentage of gross income. It reflects the profitability of agricultural activities and the economic benefit to farmers from project interventions such as improved practices, inputs, market access, or processing. |

| <b>Outcome</b><br>Outcome 2.1: Sustainable intensification of climate-resilient agricultural production and increased crop productivity | 1.2.2 Households reporting adoption of new/improved inputs, technologies or practices                                         |          |          |            | COI Survey            | Baseline, Mid, and End-line Surveys | PMU/External Agency | The project will support 41,000 HHs with land improvement and other agriculture development interventions. It is expected that at least 70% of these households adopt such practices.                                                                                                                                                      |

| <b>Outcome</b><br>Outcome 2.2: Improved production of market oriented livestock products                                    | Number of brown eggs produced annually through project supported layer farms                                                                                             |          |          |            | Records of layer farms | Annually  | PMU, DPMU      | Each layer farm will produce 9,000 eggs per year. Target is based on 70% of layer farms (target 900 farms) selling 9,000 eggs per year. The 12 BSS will produce 90,000 semen doses. Assuming 70% efficiency of collection and 70% AI success rate with 8 piglets born per AI. |

### **Fostering Climate-Resilient Upland Farming Systems in the Northeast (FOCUS) 2.0 Project Design Report**

#### **Annex 4: Economic and Financial Analysis**

Mission Dates: 31 March – 18 April 2025

Document Date: 04/09/2025

Project No. 2000004677

Report No. 7262-IN

Asia and the Pacific Division  
Programme Management Department

## Annex 4: Economic and Financial Analysis

### Introduction and Methodology

The objectives of the EFA are to: (i) evaluate the viability of the improved production systems to be provided through various types of trainings and disseminated through the various trainings; (ii) analyze the impact of these improvements on the income levels of the project beneficiaries; (iii) assess the incremental production that results from project interventions; (iv) assess the financial viability of the value chain enterprises that would be supported ; and (v) provide a basis for the economic analysis of the whole project.

The financial models developed for the project have been done in close consultation with FOCUS project staff, and officers of the line departments that are supporting the design of FOCUS 2.0. The analysis considers the project costs and project outreach assumptions at the time of project design (April/May 2025). The assumptions for the Economic Analysis (EA) are linked to the project's log frame and the project goal indicators and development objectives.

The Economic Analysis (EA) is informed by the results of the Financial Analysis (FA) which has been carried out for the main productive activities supported by the project. A sensitivity analysis was conducted to assess the impact of changes in the main parameters affecting the economic outcome of the project because of: (a) changes in project costs; (b) changes in expected benefits from the production systems promoted by the project; and (c) delays in project execution due to the risks that have been identified in the project's risk analysis. It is expected that the EFA will be periodically updated as an integral part of the project's M&E System and as an input into the project evaluation at mid-term and completion stage.

### Project Area and Beneficiaries

The project will be implemented in 700 villages of Mizoram. The total rural population of these 700 villages is approx. 110,000 households. It is expected that the project will reach around 75,000 households (project outreach target) including approx. 16,000 households from FOCUS 1.0 that are expected to be continuing with the project promoted activities. Under FOCUS 2.0 the sub-sector-wise outreach will be about 7,500 households for enterprise development and market access activities, 41,000 households for agriculture development and another 35,000 households for livestock development. It is expected that there will be considerable overlap across the project interventions within and across the typologies of interventions being promoted to achieve the expected increase in household income. Table 1 provides an overview of project costs, outreach and phasing assumptions, including estimated costs per main unit of output (e.g., farm household reached, enterprise, etc. as appropriate). This allows the assessment of the project's efficiency at completion in terms of actual costs vis-à-vis the planned costs per unit of output, as well as comparison with similar projects.

**Table 1. Outreach, phasing, and costs per unit of output for FOCUS 2.0**

## Economic Analysis

**Assumptions:** While the project will be demand driven with the community having the final say in the type of activities being implemented at the household level, there would be a top-down approach to planning identifying clusters where similar activities can be aggregated to achieve minimum viable scale of operations. For the economic analysis these typologies of the project activities have been modeled, and the incremental returns been aggregated based on the expected outreach of the activity. For Component 1 – investment models of value addition hubs and enterprises were developed based on interactions with existing enterprises and FPOs operating in Mizoram. For component 2, representation farm models of key crops that are likely to be promoted under the cluster and non-cluster approach were developed. Similarly, for the livestock models farm models were developed for the direct interventions that will be promoted by the project at the appropriate scale. These farm models cover the different farming practices across the various project districts and have been collected using data collected by the line departments.

Incremental benefits for the project were estimated as the difference between a ‘without project (WoP)’ situation that reflects current practices and a ‘with project (WP)’ scenario that illustrates changes in productivity and incomes brought about by timely access to inputs and farmers’ adoption of the technology packages. The project costs consider both the investment costs and the recurring costs. In summary, the cost-benefit analysis assesses the stream of benefits and costs over the project horizon in the WP and WoP scenarios. The analysis is done for a period of 20 years, and a 12 percent discount rate is used. However, sensitivity analyses are conducted for a range of different scenarios to assess the robustness of the results in relation to key variables that may be subject to uncertainty. All models are expressed in 2025 constant prices to enable comparability over time.

In order to calculate the annual stream of incremental benefits, the analysis makes additional assumptions regarding the phasing of project benefits. The analysis that there would be an adoption rate of 60 percent, to account for any drop offs in the long term. The total financial project costs have been converted to economic costs (which exclude taxes and duties and price contingencies), using the Costab software. The analysis was carried out for a 20-year period, which is the estimated project life including the six-year project implementation period. It is based on 2025 constant prices, and a discount rate of 12 percent was assumed. The Indian Rupee INR was used as the unit of account and the official exchange rate of Rs 85.5 to US\$1 (April 2025) was applied when converting to US\$.

**Economic viability.** The economic internal rate of return (EIRR) of the project over a 20-year period with a 12 percent discount rate comes to 27.9 percent with a NPV of INR 3,632 million (US\$ 41.6 million).

**Sensitivity Analysis.** A sensitivity analysis was conducted to assess the impact of changes in main parameters affecting the economic outcome of the project as a result of: (a) changes in project costs; (b) changes in the expected benefits from the production systems promoted by the project; and (c) delays in project execution due to the risks that have been identified in the project’s risk analysis. The results show that the project remains economically viable even in the case of adverse changes in project costs and benefits. A reduction in project benefits by 20 percent results in an EIRR of 20.5 percent while an increase in project costs of 20 percent will reduce the EIRR to 21.7 percent. A 20 percent increase in project costs combined with a 20 percent reduction in project benefits, coupled to a two-year delay of benefits, reduces the EIRR to 10.6 percent, still making the project economically viable. The EIRR of the project will equal the opportunity cost of capital if the costs increase by 79.0 percent or if the benefits reduce by 43.9 percent. Table 2 presents an overview of the sensitivity analysis including further scenarios.

**Table 2. Sensitivity analysis of the project EIRR and ENPV**

| Scenario        |                      |                     | EIRR  | ENPV (US\$ million) | ENPV (INR million) |

EIRR = Economic Internal Rate of Return. ENPV = Economic Net Present Value.

\a Percentage change in cost and/or benefit streams to obtain an EIRR of 10 percent, i.e., economic viability threshold.

### Financial Analysis

The financial analysis has been carried out for the main productive activities supported by the project. Detailed crop budgets were prepared for the key crops and typical smallholder plot sizes, providing an overview of the production system including the key production parameters, farmer organizations, investments, and marketing channels. Similar analyses were prepared for the livestock production models (for goats, and poultry) and six enterprise models. The main financial performance measures, including gross margin, net profit, return to family and total labor, and the return on investment are calculated for the Without Project (WOP) and the With Project (WP) scenarios. If applicable, the Investment Costs including required Working Capital and Annual Depreciation were calculated.

The results show considerable increase in gross margin, net profit, and return to family and total labor for all production systems. The financial analysis suggests that the project objective of a 30 percent increase in gross margins of livelihood activities of households is achievable due to diversified or intensified economic activities promoted by the project. Table 4 below shows the estimated incremental annual net income per household. It is expected that the financial analysis will be periodically updated as an integral part of the project's M&E system and as an input into the project evaluation at mid-term and completion stages.

**Table 3. Overview of financial analysis of productive activities supported by the project**

| Description                | Investment areas           | Total Investment (INR) | Incremental annual returns (INR) | Outreach | Other benefits                                                                                 |
|----------------------------|----------------------------|------------------------|----------------------------------|----------|------------------------------------------------------------------------------------------------|
| Value addition hubs        | Machinery, working capital | 11,500,000             | 7,505,000                        | 5        | Full time job opportunities of at least 10 jobs per enterprise/hub                             |

| Non - zau           | Land stabilisation                                          | 25,000     | 35,021     | 20,000 | Climate resilience, land degradation mitigation                    |
| Zau - existing      | Land stabilisation, irrigation and water source protections | 125,000    | 90,831     | 12,000 |                                                                    |
| Zau - new           |                                                             | 200,000    | 74,889     | 9,000  |                                                                    |

Particularly for zaus, it was estimated that the cropping intensity will improve from current 106 percent to 130 percent due to soil and water conservation activities on-farm and in the upper catchment areas, along with the provision of on-farm irrigation. Further, part of the areas in zaus will be diversified towards plantations to ensure long term land stabilisation and income diversification. A mix of crops in the kharif and rabi seasons were assumed based on the inputs from the line department. Given that the practice of using agro-ecological practices is rather new to the state, the financial models are drawn from the limited experience of other states where returns have shown yield improvements of 20-30 percent and reduction of cost of production by 20-30 percent. Further, the agro-ecological practices also promote practices such as crop rotation, use of cover crops, etc. which will also add to the profit of the farmer. However, for this analysis only the principal crop is considered and the use of agro-ecological practices is assumed to be limited to annual crops such as vegetables. The financial returns for the farm models are summarised in the table below:

Table 4: Financial return from zaus

| Description     | Crop                  | Unit of production (ha) | Incremental returns (financial) |
|-----------------|-----------------------|-------------------------|---------------------------------|
| Non zau patches | Maize                 | 0.4                     | 11,870                          |

## **India**

---

### **Fostering Climate-Resilient Upland Farming Systems in the Northeast (FOCUS) 2.0 Project Design Report**

#### **Annex 5: SECAP Review Note**

Mission Dates: 31 March – 18 April 2025

Document Date: 04/09/2025

Project No. 2000004677

Report No. 7262-IN

Asia and the Pacific Division  
Programme Management Department

The SECAP Review note should build on the preliminary note mentioned above, draw on the results of the screening exercise and be informed by the issues raised during the design mission, the stakeholders interviews, publicly available tools and dataset, and environmental, social or climate-related studies that inform on the characteristics of the project location. The SECAP review note includes the revised ESMP and should be attached to the Project Design Report, integrated in Draft Project Implementation Manual (PIM) and COSTAB and shall be submitted to Design Review Meeting (DRM) or IRC (for NSOs).

## 1. Introduction

1. Mizoram is a hilly state in Northeast India with 1.25 million population, of which over 94% belong to Scheduled Tribes. FOCUS 2.0 (PROSPER) aims to enhance the income and climate resilience of 75,000 rural households in Mizoram through agricultural value chains, combined with natural resource management. The project builds upon achievements and lessons learned from the FOCUS 1.0 which was launched in 2019 and completed in July 2024. Component 1 of the present project will focus on market access and enterprise development, through value chain analysis and mapping, infrastructure development, capacity development, access to financial services, and investing in ICT4D solutions. Component 2 aims to improve agricultural productivity and climate resilience by adopting sustainable practices and leveraging economies of scale. Activities include capacity building, establishing production clusters, soil and water conservation, irrigation infrastructure, access to quality inputs, facilitating long-term leases for landless farmers, and support for agroforestry and participation in voluntary carbon market.
2. In the preliminary SECAP Review Note (SRN), the PDT had provided a preliminary analysis of the social and environmental context of the project as well as an assessment and description of the environmental, social and climate risks associated with the proposed interventions. Using SECAP screening tool, the PDT categorized the preliminary environmental and social risk, as well as climate risk as Moderate. Based on the information provided in the PCN and SRN, OPR validated this rating for environmental and social, but did not validate for climate risk rating. However, since the risk screening provided a preliminary rating of environmental and social risk associated with the project interventions and was perceived to be underestimated for some of the risk including biodiversity and labour and working conditions, a review and revision was recommended. The following sections provide a description of the risk reappraisal carried out at Design stage based on a review of the PCN and documents referred; impressions gained during field visits by the Mission team and consultations held with officials from relevant departments as well as interactions with district officials who participated in the Stakeholder Workshop held on 11th May at Aizawl.
3. Mizoram is a mountain state and reflects classical mountain specificities<sup>[1]</sup> – inaccessibility due to topography, fragility due to slopes and soil type, limiting availability of arable land and severely restricting opportunities for agriculture. In Mizoram, 47.9% of the population resides in rural areas, facing challenges due to the hilly terrain and climate variability. A significant portion of the population (1.25 million) relies on traditional livelihoods with around two-thirds of rural households engaged in agriculture and allied sectors, with an average operational land holding under two hectares. Smallholder farmers face multifaceted challenges due to the region's hilly terrain and climate variability. Inadequate land and water resource management, poor extension outreach, exacerbated by land access challenges lead to low crop productivity and environmental degradation. Shortened Jhum cycles, distorted due to decreasing soil fertility consequent to land use changes and increasing population pressure does not allow forests to regrow, thus reducing natural habitat and threatening biodiversity. Livestock rearing is hindered by high mortality due to disease outbreaks, high feed costs, and low productivity. These challenges are compounded by limited access to market and finance, inadequate irrigation, and land use changes. Economic support structures are lacking and limited access to finance hampers investment in production and post-harvest stages, while low private sector engagement slows the transition of smallholders from subsistence to commercially oriented farming. The relative remoteness of Mizoram and connectivity issues pose additional challenges to market access. These factors lead to poor price realisation by smallholder farmers, and ultimately to low income, perpetuating a cycle of poverty. Employment and business opportunities, particularly for youth, are limited.
4. Mizoram has a relatively lower poverty scenario compared to the national average, with about 20% of the population living below the poverty line. Rural poverty is higher, reaching 35% in 2014. Although the state has made progress in poverty alleviation through various schemes and programs, including those focused on self-help groups, inter-district disparities remain and the southern districts lag behind their northern counterparts in many development indices. Despite the inter-district disparities, the HDI of Mizoram is impressive (updated to 0.709 by MoSPI for 2022) and significantly better than the national average of 0.467. The state's GDI at 80.1 and women's literacy rate at 89.27% suggests a relatively better status of women in Mizoram as compared to many other parts of India. Mizoram is largely a young society with a median age of 23.7 years<sup>[2]</sup>. Unemployment, lack of vocational skill training, limited access to resources, and lack of proper infrastructure are some of the major bottlenecks for rural youth in Mizoram. Unemployment is a serious problem with about 23 percent of the persons in the workforce without any gainful employment.
5. Mizoram is home to six tribes and eleven sub-tribes; some tribes have been more assimilated into mainstream institutions compared to others due to historical context, religious practices, and different languages. There are numerous ethnic tribes in Mizoram that are linked with each other either culturally or linguistically. The umbrella term for the myriad ethnic groups in Mizoram is Lushais or Mizos. This includes a number of Mizo tribes like Hmar, Lusei, Mara, Lai, Ralte and Paite. The Riangs, a sub-tribe of Tripuri and the Chakmas of Arakanese origin, comprise the non-Mizo tribes living in Mizoram. Of these tribes, the Luseis are the most prominent. More than 60 per cent of the households belong to this tribal group. Three Autonomous District Councils- Chakma Autonomous District Council (CADC), Lai Autonomous District Council (LADC), and Marma Autonomous District Council (MADC) were recognized under the sixth schedule of the Constitution of India to preserve the culture and language of different minority ethnic groups and promote their economic empowerment.
6. A Policy Note published by IPFR<sup>[3]</sup> suggests that changes in nutrition outcomes in Mizoram between 2006 and 2016 have been largely positive. Stunting prevalence declined from 39.8 percent in 2006 to 28 percent in 2016. Wasting prevalence decreased from 9 percent to 6.1 percent, and severe wasting fell from 3.6 to 2.3 percent for the same period. Low birth weight prevalence

declined from 7.6 percent to 2.2 percent. While figures for the state are impressive and suggest remarkable progress, the study also shows a high degree of variability among districts. These figures, while projecting an encouraging trend does point to the districts requiring focused attention.

7. Set against this context, FOCUS 2.0 aims to increase income of households by promoting climate resilient agriculture, secure tenure to land by increasing longer tenurial access and improved access to markets through value-chain development. A fundamental thrust of the project is to improve and strengthen market linkages through value chain development. A critical determinant for the successful attainment of this objective is ensuring uninterrupted connectivity to markets. In monsoon season, procuring produces from the farmgate can be formidably challenging. All weather farm link roads are therefore, critical to overcome this challenge. The increase in frequency of extreme climate events, particularly high intensity rainfall poses a second challenge in market connectivity as disruptions in communication are frequent due to landslides during monsoon season. Together, connectivity issues can raise the risk of assured incomes that the project is aiming to achieve.
8. The environmental, social and climate risks were assessed as Moderate during the PCN stage. Risks identified related to biodiversity, resource efficiency and pollution prevention, cultural heritage, indigenous peoples, labour and working conditions, and physical and economic resettlement. A reassessment of the risk category at Design stage requires a quick review of the socio-ecological context and the following sections provide observations from the reappraisal. An important constraint faced during the reappraisal needs mention – the lack of disaggregated data for district-wise population distribution of different tribal groups (even for the state level) hampering a proper understanding of the size of population and their geographical distribution across the State. A second limitation was the lack of downscaled climate data and projections, both at the state level and below.

## 2. Potential Social, Environmental and Climate risks and impacts of the project

12. The SECAP assessment at the Design Stage does not indicate the need for an upgradation or revision of the risk category, but does suggest the need for inclusion of an additional category (Community health and safety) and for focused attention on specific dimensions of some of the previously identified categories. The sections below (2.1-2.9) outlines details of the risks assessed at Design stage under each category.

### 2.1 Biodiversity conservation

13. The project perceives the risks related to this standard as **moderate**.
14. Mizoram has many Protected Areas across the state harbouring several rare and endangered wildlife species in her National Parks and Wildlife Sanctuaries.
15. Table 1 lists the district-wise distribution of protected areas – National Parks and Wildlife Sanctuaries – across Mizoram. The Protected Areas of Mizoram harbour two highly endangered primates – Hoolock Gibbon (only Ape in India) and Phayre's leaf eating monkey – in addition to several macaque species. Among ungulates, the red serow is found across several of Mizoram's protected areas; in fact, the serow is considered the state animal of Mizoram. Among the big cats, Mizoram's protected areas harbour the tiger and the clouded leopard besides several smaller cats, including the marble cat and the fishing cat. Mention must be made of Dampa Tiger Reserve which has the distinction of hosting the highest density of clouded leopards in South and Southeast Asia. Among the avifauna, Mizoram's protected network hosts several species of hornbills, the rare Blyth's tragopan and the bamboo partridge.
16. Table 1 has been compiled to provide an overview of the district-wise location of important protected areas (together with the area) and help in identifying the districts where extra caution has to be exercised while designing project interventions in order to ensure no adverse effects impact on Biodiversity. Three districts – Champhai, Lawngtai and Lunglei – have at least two protected areas each, which include National Parks in the first two districts. In addition, the Dampa Tiger Reserve located in Mamit district is the largest protected area in Mizoram with a core area of 500 km<sup>2</sup> and a buffer area comprising 488 km<sup>2</sup>.
17. **Table1: District-wise distribution of Protected Areas (National Parks and Wildlife Sanctuaries) in Mizoram**

| SI | District | Protected Area (National Park/Wildlife Sanctuary) | Area (in km <sup>2</sup> ) |
|----|----------|---------------------------------------------------|----------------------------|
| 1  | Mamit    | Dampa Tiger Reserve                               | 500 core, 488 buffer       |

|    |           |                                         |       |
|----|-----------|-----------------------------------------|-------|
| 2  | Champhai  | Murlen National Park                    | 100   |
| 3  | Champhai  | Lengteng WS                             | 60    |
| 4  | Lawngtlai | Phawngpui (Blue Mountain) National Park | 50    |
| 5  | Lawngtlai | Ngengpui WS                             | 110   |
| 6  | Lunglei   | Khawnglung WS                           | 35.75 |
| 7  | Lunglei   | Thorangtlang WS                         | 50    |
| 8  | Kolasib   | Pualreng WS                             | 50    |

18. (Source: Compiled from <https://forest.mizoram.gov.in/page/wildlife-of-mizoram> - Wildlife of Mizoram, Environment, Forest and Climate Change Department, Government of Mizoram)
19. During this phase, the following risks to biodiversity, can be anticipated:
20. Project interventions pertaining to Component 2 call for extra caution and focused attention in Champhai, Lawngtlai and Lunglei districts to ensure that project activities do not infringe into core areas or areas where human activities are not permitted, nor result in unintended deforestation and habitat degradation. The project will adhere to stringent protocols to ensure no activities occur within boundaries of protected areas (or recognised animal corridors) safeguarding their ecological integrity. These precautionary steps are necessary to avoid or minimise habitat degradation particularly for the endangered primates (Hoolock Gibbon and Phayre's Leaf eating monkey).
21. The project proposes to support animal husbandry for those households that do not have sufficient labour for managing agriculture in Zau clusters. The proposed animals to be encouraged are pigs, poultry and/or goats. Risks to biodiversity from the first two are minimal as these are proposed to be penned. Goats, however, are to be grazed in identified pastures. This could pose a possible risk of introducing diseases to the wild population of serows and other ungulates, but the risk is perceived to be low.
22. An associated risk is the predation of goats and kids by wildlife, particularly big cats and bears. Additionally, as the project intends to increase cropping intensity and promote a second or third cropping season, this may trigger crop depredation by wildlife, particularly around Protected Areas.
23. Special attention needs to be paid to risks of agro-biodiversity depletion arising from the promotion of cash/commodity crops. As Zau intensification would centre around cash/commodity crop(s) and promote gradual transition to settled agriculture, the risks of depletion of agro-biodiversity becomes very real and significant. This has ramifications for dietary diversity and can trigger concerns in regard to nutrition.
24. While establishing Zaus – permanent agriculture through agricultural intensification – in fringe villages of protected areas, the project will need to ensure:
25. (i) no Zau clusters fall within the protected area boundaries or known animal migration corridors; in the case of Dampa Tiger Reserve (Mamit district), extra caution must be exercised while selecting project villages within the Buffer area and all necessary clearances obtained from the Tiger Reserve Authorities/Forest Department before the project interventions are operationalised. As a preparatory step, Zau cluster maps and Participatory Landuse Planning maps need to be prepared to cross check with PA boundary maps to confirm that no infringement will take place within PA boundaries due to FOCUS activities (see SECAP section in PIM for detailed description).
26. (ii) Project teams must ensure that clear felling or clearing of tree vegetation while establishing the Zau clusters is minimal, if not avoided significantly.
27. (iii) Conscious mitigation measures of Zau enrichment through tree planting and assisted forest regeneration must be encouraged, particularly in Zau clusters that are far away from the village and villagers are reluctant to cultivate.

28. (iv) If the area cleared of tree species is significant, the Project team must encourage and support the Village Council to increase/expand existing village safety reserves and/or village supply reserves.
29. These precautionary steps are necessary to minimise habitat degradation particularly for the endangered primates (Hoolock Gibbon and Phayre's Leaf eating monkey).
  - The project proposes to support animal husbandry for those households that do not have sufficient labour for managing agriculture in Zau clusters. The proposed animals to be encouraged are pigs, poultry and/or goats. Risks to biodiversity from the first two are minimal as these are proposed to be penned. Goats, however, are to be grazed in identified pastures. This could pose a possible risk of introducing diseases to the wild population of serows (and other ungulates), but the risk is perceived to be low as veterinary health and safety measures are expected to be in place while importing livestock into project villages. However, it is wise to be sensitive and aware of the possible risks and take the necessary precautions.
  - An associated risk which can be categorised as moderate is the predation of goats and kids by wildlife, particularly big cats and bears. Sufficient precautions must be taken by the project as this could potentially increase human-wildlife conflicts and pose a risk to project investments in this sector. This also poses challenges for insurance claim settlement. Additionally, as the project intends to increasing cropping intensity and promote a second or third cropping season, this may trigger crop depredation by wildlife, particularly around Protected Areas.
30. As Zau intensification would centre around cash/commodity crop(s) and promote gradual transition to settled agriculture, the risks of depletion of agro-biodiversity becomes very real and significant. This has ramifications for dietary diversity and can trigger concerns in regard to nutrition. Safeguard measures to compensate for this depletion would be:
31. (i) encouraging and supporting households to introduce a wide variety of the leafy vegetables and other NUS crops into the household's kitchen gardens. Convergence with MiSRLM's Nutrition gardens under the POSHAN scheme should be explored and opportunities extended to MiSRLM for outscaling their programme.
32. (ii) encouraging the introduction of several of the perennial NUS crops (eg legumes, tubers, leafy vegetables and spices traditionally grown in jhum fields) into Zaus as 'companion crops'. This will serve multiple purposes- increase ground cover, provide a diversification in the Zaus thus strengthening risk aversion measures for the household and also safeguard the dietary diversity – hence nutritional security – over seasons.

## 2.2 Resource efficiency and pollution prevention

33. The project anticipates risks in relation to this standard as **moderate**, primarily due to activities aimed at enhancing agricultural productivity while mitigating environmental impacts. The proposed activities involve supporting the formation of Zau clusters or Agricultural Intensification Clusters (AICs), integrating measures such as irrigation, soil and water conservation, agroforestry, farm mechanization, and agricultural link roads. The risks from the irrigation interventions suggest the need for focused efforts to ensure long-term sustainability of water availability for irrigation purposes. Project interventions will lead to the development or rehabilitation of irrigation schemes, tapping local streamflows or harnessing water from small riverlets, which can potentially affect streamflow, unless mitigation measures are adopted.
34. Development of the Zau clusters or AICs may call for the establishment of bench terraces in certain locations. This can increase the possibility of topsoil erosion and requires specific interventions to reduce the adverse impacts.
35. The project proposes to adopt agroecological approaches potential risks from the use of chemicals for pest and weed control since farmers already use herbicides to control weeds.
36. The project proposes the establishment of at least 3 slaughter houses. Concerns arise in regard to the safe disposal of waste entrails and blood of the slaughtered animals as inappropriate disposal of biological waste could lead to pollution of soil and water bodies in addition to posing a health safety concern.
37. To address the above mentioned risks, the project proposes that for every irrigation intervention that involves the tapping of local streamflows, a catchment treatment plan be made mandatory involving:
  38. (i) an agreement with the Village Council that the catchment of the water source will not be brought under any cultivation and the identified area will be declared as a catchment reserve for posterity;
  39. (ii) wherever necessary, steps will be taken to enhance percolation and groundwater reserve through measures that draw from Springshed Recharge and Management approaches. This will require specific capacity building and training programme for the project team as well as community members for which adequate budgetary allocations need to be made.
40. Development of the Zau clusters or AICs may call for the establishment of bench terraces in certain locations. This increases the possibility of topsoil erosion and requires specific interventions to reduce the adverse impacts.
41. (i) Contour bunding using biological approaches that build on traditional practices should be the first option adopted. Traditionally, farmers lay logs along contours to reduce erosion. Split bamboo 'matings' are also used by certain communities as low fencing to prevent erosion and help in terrace formation.
42. (ii) Contour hedgerows using legumes should complement the log structures or bamboo matings to further strengthen erosion prevention measures. Legumes such as pigeon pea or soyabean are good options and these legumes should be planted in rows above and below the logs/bamboo matings. Such measures can help in terrace building with minimal costs and low labour requirements while also enhancing soil nutrient and moisture retention capacities through nitrogen fixing and mulching the nitrogen rich biomass after harvest.

43. Although the project proposes to adopt agroecological approaches such as resource recycling through the promotion of biomass mulching, composting and introduction of EM methods, moderate risks from the use of chemicals for pest and weed control cannot be ruled out as farmers are known to have adopted the use of herbicides to control weeds.
44. (i) Extreme care and caution must be exercised by the project in ensuring that chemical fertilisers and pesticides are not used.
45. (ii) As a precaution, regular trainings on the safe use of pest control agents must be imparted to farmers and steps taken to ensure adherence to the safe disposal of harmful chemicals.
46. The project proposes the establishment of at least 3 slaughterhouses. Concerns arise in regard to the safe disposal of waste entrails and blood of the slaughtered animals as inappropriate disposal of biological waste could lead to pollution of soil and water bodies in addition to posing a health safety concern.
47. (i) Effective waste disposal mechanism following national/international standards will need to be put in place and this aspect must be reflected in the bidding document during the call for bids for the construction of the slaughter houses.

## 2.3 Cultural heritage

48. As the proposed interventions are anticipated to not pose any risks to tangible cultural heritage, this standard has been considered as **moderate** risk. However, two outcomes of the basic project approach can bring about intangible changes in cultural practices. The predominant agricultural practice among all communities in Mizoram is shifting cultivation, locally called jhum. Jhumming is carried out in community land and a participating household holds annual tenurial rights to a plot that is allocated through lottery conducted by the Village Council. As tenure to agricultural plots are for a year only, a longer term of tenurial security has been introduced by FOCUS 1.0 with land leases of 10 years. This intervention, in addition to ensuring security of tenure also intends to facilitate the transition to settled agricultural practices and reduce deforestation caused by the practice, thereby supporting the Government of Mizoram's land use policy and intent of eradicating shifting cultivation.
49. This approach however, overlooks the fact that it would trigger a change in the traditional access regime and affect a transition from Common Property regime to Private Property regime with the possibility of elite capture, privatisation of common property resources and the emergence of landlessness.
50. To safeguard against such impacts (and the emergence of second-generation issues)<sup>[1]</sup>,
51. (i) the formal registration of the long-term lease (or licence) issued by the Revenue department should be to the Village Council and not individual households and
52. (ii) the lease should not allow the conversion of the license issued to a permanent land patta in the name of any individual.
53. (iii) This needs to be a mandatory conditionality included in the MoU to be signed with Village authorities of all participating villages in all districts.
54. <sup>[1]</sup> See Choudhury, D., Bhuchar, S., Thomas, S. (2021). *Transitioning shifting cultivation to resilient farming systems in South and Southeast Asia*. Resource book. ICIMOD.

## 2.4 Indigenous peoples

55. The target groups identified for FOCUS 2.0 comprise completely of tribal communities (or indigenous peoples). The risks related to Indigenous (tribal) Peoples are perceived to be **moderate**, as the project will build upon local traditional knowledge and promote full and effective participation of the tribes present in the area. With a cent percent tribal community as target group, FOCUS does not require a separate Indigenous/Tribal Peoples Plan. All social mobilisation, project awareness raising, consultations on project objectives, components and eligibility will be conducted under an FPIC framework. An outline of the FPIC implementation plan is provided below. An in-depth assessment of risks related to the project approach and mitigation measures developed taking into account the customary laws among the target groups and the tribal governance system among them suggests that there is a need for specific attention and appropriate action.
56. **FPIC Implementation Plan Outline**

| SI | FPIC activity                               | Readiness Action Plan Activity<br>Description & serial number | Officers responsible                     | Timeline<br>(Corresponding to RAP timeline) |

57. Under Component 2, the project proposes to target 30% of households for agriculture intensification (and transition to settled agriculture with a longer lease period) and another 30% for animal husbandry options, leaving 40% of households practising jhum outside the purview of direct project interventions. Establishment of cash/commodity crops and the sedentarisation of agriculture in the Zaus on community land will result in the reduction of area available for jhum and the resultant shortening of jhum cycles. As all households practising shifting cultivation will not be included in Zau activities, the jhum practice of the excluded jhumiyas will become further marginalised, adversely affecting their yields (and potentially the household food security). This raises serious concerns and requires carefully thought-out risk reduction measures, keeping in perspective IFAD's declared principle of 'doing no harm'.
58. As pointed out under Biodiversity, the promotion of cash/ commodity crops in the agriculture intensification cluster or Zaus can result in a depletion (and possible erosion) of agro-biodiversity, particularly non-cereal tubers, leafy vegetables, legumes and spices. These NUS crops are perceived as climate smart, nutrient dense crops and extremely critical for maintaining the seasonal dietary diversity and nutritional security, especially of poor households. These crops also help to enhance adaptive capacities of the rural poor.
59. Although crop combinations to be adopted by Zau cluster members will be left to the choice of the households, a possible outcome of cash/commodity crop promotion in the Zaus will be either (i) a reduction of the area under paddy in Zau plots, or (ii) the total replacement of area under paddy with cash/ commodity crops. This raises concerns for the household's staple (cereal) security through the year, as studies across the uplands of NER suggest a four-to-six-month staple security that is met from self-production from jhum fields.
60. Establishment of cash/commodity crops and the sedentarisation of agriculture in the Zaus on community land will result in the reduction of area available for jhum and the resultant shortening of jhum cycles. As all households practising shifting cultivation may or may not be included in Zau activities, the jhum practice of the excluded jhumiyas will become further marginalised, adversely affecting their yields (and potentially the household food security). This raises serious concerns and requires carefully thought-out risk reduction measures. To mitigate adverse outcomes, the project should:
61. (i) initiate discussions with the Village Council to explore willingness of the village to try and increase the cultivation phase of their jhumming to at least two years from the present practice of annual access. This could be made conditional to the village's inclusion in the project and should figure prominently in the MoU to be signed with FOCUS 2.0.
62. (ii) The FPIC process must include a thorough discussion on the issue and the conclusions/agreements are formally recorded, duly signed and endorsed by all parties.
63. (iii) Support needs to be extended to households for enhancing land capability within their jhum plots so that cultivation can be

continued for at least a second year (if not more). Land capability enhancement can be possible through the introduction of agro-ecological practices and the introduction of EM inoculants or biofertilizers.

64. (iv) These households must be included in all capacity building events focused on soil fertility enhancement, crop management and introduction of improved crop cultivation methods.
65. (v) Conduct the Participatory Landuse Planning and Mapping as a central part of the FPIC process to clearly demarcate (a) the Zau cluster(s) identified for FOCUS 2.0 with the individual plots (if possible) (b) all non-Zau jhum plots to be cultivated for that year (c) all jhum clusters within the village territory together with the jhum cycles for each cluster (d) catchment protected areas identified for tapping streamflows/riverlets for irrigation purposes (e) fallows that are accessed for wild edibles and forest produces (f) Village Supply and Reserve Forests, and (g) pastureland to be used for grazing of goats (where applicable). The project team should facilitate this mapping on RS imageries/Google map printouts which are possibly on a 1:10000 scale. This PLUPM will serve as a concrete record of a thorough FPIC process having taken place and should also serve as a monitoring tool/means of verification of project interventions undertaken.
66. (vi) Although crop combinations to be adopted by Zau cluster members will be left to the choice of the households, a possible outcome of cash/commodity crop promotion in the Zaus will be either (i) a reduction of the area under paddy in Zau plots, or (ii) the total replacement of area under paddy with cash/ commodity crops. This raises concerns for the household's staple (cereal) security through the year, as studies across the uplands of NER suggest a four-to-six-month staple security that is met from self-production from jhum fields. The project assumptions that staples/cereal insecurity will not increase consequent to promotion of cash/ commodity crops because (i) project intervention in Zaus should improve soil fertility and hence yields – therefore, even if households reduce the area under paddy, productivity and yields should improve following inputs and improved practices, sufficiently compensating for the reduction in area under paddy (ii) most households are dependent on rice procurement through the Public Distribution System. Allocation of rice through the PDS in the case of NER hill states is adequate to meet the annual requirements of the family. Additionally, to factor in disruption in communication during monsoons, PDS outlet(s) are located in the village and storage facilities established within the village to hold a buffer stock for at least two months to tide over such exigencies. (iii) The project will encourage mixed crops and include seasonal as well as short-gestation cash crops to facilitate cash generation within a season. This should provide the household with the means to procure staples from the market if the need arises.

## 2.5 Labour and working conditions

67. The risk in relation to the Labour Conditions Standard is considered as **moderate**. Activities under Component 2 may pose risks in relation to sexual discrimination, harassment or abuse possibly as a result of labour immigration.
68. Clear provisions outlining safeguards against sexual harassment/discrimination and abuse (SHEA), wage disparity and child labour must be included in all bid documents and strict adherence ensured by the project teams during execution of infrastructure/farm road activities.

## 2.6 Community health and safety

69. The proposed activities for the Project suggests the potential **moderate** risks associated to this standard.
70. The establishment of slaughterhouses and safe disposal of biological waste implies risks to health associated to poor practices that may entail diseases, including foot and mouth disease, which has concerns for community health and safety. Again, these have been elaborated under the Resource Efficiency and Pollution Prevention section and the required remedial action outlined in the relevant section.
71. Lastly, road construction and minor infrastructure development requiring temporary labour carries a risk of increased community exposure to disease(s) and/or SHEA incidents, in instances where construction and/or related labour camps are nearby.

## 2.7 Physical and economic resettlement

72. The risk screening at PCN stage presumed that project interventions, particularly the establishment of Agriculture Intensification Clusters or Zau clusters would result in physical and economic resettlement. This assessment, however, is unfounded and the reassessment at Design stage suggests a downgrading of the risk category to **low** risk as the project activities do not anticipate a risk of physical or economic displacement.

## 2.8 Financial intermediaries and direct investments

73. Risk rating for Financial interventions and procurement have been discussed and adequately addressed under the procurement section and hence are not elaborated here. However, it should be noted that all proposals for infrastructure, slaughterhouse construction, irrigation and farm roads should be treated as sub-projects, each requiring an ESCMP. Safeguard measures suggested in the respective ESCMP must be included in the contract clauses by the Procurement unit at PIU/DMPU as the case may be.

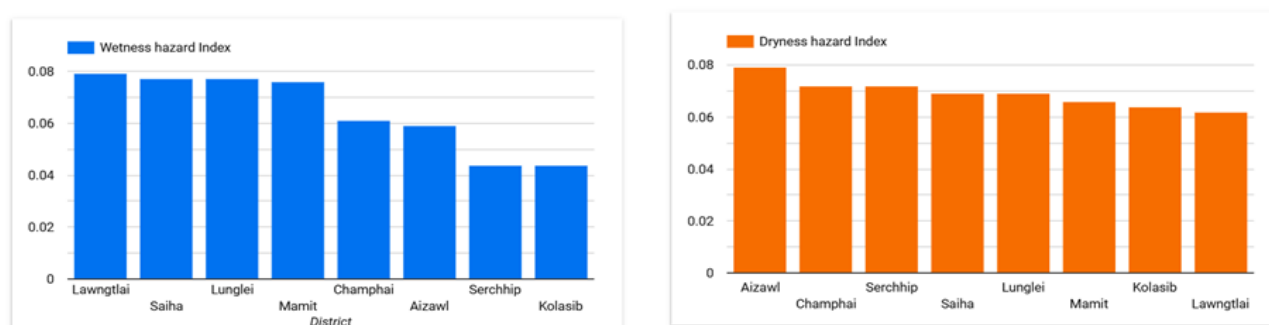

## 2.9 Climate change

74. Downscaled climate projections for the state of Mizoram are unavailable in the relevant portals (Climate Change Knowledge Portal) and therefore the updated SAPCC prepared by the Nodal department (EF&CC) under the aegis of the Executive Council

on Climate Change served as the immediate reference point for assessing climate risks pending the availability of downscaled projections. The SAPCC suggests a trend of increasing temperatures (both summer and winter temperatures) and a decrease in rainfall patterns, suggesting deficit rainfall for the state. Projections for precipitation suggest a decrease in the number of rainy days but a stable overall magnitude of rainfall. Heavy precipitation days (R20mm) were projected to increase by up to 14 days, suggesting more days with intense rainfall and the possibility of extreme events. These projected changes have significant ramifications for water resources, agriculture, health, and connectivity and infrastructure in the region.

75. Interactions with the communities during field visits, discussions with officials of relevant departments and interactions with district teams during the stakeholder workshop confirm some of the assertions made. Increased summer temperatures, erratic rainfall patterns, extreme events (hailstorms, high intensity rainfall) and an increase in dry periods are observed to be on the rise. The SAPCC indicates three of the northern districts – Mamit, Serchhip and Champhai - as having a high combined climate risk (assessed 2017), while most of the other districts are projected with moderate combined climate risks. The State Climate Change Cell of the Mizoram Science, Technology and Innovation Council, in its Climate Change dashboard also provides information on the vulnerability status of each district to climate hazards. The figure below compiled by MISTIC and provides an indication of the vulnerability of each district to excessive rainfall (and flash floods) as well as dryspells (leading to drought like conditions).

**DISTRICT LEVEL WETNESS (FLOOD) AND DRYNESS (DROUGHT) RISK PROFILE**

76. Source: <https://mistic.mizoram.gov.in/sccc-dashboard/>
77. An interpretation of such assessments, combined with the climate induced disaster trends over the last few years indicate the possibility of prolonged dry periods, deficit rainfall and increased extreme events increasing heat and water stress for crops, and possible outbreaks of pests and diseases impacting crop performance and yields.
78. Delayed onset of monsoons and the increased incidence of dryspells early in the season can result in crop desiccation and a need for replanting. Often farmers do not have saved seeds or access to seeds for replanting resulting in a possible food insecurity and distress.
79. Increased temperatures and high humidity can result in pest and pestilence build up and frequency of pest outbreaks can be expected to increase. Further, increases in storms, hailstorms and cyclonic weather events, particularly later in the year can have serious impacts on horticulture and/or on standing crops leading to loss of yield, incomes and food insecurity.
80. The climate projections and their impacts have serious implications for the valuechain promotion activities proposed under the project. Extreme events, particularly increased incidences of heavy rainfall could trigger risks of landslides and disruption of communication with serious implications for valuechain activities and market access.
81. Based on the observations narrated above, the climate risk can be perceived to be **moderate**. However, concrete steps have to be taken to reduce vulnerabilities and to enhance adaptative capacities, particularly of the poor and vulnerable households. A prerequisite is a participatory vulnerability assessment across project villages, preferably in the first year before component implementation is operationalised in order to make project interventions climate responsive and resilient.
82. Incidences of crop wilting soon after seed germination consequent to delayed rainfall and dryspells are expected to increase, necessitating the need for replanting of crops. Often farmers do not have saved seeds or access to seeds for replanting resulting in a possible food insecurity and distress.
83. (i) To ease access to seeds in cases of replanting, community seedbanks are recommended and the setting up of a community seed exchange mechanism, particularly for the support of the poorest and marginalised households.
84. (ii) Increased temperatures and high humidity can result in pest and pestilence build up and frequency of pest outbreaks can be expected to increase. This can pose serious challenges for the farmer as well as the extension workers. While the classic response is to use chemical pesticides and fungicides, with FOCUS 2.0 adopting an agro-ecological approach, steps need to be well in place to meet such challenges employing botanicals or organic pest control methods.
85. (iii) Efforts should be made to promote biological pest control methods, starting with the risk-spreading approach traditionally practised in jhum – that of increasing crop diversity within fields.
86. (iv) Steps should be taken to build capacities in organic pest control methods and for introducing such technologies into the project villages.

87. (v) These risks call for adequate response measures and the need for setting up a Climate Emergency Response mechanism as well as an effective crop insurance framework.
88. The climate projections and their impacts have serious implications for the valuechain promotion activities proposed under the project.
- As a first principle to respond to climate risks, extreme care should be taken in selection of the valuechain commodities and a high preference adopted for non-perishables.
  - If perishable crops are included in VCD options, specific attention should be given for semi-processing and value addition. Possible value chain commodities identified at Design stage include perishables such as ginger and Mizo chilli. An immediate risk reduction practice would be to promote drying of the commodities and the grinding of the commodities to produce powdered spices. These steps would help in immediately reducing risks from microbial spoilage resulting from high temperatures and humidity.
  - With extreme events projected to increase in frequency, particularly the increase in high intensity rainfall, disruptions in communication and transportation will become more frequent, adding to disruptions of the valuechain during the monsoon months. Such disruptions will have to be factored in while designing value chains and calculating profitability.
  - Lastly, given the probability of increased climate uncertainties in the coming years, a strong recommendation is made for exploring appropriate mechanisms for agricultural insurance.

### 3. Regulatory framework and institutional capacities

89. The below sub sections 3.1 - 3.2 elaborates the Regulatory Framework and Institutional Capacities.

#### 3.1 National policies and regulatory framework relevant to SECAP

- National Environment Policy, 2006
- The Environmental (Protection) Act, 1986
- Indian Forest Act 1927
- National Disaster Management Act, 2005
- The Biological Diversity Act 2002
- National Building Code (NBC) of India 2005
- Schedule Tribes and other Traditional Forest Dwellers (Recognition of Forest Rights) Act, 2006
- The Scheduled Castes and the Scheduled Tribes (Prevention of Atrocities) Act, 1989
- National Commission for Women Act, 1990
- National Policy for Women, 2016
- National Water Policy, 2012
- National Policy for Farmers, 2007
- National Forest Policy, 1988
- National Biodiversity Action Plan (NBAP), 2008
- Mizoram vision 2030 Program
- The New Land Use Policy (NLUP) (or three phases) 1984-87, 1991-97, and 2011-14
- Mizoram State REDD+ Action Plan<sup>[1]</sup>
- The Mizoram Water Resources (Management and Regulation) Act, 2024
- Mizoram Agricultural commencement
- Land Leasing Act, 2021
- State Action Plan and Climate Change (2021-2017)<sup>[2]</sup>

90. <sup>[1]</sup> MIZORAM STATE REDD+ ACTION PLAN

91. <sup>[2]</sup><https://forest.mizoram.gov.in/uploads/attachments/eaca54828e34ef7b4472fd5c985fd31b/pages-202-sapc-mizoram-2012-17.pdf>

#### 3.2 National capacities, challenges and lessons with respect to SECAP implementation and compliance

92. The institutional canvas for FOCUS 2.0 will be broadened to include several new partners across government departments and agencies, the non-government sector and the traditional institutions. The guiding principle of FOCUS 2.0 will be to leverage existing opportunities for collaboration, partnerships, skill and resource sharing through active convergence with these agencies and their ongoing programmes. While the Department of Agriculture will continue as the lead implementation agency, strong partnerships will be formalised with several line departments that have the expertise required in meeting the objectives of the project. In addition to the Department of Horticulture and Animal Husbandry and Veterinary (both of which are integral to the project), new partnerships will be forged with the Mizoram State Rural Livelihood Mission to capitalise on their impressive institutional network at the grassroot level for forging the 'last mile' bridge and delivery mechanism with communities. Partnership with Directorate of Commerce and Industry attains importance as fundamental thrust of the project is to strengthen market linkages through value chain development. In addition, Department of Irrigation and Water Resources, Soil Conservation, Environment Forest and Climate Change are additional departments who will be important partners. These partnerships will help improve coordination and complementarity while laying the ground for the project's exit strategy and long-term sustainability. Among other government agencies, strong partnerships will be explored with NABARD, NeDFi and NEC for convergence of

schemes and programmes in rural financing and infrastructure. Technical partnerships are proposed with the Mizoram Science and Technology Council, particularly the Geospatial and Climate Change units. Collaboration with MiRSAC is critical for identification of Zau clusters and also the PLUPM exercise that is proposed in the FPIC process. Similarly, collaboration will be explored with the Horticulture Department of Mizoram University for technical expertise. A strategic partnership is proposed with SELCO, a national non-government organisation specialising in non-conventional energy, and presently working in Mizoram to leverage their experience in the energy sector and strengthen the project's objective of providing energy solutions for Component 1 while meeting the fundamental goal of promoting climate resilience. At the community level, partnerships will be forged with the Cluster Federations set up by MiSRLM in the context of product aggregation, storage and processing for value chains, while at the village level, Village Councils and Village Organisations will be critical partners for the smooth implementation of project activities.

#### 4. Environmental and social category

93. The risk category proposed for the project is **moderate**.

#### 5. Climate risk category

94. The proposed climate risk category based on the SECAP risk screening checklist is **moderate**. Field mission and desk-review indicated only moderate climate risk, thus no additional actions are required. As best practice, the project design ensures that climate considerations are made as part of the selection criteria/decision making matrix to inform any agricultural practices supported under Component 2 and infrastructure developed for resilience and adaptation. The purpose of incorporating any climate information into these decision-making processes would be to capture community vulnerabilities to climate risks and the preferred (or best-fit) adaptive responses, supporting their overall adaptive capacities. This will help with climate resilience building of communities and related project infrastructure.

#### 6. Recommendations for project design and implementation

95. The project design and implementation should take note that the target groups of the project will consist solely of tribal communities (or indigenous peoples). Therefore, it is recommended that:
96. (a) a separate Indigenous Peoples Plan is not considered relevant for this project.
97. (b) The social mobilisation activities, project awareness raising events, project objectives and activities discussions and PRA exercises to be conducted in the context of project implementation planning should all be perceived as integral to the FPIC process and separate FPIC processes need not be initiated. An outline of the FPIC implementation plan is provided in section 2.4 (Indigenous Peoples). The project plans to hold participatory mapping for identification of Zau clusters (agriculture intensification clusters) for each project village. The project also plans to conduct Participatory Landuse Planning and Mapping exercises. The Zau mapping exercise should be seen as an integral part of the PLUP and mapping exercise and can provide a tangible document reflecting the active involvement of the primary stakeholders – the more detailed the PLUP map, the more transparent the FPIC facilitation and intense the involvement of stakeholders. The PLUP map can thus serve as a document to reflect the inclusive nature of the FPIC process itself.
98. (c) It is pertinent to raise a point of caution here in the context of an overt dependence on irrigation for agricultural intensification clusters. While irrigation may provide immediate solutions for agricultural intensification in the project areas, climate models predict, even in the short-term (2030), an increasing trend of high temperatures and dry days in a year, suggesting that water availability will be adversely affected. Agriculture in Mizoram (and many other mountain areas of the Himalayas) is heavily dependent on rainfall. As rainfall becomes increasingly deficit, streamflows will also become seasonal and in many cases, could dry up. This will significantly affect irrigation and may prove to be a serious challenge in the medium and long-term for the project interventions. It may be advisable, therefore, to strengthen rainfed agricultural approaches in parallel, encouraging the conservation and management of stress tolerant (particularly water stress) crop varieties and practices that adopt 'more crop per drop' approaches.
99. (d) It is necessary to track the impact of project intervention on agricultural intensification on transitions from shifting cultivation. In this regard, as the project implementation is operationalised, the following should be included as indicators for tracking transition and regular data and information should be collected (as a M&E requirement):
100. (i) No of Zau cluster households who have completely transited to settled agriculture and do not practice shifting cultivation at all
101. (ii) No of Zau cluster households who still continue with shifting cultivation despite having adopted settled agriculture
102. (iii) Total number of households in the village who continue with the practice of shifting cultivation
103. (iv) The change in jhum cycle (at the beginning of the project and for every subsequent year)

- 104.(v) Total area of village under forest cover (including Supply and Reserve forests)
- 105.(vi) Total area of fallow land that have been brought under cash/ commodity crops preventing regeneration of forests
- 106.(vii) Total area of fallows that have regenerated into forests subsequent to adoption of settled agricultural practices (ie forest area added to existing forests within village territory since beginning of project)
- 107.As a PLUP map will be prepared for each village at the initial stages, the same map can be updated each year to capture information pertaining to (v) (vi) and (vii).

## 7. Further studies needed

- 108.No further studies are needed.

## 8. Monitoring and evaluation

- 109.The Environmental, Social and Climate Management Framework matrix provided as an annex lists the monitoring indicators as well as the frequency schedules while providing a list of the project official(s) responsible for monitoring these outputs. It is important here to also provide a selected list of critical indicators that need to be monitored to track progress and compliance of SECAP requirements. The ESCMF matrix may be updated to include specific actions related to FPIC implementation plan once this is prepared with full details.
- 110.In the context of biodiversity, Zau cluster maps (to be developed based on LULC 1:10000 scale for Zau identification) must be cross checked with PA boundary maps to ensure all project activities are planned and implemented within areas permitted for human activities. This must be ensured by district teams in concerned districts and tracked by the SECAP team (M&E and SECAP Asst Manager in districts and SECAP Asst Managers at HQ). The next indicator, reflecting precautions against deforestation, habitat degradation and measures to offset any significant tree clearing will be the agreements with the individual Village Council and needs quarterly monitoring by the same team. Lastly, the number of Participatory Landuse Planning maps prepared for each village will serve both as an indicator of compliance to biodiversity concerns as well as evidence for a well implemented FPIC engagement.
- 111.An indicator of precautionary steps taken to prevent accidental introduction of diseases into wild populations of ungulates because of the import of livestock will be the number of incidences of import and the documentation of preventive steps taken (ie vaccination, etc). This reporting should be done by the Livestock managers and monitored by the SECAP staff in the districts and at Aizawl. The frequency of monitoring should be quarterly.
- 112.An indicator that is critical for monitoring to track compliance to the concern raised in Cultural Heritage is the number of long-term leases for the Zaus registered under the name of the village council. Any registration of lease/licence in the name of individual members of the Zau cluster must be taken as a serious non-compliance of the SECAP concern attracting the appropriate action. This indicator must be monitored regularly.
- 113.Lastly, two indices need to be monitored regularly to track compliance to the concerns raised about depletion of agro-biodiversity. The first is regularly tracking the number of Zau members (and non-Zau members) adopting the introduction of non-cereal jhum crops, particularly NUS crops into their kitchen/homesteads. A supporting indicator can be the number of households who have been linked to MiSRM's Nutrition Garden scheme. A similar tracking is also necessary of the number of Zau members who have introduced non-cereal crops as a multi-cropping approach into their Zaus. Every season (or quarterly) a dietary diversity assessment should be conducted to monitor the change (reduction or improvement) in sample households of Zau members.

| Biodiversity conservation                                                                                                                                                                                                                                                                                                               | Yes/No | Likelihood | Consequence                                                                                                                                             | Risk Rating |
| 1.1 Could the project involve or lead to conversion or degradation of biodiversity, habitats (including modified habitat, natural habitat and critical natural habitat) and/or ecosystems and ecosystem services?                                                                                                                       | Yes    | Possible   | Minor<br>Project will have minor adverse impact on habitats. Impacts are temporary and confined to a small area of low ecological sensitivity or value. | Low         |
| 1.2 Could the project involve or lead to activities negatively impacting habitats that are legally protected, officially proposed for protection, or recognized as protected by traditional local communities and/or authoritative sources (e.g. National Park, Nature Conservancy, Indigenous Community Conserved Area, (ICCA), etc.)? | Yes    | Possible   | Minor<br>Project is close to a protected area, and associated facilities may have minor indirect negative impacts.                                      | Low         |
| 1.3 Could the project involve or lead to an increase in the chance of human-wildlife encounters/conflict?                                                                                                                                                                                                                               | Yes    | Possible   | Moderate<br>Project may involve conflict leading to some loss of livelihood or threat to wildlife, but this is not major.                               | Moderate    |
| 1.4 Could the project involve or lead to risks to endangered species (e.g. reduction, encroachment on habitat)?                                                                                                                                                                                                                         | Yes    | Unlikely   | Minor<br>Net loss in biodiversity with a status of Least Concern.                                                                                       | Low         |
| 1.5 Could the project involve or lead to negative impacts/risks to migratory wildlife?                                                                                                                                                                                                                                                  | No     |            |                                                                                                                                                         | Low         |
| 1.6 Could the project involve or lead to introduction or utilization of any invasive alien species of flora and fauna, whether accidental or intentional?                                                                                                                                                                               | Yes    | Possible   | Minor<br>Low potential for invasive species of flora or fauna to be introduced and strict controls are in place.                                        | Low         |
| 1.7 Could the project involve or lead to the handling or utilization of genetically modified organisms?                                                                                                                                                                                                                                 | No     |            |                                                                                                                                                         | Low         |
| 1.8 Will the project involve or lead to procurement through primary suppliers of natural resource materials (wood, gravel, sand, etc.)?                                                                                                                                                                                                 | Yes    |            | Moderate<br>Project will require procurement of natural resources through primary suppliers, and resource extraction is tightly regulated.              | Moderate    |
| Resource Efficiency and Pollution Prevention                                                                                                                                                                                                                                                                                            | Yes/No | Likelihood | Consequence                                                                                                                                             | Risk Rating |

| Environmental and Social Safeguards                                                                                                                                                                                                                                      |     |          |                                                                                                                                                                                                                                                                                                                     |          |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
| 2.1 Could the project involve or lead to the release of pollutants to the environment (on and off farm) due to routine or non-routine circumstances with the potential for adverse local, regional, and/or transboundary impacts?                                        | Yes | Possible | Minor<br><br>Pollutants may be released, either routinely or by accident, but treatment systems are proven, verified and affordable. Receiving environment has absorptive capacity.                                                                                                                                 | Low      |
| 2.2 Could the project be located in an area which is being, or has been, polluted by an external source (e.g. a mine, smelter, industry)?                                                                                                                                | No  |          |                                                                                                                                                                                                                                                                                                                     | Low      |
| 2.3 Will the project involve or lead to significant consumption of raw materials and energy?                                                                                                                                                                             | No  |          |                                                                                                                                                                                                                                                                                                                     | Low      |
| 2.4 Will the project develop or rehabilitate irrigation schemes and/or involve or lead to significant extraction, diversion or containment of surface or ground water? (For example, construction of dams, reservoirs, river basin developments, groundwater extraction) | Yes |          | Moderate<br><br>The project will need a considerable amount of groundwater or surface water. This will require a minor extension of existing sources. This will include development or rehabilitation of small-scale irrigation schemes below 300 ha per scheme.                                                    | Moderate |
| 2.5 Will the project involve the use of agrochemicals (pesticides, fertilizers, and other modifying agents) which have potential to pollute soils and water bodies or cause other negative impacts?                                                                      | Yes |          | Moderate<br><br>The project will require use of fertilizers, pesticides and/or other modifying agents, but options are available to replace polluting fertilizers and/or pesticides with alternatives. The adaptive capacity of the environment is high, which should ameliorate most potential pollution problems. | Moderate |
| 2.6 Will the project involve or lead to primary production of living natural resources through cultivation or rearing of plants, annual and perennial crop farming, etc.?                                                                                                | Yes |          | Moderate<br><br>Project will be fully dependent on production of living natural resources. Project will be sited in an existing agricultural area, with low environmental and/or social sensitivity.                                                                                                                | Moderate |

| Environmental and Social Safeguards                                                                                                                                 |     |  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |          |

## Climate Risk Classification: Moderate

|                                                                                                                                                                              |                     |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------|
| <b>Step 1: Hazard identification</b>                                                                                                                                         |                     |
| <b>What are the expected hazards in the project intervention area?</b>                                                                                                       | <b>No, Yes, TBD</b> |
| 1.1 River flood                                                                                                                                                              | Yes                 |
| 1.2 Coastal Flood                                                                                                                                                            | No                  |
| 1.3 Urban Flood                                                                                                                                                              | Yes                 |
| 1.4 Landslide                                                                                                                                                                | Yes                 |
| 1.5 Cyclone                                                                                                                                                                  | Yes                 |
| 1.6 Water Scarcity (agricultural droughts and/or dry spells)                                                                                                                 | No                  |
| 1.7 Extreme Heat                                                                                                                                                             | Yes                 |
| 1.8 Wildfires                                                                                                                                                                | Yes                 |
| <b>Future climate scenarios foreseen (period 2040-2059) - Change in frequency and intensity</b>                                                                              | <b>No, Yes, TBD</b> |
| 1.9 Change in temperature (increase or decrease)                                                                                                                             | Yes                 |
| 1.10 Change in rainfall (increase or decrease)                                                                                                                               | Yes                 |
| 1.11 Climate variability                                                                                                                                                     | Yes                 |
| 1.12 Intensity and frequency of extreme events                                                                                                                               | Yes                 |
| <b>Is the project expected to have an impact on climate change (i.e. contribute to greenhouse gas emissions)?</b>                                                            | <b>No, Yes, TBD</b> |
| 1.13 Is the project expected to be a significant emitter of greenhouse gas emissions?                                                                                        | No                  |
| <b>Step 2: Exposure Assessment</b>                                                                                                                                           |                     |
| <b>Is the project located in exposed areas to weather-related natural hazards?</b>                                                                                           | <b>No, Yes, TBD</b> |
| 2.1 Low-lying areas (valleys, coastal zones, and small islands)                                                                                                              | No                  |
| 2.2 Very warm areas (subtropical)                                                                                                                                            | Yes                 |
| 2.3 Tropical areas (rainforests)                                                                                                                                             | Yes                 |
| 2.4 Arid and semi-arid areas (deserts)                                                                                                                                       | No                  |
| 2.5 Mountains zones and permafrost areas (tundra)                                                                                                                            | Yes                 |
| 2.6 River banks                                                                                                                                                              | Yes                 |
| <b>Does the project target agricultural systems, ecosystems or livelihoods exposed to weather-related hazards?</b>                                                           | <b>No, Yes, TBD</b> |
| 2.7 Is crop production frequently affected by rainfall variability, prolonged droughts, changes in temperature or pests and diseases?                                        | Yes                 |
| 2.8 Is livestock productivity frequently affected by rainfall variability, prolonged droughts, changes in temperature or diseases?                                           | Yes                 |
| 2.9 Are fisheries frequently affected by ocean acidification, water salinity and changes in sea surface temperature due to ocean-atmospheric oscillations or climate change? | N/A                 |
| 2.10 Is forest productivity frequently affected by wildfires, diseases, rainfall variability, prolonged droughts, or changes in temperature?                                 | Yes                 |
| 2.11 Is the biodiversity in the project area likely to be affected by changes in climate variables?                                                                          | Yes                 |
| 2.12 Is any stage of the agricultural value chain (production, storage, processing and marketing) exposed to climate related hazards?                                        | Yes                 |
| 2.13 Is any rural infrastructure likely to be affected by flooding, landslides, changes in temperatures, and extreme winds.                                                  | Yes                 |
| <b>Step 3: Sensitivity Assessment</b>                                                                                                                                        |                     |
| <b>What are key sensitivities for the populations in the project's areas of intervention?</b>                                                                                | <b>No, Yes, TBD</b> |
| 3.1 Is conflict exacerbating the population's sensitivity to weather related hazards?                                                                                        | No                  |

|                                                                                                                                                                                                                             |                     |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------|
| 3.2 Is population displacement being exacerbated by climate change impacts?                                                                                                                                                 | No                  |
| 3.3 Are diseases (e.g. COVID-19, malaria, cholera) increasing the population's vulnerability and affecting their capacity to address potential weather-related hazards?                                                     | No                  |
| 3.4 Are social inequalities (e.g. based on gender, youth, indigenous persons and other marginalized groups) being exacerbated by climate change?                                                                            | No                  |
| 3.5 Human Development Index (HDI)                                                                                                                                                                                           | Yes                 |
| 3.6 Multidimensional Poverty Index (MPI)                                                                                                                                                                                    | Yes                 |
| 3.7 Is the Multidimensional Poverty Index (MPI) equal to or above 0.1?                                                                                                                                                      |                     |
| <b>Step 4: Adaptive capacity</b>                                                                                                                                                                                            |                     |
| <b>What are key adaptive capacities in the areas of project intervention?</b>                                                                                                                                               | <b>No, Yes, TBD</b> |
| 4.1 Is the country well ranked in the Disaster risk reduction progress score?                                                                                                                                               | Yes                 |
| 4.2 Are climate and weather information services (real-time weather data, seasonal forecasts etc.) effectively being delivered (through radio, TV, SMS, extension services etc.) to farmers, rural dwellers, and end users? | Yes                 |
| 4.3 Does the project country have an early action plan (preparedness and emergency response) to mitigate the impacts of weather-related hazards once the shock occurs?                                                      | Yes                 |
| 4.4 Does the government or other institutions support the target population/communities with the necessary social and economic resources to prepare for or respond to climate-related events?                               | Yes                 |
| 4.5 Is the target community carrying out (using their own means) agricultural adaptation?                                                                                                                                   | Yes                 |
| 4.6 Does the target population have the economic means or support to adjust or adapt their activities in response to weather related shocks?                                                                                | No                  |
| 4.7 Do policies/mechanisms exist that make financial credit, loans, and agricultural insurance available?                                                                                                                   | Yes                 |
| 4.8 Are rural infrastructures effectively delivering services to farmers and rural dwellers?                                                                                                                                | No                  |

### **Environmental, Social and Climate Management Plan (ESCMP)**

Mission Dates: 31 March – 18 April 2025

Document Date: 04/09/2025

Project No. 2000004677

Report No. 7262-IN

Asia and the Pacific Division  
Programme Management Department

## 8. Environmental, Social and Climate Management Plan

As part of the SECAP Procedures described above, the project has been screened to identify potential environmental and social risks in relation to activities of components 1 (market linkages, valuechain and enterprise development) and 2 (Zau cluster development and lease formalization) and how they may impact environmental, social and climate receptors, as well as proposed mitigation measures. This section is to be understood as an explanation of the ESCMF Matrix.

### Standard 1. Biodiversity Conservation

The risk to Biodiversity was assessed as Moderate. This includes both direct risks to forest and wildlife habitats and risks from agro-biodiversity depletion due to Zau intensification. The moderate risk to biodiversity arises from Component 2's bench-terracing and expanded grazing around Zau clusters that border the Dampa Tiger Reserve and other forest fragments. These interventions, while limited to community-managed plots, could disrupt primate movement corridors and fragment understorey habitat.

While Mizoram has many Protected Areas across the state harbouring several rare and endangered wildlife species in its National Parks and Wildlife Sanctuaries, the project will adhere to stringent protocols to ensure no activities occur within or near protected areas, safeguarding their ecological integrity'.

Table 1 lists the district-wise distribution of protected areas – National Parks and Wildlife Sanctuaries – across Mizoram. The Protected Areas of Mizoram harbour two highly endangered primates – Hoolock Gibbon (only Ape in India) and Phayre's leaf eating monkey – in addition to several macaque species. Among ungulates, the red serow is found across several of Mizoram's protected areas; in fact, the serow is considered the state animal of Mizoram. Among the big cats, Mizoram's protected areas harbour the tiger and the clouded leopard besides several smaller cats, including the marble cat and the fishing cat. Mention must be made of Dampa Tiger Reserve which has the distinction of hosting the highest density of clouded leopards in South and Southeast Asia. Among the avifauna, Mizoram's protected network hosts several species of hornbills, the rare Blyth's tragopan and the bamboo partridge.

Table 1 has been compiled to provide an overview of the district-wise location of important protected areas (together with the area) and help in identifying the districts where extra caution has to be exercised while designing project interventions in order to safeguard SECAP concerns on Biodiversity. Three districts – Champhai, Lawngtlai and Lunglei – have at least two protected areas each, which include National Parks in the first two districts. In addition, the Dampa Tiger Reserve located in Mamit district is the largest protected area in Mizoram with a core area of 500 km<sup>2</sup> and a buffer area comprising 488 km<sup>2</sup>.

Table1: District-wise distribution of Protected Areas (National Parks and Wildlife Sanctuaries) in Mizoram

| Sl | District  | Protected Area (National Park/Wildlife Sanctuary) | Area (in km <sup>2</sup> ) |
|----|-----------|---------------------------------------------------|----------------------------|
| 1  | Mamit     | Dampa Tiger Reserve                               | 500 core, 488 buffer       |

(Source: Compiled from <https://forest.mizoram.gov.in/page/wildlife-of-mizoram> - Wildlife of Mizoram, Environment, Forest and Climate Change Department, Government of Mizoram)

- Operationalising project interventions, particularly pertaining to Component 2 calls for extra caution and focused attention in these districts to ensure that project activities do not infringe into core areas or areas where human activities are not permitted, and project activities do not result in deforestation and habitat degradation. These precautionary steps are necessary to minimise habitat degradation particularly for the endangered primates (Hoolock Gibbon and Phayre's Leaf eating monkey).
- An associated risk which can be categorised as moderate is the predation of goats and kids by wildlife, particularly big cats and bears. Additionally, as the project intends to increase cropping intensity and promote a second or third cropping season, this may trigger crop depredation by wildlife, particularly around Protected Areas.
- In addition, attention needs to be paid to risks of depletion of agro-biodiversity arising from the promotion of cash/commodity crops. As Zau intensification would centre around cash/commodity crop(s) and promote gradual transition to settled agriculture, the risks of depletion of agro-biodiversity is increased. This has ramifications for dietary diversity and can trigger concerns in regard to nutrition.
- Although crop combinations to be adopted by Zau cluster members will be left to the choice of the households, a possible outcome of cash/commodity crop promotion in the Zaus will be either (i) a reduction of the area under paddy in Zau plots, or (ii) the total replacement of area under paddy with cash/ commodity crops. This raises concerns for the household's staple (cereal) security through the year, as studies across the uplands of NER suggest a four-to-six-month staple security that is met from self-production from jhum fields.

### **Proposed Mitigation Measures**

To address this, the PIU will secure forest department clearance and map all Zaus and enclosures against protected-area boundaries, ensuring no-clearance clauses are enforced in construction contracts.

In addition, native species will be planted and degraded fringes allowed to regenerate naturally, while village-led corridors maintain continuity between core forest areas and reduce edge effects on wildlife.

While establishing Zaus – permanent agriculture through agricultural intensification – in fringe villages of protected areas, the project will need to ensure: (i) no Zau clusters fall within the protected area boundaries; in the case of Dampa Tiger Reserve (Mamit district), extra caution must be exercised while selecting project villages within the Buffer area and all necessary clearances obtained from the Tiger Reserve Authorities/Forest Department before the project interventions are operationalised.

(ii) Project teams must ensure that clear felling or clearing of tree vegetation while establishing the Zau clusters is minimal, if not avoided significantly.

(iii) Conscious mitigation measures of Zau enrichment through tree planting and assisted forest regeneration must be encouraged, particularly in Zau clusters that are far away from the village and villagers are reluctant to cultivate.

(iv) If the area cleared of tree species is significant, the Project team must encourage and support the Village Council to increase/expand existing village safety reserves and/or village supply reserves.

These precautionary steps are necessary to minimise habitat degradation particularly for the endangered primates (Hoolock Gibbon and Phayre's Leaf eating monkey).

- The project proposes to support animal husbandry for those households that do not have sufficient labour for managing agriculture in Zau clusters. The proposed animals to be encouraged are pigs, poultry and/or goats. Risks to biodiversity from the first two are minimal as these are proposed to be penned. Goats, however, are to be grazed in identified pastures. This could pose a possible risk of introducing diseases to the wild population of serows (and other ungulates), but the risk is perceived to be low as veterinary health and safety measures are expected to be in place while importing livestock into project villages. However, it is wise to be sensitive and aware of the possible risks and take the necessary precautions.
- An associated risk which can be categorised as moderate is the predation of goats and kids by wildlife, particularly big cats and bears. Sufficient precautions must be taken by the project as this could potentially increase human-wildlife conflicts and pose a risk to project investments in this sector. This also poses challenges for insurance claim settlement.
- As Zau intensification would centre around cash/commodity crop(s) and promote gradual transition to settled agriculture, the risks of depletion of agro-biodiversity becomes very real and significant. This has ramifications for dietary diversity and can trigger concerns in regard to nutrition. A safeguard measure to compensate for this depletion would be

(i) encouraging and supporting households to introduce a wide variety of the leafy vegetables and other NUS crops into the household's kitchen gardens. Convergence with MiSRLM's Nutrition gardens under the POSHAN scheme should be explored and opportunities extended to MiSRLM for outscaling their programme.

(ii) encouraging the introduction of several of the perennial NUS crops into Zaus as 'companion crops'. This will serve multiple purposes- provide a diversification in the Zaus thus strengthening risk aversion measures for the household and also safeguard the dietary diversity – hence nutritional security – over seasons.

## **Standard 2 Resource Efficiency and Pollution Prevention**

This standard is applicable in relation to activities aimed at enhancing agricultural productivity while mitigating environmental impacts. The proposed activities involve supporting the formation of Zau clusters or Agricultural Intensification Clusters (AICs), integrating measures such as irrigation, soil and water conservation, agroforestry, natural farming, farm mechanization, and agricultural link roads. Although the risks from the irrigation interventions do not suggest the need for any revision of the risk categorisation, focused efforts must be made to ensure long-term sustainability of water availability for irrigation purposes. A reassessment of the risks from proposed project interventions does not necessitate any revision of the risk category, but suggests the need for attention to specificities.

- Project interventions will lead to the development or rehabilitation of irrigation schemes, tapping local streamflows or harnessing water from small riverlets, which can potentially affect streamflow, unless mitigation measures are adopted.

- Development of the Zau clusters or AICs may call for the establishment of bench terraces in certain locations. This can increase the possibility of topsoil erosion and requires specific interventions to reduce the adverse impacts.
- Although the project proposes to adopt agroecological approaches, moderate risks from the use of chemicals for nutrient enhancement and pest control cannot be ruled out as farmers are known to have adopted the use of herbicides to control weeds.
- The project proposes the establishment of at least three slaughterhouses. Concerns arise in regard to the safe disposal of waste entrails and blood of the slaughtered animals as inappropriate disposal of biological waste could lead to pollution of soil and water bodies in addition to posing a health safety concern.

### **Proposed Mitigation Measures**

- (i) The project risks in relation to this standard are considered moderate, primarily with activities aimed at enhancing agricultural productivity while mitigating environmental impacts. Focused efforts must be made to ensure long-term sustainability of water availability for irrigation purposes. It is recommended therefore, that for every irrigation intervention that involves the tapping of local streamflows, a catchment treatment plan be made mandatory involving: an agreement with the Village Council that the catchment of the water source will not be brought under any cultivation and the identified area will be declared as a catchment reserve for posterity;
- (ii) wherever necessary, steps will be taken to enhance percolation and groundwater reserve through measures that draw from Springshed Recharge and Management approaches. This will require specific capacity building and training programme for the project team as well as community members for which adequate budgetary allocations need to be made.
- Development of the Zau clusters or AICs may call for the establishment of bench terraces in certain locations. This increases the possibility of topsoil erosion and requires specific interventions to reduce the adverse impacts.
  - (i) Contour bunding using biological approaches that build on traditional practices should be the first option adopted. Traditionally, farmers lay logs along contours to reduce erosion. Split bamboo 'mattings' are also used by certain communities as low fencing to prevent erosion and help in terrace formation.
  - (ii) Contour hedgerows using legumes should complement the log structures or bamboo mattings to further strengthen erosion prevention measures. Legumes such as pigeon pea or soyabean are good options and these legumes should be planted in rows above and below the logs/bamboo mattings. Such measures can help in terrace building with minimal costs and low labour requirements while also enhancing soil nutrient and moisture retention capacities through nitrogen fixing and mulching the nitrogen rich biomass after harvest.
- Although the project proposes to adopt agroecological approaches such as resource recycling through the promotion of biomass mulching, composting and introduction of EM methods, moderate risks from the use of chemicals for nutrient enhancement and pest control cannot be ruled out as farmers are known to have adopted the use of herbicides to control weeds.
  - (i) Extreme care and caution must be exercised by the project in ensuring that chemical fertilisers and pesticides are not used.

- (iii) As a precaution, regular trainings on the safe use of pest control agents must be imparted to farmers and steps taken to ensure adherence to the safe disposal of harmful chemicals.
- The project proposes the establishment of at least 3 slaughter houses. Concerns arise in regard to the safe disposal of waste entrails and blood of the slaughtered animals as inappropriate disposal of biological waste could lead to pollution of soil and water bodies in addition to posing a health safety concern.
  - (i) Effective waste disposal mechanism following national/international standards will need to be put in place and this aspect must be reflected in the bidding document during the call for bids for the construction of the slaughter houses.

### **Standard 3 Cultural Heritage**

Although proposed interventions can be assumed not to pose any risks to tangible cultural heritage, two outcomes of the basic project approach can bring about intangible changes in cultural practices.

The predominant agricultural practice among all communities in Mizoram is shifting cultivation, locally called jhum.

Jhumming is carried out in community land and a participating household holds annual tenurial rights to a plot that is allocated through lottery conducted by the Village Council. As tenure to agricultural plots are for a year only, a longer term of tenurial security has been introduced by FOCUS 1.0 with land leases of 10 years. This intervention, in addition to ensuring security of tenure also intends to facilitate the transition to settled agricultural practices and reduce deforestation caused by the practice, thereby supporting the Government of Mizoram's land use policy and intent of eradicating shifting cultivation.

This approach however, overlooks the fact that it would trigger a change in the traditional access regime and affect a transition from Common Property regime to Private Property regime, the possibility of elite capture, privatisation of common property resources and the emergence of landlessness.

### **Anticipated Mitigation Measures**

Under Component 2, the project proposes to target 30% of households for agriculture intensification (and transition to settled agriculture with a longer lease period) and another 30% for animal husbandry options, leaving 40% of households practising jhum outside the purview of direct project interventions. Establishment of cash/commodity crops and the sedentarisation of agriculture in the Zaus on community land will result in the reduction of area available for jhum and the resultant shortening of jhum cycles. As all households practising shifting cultivation will not be included in Zau activities, the jhum practice of the excluded jhumiyas will become further marginalised, adversely affecting their yields (and potentially the household food security). This raises serious concerns and requires carefully thought-out risk reduction measures, keeping in perspective IFAD's declared principle of 'doing no harm'.

As pointed out under Biodiversity, the promotion of cash/ commodity crops in the agriculture intensification cluster or Zaus can result in a depletion (and possible erosion) of agro-biodiversity, particularly non-cereal tubers, leafy vegetables, legumes and spices. These NUS crops are perceived as climate smart, nutrient dense crops and extremely critical for maintaining the seasonal dietary diversity and nutritional security, especially of poor households. These crops also help to enhance adaptive capacities of the rural poor.

Although crop combinations to be adopted by Zau cluster members will be left to the choice of the households, a possible outcome of cash/commodity crop promotion in the Zaus will be either (i) a reduction of the area under paddy in Zau plots, or (ii) the total replacement of area under paddy with cash/ commodity crops. This raises concerns for the household's staple (cereal) security through the year, as studies across the uplands of NER suggest a four-to-six-month staple security that is met from self-production from jhum fields.

To safeguard against such impacts (and the emergence of second-generation issues)<sup>1</sup>,

- the formal registration of the long-term lease (or licence) issued by the Revenue department should be to the Village Council and not individual households and
- the lease should not allow the conversion of the license issued to a permanent land patta in the name of any individual.

This needs to be a mandatory conditionality included in the MoU to be signed with Village authorities of all participating villages in all districts.

Establishment of cash/commodity crops and the sedentarisation of agriculture in the Zaus on community land will result in the reduction of area available for jhum and the resultant shortening of jhum cycles. As all households practising shifting cultivation may or may not be included in Zau activities, the jhum practice of the excluded jhumiyas will become further marginalised, adversely affecting their yields (and potentially the household food security). This raises serious concerns and requires carefully thought-out risk reduction measures. To mitigate adverse outcomes, the project should:

- (i) initiate discussions with the Village Council to explore willingness of the village to try and increase the cultivation phase of their jhumming to at least two years from the present practice of annual access. This could be made conditional to the village's inclusion in the project and should figure prominently in the MoU to be signed with FOCUS 2.0.
- (ii) Support need to be extended to households for enhancing land capability within their jhum plots so that cultivation can be continued for at least a second year (if not more). Land capability enhancement can be possible through the introduction of agro-ecological practices and the introduction of EM inoculants or biofertilizers.
- (iii) These households must be included in all capacity building events focused on soil fertility enhancement, crop management and introduction of improved crop cultivation methods.
- (iv) FPIC process must include a thorough discussion of the issue and the conclusions/agreements are formally recorded, duly signed and endorsed by all parties.
- (v) Conduct the Participatory Landuse Planning and Mapping as a central part of the FPIC process to clearly demarcate (a) the Zau cluster(s) identified for FOCUS 2.0 with the individual plots (if possible) (b) all non-Zau jhum plots to be cultivated for that year (c) all jhum clusters within the village territory together with the jhum cycles for each cluster (d) catchment protected areas identified for tapping streamflows/riverlets for irrigation purposes (e) fallows that are accessed for wild edibles and forest produces (f) Village Supply and Reserve Forests, and (g) pastureland to be used for grazing of goats (where applicable). The project team should facilitate this mapping on RS imageries/Google map printouts which are possibly on a 1:10000 scale. This PLUPM will serve as a concrete record of a thorough FPIC process having taken

---

<sup>1</sup> See Choudhury, D., Bhuchar, S., Thomas, S. (2021). *Transitioning shifting cultivation to resilient farming systems in South and Southeast Asia*. Resource book. ICIMOD.

place and should also serve as a monitoring tool/means of verification of project interventions undertaken.

Although crop combinations to be adopted by Zau cluster members will be left to the choice of the households, a possible outcome of cash/commodity crop promotion in the Zaus will be either (i) a reduction of the area under paddy in Zau plots, or (ii) the total replacement of area under paddy with cash/ commodity crops. This raises concerns for the household's staple (cereal) security through the year, as studies across the uplands of NER suggest a four-to-six-month staple security that is met from self-production from jhum fields. The project assumptions that staples/cereal insecurity will not increase consequent to promotion of cash/ commodity crops because (i) project intervention in Zaus should improve soil fertility and hence yields – therefore, even if households reduce the area under paddy, productivity and yields should improve following inputs and improved practices, sufficiently compensating for the reduction in area under paddy (ii) most households are dependent on rice procurement through the Public Distribution System. Allocation of rice through the PDS in the case of NER hill states is adequate to meet the annual requirements of the family. Additionally, to factor in disruption in communication during monsoons, PDS outlet(s) are located in the village and storage facilities established within the village to hold a buffer stock for at least two months to tide over such exigencies. (iii) The project will encourage mixed crops and include seasonal as well as short-gestation cash crops to facilitate cash generation within a season. This should provide the household with the means to procure staples from the market if the need arises.

#### **Standard 4 Indigenous Peoples**

The target groups identified for FOCUS 2.0 comprise completely of tribal communities (or indigenous peoples). The risks related to Indigenous (tribal) Peoples are perceived to be moderate, as the project will build upon local traditional knowledge and promote full and effective participation of the tribes present in the area. With 100% tribal community as target group, FOCUS does not require a separate Indigenous/Tribal Peoples Plan. All social mobilisation, project awareness raising, consultations on project objectives, components and eligibility will be conducted under an FPIC framework approach. An outline of the FPIC implementation plan is provided below. An in-depth assessment of risks related to the project approach and mitigation measures developed considering the customary laws among the target groups and the tribal governance system among them suggests that the SECAP Review Note at PCN stage overlooked certain nuances as outlined in the above section. Although these concerns do not suggest a need to upgrade the risk category, they certainly suggest the need for specific attention and appropriate action.

### Standard 5 Labour and Working Conditions

The PDT had proposed a moderate risk ranking for labour and working conditions, the reassessment at Design stage confirms this rate. Clear provisions outlining safeguards against sexual harassment/discrimination and abuse (SHEA), wage disparity and child labour must be included in all bid documents and strict adherence ensured by the project teams during execution of infrastructure/farm road activities.

### Standard 6 Community health and Safety

The SECAP Note at PCN stage did not list Community Health and Safety as a concern. However, given the proposed activities for the Project Components at Design stage, inclusion of this category is strongly suggested as the present assessment suggests a moderate risk categorisation.

#### SECAP concerns:

- The risks arise from two aspects of proposed project activities, all of which have been discussed under Biodiversity, Resource Efficiency and Pollution Prevention and Indigenous Peoples sections above. The first (elaborated under the Biodiversity and Indigenous Peoples categories) is in regard to the depletion of agrobiodiversity subsequent to the establishment of cash/commodity crops. A reduction in agrobiodiversity has implications for seasonal dietary diversity, and by extension, serious ramifications for nutritional security, especially of children, expectant and nursing mothers and the aged.
- The establishment of slaughterhouses and safe disposal of biological waste has concerns for community health and safety. Again, these have been elaborated under the Resource Efficiency

and Pollution Prevention section and the required remedial action outlined in the relevant section.

- Lastly, road construction and minor infrastructure development requiring temporary labour carries a risk of increased community exposure to disease(s) and/or SHEA incidents, in instances where construction and/or related labour camps are nearby.

The risks in relation to this standard in the context of the project arise from three aspects of proposed project activities, two of which have been discussed under Biodiversity and Resource Efficiency and pollution prevention sections above while the third is related to labour conditions.

- The first (elaborated under the Biodiversity category) is in regard to the depletion of agrobiodiversity subsequent to the establishment of cash/commodity crops. A reduction in agrobiodiversity has implications for seasonal dietary diversity, and by extension, serious ramifications for nutritional security, especially of children, expectant and nursing mothers and the aged. Remedial measures have been suggested under the Biodiversity section and are therefore, not repeated here.
- The establishment of slaughterhouses and safe disposal of biological waste has concerns for community health and safety. Again, these have been elaborated under the Resource Efficiency and Pollution Prevention section and the required remedial action outlined in the relevant section.
- Road construction and minor infrastructure development requiring temporary labour carries a risk of increased community exposure to disease(s) and/or SHEA incidents, in instances where construction and/or related labour camps are nearby. In addition to the precautions and mitigation measures related to Labour Conditions (e.g. with SHEA safeguards included in bidding documents of contractors), the PIU/DPIU safeguards staff must sensitize communities located near these activities on the related risks & preventative measures/reporting procedures prior to the commencement of those activities.

#### **Standard 7 Physical and economic resettlement**

The risk screening at PCN stage presumed that project interventions, particularly the establishment of Agriculture Intensification Clusters or Zau clusters would result in physical and economic resettlement. This assessment, however, is unfounded and the reassessment at Design stage suggests a downgrading of the risk category to low risk.

#### **Standard 8 Financial Intermediaries and Direct Investments.**

Risk rating for Financial interventions and procurement have been discussed and adequately addressed under the procurement section and hence are not elaborated here. However, it should be noted that all proposals for infrastructure, slaughterhouses, irrigation and farm roads should be treated as sub-projects, each requiring an ESCMP. Safeguard measures suggested in the respective ESCMP must be included in the contract clauses by the Procurement unit at PIU/DPIU as the case may be.

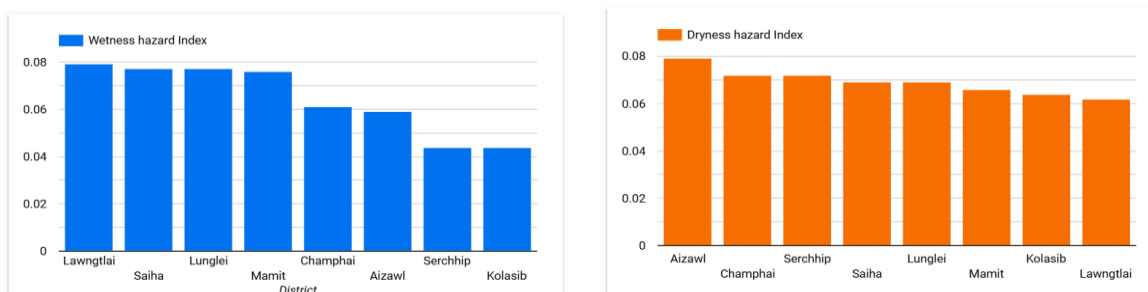

#### **Standard 9 Climate change**

Downscaled climate projections for the state of Mizoram are unavailable in the relevant portals (Climate Change Knowledge Portal) and therefore the updated SAPCC prepared by the Nodal department (EF&CC) under the aegis of the Executive Council on Climate Change served as the immediate reference point for assessing climate risks pending the availability of downscaled projections. The SAPCC suggests a trend of increasing temperatures (both summer and winter temperatures) and a decrease in rainfall patterns, suggesting deficit rainfall for the state.

Projections for precipitation suggest a decrease in the number of rainy days but a stable overall magnitude of rainfall. This trend is reported by all the published studies with the 2021 study reporting a decreasing rate of 5.22 mm/yr. Heavy precipitation days (R20mm) were projected to increase by up to 14 days, suggesting more days with intense rainfall and the possibility of extreme events. These projected changes have significant ramifications for water resources, agriculture, health, and connectivity and infrastructure in the region.

Interactions with the communities during field visits, discussions with officials of relevant departments and interactions with district teams during the stakeholder workshop confirm some of the assertions made. Increased summer temperatures, erratic rainfall patterns, extreme events (hailstorms, high intensity rainfall) and an increase in dry periods are observed to be on the rise. The SAPCC indicates three of the northern districts – Mamit, Serchhip and Champhai - as having a high combined climate risk (assessed 2017), while most of the other districts are projected with moderate combined climate risks. The State Climate Change Cell of the Mizoram Science, Technology and Innovation Council, in its Climate Change dashboard also provides information on the vulnerability status of each district to climate hazards. The figure below compiled by MISTIC provides an indication of the vulnerability of each district to excessive rainfall (and flash floods) as well as dryspells (leading to drought like conditions).

**DISTRICT LEVEL WETNESS (FLOOD) AND DRYNESS (DROUGHT) RISK PROFILE**

Source: <https://mistic.mizoram.gov.in/sccc-dashboard/>

#### SECAP concerns:

- An interpretation of such assessments, combined with the climate induced disaster trends over the last few years indicate the possibility of prolonged dry periods, deficit rainfall and increased extreme events increasing heat and water stress for crops, and possible outbreaks of pests and diseases impacting crop performance and yields.
- Delayed onset of monsoons and the increased incidence of dry spells early in the season can result in crop desiccation and a need for replanting. Often farmers do not have saved seeds or access to seeds for replanting resulting in a possible food insecurity and distress.
- Increased temperatures and high humidity can result in pest and pestilence build up and frequency of pest outbreaks can be expected to increase. Further, increases in storms, hailstorms and cyclonic weather events, particularly later in the year can have serious impacts on horticulture and/or on standing crops leading to loss of yield, incomes and food insecurity.
- The climate projections and their impacts have serious implications for the value chain promotion activities proposed under the project. Extreme events, particularly the increase incidences of heavy rainfall could trigger risks of landslides and disruption of communication with serious implications for value chain activities and market access.

Based on the observations narrated above and following the SECAP climate risk checklist, the climate risk is assessed as moderate. No specific steps are required to further address climate, however steps were taken during project design to ensure climate considerations are made for any agricultural practices supported under Component 2 and infrastructure developed for resilience and adaptation.

Incidences of crop wilting soon after seed germination consequent to delayed rainfall and dry spells are expected to increase, necessitating the need for replanting of crops. Often farmers do not have saved seeds or access to seeds for replanting resulting in a possible food insecurity and distress.

- i. To ease access to seeds in cases of replanting, community seedbanks are recommended and the setting up of a community seed exchange mechanism, particularly for the support of the poorest and marginalised households.
- ii. Increased temperatures and high humidity can result in pest and pestilence build up and frequency of pest outbreaks can be expected to increase. This can pose serious challenges for the farmer as well as the extension workers. While the classic response is to use chemical pesticides and fungicides, with FOCUS 2.0 adopting an agro-ecological approach, steps need to be well in place to meet such challenges employing botanicals or organic pest control methods. Efforts should be made to promote biological pest control methods, starting with the risk-spreading approach traditionally practised in jhum – that of increasing crop diversity within fields. These risks call for adequate response measures and the need for setting up a Climate Emergency Response mechanism as well as an effective crop insurance framework.
- iii. The climate projections and their impacts have serious implications for the valuechain promotion activities proposed under the project.
- iv. As a first principle to respond to climate risks, extreme care should be taken in selection of the valuechain commodities and a high preference adopted for non-perishables.
- v. If perishable crops are included in VCD options, specific attention should be given for semi-processing and value addition. Possible value chain commodities identified at Design stage include perishables such as ginger and Mizo chilli. An immediate risk reduction practice would be to promote drying of the commodities and the grinding of the commodities to produce powdered spices. These steps would help in immediately reducing risks from microbial spoilage resulting from high temperatures and humidity.
- vi. With extreme events projected to increase in frequency, particularly the increase in high intensity rainfall, disruptions in communication and transportation will become more frequent, adding to disruptions of the valuechain during the monsoon months. Such disruptions will have to be factored in while designing value chains and calculating profitability.
- vii. Lastly, given the probability of increased climate uncertainties in the coming years, a strong recommendation is made for exploring appropriate mechanisms for agricultural insurance.

It is pertinent to raise a point of caution here in the context of an overt dependence on irrigation for agricultural intensification clusters. While irrigation may provide immediate solutions for agricultural intensification in the project areas, climate projects predict, even in the short-term (2030), an increasing trend of high temperatures and dry days in a year, suggesting that water availability will be adversely affected. Agriculture in Mizoram (and many other mountain areas of the Himalayas) is heavy dependent on rainfall. As rainfall becomes increasingly deficit, streamflows will increasingly become seasonal and in many cases, could dry up. This will significantly affect irrigation and may prove to be a serious challenge in the medium and long-term. It may be advisable, therefore, to strengthen rainfed agricultural approaches, encouraging

the conservation and management of stress tolerant (particularly water stress) crop varieties and practices that adopt 'more crop per drop' approaches.

## 9. Environmental, Social and Climate Management Framework Matrix

The ESCMP Matrix serves as a practical implementation tool that translates the overarching ESCMP framework into specific, actionable measures tailored to the types of environmental, social, and climate risks anticipated under the FOCUS 2.0 project. The matrix outlines concrete mitigation and enhancement measures, identifies responsible institutions, and defines means of verification and reporting frequency for each safeguard requirement. Its primary purpose is to support effective operationalization of the ESCMP by providing clear, site-level guidance to the implementation partners.

During project implementation, the matrix is to be used as a reference document for the preparation of sub-project-specific ESCMPs, ensuring that key safeguards measures—such as pollution prevention, occupational health and safety, and grievance handling—are consistently addressed. It may be updated to include specific actions related to FPIC implementation plan once this is prepared with full details. It also supports day-to-day monitoring by providing a structured format to track compliance, identify gaps, and inform adaptive management. As a living tool, the matrix may be updated as new risks emerge, activities evolve, or site-specific needs require enhanced mitigation measures. Its use is essential to maintaining alignment with IFAD's SECAP 2021 requirements and requirements by national legislation.

| ESCMF Matrix                                                                                                                                    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                                                                                                                                                                                                                                                      |                                                                                                                                                                                                                                                                                                                                    |                                                                    |                                                                                |

## **10. Grievance Redressal Mechanism**

IFAD requires an easily accessible grievance mechanism at project-level in order to receive and resolve concerns and complaints of people who may be adversely affected or potentially harmed by IFAD-supported projects that fail to meet the SECAP Standards and related policies. Furthermore, IFAD requires that project-affected people are informed about the existence and functioning of this mechanism in any easily understandable form and language, and to integrate it into the overall community engagement strategy. The grievance redress mechanism should incorporate existing formal and informal grievance mechanisms, strengthened or supplemented as needed for each specific project, and in proportion to the expected risks and impacts of the project. Project-affected people may use the grievance mechanism without retribution or reprisal, and the grievance mechanism should not impede access to other judicial or administrative remedies available under national law or through existing arbitration procedures or other accountability mechanisms.

The Project will establish a Grievance Redress Mechanism (GRM) designed to seek/generate feedback from and to project stakeholders and address/ respond to grievances, problems, issues or complaints related to project activities and project environmental and social performance. The Project will ensure through the GRM that all project stakeholders will be aware of their rights to access and/or will have access to the GRM at all project management levels, which will be provided in a transparent manner free of costs and without fear of reprisal or retribution on the part of aggrieved parties. In addition, the Project's GRM will help ensure that the rights and interests of project stakeholders are protected from unforeseen lapses in said project performance and that all concerns arising therefrom in all project phases will be effectively addressed. To achieve these ends, the Project will regularly engage project stakeholders and provide them information on the processes and means of raising and addressing grievances through the GRM.

### **Project level GRM**

The PIU shall provide appropriate channels for submission of grievances, which may include the following: (i) Grievance Drop Box: This provides a means for anonymous complainants to raise concerns without revealing their identities. Labelling the grievance box to a more culturally-sensitive term will be encouraged. (ii) Through the Project GRM social media platform (iii) An official physical address for Grievance Desk with Contact Persons/GRM Focal persons at every grievance level will be established and publicly disclosed, where complainants may send complaints through letters via personal, postal or courier delivery. (iv) A hotline number or call center at each level that can be publicly accessed via voice calls or SMS.

Note – This list is not exhaustive and other channels may be considered instead, as appropriate with due regard for language and accessibility. The overall responsibility for operationalizing the GRM will rest with PMO and the GRM will be reviewed and updated during early implementation.

### **IFAD Complaints Procedure**

IFAD Complaints Procedure also place mechanism to allow individuals and communities to contact IFAD directly if stakeholders or non-stakeholders believe that they are or might be adversely affected by an IFAD-funded project or program not complying with IFAD's Social and Environmental Policies and mandatory aspects of SECAP. They may submit a request to [SECAPcomplaints@ifad.org](mailto:SECAPcomplaints@ifad.org) and request that an impartial review be carried out by IFAD's Office of the Vice-President.

### **Monitoring and Reporting**

Meetings with stakeholders shall be documented, highlighting agreements and ways forward which will be monitored throughout project implementation.

### **Grievance Redressal Mechanism for Tier 1 (Village and Block level)**

At the village or Cluster level, the project proposes to set up two different approaches to collect and address grievances at local level, based on the components:

For Component 1 Market and Enterprise Development, the Collective Marketing Management Committees (CMC) that will be established as part of the project activities will establish a Grievance Redressal Cell (CMC-GRC) with the aim of receiving grievances, and designate a responsible person as the Grievance Redressal Focal Point (CMC-GRF).

Grievances related to aggregation operations, infrastructure access, user fees, service quality, and market transaction disputes will probably feature at this level and are expected to be addressed at the CMC Management Committee level.

For Component 2 Crop and Livestock Activities, the project will establish Farmers Markets at Block level for aggregation, storage and market related activities. A Farmers Market Management Committee (FMMC) will be established, composed of FPOs, SHGs and entrepreneurs, ensuring inclusive representation of both service providers and users. The FMMC will establish a Grievance Redressal Cell (FMMC-GRC) and nominate a Grievance Redressal Focal Point (FMMC-GRF) responsible for handling of grievances.

**Step 1. Grievance Intake.** The Grievance Redress Focal Point of the different Committees will be responsible for receiving and recording grievances and details of the complainant, including the date of reception and other relevant information (template for recording grievances is available in annex 3). Grievances by a complainant may also be submitted to the Committee office in writing. In case a complainant prefers to maintain anonymity, the Focal Point will record the grievance, keeping sensitive information reserved or complainant will be contacted and asked if there is a need for confidentiality. =

In the context of meeting(s) convened at communities/villages in the context of stakeholder engagement and project implementation activities, time should be specifically dedicated to inform about the existence and functioning of the grievance redress mechanism and when possible, the grievance redress focal points should attend the meetings. Any grievances recorded in the context of a village meeting will be communicated by the CLF Community Worker/Cluster Focus Coordinator with the corresponding grievance redress focal point to the district Asst Manager M&E and SECAP. This report should also point out any grievance that could not be resolved at the village/CLF level, thus requiring action at the district level. Details of the grievance and all related information should then be forwarded to the Asst Manager, M&E and SECAP for placing the same to the District Grievance Redressal Committee for resolution.

**Step 2. Verification and Assessment.** Once a grievance is received, the Focal Point calls for a meeting of the Committee, to assess the eligibility and severity of the grievance. The CMC will decide whether a personal hearing is necessary to gather additional information, or if the grievance can be redressed, needs to be upscaled or dismissed if found ineligible.

**Step 3. Resolution and Communication.** Following the CMC meeting, the Focal Point will be responsible for recording the information in the logbook and informing the complainant of the decision by the Committee.

If the grievance can be resolved by the Committee directly, the necessary action is initiated.

Communication of the decision by the CMC to the complainant should not exceed three weeks from the day of receipt and registration of the grievance.

In case a grievance needs resolution at a higher level, the CMC-GRF will forward the information the District Grievance Redressal Committee at the District Project Management Project Unit (DPIU).

The FMMC-GRF will maintain a Grievance Register to record all grievances received, with details of the complainant and date of receipt, except in cases where the complainant insists on anonymity. The FMMC will examine all grievances received and take appropriate decisions, advising a personal hearing of both parties if necessary, or immediately deciding on the redressal to be provided or recommending the dismissal of a grievance if found irrelevant or superficial. The FMMC-GRF will record the decisions against each grievance, particularly of those dismissed, recording the reasons thereof, in the Grievance Register and communicate to the complainant not later than three weeks from the date of receipt of the grievance.

The CMC-GRF will maintain a logbook with all information, including resolved grievances, stakeholders involved and dates. This information will be reported regularly to the PIU fortnightly put up all grievances and related information recorded to the Collective Marketing Management Committee for hearing and redressal.

Grievance redressal mechanisms usually require a grievance to be registered in writing. IN the context of this project, this could represent an impediment to file grievances, as complainants may prefer to present them verbally. A cultural sensitivity and respect for this tradition is to be considered in the design and operationalization of the project-level grievance redress mechanism.

### **Grievance Redressal Mechanism for Tier 2 (District and Hub levels)**

For grievances that cannot be addressed at village or Committee level, the District Project Management Unit (DPIU) will set up a District level Grievance Redressal Committee. The Committee will comprise of the Asst Managers Crop Productivity, Business Development, Gender and Capacity Building and include a representative each from CMC and FMMC (on rotation basis annually). The Committee should be chaired by the District Manager with the Asst Manager M&E and SECAP as convenor.

The Convenor, after receiving the communication with the grievance from the Committee Focal Points, or from the CLF , should call for a meeting of the District Grievance Redressal Committee (DGRC) within 48 hours to address the issue. The Asst Manager, M&E and SECAP will also include any grievances received about DPIU at the DGRC meeting.

DGRC meetings will be chaired by the District Manager and the committee will examine each upscaled grievance and suggest redressal action as appropriate. If a meeting with the complainant is required, hearing is organized within 7 days to discuss with the complainant. To avoid inconvenience to the aggrieved parties, hearings can be conducted at the Cluster/Block level at regular intervals. All decisions taken in regard to the grievances registered must be recorded in the DGRC meeting minutes, including grievances considered not eligible. The reasons for dismissal of the grievance must be clearly recorded in the minutes. Decisions of the DGRC must be communicated to the complainants not later than two weeks from the date when the DGRC meeting was held. In case any grievance cannot be resolved at the DGRC level, or is against the DPIU management, the same should be forwarded for resolution to the PIU.

FOCUS 2.0 also proposes to establish Business promotion Hubs in selected districts, catering to multiple districts. It is advised that each of the Hubs should set up a Grievance Redressal Cell under the supervision of the Hub management committee. The Hub Management Committee should designate a responsible person as the Grievance Redressal focal point (H-GRF) whose duties will be receiving and recording, aligned to those of the CMC-GRF and FMCC-GRFs. Given the multi-district scale and private sector engagement through PPP models, grievance redress will be more formalized. Operators will be required

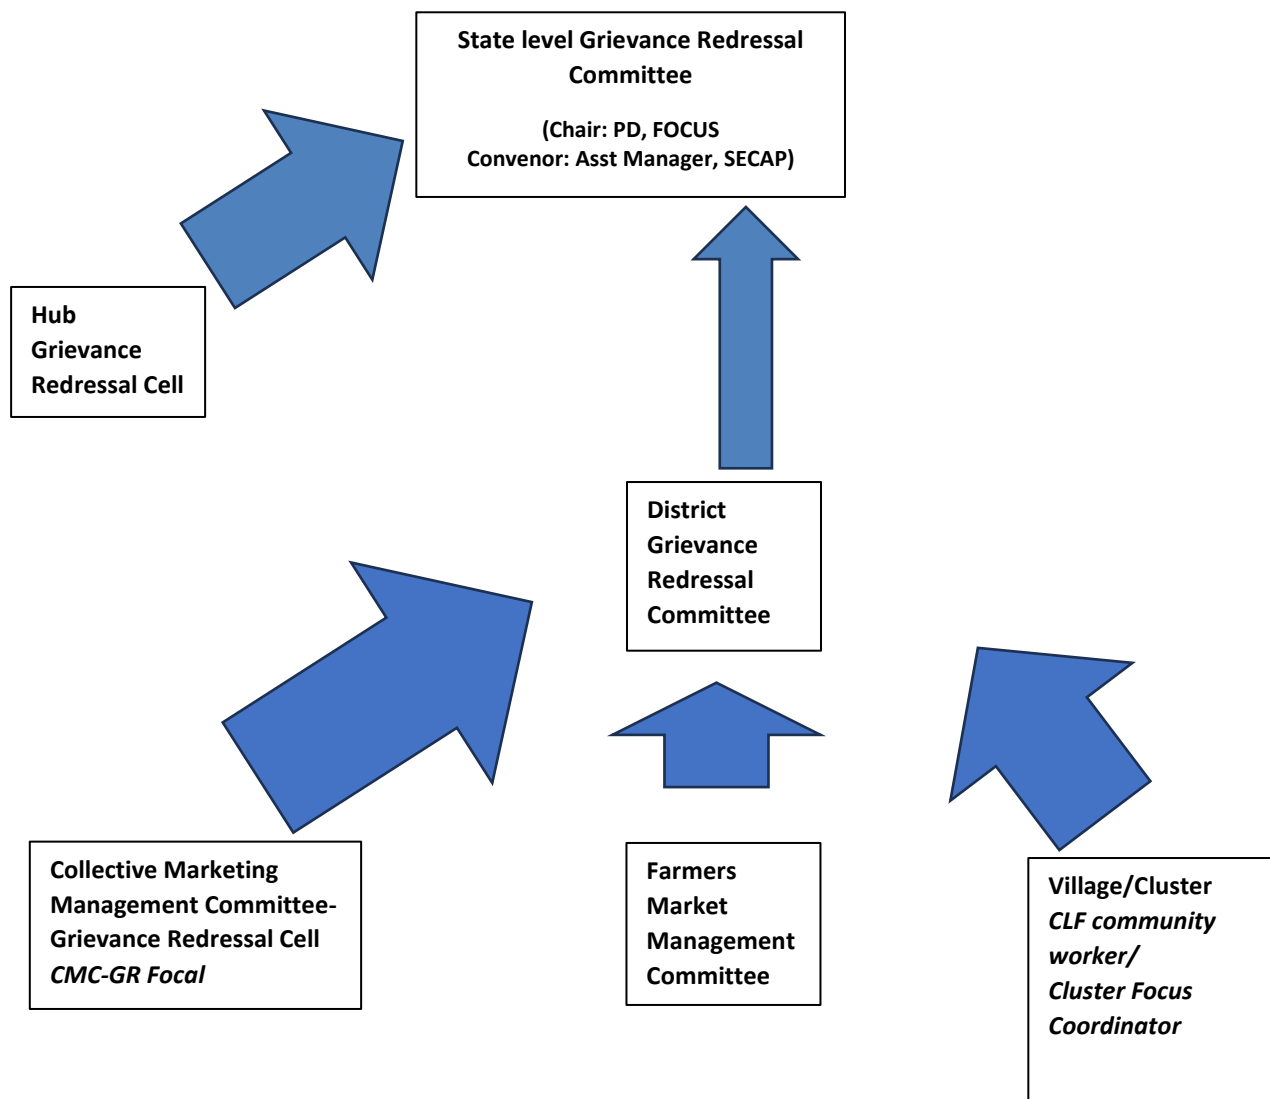

to maintain transparent records of complaints, response timelines, and resolution actions. The H-GRF should be convened once a grievance received and fix dates not later than a fortnight to hear aggrieved parties and facilitate negotiations. As far as possible, redressals should be provided within a month of the hearing.

### **Grievance Mechanism Tier 3 (National/State level)**

In case the grievance cannot be resolved at the district level (or District officers are the subject of the grievance) or the Hub, the grievance should be communicated immediately to the PIU level where the PD will chair a Grievance Redressal Committee with Asst Manager, SECAP and Asst Manager, Gender and Capacity Building as members. Representatives from FPO federations, SHG apex bodies, rural enterprise association and the Women's commission should also be included to this State level Grievance Redressal body on a rotation basis for tenures of two years. As a rule, receipt of the grievance registration at the district level (or the Hubs) should be communicated immediately to the individual (if the complaint is not anonymous) within a week. Decisions taken at the District GRM or H-GRM meeting should be conveyed to the aggrieved party within a week from the meeting.

The Grievance Redressal Mechanism should have provision for appeals in case redressal decisions are not found satisfactory or contested. As a rule, the next highest GR Committee should be the appellate body, and appeals made to such appellate bodies in writing. Contact numbers of CMC-GRF, FMMC-GRF, Assistant Manager, M&E and SECAP, as well as District Manager, DPIU and the Assistant Manager, SECAP at PIU should be prominently displayed in the respective offices and widely circulated in print media so that any stakeholder who wishes to register a grievance can contact the focals to do so.

**Schematic flowchart of proposed Grievance Redressal Mechanism for FOCUS 2.0**

## 11. Stakeholder Engagement Plan (SEP)

The institutional canvas for FOCUS 2.0 will be broadened to include several new partners across government departments and agencies, the non-government sector and the traditional institutions. The guiding principle of FOCUS 2.0 will be to leverage existing opportunities for collaboration, partnerships, skill and resource sharing through active convergence with these agencies and their ongoing programmes. While the Department of Agriculture will continue as the lead implementation agency, strong partnerships will be formalised with several line departments that have the expertise required in meeting the objectives of the project. New partnerships will be forged with the Mizoram State Rural Livelihood Mission to capitalise on their impressive institutional network at the grassroot level for forging the 'last mile' bridge and delivery mechanism with communities. Partnership with Directorate of Commerce and Industry attains importance as fundamental thrust of the project is to strengthen market linkages through value chain development. In addition, Department of Irrigation and Water Resources, Soil Conservation, Environment Forest and Climate Change are additional departments who will be important partners, the latter being critical stakeholders in those districts which host important protected areas such as National Parks and Tiger Reserves. These partnerships will help improve coordination and complementarity while laying the ground for the project's exit strategy and long-term sustainability. Among other government agencies, strong partnerships will be explored with NABARD, NeDFi and NEC for convergence of schemes and programmes in rural financing and infrastructure. Technical partnerships are proposed with the Mizoram Science and Technology Council, particularly the Geospatial and Climate Change units. Collaboration with MiRSAC is critical for identification of Zau clusters and also the PLUMP exercise that is proposed in the FPIC process. Similarly, collaboration will be explored with the Horticulture Department of Mizoram University for technical expertise and a collaboration with the Incubation Centre set up to support Start Ups and entrepreneurship development. A strategic partnership is proposed with SELCO, a national non-government organisation specialising in non-conventional energy, and presently working in Mizoram to leverage their experience in the energy sector and strengthen the project's objective of providing energy solutions for Component 1 while meeting the fundamental goal of promoting climate resilience. At the community level, partnerships will be forged with the Cluster Federations set up by MiZSRLM in the context of product aggregation, storage and processing for value chains, while at the village level, Village Councils and Village Organizations (VOs) will be critical partners for the smooth implementation of project activities. The Stakeholder Engagement Plan (SEP), therefore, must be broad, multi-pronged and continuous given the wide spectrum of stakeholders that need to be sensitised and pro-actively engaged for establishing effective collaboration and ensuring compliance to SECAP requirements. The basic aim of the SEP will be to:

- Identify all potential project stakeholders, including affected parties and interested parties (a continuous exercise as the project progresses)
- Consult with project stakeholders to understand their concerns, development needs, priorities, particularly those of potential adversely affected group;
- Set out a concrete mechanism to ensure stakeholders' feedback is timely solicited, considered and incorporated into project design and implementation;
- Identify strategies to notify and disclose project information to identified stakeholders, particularly those who are negatively affected groups to collect their meaningful feedback;
- Specify methods for consulting with project stakeholders, collect opinions, and incorporate feedback into project design;
- Ensure grievance redress mechanism in place
- Ensure appropriate human and financial resources are arranged to ensure timely and effective implementation of SEP

The SEP is considered a living document that may be updated, as needed, during project implementation to ensure it reflects the needs of the project. It has been prepared during design and, as project information becomes available during early implementation, it is expected to be reviewed and updated accordingly.

The Stakeholder spectrum for FOCUS 2.0 can broadly be clustered at four levels – (i) community and community level institutions, (ii) private sector (market and value chain related actors) (iii) government departments and government agencies, and (iv) technical partners and service providers (university, research organisations).

- (iv) Engagements with the village/cluster level organisations, including the traditional Village Council and Village Organisations are envisaged not only at the initiation of the project during the sensitisation exercises, but regularly during project implementation. After the first sensitisation meeting with the Village Council, Village Organisation and households residing in the village, the project will have a series of meetings to introduce the project objectives and components, select primary beneficiaries and conduct the FPIC process. The project will also setup mechanisms for improving marketing facilities and this will require engagement with producers and potential entrepreneurs at the village and cluster level. FOCUS 2.0 also proposes to set up Farmer Fields Schools and also support Community level knowledge exchange platforms for experience sharing and peer learning. These platforms can provide crucial foras for stakeholder engagement and interaction as well as mediums for dissemination of important information about project interventions and initiatives, including through a dedicated UTube platform. In addition, as project implementation progresses, the project envisages to put in place a Grievance Redressal Mechanism and the GRM would provide an additional means for stakeholder engagement.
- (iv) FOCUS 2.0 aims to improve market linkages and strengthen valuechains through the establishment of Collective Marketing Centres (CMCs) at farm-gate, Farmers' Markets (FMs) at the cluster or Block level and multi-district Value addition Hubs. These exercises will call for intense and meaningful engagements with producers, FPOs, SHGs and their federations, local entrepreneurs, traders and the private sector. Engagements and strong collaboration are also foreseen with banks and credit institutions as well as the Department of Commerce and Industry. Engagements with the wide array of stakeholders under this category will continue during planning and form the core of SEP process. The project plans to set up management committees for the CMCs as well as the FMs. These management committees provide an effective platform for engagement with producer groups, FPOs, SHGs and their federations and local traders and members of the private sector. In addition, as the project implementation progresses, a GR mechanism is expected to be operationalised which will then provide an additional means for engagement by aggrieved stakeholders. A state-level Private sector Round Table or Conference is proposed in the first year to initiate engagement with this critical set of stakeholders and is expected to provide insights for refining stakeholder mechanisms with this sector.
- (iv) Chapter 3 of the PDR, under section 3.1 (Organisational Setup and Governance) outlines the establishment of State level Project Management Committee, chaired by the Secretary Agriculture and the State level Project Steering Committee chaired by the Chief Secretary with members drawn from different departments and the State Policy Coordination Committee. The Project Director, FOCUS 2.0 will function as the Member Secretary for the Project Management Committee while the Secretary, Agriculture will function as the Member Secretary for the Steering Committee. These fora at the State level provide a platform for regular engagement of key stakeholders, and will function as a communication and decision-making channel, informing members of the progress as well as of issues that require their advice and support.

At the district level, the project will set up the District Project Coordination Committee, chaired by the Deputy Commissioner of the district and members drawn from all the relevant departments. The District Committee will also have members drawn from the Banking sector (NABARD) and thus provide a channel for engagement and interaction with this important sector. A key best practice institutionalized in the previous phase – specifically: maintaining a standing agenda item for community feedback – will be formalized across all districts under FOCUS 2.0. This mechanism allows farmers and community-based organizations to present concerns and recommendations directly to district authorities, reinforcing the project’s commitment to participatory planning, grassroots accountability, and responsive programme delivery, reinforcing a meaningful stakeholder engagement mechanism.

FOCUS 2.0 covers several districts which host important Protected Areas, including National Parks and a Tiger Reserve. The Park authorities in the concerned districts and the Forest Environment and Climate Change department (in particular the Wildlife and Parks directorate) are particularly important stakeholders with whom the project needs to engage closely. While clear engagement needs and necessary action have been outlined in PIM under the Biodiversity SECAP category, the senior management at the PIU (PD and relevant thematic managers) must set up regular meetings with the Chief Wildlife Warden and his team to appraise them of project interventions (particularly land based production related activities) planned for the project villages in fringe areas and the buffer zone of the protected areas and the preventive steps adopted to avoid infringement into PA core area boundaries and steps taken to avoid habitat degradation. Such meetings should be organised to facilitate strong cooperation and develop strategies to avoid any conflict of interests.

- (iv) The fourth category of stakeholders are primarily technical partners or service providers. Agencies such as the Mizoram Science and Technology Council, specifically the Geospatial Unit will be engaged for preparation of GIS based LULC maps, including the PLUP maps. The latter can serve as a useful M&E tool if applied judiciously. Engagement with S&T Geospatial unit must be regular and with the required intensity. Similarly, engagement with different departments of the Mizoram University will be specifically for technical purposes. Special attention needs to be paid for collaboration and engagement with Mizoram University’s Incubation Centre for capacity building of entrepreneurs (especially youth) and also hand-hold them for Startup initiation. Such engagement will be on a need basis and interactions would predominantly be with the PIU officials. Formal engagement plans will need to be developed as project implementation gets off the ground and the specific needs and their intensity becomes more concretised.

### **Preliminary Stakeholder Engagement Plan Matrix**

The preliminary stakeholder engagement matrix included in this section presents an initial mapping of the key stakeholders identified during the project design phase. It outlines stakeholder groups’ characteristics, their potential interest and influence in the project, key concerns, and suggested engagement strategies. This matrix is a critical tool for operationalizing the Stakeholder Engagement Plan (SEP) and is intended to serve as a living resource for guiding inclusive and meaningful stakeholder engagement throughout implementation.

During project execution, this matrix will assist the PIU, DPIU and Technical Service Providers (TSPs) in planning and prioritizing engagement activities based on stakeholder relevance, influence, and potential vulnerability. It provides a structured approach for:

- Identifying which stakeholders require targeted outreach, ongoing consultation, or more intensive participation;
- Tailoring communication channels and consultation formats to the needs and capacities of different stakeholder groups (e.g., women, Indigenous Peoples, financial intermediaries, POs);
- Integrating engagement actions into the Annual Work Plan and Budget (AWPB) and site-specific planning, including the design of sub-project ESCMPs;
- Tracking the frequency and effectiveness of engagement activities to inform adaptive management;
- Ensuring that engagement with marginalized or vulnerable groups is systematically pursued and documented.

The matrix will be reviewed and updated regularly—at least annually or whenever new sub-projects are identified—based on monitoring data, community feedback, and evolving stakeholder dynamics. As such, it complements the ESCMP and supports compliance with IFAD’s SECAP 2021 by ensuring transparency, accountability, and inclusion in the planning and implementation of project interventions.

#### Outline Stakeholder Engagement Matrix

(Stakeholders listed in tentative order of influence and impact; non-exhaustive, to be updated and refined as project needs are further crystalised)

| Stakeholder                                                                                                                 | Concerns                                                                                                | Engagement methods                                                                                                | Relevant information disclosure                                                                                           | Frequency of Engagement             | Responsible                                    | Timeline      |
|-----------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------|-------------------------------------|------------------------------------------------|---------------|
| State-level Steering Committee (senior decision makers, including members from State Policy Coordination Committee)         | Project performance (including financial); convergence between departments and agencies, project impact | Regular committee meetings, necessary briefings with Chair as required; submission of regular performance reports | Project performance, target achievements, financial performance and budgetary issues, coordination and convergence issues | As mandated in Agreement /PDR norms | Secretary, Agriculture assisted by PD and team | Project cycle |
| State level Project Management Committee (senior decision makers drawn from relevant departments, agencies and FI partners) | Project performance, project management, partnership building and convergence effectiveness             | Regular committee meetings, necessary briefings with Chair as required; submission of regular performance reports | Project performance, target achievements, financial performance and budgetary issues, coordination and convergence issues | Quarterly or as required            | Project Director                               | Project cycle |

## Annex 1. Sub-project Screening and IFAD's Exclusion List

| SECTION A: General Information                                                                                                                 |  |
|------------------------------------------------------------------------------------------------------------------------------------------------|--|
| Date:                                                                                                                                          |  |
| Name:                                                                                                                                          |  |
| Sub-project:                                                                                                                                   |  |
| Sub-project location:                                                                                                                          |  |
| Proposed sub-project duration:                                                                                                                 |  |
| Sub-project Description.<br>Briefly describe the sub-project activities, particularly as they interact with the environment and social context |  |
| Categorize sub-project activities into high, substantial, moderate, and low risk activities.                                                   |  |

Include a map of the sub-project site and activities.

### SECTION B: Exclusion List Screening

Can you confirm that none of the activities involved those listed in the Exclusion List? (see list at the end of this annex ): **Y** / **N**

### SECTION C: Potential Environmental/Social Risks Impacts of Activities

| Applicable Impacts/Risks/activities                                                                                                                                                                                                              | Y | N | Unknown | Comments                                                                                                                               |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---|---|---------|----------------------------------------------------------------------------------------------------------------------------------------|
| <b>General Assessment and Management of Environmental and Social Risks and Impacts</b>                                                                                                                                                           |   |   |         |                                                                                                                                        |
| Is a full Environmental and/or Social Impact Assessment required for the sub-project based on national legislation of Cambodia?                                                                                                                  |   |   |         | Ensure compliance with national regulations (permits, approvals, etc as relevant) is obtained as early as possible.                    |
| Have there been any complaints raised by local affected peoples or groups or NGOs regarding conditions of the sub-project area or, if relevant, facility to be used?<br><i>If so, will project financing be used to remedy these complaints?</i> |   |   |         | Ensure the SEP and GRM include a focus to consistently address grievances                                                              |
| Is there a risk that sub-project benefits may not reach truly vulnerable populations?                                                                                                                                                            |   |   |         | Ensure this is identified and addressed through the SEP and GRM                                                                        |
| Is there a risk that the selection of the activity location or beneficiaries will lead to conflict?                                                                                                                                              |   |   |         | Ensure this is identified and addressed through the SEP and GRM                                                                        |
| <b>Labour and Working Conditions</b>                                                                                                                                                                                                             |   |   |         |                                                                                                                                        |
| Do activities include any risks of child labour?                                                                                                                                                                                                 |   |   |         | Site specific ESCMP will identify specific activities to be performed by children under 18 that will not represent harmful conditions. |

| Is there a risk that the sub-project will cause (i) changes to landscapes and habitat; (ii) habitat fragmentation; (iii) blockages to migration routes; (iv) increased water consumption; and/or (v) contamination of natural habitats? |   |   |         | Activity non eligible under this project                                                                                                                                                                               |
| Is there a risk that the activity causes loss of precious ecological assets?                                                                                                                                                            |   |   |         | Activity non eligible under this project                                                                                                                                                                               |
| <b>Stakeholder Engagement and Information Disclosure</b>                                                                                                                                                                                |   |   |         |                                                                                                                                                                                                                        |
| Is there a risk that the activity fails to incorporate measures to allow meaningful, effective and informed consultation of stakeholders, such as community engagement activities?                                                      |   |   |         | The SEP and GRM of the project will include provisions to ensure these risks are assessed and identified as early as possible, and addressed through relevant activities, depending on the sub-project specific needs. |
| Are women likely to participate in decision-making processes regarding the activity?                                                                                                                                                    |   |   |         |                                                                                                                                                                                                                        |
| Is there a risk that exclusion of beneficiaries will lead to grievances?                                                                                                                                                                |   |   |         |                                                                                                                                                                                                                        |
| Is there a risk that the activity will have poor access to beneficiaries?                                                                                                                                                               |   |   |         |                                                                                                                                                                                                                        |

## Exclusion List of Activities

Any sub-project that meets one or more of the following screening criteria will not be approved for financing under the project:

- Infrastructure schemes that require land acquisition or entail physical or economic displacement
- Activities that would likely create adverse impacts on ethnic minorities within the village and/or in neighboring villages, or activities that are unacceptable to the affected ethnic minorities living in an ethnic homogenous village or a village of mixed ethnic composition.
- Cause damage or loss to cultural property, including sites having archeological (prehistoric), paleontological, historical, religious, cultural and unique natural values.
- Resources access restriction (e.g. restricted access to farming land) that could not be mitigated and will result in adverse impacts on the livelihoods of ethnic groups and disadvantage peoples. **Any sub-projects that may be considered high-risk or substantial risk as per IFAD's SECAP, or by national requirements.**

## Scope of environmental impacts

- Sub-activities that require full EIA will not be financed.

## Purchase of agricultural inputs

- Purchase of banned pesticides, insecticides, herbicides and other unbanned pesticides, unbanned insecticides and unbanned herbicides and dangerous chemicals exceeding the amount required to treat efficiently the infected area. However, if pest invasion occurs, the use of small amounts of eligible and registered pesticides in Cambodia will be allowed if supplemented by additional training of farmers to ensure pesticide safe uses in line with IFAD policies and procedures. Highly Hazardous Pesticides (HHP) will not be used by the project.
- Purchase of destructive farming gear and other investments detrimental to the environment.

## Use of chemicals

- Any projects that will use or induce the use of hazardous materials (including asbestos) or any banned chemicals.

## Introduction of farming technologies

- Introduction of non-native species, unless these are already present in the vicinity or known from similar settings to be non-invasive.
- Significant conversion or degradation of natural habitat or where the conservation and/or environmental gains do not clearly outweigh any potential losses.

## Illegal Trading and Production

- Production or trade in any product or activity deemed illegal under national legislation or regulations or international conventions and agreements, or subject to international bans.
- Trade in any products with businesses engaged in exploitative environmental or social behavior.

## Labor & Working Condition

- Labor and working conditions involving harmful, exploitative, involuntary or compulsory forms of labor, forced labor, child labor or significant occupational health and safety issues

## **Annex 2. Sub project Environmental, Social and Climate Management Plans (ESCMP)**

A sub-project ESCMP consists of a set of mitigation, monitoring, and institutional measures to be taken during implementation and operation of a sub-projects to manage adverse environmental and social risks and potential impacts, offset them, or reduce them to acceptable levels. The ESCMP also includes the measures and actions needed to implement these measures and is implemented in line and consistent with any requirements by national legislation.

This annex provides a standard template and guidance for the development of sub-project **(ESCMPs)**. These sub-projects may include small-scale infrastructure investments, value chain technical assistance, production support, and other localized interventions. The objective is to ensure that each sub-project is screened, assessed, and the adequate risk management measures identified and implemented in accordance with IFAD's SECAP 2021 and Cambodian national legislation.

Following sub-project screening, an ESCMP is prepared with the relevant mitigation measures that will be monitored according to the activities of the sub-project. The template supports operational consistency across sub-projects and ensures that mitigation, monitoring, and stakeholder engagement measures are tailored to specific contexts and activities. It complements the overarching ESCMP by applying its principles and procedures at the sub-project level.

Each sub-project identified as requiring an ESCMP—based on risk screening—must use this template to prepare a site-specific plan before implementation begins. The plan must be:

- Prepared by the PMO or designated TSP in consultation with local stakeholders;
- Disclosed and validated at the provincial level by the PDoC;
- Submitted for review and clearance by the PMO safeguards team;
- Cleared by IFAD prior to implementation, when required.

The following is a sample Table of Contents for a site-specific ESCMP, which consists of:

### **1. Subproject Overview**

- a. Sub-project title and code
- b. Location (province, commune, village)
- c. Objectives and summary of activities
- d. Implementing agency and partners

### **2. Summary of Screening Results**

- a. Risk classification (based on SECAP screening tool)
- b. Applicable SECAP standards
- c. Exclusion list check confirmation

### **3. Description of Environmental, Social, and Climate Risks**

- a. Identified risks and potential impacts (e.g., waste, pollution, land, labor, IPs, biodiversity)  
Environmental and social risks and impacts identified with the involved subproject. Potential subproject impacts should cover direct, indirect impacts. Where relevant, include cumulative impact assessment;
- b. Risk justification and context-specific factors
- c. Brief summary of applicable legal frameworks (National legislation laws and requirements, and applicable IFAD SECAP requirements Environmental) including gap filling measures.

### **4. Mitigation Measures**

- a. Specific actions to avoid, minimize or mitigate each identified risk.
- b. Timeline for implementation
- c. Responsible entity for each measure

### **5. Monitoring Plan**

- a. Monitoring indicators for each safeguard area
- b. Means and frequency of verification

- c. Roles and responsibilities (PMO, PDoC, TSP, FI)
- d. Reporting formats and timelines
- 6. **Stakeholder Engagement and Disclosure**
  - a. Summary of engagement activities conducted
  - b. Key stakeholders consulted and feedback received
  - c. Actions taken in response to stakeholder input
  - d. Future engagement and consultation plan
- 7. **Grievance Redress Mechanism**
  - a. Local-level access points for GRM
  - b. Roles and responsibilities for complaint handling
  - c. Integration of feedback into project planning
- 8. **Budget for Environmental and Social Measures**
  - a. Cost estimates for mitigation, training, GRM, and monitoring
  - b. Funding source and budget line
- 9. **Annexes**
  - a. Site photos, maps, and design diagrams (as relevant)
  - b. Screening checklist and classification form
  - c. Signed documentation of land donation (if applicable)
  - d. Consultation attendance sheets and records

**SAMPLE TABLE FOR ESCMP MONITORING**

| IDENTIFIED ENVIRONMENTAL, SOCIAL AND CLIMATE RISKS AND IMPACTS | MITIGATION MEASURES | MONITORING INDICATOR | COSTS | RESPONSIBLE | FREQUENCY/TIMING | STATUS AND COMMENTS |
|----------------------------------------------------------------|---------------------|----------------------|-------|-------------|------------------|---------------------|
|                                                                |                     |                      |       |             |                  |                     |
|                                                                |                     |                      |       |             |                  |                     |
|                                                                |                     |                      |       |             |                  |                     |

### Annex 3. Sample Grievance Receipt and Response Forms

The proposed **sample grievance receipt form** serves as a tool for documenting complaints and concerns raised by stakeholders during the implementation of the AIMS Additional Financing (AF) project. This form is a core component of the project's **Grievance Redress Mechanism (GRM)** and supports the project's commitment to transparency, accountability, and inclusive engagement, as set out in the Stakeholder Engagement Plan (SEP) and IFAD's SECAP 2021.

The form is designed to:

- Enable affected persons or other stakeholders to formally record grievances related to project activities, impacts, or stakeholder interactions;
- Ensure that complaints are registered systematically, acknowledged promptly, and resolved fairly;
- Provide a written record of grievances, including follow-up actions and outcomes;
- Support project teams in identifying systemic issues or recurring risks requiring corrective action;
- Facilitate reporting to IFAD on the performance and responsiveness of the GRM.

The grievance receipt form is to be used by project personnel, as indicated in section xx of the ESCMF:

The form should be accessible to all stakeholders. Where needed, oral grievances may be transcribed by staff on behalf of the complainant, ensuring inclusivity for illiterate or differently abled individuals.

The grievance receipt form must be completed:

- Upon receiving a complaint through any project channel (e.g., consultation meeting, office visit, hotline, or field activity);
- During or after stakeholder engagement sessions where issues are raised;
- As part of routine implementation, particularly in high-risk sub-projects or locations with vulnerable populations.

Once completed, the form should be submitted to the designated GRM focal point, who is responsible for ensuring proper registration, tracking, and follow-up. The PIU safeguards team consolidates this data quarterly and includes summaries in reporting to IFAD.

By using this form consistently and transparently, the project ensures that all grievances are handled in a timely, culturally appropriate, and fair manner, contributing to conflict prevention and improved stakeholder trust.

## Record f Grievances Form

|                                                                                                                                                                            |                                         |                                        |           |

## Annex 4. Sample Grievance Record Matrix

The **Grievance Record Matrix** is a project-level tracking tool established to operationalize the Grievance Redress Mechanism (GRM) under the FOCUS 2.0 project. This matrix supports the systematic documentation, monitoring, and resolution of all complaints and feedback received from stakeholders, and is essential to ensure transparency, accountability, and continuous improvement in project delivery.

This matrix forms part of the project's broader commitment to stakeholder engagement, as articulated in the Stakeholder Engagement Plan (SEP), and aligns with IFAD's SECAP 2021 requirements and national good practices.

The matrix enables project teams to:

- Maintain a **centralized and transparent log** of grievances received across provinces and implementation levels;
- Monitor the **timeliness and effectiveness** of responses and resolutions;
- Identify and address **systemic issues or recurring concerns**;
- Report grievance trends and resolution status to **IFAD and national oversight bodies**;
- Ensure that affected persons, particularly vulnerable groups, have access to a functioning, culturally appropriate, and timely complaints process.

The Grievance Record Matrix is maintained by the **PIU safeguards focal point**, with inputs collected from the CMCC- GRF, FMCC-GRF, CLF, and District level Grievance Redress Focal Points.

The PMO ensures data consistency across provinces and prepares consolidated summaries for inclusion in quarterly and semi-annual safeguard reporting to IFAD.

The matrix is updated on a quarterly basis and entries must be supported by accompanying documentation (e.g., grievance form, photos, meeting records), and unresolved or serious complaints must be flagged to the PMO for escalation.

The Grievance Record Matrix is a central tool for the implementation of both the ESCMF and SEP, ensuring that stakeholder feedback directly informs adaptive project management and risk mitigation. It also facilitates incident reporting, as the PIU is required to notify IFAD of serious issues within 48 hours, including SEA/SH allegations, fatalities, and community-level disruptions, as outlined in the ESCMP incident protocols.

Regular analysis of the matrix will help the PIU identify trends and inform capacity building, engagement strategies, and safeguards adjustments as needed.

| Case No | Information on the Complainant |      |       |        |         |                   | Info on grievances |         | Forwarded         |                     |                             | Case closure                     |               |                     |                                     |

## Annex 5. Annual SECAP Progress Report

### 1. General information

- Acronyms
- Project name:
- Project ID:
- Country:

### 2. Implementation of Environmental and Social Safeguards

#### 2.1. SECAP Documents Reviewed and/or Prepared

List of key documents reviewed (e.g., ESCMP) and prepared (e.g., site specific ESCMP) against the required

| SECAP document required | Status (under preparation, under revision, finalized) | Date of finalization | Main lead for the preparation of the document (e.g E&S specialist, consultant, M&E specialist, ect) |
|-------------------------|-------------------------------------------------------|----------------------|-----------------------------------------------------------------------------------------------------|
|                         |                                                       |                      |                                                                                                     |
|                         |                                                       |                      |                                                                                                     |

#### 2.2. Implementation of management plans

Detail the progress in the implementation of the mitigation measures in the ESCMP and the management plans with the achievements on the indicators

| Project interventions/Sub-project | Location (site) | Environmental and social risks | Mitigation measures | SECAP Documents | Period of implementation (mm/yy-mm/yy) | Status of the implementation of the mitigation measures (not started; on-going; completed) | Indicators |
|-----------------------------------|-----------------|--------------------------------|---------------------|-----------------|----------------------------------------|--------------------------------------------------------------------------------------------|------------|
|                                   |                 |                                |                     |                 |                                        |                                                                                            |            |

#### 2.3. Environmental, Health and Safety permits and licenses (*If applicable*)

List of the environmental permits and licences obtained if applicable

| EHS Permit / License | Reason for permit / license | Issuer of permit / license | Issue date | Expiry date | Compliance status (Compliant-C-/Non Compliant -NC-) | Observation |
|----------------------|-----------------------------|----------------------------|------------|-------------|-----------------------------------------------------|-------------|
|                      |                             |                            |            |             |                                                     |             |

### 3. Environmental and Social Safeguards Compliance Monitoring

#### 3.1. Updates on the corrective actions taken (*from supervision missions*)

Overview of compliance with environmental requirements, highlighting any corrective measures taken. (e.g., biodiversity, pollution control, resource management, displacement, community health and safety, indigenous peoples' rights, etc.).

| Project interventions/<br>Sub-project | Location<br>(site) | E&S issues | Corrective action | Person/entity responsible | Current status of corrective action (not started; on-going; completed) | Evidence of the status (if any) |
|---------------------------------------|--------------------|------------|-------------------|---------------------------|------------------------------------------------------------------------|---------------------------------|
|                                       |                    |            |                   |                           |                                                                        |                                 |

### 3.2. Updates on the corrective actions taken *(from previous periods)*

Overview of compliance with environmental requirements, highlighting any corrective measures taken. (e.g., biodiversity, pollution control, resource management, displacement, community health and safety, indigenous peoples' rights, etc.).

| Project interventions/<br>Sub-project | Location<br>(site) | E&S issues | Corrective action | Person/entity responsible | Current status of corrective action (not started; on-going; completed) | Evidence of the status (if any) |
|---------------------------------------|--------------------|------------|-------------------|---------------------------|------------------------------------------------------------------------|---------------------------------|
|                                       |                    |            |                   |                           |                                                                        |                                 |

### 3.3. Compliance monitoring *(during the reporting period)*

Summary of fieldwork conducted, including site visits and inspections, with a focus on environmental compliance during the reporting period.

Overview of compliance with environmental requirements, highlighting any non-conformances and recommendation for corrective measures taken. (e.g., biodiversity, pollution control, resource management, displacement, community health and safety, indigenous peoples' rights, etc.).

| Project interventions/<br>Sub-project | Location<br>(site) | Environmental and social issue identified<br>(SECAP standards) | Monitoring Findings | Recommendations for corrective action | Timeline for the implementation of the corrective action | Person/entity responsible |
|---------------------------------------|--------------------|----------------------------------------------------------------|---------------------|---------------------------------------|----------------------------------------------------------|---------------------------|
|                                       |                    |                                                                |                     |                                       |                                                          |                           |

## 4. Environmental and Social incidents

Please describe any incidents from the previous reporting period if the status is still active.

| Incident | Date | Summary details | Action taken | Current Status<br>(Active, Closed) |
|----------|------|-----------------|--------------|------------------------------------|
|          |      |                 |              |                                    |

## 5. Grievance Redress Mechanism (GRM)

Assess the operationalization of the GRM, critical for addressing community concerns.

Summary of grievances raised and how they were addressed, including issues related to employment practices and compensation claims.

| Details of Complaint or Grievance | Complainant (employee, community member, etc.): | Date Received | Action taken | Current Status (Active, Closed) |
|-----------------------------------|-------------------------------------------------|---------------|--------------|---------------------------------|
|                                   |                                                 |               |              |                                 |

## 6. Cross-Cutting Issues

Discuss issues that span across environmental, social, and climate safeguards, such as stakeholder engagement, capacity building, and gender equality

- Analysis of stakeholder engagement processes and their effectiveness.
- Assessment of capacity-building initiatives for implementing safeguards.
- Gender equality considerations and how they have been integrated across safeguards.
- Challenges in addressing cross-cutting issues and proposed strategies.

## 7. Challenges and Lessons Learned

Reflect on the challenges encountered during the reporting period and identify key lessons learned.

## 8. Recommendations and Next Steps

Provide actionable recommendations based on the findings of the monitoring report.

- Specific recommendations for improving the implementation of environmental, social, and climate safeguards.
- Proposed actions (priority and timeline) for the next monitoring period.
- Timeline and responsibility for implementing the recommended actions.

## 9. Appendices

Provide additional data, detailed case studies, or supplementary information that supports the main content of the report.

- Detailed tables, graphs, or charts with monitoring data.
- Full case studies or project reports.

# 1. Introduction

The *Fostering Climate-Resilient Upland Farming Systems in the Northeast (FOCUS)* project, implemented from 2018 to 2024, was the first externally aided project (EAP) in Mizoram's agriculture and allied sector, and marked a major step in strengthening institutional capacity within the state. Implemented through the Society for Climate Resilient Agriculture in Mizoram (SCRAM) under the Department of Agriculture, the project covered six districts in northern Mizoram and reached around 55,000 smallholder households, tribal communities in remote upland areas. It addressed key challenges such as low productivity, natural resource degradation, and weak market linkages through a combination of interventions: Integrated Farming Systems – Compact Area Development Approach (IFS–CADA)<sup>1</sup>, institutional strengthening of farmer groups, promotion of climate-smart agriculture, sustainable livestock development (notably piggyery), and value chain support. Promising models such as IFS–CADA, boar semen stations and artificial insemination labs, Farmer Producer Organisations (FPOs), soil and water conservation techniques, long-term land lease arrangements for landless farmers, and the Innovation Fund emerged from this multi-pronged approach.

The endline evaluation confirmed that these models have demonstrated strong potential for replication and scalability while addressing production and market challenges. While FOCUS has laid a solid foundation for climate-resilient, market-linked agriculture in the state, continued support is required to deepen institutional capacity and improve smallholders' access to services and markets—insights that directly inform the design of FOCUS 2.0.

Building on this momentum, the Government of Mizoram (GoM) has proposed a second phase—FOCUS 2.0—with an estimated project cost of US\$ 72.3 million, including an IFAD loan of US\$ 45.8 million. With the potential demonstrated in the first phase, the state aims to expand coverage to all 11 districts (5 from the southern region). The new phase will deepen climate-resilient agricultural intensification clusters and value chain development through a hub-and-spoke model. It aligns with the state's flagship Handholding Scheme for Sustainable Livelihoods (*Bana-Kaih*)<sup>2</sup>, which promotes integrated farming, cluster-based production approach (*Zau/s*)<sup>3</sup>, market access, value addition, access to finance, and skill-entrepreneurship development. At the national level, FOCUS 2.0 complements the Government of India's rural development priorities and flagship programmes such as PM-DevINE and NESIDS<sup>4</sup>, which aim to enhance infrastructure

---

<sup>1</sup> Integrated Farming Systems – Compact Area Development Approach (IFS-CADA) with the following features: a) Land allocation on long tenure (5-20 years) to Landless FIGs groups covering 30-100 Ha. at a single location to build a production cluster; b) Farm link road; c) Land development (bench terracing); d) Water resource development (tanks, pipes, tapping springs and streams, etc.); and e) Supply of planting material based on high value crops (apple, mandarin, dragon fruit) and livestock

<sup>2</sup> *Bana-Kaih* - is Mizoram's Handholding Scheme for Sustainable Livelihoods launched in 2024, promoting integrated farming, value addition, market access, and financial inclusion for rural households <https://handholding.mizoram.gov.in/>

<sup>3</sup> The *Zau* (or *Zaus*) cluster-based production approach refers to the development of clusters/*Zau* defined by the following characteristics: (i) a contiguous piece of land; (ii) not limited to upland (thus there are lowland *Zau* and upland *Zau*); (iii) having irrigation/consistent water source to ensure multi-season cropping capability; and (iv) synchronized farming to acquire scale to reach markets in a cost-effective and efficient manner. The *Zau* are aimed at promoting sustainable livelihoods and enhancing productivity. Under the Mizoram Bana Kaih (Handholding) Scheme, these clusters are selected based on agro-climatic suitability, economic viability, and employment potential.

<sup>4</sup> North East Special Infrastructure Development Scheme ([NESIDS](#)) and Prime Minister's Development Initiative for North Eastern Region ([PM-DevINE](#))

and connectivity in the Northeast. This multi-tiered alignment creates a strong enabling environment for FOCUS 2.0 to enhance the economic, social, and climate resilience of farming households across Mizoram

## **Purpose and Scope of the ESCMF**

The Environmental, Social and Climate Management Framework (ESCMF) for FOCUS 2.0 outlines the procedures, principles, and actions necessary to ensure that project activities are implemented in a manner that is environmentally, socially, and climatically responsible. It aligns with the requirements of the Government of India and IFAD's Social, Environmental and Climate Assessment Procedures (SECAP 2021).

At the moment of preparation of this document, exact project interventions and locations are not known, therefore the ESCMF outlines anticipated environmental, social, and climate-related risks and impacts, and defines the approach to identify measures to avoid, minimize, or mitigate the risks in line with the mitigation hierarchy. It sets forth implementation responsibilities, monitoring mechanisms, and institutional arrangements necessary to manage these risks effectively throughout the project lifecycle. The ESCMF also establishes guidance on stakeholder engagement and grievance redress.

Specifically, the ESCMF includes:

- A summary of project and sub-project interventions under FOCUS 2.0, with the information available at the moment of preparing this document;
- Screening procedures to assess sub-project risks in line with both national regulations and IFAD's SECAP standards;
- A description of mitigation measures and monitoring tools for identified risks, particularly related to labor, land, Indigenous Peoples, pollution prevention, OHS, climate vulnerability, and community health and safety;
- An outline of roles and responsibilities across the Project Management Unit (PIU), District Project Management Unit (DPIU), Technical Service Providers, and Financial Intermediaries;
- A commitment to a participatory process through a Stakeholder Engagement Plan (SEP) and a functioning Grievance Redress Mechanism (GRM).

The ESCMF is implemented in support of project activities, therefore it is considered as a living document and the responsibility of the Project Management Unit to update, ensuring the information is adequate and relevant to respond to project needs. It serves as a key instrument for ensuring that FOCUS 2.0 achieves its development goals while upholding sustainability and equity in project execution.

## **2. Project description**

The Project Development Objective (PDO) is to enhance the income and climate resilience of 76,000 households (of which over 94% belong to Scheduled Tribes) across the State of Mizoram, India, through market-driven value chain interventions in agriculture and allied sectors. FOCUS 2.0 adopts an integrated, area-based approach to strengthen climate-resilient agriculture and livestock productivity, while enabling market access and enterprise development for smallholder farmers, their organizations and enterprises across all 11 districts of Mizoram. Building on lessons from FOCUS, the project is structured around Agricultural Intensification Clusters (Zaus) and aligned closely with the Government of Mizoram's flagship Bana Kaih (handholding) policy, which promotes synchronized, market-oriented, and sustainable farming systems. Zaus serve as spatial and institutional anchors for targeted investments in land development,

water management, and production systems, while ensuring convergence with key centrally and state-sponsored schemes across agriculture, horticulture, animal husbandry, and rural connectivity.

Component 1 will facilitate market access and enterprise development and deploys a tiered hub-and-spoke infrastructure model comprising of village-level Collective Marketing Centers (CMCs), block-level Farmers' Markets, and district-level Value Addition Hubs (Hubs). These investments are supported by enterprise incubation and access to finance, including Kisan Credit Card (KCC) facilitation, targeted credit lines, and digital financial services. All infrastructure will be publicly financed but operated under Public-Private Partnership (PPP) or community-led models to ensure sustainability. Emphasis is placed on backward and forward linkages to Aizawl and inter-state trade hubs, while promoting private sector engagement, including for livestock aggregation and poultry processing. Over 1,500 km of farm link roads will connect Zaus to markets, supported by convergence with Public Works Department (PWD) and Pradhan Mantri Gram Sadak Yojan (PMGSY).

**Component 2** aims to enhance climate-resilient crop and livestock production.

Subcomponent 2.1 targets Zau clusters for sustainable agricultural intensification, with support for soil and water conservation, land development, and climate-smart inputs. Production will be synchronized through collective action models (e.g., smallholder farmers utilizing large fields), with farmers organized into Zau groups. Convergence with schemes such as Rashtriya Krishi Vikas Yojana (RKVY), Pradhan Mantri Krishi Sinchayee Yojana (PMKSY), and the State Horticulture Mission will be pursued to scale access to irrigation, inputs, and planting material. Access to digital extension advisory services will also support farmers (from a blend of Zau households and Facilitators), using a phased approach that commences with coverage of three of the original FOCUS "old" districts, and then adds an additional three "new" FOCUS 2.0 districts. As digital extension advisory is subscription based, it will be accessible by those interested. Broader land-development support for non-Zau households will also cover an approximate 20,000 households.

Subcomponent 2.2 strengthens livestock productivity and disease resilience. Building on successes from FOCUS, the project scales interventions in pig breeding, goat rearing, backyard and broiler poultry, and egg production, with strong biosecurity and African Swine Flu (ASF) mitigation protocols. Market access will be enabled through investments in a poultry processing facility (Aibawk), egg aggregation systems, and cold chains. Community Animal Health Workers (CAHWs) and trained artificial insemination (AI) technicians will support last-mile service delivery, with convergence with Animal Husbandry and Veterinary Services (AH&VS) schemes to expand reach and sustainability.

The project will reach out to a total of 156,872 households, including 75,915 unique households, benefiting a total of 303,661 individuals.

The primary target group includes resource-poor households, female-headed households, rural youth, religious ethnic minorities, and marginalized livestock keepers, of which 94% belong to scheduled tribes. The project will be implemented in all 700 Villages in the 28 Rural Development (RD) blocks of 11 districts of the Mizoram state. In every village, at least one Intensive Zau Cluster will be promoted, prioritizing the participation of the landless, female-headed households, and resource-poor families. In addition to the six districts covered under FOCUS, such as Serchhip, Mamit, Champai, Khawzwal, Kolasib, and Saitul, FOCUS 2.0 will also cover the remaining five districts, emphasizing the inclusion of the poorer southern districts of Siaha, Lawngtlai, and Hnathial, where the poverty rate is high, the human development index is low, and a majority of ethnic religious minorities, such as Chakma and Reang (Bru) tribes reside. Districts such as Lawngtlai, Siaha, and Mamit – which exhibit higher poverty levels and lower scores on the Human Development Index, health status index, and education achievement index – will be prioritized for

investments in community infrastructure, including the promotion of market centers and farmers' markets, to create an enabling environment for economic upliftment.

### **Target groups**

The project will engage distinct groups through a differentiated support strategy:

- a. **Ethnic minority groups:** Special efforts will target minority tribes such as the Chakma and Bru communities, who are concentrated in southern districts and face severe socio-economic disadvantages.
- b. **Female-headed households:** Support will be tailored to and targeted at women managing land with limited labor resources, including training, access to agricultural inputs, and financial services. Divorced and separated women will be prioritized, given their heightened vulnerability.
- c. **"Landless" and smallholder families:** Households depending on annual Village Council land allocations and lacking secure tenure will receive specific support to stabilize and enhance agricultural livelihoods.
- d. **Rural youth (men and women):** Recognizing the high unemployment rates and vulnerability to social risks, the project will facilitate vocational training, prioritize youth for enterprise development support, and market linkages to empower young people.
- e. **Women-led business and institutions:** To level the playing field, the project will prioritize women-led businesses and institutions and female entrepreneurs for enterprise development support and for public-private partnerships in its interventions.

Differentiated interventions will ensure that the needs and constraints of each group are addressed appropriately. For instance, marginalized women may require specific capacity building in agricultural technologies and leadership, while unemployed youth may need targeted skills development and access to entrepreneurship opportunities. The project will also collaborate with Youth Mizo Associations and other community structures to enhance outreach and engagement, capitalizing on the strong culture of volunteerism in Mizo society.

## **3. Implementation Arrangements**

The institutional systems and capacities established under the earlier phase of the Society for Climate Resilient Agriculture in Mizoram (SCRAM) will provide the foundation for Phase II. The Department of Agriculture, Government of Mizoram, through the SCRAM Society, will remain the lead implementing agency. Phase II will retain the three-tier implementation structure (State, District, and Village-level), facilitating decentralized planning and ensuring effective delivery. FOCUS further strengthens this structure, with emphasis on:

- Financial management and procurement systems
- Environmental and social safeguards
- Stronger convergence mechanisms at district and community levels
- Elevating inter-departmental coordination and strategic alignment

The implementation framework continues to rest on two core pillars:

- **Governance** — through structured committees at the State, PIU, and District levels chaired by Government officials, ensuring policy oversight and inter-departmental alignment.
- **Management** — through the SCRAM PIU, District Project Units, and community-level bodies, ensuring decentralized, community-led implementation.

### **Project Management:**

Project management of FOCUS 2.0 covers three key functions: (i) operational planning; (ii) technical execution; and (iii) results-based monitoring. Phase II builds on the existing institutional framework by strengthening core implementation structures and clarifying leadership roles to enhance efficiency and responsiveness. Implementation follows a three-tier structure:

- **State Project Management Unit (SPIU)** – provides strategic direction, oversight, and interdepartmental coordination.
- **District Project Management Units (DPIUs)** – supported by **block-level teams**, they lead localized planning, implementation, and supervision.
- **Village-level institutions and community-based staff** – including CLFs, VOs, and Zau Resource Persons – serve as the interface with beneficiaries and ensure last-mile delivery.

At the moment of preparation of this document, the implementation arrangements and roles and responsibilities are to be considered indicative. During early implementation, the PIU will have the responsibility to review and update the information in this regard to reflect the reality on the ground, and ensure the ESCMF and other management plans are consistently implemented.

At the **State level**, the Project Management Unit will include two SECAP Assistant Managers (one for the northern districts and the other for districts in the south) will be responsible for overseeing all SECAP related activities as well as for capacity building required. The SECAP Asst Managers at PIU should make arrangements that all required information and data are then communicated to them at regular intervals for SECAP compliance monitoring. As the project MIS is developed, SECAP Assistant Managers must ensure that all the SECAP indicators are incorporated into the MIS for effective monitoring and reporting. The Assistant Managers will be under the direct supervision of a Manager, M&E, who will also be responsible for overall coordination of relevant SECAP Aspects.

At the **district level**, an Assistant Manager will be inducted with the overall responsibility of implementing all SECAP related activities and as the staff responsible for M&E will also ensure data gathering, documentation and reporting to the District Manager and to the PIU.

At **cluster level**, the CLF coordinator will be responsible for oversight of project activities, collecting relevant information from the village level project staff and act as point of contact for the district monitoring and SECAP assistant manager. At village level, the project proposes to have a Zau Resource person, a Community Animal Health worker and a book keeper. The first two should be the first informants for tracking progress on the indicators necessary for monitoring SECAP compliance, whereas the book keeper will have a responsibility of preparing minutes of meetings and other documentation work as required. The CLF coordinator, assisted by the Zau Resource person and AH worker, will be responsible for convening meetings required for the project implementation purposes (including for the FPIC process).

## **4. Institutional and legal framework**

### **National Legislation**

In India, the Environment (Protection) Act, 1986 provides overarching authority for the protection and improvement of the environment and empowers the Central Government to issue standards for effluent and emissions, and to frame rules for handling hazardous substances.

The Environmental Impact Assessment (EIA) process in India is regulated by the EIA Notification S.O. 1533(E), 2006 (and subsequent amendments), establishing that projects listed under Schedule I (e.g., large-scale irrigation, land development, fertilizer plants) must obtain environmental clearance before construction. The Notification sets out screening, scoping, public consultation, and appraisal procedures.

#### Agriculture-Specific Legislation

Insecticides Act, 1968 & Insecticides Rules, 1971 that governs the manufacture, sale, transport and use of insecticides; requires registration of products to ensure safety for users and the environment.

Fertiliser Control Order, 1985 that regulates the production, distribution and quality of fertilizers; mandates labeling and nutrient content standards.

Seeds Act, 1966 & Seeds Rules, 1968 that controls quality of seeds sold in India; sets testing and certification procedures to ensure germination rates and genetic purity.

Water (Prevention and Control of Pollution) Cess Act, 1977, that imposes a cess on water consumption by industries and certain agricultural users to incentivise efficient use.

The following acts (State and National) constitute the legal framework guiding SECAP:

1. Forest Conservation Act, 1980,
2. Forest (Conservation) Amendment Act, 2023
3. National Disaster Management Act, 2005
4. National Environment Policy, 2006
5. The Environmental (Protection) Act, 1986
6. The Biological Diversity Act 2002
7. National Forest Policy, 1988
8. National Biodiversity Action Plan (NBAP), 2008
9. Schedule Tribes and other Traditional Forest Dwellers (Recognition of Forest Rights) Act, 2006
10. National Water Policy, 2012
11. National Policy for Farmers, 2007
12. National Building Code (NBC) of India 2005
13. The Scheduled Castes and the Scheduled Tribes (Prevention of Atrocities) Act, 1989
14. National Commission for Women Act, 1990
15. National Policy for Women, 2016
16. Mizoram vision 2030 Program
17. The New Land Use Policy (NLUP) (or three phases) 1984-87, 1991-97, and 2011-14
18. Mizoram State REDD+ Action Plan[1]
19. The Mizoram Water Resources (Management and Regulation) Act, 2024
20. Mizoram Agricultural commencement
21. Land Leasing Act, 2021
22. State Action Plan and Climate Change (2021-2017)[2]

#### **IFAD's Social, Environmental and Climate Assessment Procedures**

Building on the suite of national environmental, social and sector-specific laws outlined above, IFAD's Social, Environmental and Climate Assessment Procedures (SECAP 2021) establish IFAD's own standards and procedures for screening, assessing and managing risks and impacts throughout the project cycle. SECAP comprises nine thematic Standards—ranging from biodiversity conservation and resource

efficiency to labour conditions, cultural heritage, Indigenous Peoples and climate resilience—each with clearly defined objectives, scope and required mitigation hierarchy. By integrating international best practice with national requirements, SECAP ensures that all IFAD-supported sub-projects are implemented in compliance with IFAD’s policies.

**Standard 1: Biodiversity Conservation.** The objectives are to conserve biodiversity and ensure the fair and equitable sharing of benefits from genetic resources. Respect and promote the knowledge and practices of indigenous peoples and local communities relevant to biodiversity conservation and sustainable use, including their customary use of biological resources. Apply a precautionary approach to natural resource management for environmentally sustainable development.

**Standard 2 on Resource efficiency.** The objectives of this standard are to avoid, minimize and manage the risks and impacts associated with hazardous substances and materials, including pesticides; avoid or minimize project-related emissions of short- and long-lived climate pollutants; promote more sustainable use of resources, including energy, land and water; and identify opportunities for improving resource efficiency.

**Standard 3 on Cultural Heritage.** The objectives are to preserve and safeguard cultural heritage. Actively prevent IFAD-supported projects from altering, damaging, or removing tangible or intangible cultural heritage. Promote the equitable sharing of benefits derived from its use and ensure meaningful consultation on matters related to cultural heritage.

**Standard 4 on Indigenous Peoples.** The objectives of this standard are to support indigenous peoples to determine priorities and strategies for exercising their right to development; ensure that each project is designed in partnership with indigenous peoples and with their full, effective and meaningful consultation, leading to FPIC; ensure that indigenous peoples obtain fair and equitable benefits and opportunities from project-supported activities in a culturally appropriate and inclusive manner; and recognize and respect the rights of indigenous peoples to the lands, territories, waters and other resources that they have traditionally owned, used or relied upon.

**Standard 5 on Labour and Working Conditions.** The objectives of this standard include: promote direct action to foster decent rural employment; promote, respect and realize fundamental principles and rights by preventing discrimination and promoting equal opportunities for workers; supporting freedom of association and the right to collective bargaining; and preventing the use of child labour and forced labour; protect and promote the safety and health of workers; ensure that projects comply with national employment and labour laws, and international commitments; leave no one behind by protecting and supporting workers in disadvantaged and vulnerable situations, including women (e.g. maternity protection), young workers, migrant workers, workers in the informal economy and workers with disabilities.

**Standard 6 Community health and safety.** The objectives of this standard are: ensure quality and safety in the design and construction of programming-related infrastructure, preventing and minimizing potential safety risks and accidents; avoid or minimize community exposure to disaster risks, diseases and hazardous materials associated with project activities; ensure that the safeguarding of personnel and property minimizes risks to communities and is carried out in accordance with international human rights standards and principles; have in place effective measures to address emergency events, whether human-made or natural hazards.

**Standard 7 on Physical and economic resettlement.** The objectives of this standard are to avoid involuntary resettlement or, when unavoidable, minimize involuntary resettlement by exploring alternative project designs and sites; avoid forced eviction; ensure that resettlement activities are planned

and implemented collaboratively with the meaningful participation of affected people; enhance and restore the livelihoods of all displaced people; and provide explicit guidance to borrowers/recipients/partners on the conditions that need to be met regarding involuntary resettlement.

**Standard 8 on Financial intermediaries and direct investments.** The objectives of this standard are to promote sound environmental, social and climate practices, and sound human resource management with Fis and direct investees; ensure that Fis and direct investees assess and manage any environmental and social risks and impacts of subprojects; and promote good environmental and social management practices by direct investees and in the subprojects financed by Fis.

**Standard 9 on Climate Change.** The objectives are to align IFAD-supported projects with Nationally Determined Contributions, the Paris Agreement goals, and other international frameworks. Screen and assess proposed activities for climate change and disaster risks and impacts (both project impacts and impacts on projects). Apply the mitigation hierarchy in project design. Strengthen community resilience to climate change impacts and climate-related disasters. Enhance community adaptation to the adverse impacts of climate change and foster climate-resilient, low GHG-emitting projects that safeguard food production.

## **5. Procedure for ESC Screening and Management for sub-projects**

In the context of this project, a sub-project is any concrete activity or group of activities carried out under Components 1 and 2 within a defined geographic area—whether a community, cluster or project site. Typical examples include construction or upgrading of market facilities and slaughterhouses, installation of solar-powered water systems, or targeted value-chain investments such as processing equipment, and will depend on the project.

The adequate identification of sub-projects as soon as project activities and sites become known, ensures that environmental and social (E&S) risks are assessed at the scale where impacts actually occur, and that appropriate mitigation measures are designed and applied consistently. Because sub-projects are usually localized and managed at the local level (cluster, district or provincial), involving construction, financing, technical assistance or farmer training, treating them as individual units of analysis helps to:

- Capture site-specific risks (e.g. soil erosion, water use, community health) rather than relying on generic, project-wide assumptions.
- Tailor mitigation measures to local conditions, regulatory requirements and stakeholder concerns.
- Track and report performance more accurately, since each sub-project can be monitored against its own E&S management plan.

The objective of structuring FOCUS 2.0 around clearly defined sub-projects, is to make the risk-management process more precise and transparent, ensuring all interventions are implemented in compliance with national legislation and SECAP requirements.

Annex 1 in this document provides a practical checklist for screening sub-projects for potential SECAP risks. The checklist is also available in Annexure 5 of the Procurement Chapter in the Project Implementation Manual (PIM). Initial E&S screening for each sub-project should use the proposed checklist and identify potential risks. The objective of the screening is to:

- i) identify relevant environmental, social and climate risks applicable in the context of the sub-project, as well as inherent risks connected to the project location.
- ii) identify the need for specific management plans to be developed (biodiversity management plan, indigenous peoples plan, etc)

- iii) identify relevant mitigation measures to be implemented and monitored during project implementation.

In identifying project impacts, the team will apply a mitigation hierarchy to anticipate – and whenever possible avoid – adverse impacts. The mitigation hierarchy is applied by:

- (i) anticipating and avoiding risks and impacts;
- (ii) where avoidance is not possible, minimizing or reducing risks and impacts;
- (iii) once risks and impacts have been minimized or reduced, mitigating them; and
- (iv) where residual adverse impacts remain, compensating for or offsetting them, whenever technically and financially feasible.

Avoidance of significant adverse impacts may require a redesign or cessation of some activities. A precautionary approach should be used when addressing potential adverse impacts on biodiversity, ecosystems and communities. When serious threats exist, a lack of scientific certainty should not be a reason to postpone the adoption of preventive measures.<sup>5</sup>

The grievance Redress Mechanism and the Stakeholder Engagement Plan will also be continuously implemented and adapted to the local conditions and needs of sub-projects.

The implementation of environmental, social, and climate risk management measures at sub-project level follows a structured sequence: (1) Screening, (2) ESCMP Preparation and Clearance, and (3) Implementation, Monitoring, and reporting.

The information below regarding the activities and responsibilities are proposed with the available information at this stage. It will be the PIU's responsibility to review and update the following sections, to ensure adequate responsibilities are allocated in line with project implementation arrangements and local context needs:

### **5.1 Sub-project Screening**

As early as project activities and sites are known, the District team, consisting of the Jr Engineer, Asst Manager Crop production, Asst Manager Gender and Capacity Building and Asst Manager SECAP will conduct sub-project level screening consulting with beneficiaries and related local stakeholders to identify E&S risks and potential impacts associated with subprojects activities.

#### **The DPIU team, led by Asst Manager SECAP should**

- Lead the sub-project screening process using the SECAP-compliant screening tool (Annex 1).
- Conduct a screening against IFAD's exclusion list, to ensure only eligible activities will be financed in the context of the project, as well as screening against IFAD's SECAP 2021, using the screening tool in annex 1.
- Determine sub-project risk ratings and SECAP requirements (e.g. management plans) to guide further steps.
- Prepare relevant documentation and information to submit to the State level authority (Department of Environment, Forest and Climate Change) in case any sub-project calls for an EIA.
- Maintain a centralized database of screening results and decisions.

The CLF Coordinator, assisted by the village level project team will

- Facilitate necessary consultative meetings with the Village Council, Village Organisation members and the project beneficiary households

---

<sup>5</sup> IFAD SECAP 2021.

- Support data collection and site visits during screening, including consultation with community members and local authorities.
- Ensure documentation of preliminary risks and community feedback is submitted to DPIU team.
- Provide technical input to characterize sub-project risks (e.g., land use, pollution, health and safety) and assist in completing screening tools and advise on mitigation planning.

## **5.2 Sub-Project ESCMP Preparation**

Once risks are identified, appropriate adaptation or mitigation measures should be identified case by case, in consultation with the community and local stakeholders that will be affected and the Village Council of the concerned village, and following the mitigation hierarchy – avoid risks, minimise or reduce, mitigate, offset or compensate.

DPIU will oversee or directly prepare site-specific ESCMPs (a proposed template for sub-project ESCMP is available in annex 2) for the respective district, identifying implementation arrangements at local level, setting clear roles and responsibilities, monitoring indicators and costs, and the Asst Manager SECAP will facilitate disclosure and community feedback on draft ESCMPs at provincial and local levels and share evidence and reports on such activities to PIU. At the PIU, the Manager M&E, assisted by the Asst Managers SECAP, will keep records of compliance and report the same in the M&E reports.

In addition, stakeholder engagement activities and local arrangements for operationalizing the grievance redress mechanism will be identified and implemented until closure of activities.

Once appropriate mitigation measures have been discussed and agreed upon, those that can be or are to be undertaken by the contractor (especially in the context of labour conditions, community health and safety and pollution abatement) should be clearly defined and included as binding clause(s) in the contract awarded to the contractor for execution of the sub-project. Non-compliance of these clause should be penalised, being regarded as a breach of contract attracting appropriate penalties and action.

All project activities are expected to be in line with national requirements and materially consistent with IFAD's SECAP 2021.

## **5.3 Sub-project Monitoring and Reporting**

The sub-project specific ESCMPs and associated management plans will be consistently monitored through project implementation to ensure that mitigation measures are being effectively implemented and that risks are being managed as required by IFAD's SECAP and national legislation.

Monitoring occurs at multiple levels—by the implementing entities, technical partners, and oversight agencies—and includes both internal monitoring and external verification through site visits and reporting.

Each site-specific ESCMP must include:

- Monitoring indicators specific to identified risks (e.g., pollution levels, number of OHS incidents, waste management practices);
- Verification methods (e.g., site observations, community feedback, documentary review);
- Means of verification (e.g., photo evidence, inspection reports, checklists);
- Monitoring frequency (e.g., monthly, quarterly);

- Reporting formats aligned with IFAD's requirements.

Monitoring results are used not only for compliance verification but also to inform adaptive management. Based on the findings from monitoring, the PIU may propose updates to ESCMPs, trigger corrective actions, or revise implementation strategies to address emerging risks. All sub-project ESCMPs will be treated as living documents and updated as necessary in response to monitoring outcomes, grievances received, or contextual changes.

Annex 2 includes a monitoring template. During early implementation, roles and responsibilities for specific monitoring and reporting requirements will be reviewed and updated as necessary. The PIU has the overall responsibility to ensure the project is implemented in compliance with the requirements of national legislation and IFAD's SECAP requirements, as outlined in the ESCMF and ensures that each site-specific ESCMP includes appropriate monitoring indicators, verification methods, and reporting formats.

Primary responsibility of implementation will be under the PIU, and includes:

- Ensure compliance with national legislation requirements of the project
- Prepare, implement, and monitor environmental and social management plans that are developed in the context of the project, including finalization/updating of this Environmental, Social and Climate Management Framework, the Stakeholder Engagement Plan, the Grievance Redress Mechanism and any other SECAP document.
- Undertake site visits and on-ground review, check and document compliance with site-specific measures as presented in site-specific ESCMPs.
- Provide guidance to project staff and other stakeholders on the implementation and documentation of compliance related to environmental mitigation and monitoring measures, as presented in site-specific ESCMPs.
- Check that all documents necessary to ensure full compliance with Environmental & Social Safeguard documents, as per national regulation and IFAD's SECAP requirements are in place and regularly updated.
- Ensure that project activities, being developed as a part of the Project, are designed to include avoidance of potential social and environmental risks, as recommended in the ESCMPs.
- Coordinate the implementation of SEP, and ensure the GRM is operational in all project locations.
- Ensure the complaints logbook is updated at least quarterly, and ensure all complaints/grievances received are timely addressed.
- Coordinate the incident reporting communications. The PIU also ensures that serious incidents are reported to IFAD within 48 hours, in line with SECAP requirements.
- The PIU is responsible for consolidating data received from district level, conducting periodic field visits, and preparing annual environmental and social safeguards reports for submission to IFAD. An indicative template is included in Annex 5.

The M&E Manager in the PIU plays a frontline role in sub-project monitoring. S/he is responsible for conducting regular field-level monitoring of safeguards implementation, particularly for infrastructure works and value chain activities under their jurisdiction and will work closely with relevant staff in planning and implementation of the subprojects located within their Districts. The Jr Engineer and SECAP Assistant Manager will also supervise project officers at the village level and are responsible for:

- Executing and monitoring the civil works in the respective districts/villages

- Coordinating effectively with all project stakeholders, contractors, local authorities, provincial departments and project communities;
- Supporting district-level project officers in monitoring and evaluating progress and performance of consultants and contractors;
- Supporting trainings on E&S thematic relevant to the project, including COVID-19, labor, gender, SEA/SH,VAC, use of agro-chemicals, etc.
- Supporting PIU to disseminate project information and conduct consultation activities, as well as ensuring effective grievance redress resolution within their district;
- Liaising with village authorities to encourage vulnerable groups to engage with the project;

### **Considerations for ESCMF Monitoring**

The Environmental, Social and Climate Management Framework includes indicative monitoring indicators as well as the frequency schedules while providing a list of the project official(s) responsible for monitoring these outputs. It is important here to also provide a selected list of critical indicators that need to be monitored to track progress and compliance of SECAP requirements.

In the context of biodiversity, Zau cluster maps (to be developed based on LULC 1:10000 scale for Zau identification) must be cross checked with PA boundary maps to ensure all project activities are planned and implemented within areas permitted for human activities. This must be ensured by district teams in concerned districts and tracked by the SECAP team (M&E and SECAP Asst Manager in districts and SECAP Asst Managers at HQ). The next indicator, reflecting precautions against deforestation, habitat degradation and measures to offset any significant tree clearing will be the agreements with the individual Village Council and needs quarterly monitoring by the same team. Lastly, the number of Participatory Landuse Planning maps prepared for each village will serve both as an indicator of compliance to biodiversity concerns as well as evidence for a well implemented FPIC engagement.

An indicator of precautionary steps taken to prevent accidental introduction of diseases into wild populations of ungulates because of the import of livestock will be the number of incidences of import and the documentation of preventive steps taken (ie vaccination, etc). This reporting should be done by the Livestock managers and monitored by the SECAP staff in the districts and at Aizawl. The frequency of monitoring should be quarterly.

An indicator that is critical for monitoring to track compliance to the concern raised in Cultural Heritage is the number of long-term leases for the Zaus registered under the name of the village council. Any registration of lease/licence in the name of individual members of the Zau cluster must be taken as a serious non-compliance of the SECAP concern attracting the appropriate action. This indicator must be monitored regularly.

Lastly, two indices need to be monitored regularly to track compliance to the concern raised about depletion of agro-biodiversity. The first is regularly tracking the number of Zau members (and non-Zau members) adopting the introduction of non-cereal jhum crops, particularly NUS crops into their kitchen/homesteads. A supporting indicator can be the number of households who have been linked to MiSRML's Nutrition Garden scheme. A similar tracking is also necessary of the number of Zau members who have introduced non-cereal crops as a multi-cropping approach into their Zaus. Every season (or quarterly) a dietary diversity assessment should be conducted to monitor the change (reduction or improvement) in sample households of Zau members.

## **6. Capacity Building**

The implementation of this ESCMF, as well as the SEP, the GRM and any other management plan will involve responsibilities from various project staff at PIU, District and village levels, it is important that all involved stakeholders have a clear understanding of their respective roles and responsibilities conducting such activities, and understanding of what information needs to be shared with whom. The management of E&S risks of the project is a continuous and team effort, and capacity building is crucial to ensure shared understanding.

- Once the various roles and responsibilities around risk management have been reviewed and updated, the SECAP Assistant Managers at PIU will conduct an overall capacity building needs assessment to identify what are the knowledge gaps around the topic and how to ensure the staff with these responsibilities has access to capacity building to support them in their functions. The capacity building will be continuous, with an on-boarding training, and refreshers on certain topics that are considered more sensitive. In particular, the program will: Assist the PIU in overseeing the implementation of the ESCMF, including supervision and evaluation of the work to be undertaken with respect to mitigation measures and monitoring requirements.
- Provide training to PIU/government staff to strengthen awareness and technical expertise in environmental and social aspects.
- Train PIU/government staff in appropriate project inspection, monitoring, use of monitoring equipment and data collection techniques.
- Assist consultants in coordinating and consulting with other government agencies, local communities, NGOs and other stakeholders concerned with the environmental and social aspects of the project.

## **7. Costs and budgetary considerations**

The implementation of the Environmental, Social, and Climate Management Framework (ESCMF) under the FOCUS 2.0 requires dedicated financial resources to ensure that all mitigation, monitoring, and stakeholder engagement activities are effectively carried out. To this end, the ESCMF includes preliminary cost estimates for key safeguard activities, including training, monitoring, community engagement, grievance redress, and the implementation of specific mitigation measures. These indicative costs, reflected in the ESCMP matrix (please refer to Section 9 of this document) and associated annexes, serve as a baseline for planning and allocation.

During implementation, the ESCMP should be revised once construction and operation activities are well defined. Information should also be provided on responsibilities for reporting, work plan, procurement plan, cost estimation and corrective action mechanisms.

During implementation, the detailed costing of ESCMP activities will be refined and finalized as part of the sub-project-specific planning process. Site-specific ESCMPs will include tailored cost estimates for environmental and social mitigation and monitoring measures. These costs will be integrated into the overall budget of each sub-project and clearly reflected in the procurement and implementation plans. The PMO, in close coordination with the Department of Agriculture, Technical Service Providers (TSPs), and Financial Intermediaries (FIs), will be responsible for ensuring that adequate funds are allocated at the time of sub-project appraisal and that these allocations are reflected in sub-project financing agreements.

The SECAP activities have been designed to proactively mainstream SECAP compliance within project component activities. As FOCUS 2.0 target groups are all tribal communities, a separate Indigenous Peoples Plan is not suggested. Similarly, social mobilisation, awareness raising, project objectives awareness consultations, beneficiary identification and selection and all associated PRA exercises till the Participatory Landuse Planning and Mapping exercise will be planned and executive within an FPIC process Framework, which is outlined under Standard 4, thus further strengthening the mainstreaming process. Consequently, SECAP specific costs and budgetary considerations are not provided separately and hence, embedded within project component costs (Component 2 and under Component 3.2 M&E, Knowledge Management). However, a table summarising the human resource costs is provided below.

| Sl          | Position                             | Unit                                                          | Unit cost (in USD) | Total cost (USD '000) |
|-------------|--------------------------------------|---------------------------------------------------------------|--------------------|-----------------------|
| <b>PIU</b>  |                                      |                                                               |                    |                       |
| 1.          | Assistant Manager (SECAP)            | 2 (one for Northern districts and one for Southern districts) | 701.754            | 17.2                  |
| <b>DPIU</b> |                                      |                                                               |                    |                       |
| 2.          | Asst Manager (Planning, MIS & SECAP) | One in each district                                          | 584.795            | 71.6                  |

To ensure the sustainability and adequacy of financing for environmental and social safeguards, ESCMP-related costs will be reviewed and updated on an annual basis through the Annual Work Plan and Budget (AWPB) exercise. The PMO will coordinate this process and ensure that updates to ESCMP implementation needs—such as additional training, new safeguard risks, or emerging mitigation requirements—are captured in the planning and budgeting cycle. Adjustments to the budget will be made based on lessons learned, monitoring outcomes, and evolving risks.

This integrated approach ensures that ESCMP implementation remains financially viable, responsive to on-the-ground realities, and aligned with IFAD's SECAP 2021. It also reinforces the principle that environmental and social management is an integral component of project operations, rather than an add-on. By embedding ESCMP costs within the annual planning and budget process, the project safeguards both compliance and effectiveness across all levels of implementation.

## 8. Environmental, Social and Climate Management Plan

As part of the SECAP Procedures described above, the project has been screened to identify potential environmental and social risks in relation to activities of components 1 (market linkages, valuechain and enterprise development) and 2 (Zau cluster development and lease formalization) and how they may impact environmental, social and climate receptors, as well as proposed mitigation measures. This section is to be understood as an explanation of the ESCMF Matrix.

## Standard 1. Biodiversity Conservation

The risk to Biodiversity was assessed as Moderate. This includes both direct risks to forest and wildlife habitats and risks from agro-biodiversity depletion due to Zau intensification. The moderate risk to biodiversity arises from Component 2's bench-terracing and expanded grazing around Zau clusters that border the Dampa Tiger Reserve and other forest fragments. These interventions, while limited to community-managed plots, could disrupt primate movement corridors and fragment understorey habitat.

While Mizoram has many Protected Areas across the state harbouring several rare and endangered wildlife species in its National Parks and Wildlife Sanctuaries, the project will adhere to stringent protocols to ensure no activities occur within or near protected areas, safeguarding their ecological integrity'.

Table 1 lists the district-wise distribution of protected areas – National Parks and Wildlife Sanctuaries – across Mizoram. The Protected Areas of Mizoram harbour two highly endangered primates – Hoolock Gibbon (only Ape in India) and Phayre's leaf eating monkey – in addition to several macaque species. Among ungulates, the red serow is found across several of Mizoram's protected areas; in fact, the serow is considered the state animal of Mizoram. Among the big cats, Mizoram's protected areas harbour the tiger and the clouded leopard besides several smaller cats, including the marble cat and the fishing cat. Mention must be made of Dampa Tiger Reserve which has the distinction of hosting the highest density of clouded leopards in South and Southeast Asia. Among the avifauna, Mizoram's protected network hosts several species of hornbills, the rare Blyth's tragopan and the bamboo partridge.

Table 1 has been compiled to provide an overview of the district-wise location of important protected areas (together with the area) and help in identifying the districts where extra caution has to be exercised while designing project interventions in order to safeguard SECAP concerns on Biodiversity. Three districts – Champhai, Lawngtai and Lunglei – have at least two protected areas each, which include National Parks in the first two districts. In addition, the Dampa Tiger Reserve located in Mamit district is the largest protected area in Mizoram with a core area of 500 km<sup>2</sup> and a buffer area comprising 488 km<sup>2</sup>.

Table1: District-wise distribution of Protected Areas (National Parks and Wildlife Sanctuaries) in Mizoram

| Sl | District  | Protected Area (National Park/Wildlife Sanctuary) | Area (in km <sup>2</sup> ) |
|----|-----------|---------------------------------------------------|----------------------------|
| 1  | Mamit     | Dampa Tiger Reserve                               | 500 core, 488 buffer       |
| 2  | Champhai  | Murlen National Park                              | 100                        |
| 3  | Champhai  | Lengteng WS                                       | 60                         |
| 4  | Lawngtlai | Phawngpui (Blue Mountain) National Park           | 50                         |
| 5  | Lawngtlai | Ngengpui WS                                       | 110                        |
| 6  | Lunglei   | Khawnglung WS                                     | 35.75                      |
| 7  | Lunglei   | Thorangtlang WS                                   | 50                         |
| 8  | Kolasib   | Pualreng WS                                       | 50                         |
| 9  | Saiha     | Tokalo WS                                         | 250                        |
| 10 | Aizawl    | Tawi WS                                           | NA                         |

(Source: Compiled from <https://forest.mizoram.gov.in/page/wildlife-of-mizoram> - Wildlife of Mizoram, Environment, Forest and Climate Change Department, Government of Mizoram)

- Operationalising project interventions, particularly pertaining to Component 2 calls for extra caution and focused attention in these districts to ensure that project activities do not infringe into core areas or areas where human activities are not permitted, and project activities do not result in deforestation and habitat degradation. These precautionary steps are necessary to minimise habitat degradation particularly for the endangered primates (Hoolock Gibbon and Phayre's Leaf eating monkey).
- An associated risk which can be categorised as moderate is the predation of goats and kids by wildlife, particularly big cats and bears. Additionally, as the project intends to increase cropping intensity and promote a second or third cropping season, this may trigger crop depredation by wildlife, particularly around Protected Areas.
- In addition, attention needs to be paid to risks of depletion of agro-biodiversity arising from the promotion of cash/commodity crops. As Zau intensification would centre around cash/commodity crop(s) and promote gradual transition to settled agriculture, the risks of depletion of agro-biodiversity is increased. This has ramifications for dietary diversity and can trigger concerns in regard to nutrition.
- Although crop combinations to be adopted by Zau cluster members will be left to the choice of the households, a possible outcome of cash/commodity crop promotion in the Zaus will be either (i) a reduction of the area under paddy in Zau plots, or (ii) the total replacement of area under paddy with cash/ commodity crops. This raises concerns for the household's staple (cereal) security through the year, as studies across the uplands of NER suggest a four-to-six-month staple security that is met from self-production from jhum fields.

### **Proposed Mitigation Measures**

To address this, the PIU will secure forest department clearance and map all Zaus and enclosures against protected-area boundaries, ensuring no-clearance clauses are enforced in construction contracts.

In addition, native species will be planted and degraded fringes allowed to regenerate naturally, while village-led corridors maintain continuity between core forest areas and reduce edge effects on wildlife.

While establishing Zaus – permanent agriculture through agricultural intensification – in fringe villages of protected areas, the project will need to ensure: (i) no Zau clusters fall within the protected area boundaries; in the case of Dampa Tiger Reserve (Mamit district), extra caution must be exercised while selecting project villages within the Buffer area and all necessary clearances obtained from the Tiger Reserve Authorities/Forest Department before the project interventions are operationalised.

(ii) Project teams must ensure that clear felling or clearing of tree vegetation while establishing the Zau clusters is minimal, if not avoided significantly.

(iii) Conscious mitigation measures of Zau enrichment through tree planting and assisted forest regeneration must be encouraged, particularly in Zau clusters that are far away from the village and villagers are reluctant to cultivate.

(iv) If the area cleared of tree species is significant, the Project team must encourage and support the Village Council to increase/expand existing village safety reserves and/or village supply reserves.

These precautionary steps are necessary to minimise habitat degradation particularly for the endangered primates (Hoolock Gibbon and Phayre's Leaf eating monkey).

- The project proposes to support animal husbandry for those households that do not have sufficient labour for managing agriculture in Zau clusters. The proposed animals to be encouraged are pigs, poultry and/or goats. Risks to biodiversity from the first two are minimal as these are

proposed to be penned. Goats, however, are to be grazed in identified pastures. This could pose a possible risk of introducing diseases to the wild population of serows (and other ungulates), but the risk is perceived to be low as veterinary health and safety measures are expected to be in place while importing livestock into project villages. However, it is wise to be sensitive and aware of the possible risks and take the necessary precautions.

- An associated risk which can be categorised as moderate is the predation of goats and kids by wildlife, particularly big cats and bears. Sufficient precautions must be taken by the project as this could potentially increase human-wildlife conflicts and pose a risk to project investments in this sector. This also poses challenges for insurance claim settlement.
- As Zau intensification would centre around cash/commodity crop(s) and promote gradual transition to settled agriculture, the risks of depletion of agro-biodiversity becomes very real and significant. This has ramifications for dietary diversity and can trigger concerns in regard to nutrition. A safeguard measure to compensate for this depletion would be

(i) encouraging and supporting households to introduce a wide variety of the leafy vegetables and other NUS crops into the household's kitchen gardens. Convergence with MiSRLM's Nutrition gardens under the POSHAN scheme should be explored and opportunities extended to MiSRLM for outscaling their programme.

(ii) encouraging the introduction of several of the perennial NUS crops into Zaus as 'companion crops'. This will serve multiple purposes- provide a diversification in the Zaus thus strengthening risk aversion measures for the household and also safeguard the dietary diversity – hence nutritional security – over seasons.

## **Standard 2 Resource Efficiency and Pollution Prevention**

This standard is applicable in relation to activities aimed at enhancing agricultural productivity while mitigating environmental impacts. The proposed activities involve supporting the formation of Zau clusters or Agricultural Intensification Clusters (AICs), integrating measures such as irrigation, soil and water conservation, agroforestry, natural farming, farm mechanization, and agricultural link roads. Although the risks from the irrigation interventions do not suggest the need for any revision of the risk categorisation, focused efforts must be made to ensure long-term sustainability of water availability for irrigation purposes. A reassessment of the risks from proposed project interventions does not necessitate any revision of the risk category, but suggests the need for attention to specificities.

- Project interventions will lead to the development or rehabilitation of irrigation schemes, tapping local streamflows or harnessing water from small riverlets, which can potentially affect streamflow, unless mitigation measures are adopted.
- Development of the Zau clusters or AICs may call for the establishment of bench terraces in certain locations. This can increase the possibility of topsoil erosion and requires specific interventions to reduce the adverse impacts.
- Although the project proposes to adopt agroecological approaches, moderate risks from the use of chemicals for nutrient enhancement and pest control cannot be ruled out as farmers are known to have adopted the use of herbicides to control weeds.
- The project proposes the establishment of at least three slaughterhouses. Concerns arise in regard to the safe disposal of waste entrails and blood of the slaughtered animals as inappropriate disposal of biological waste could lead to pollution of soil and water bodies in addition to posing a health safety concern.

## Proposed Mitigation Measures

- (i) The project risks in relation to this standard are considered moderate, primarily with activities aimed at enhancing agricultural productivity while mitigating environmental impacts. Focused efforts must be made to ensure long-term sustainability of water availability for irrigation purposes. It is recommended therefore, that for every irrigation intervention that involves the tapping of local streamflows, a catchment treatment plan be made mandatory involving: an agreement with the Village Council that the catchment of the water source will not be brought under any cultivation and the identified area will be declared as a catchment reserve for posterity;
  - (ii) wherever necessary, steps will be taken to enhance percolation and groundwater reserve through measures that draw from Springshed Recharge and Management approaches. This will require specific capacity building and training programme for the project team as well as community members for which adequate budgetary allocations need to be made.
- Development of the Zau clusters or AICs may call for the establishment of bench terraces in certain locations. This increases the possibility of topsoil erosion and requires specific interventions to reduce the adverse impacts.
  - (i) Contour bunding using biological approaches that build on traditional practices should be the first option adopted. Traditionally, farmers lay logs along contours to reduce erosion. Split bamboo 'mattings' are also used by certain communities as low fencing to prevent erosion and help in terrace formation.
  - (ii) Contour hedgerows using legumes should complement the log structures or bamboo mattings to further strengthen erosion prevention measures. Legumes such as pigeon pea or soyabean are good options and these legumes should be planted in rows above and below the logs/bamboo mattings. Such measures can help in terrace building with minimal costs and low labour requirements while also enhancing soil nutrient and moisture retention capacities through nitrogen fixing and mulching the nitrogen rich biomass after harvest.
- Although the project proposes to adopt agroecological approaches such as resource recycling through the promotion of biomass mulching, composting and introduction of EM methods, moderate risks from the use of chemicals for nutrient enhancement and pest control cannot be ruled out as farmers are known to have adopted the use of herbicides to control weeds.
  - (i) Extreme care and caution must be exercised by the project in ensuring that chemical fertilisers and pesticides are not used.
  - (iii) As a precaution, regular trainings on the safe use of pest control agents must be imparted to farmers and steps taken to ensure adherence to the safe disposal of harmful chemicals.
- The project proposes the establishment of at least 3 slaughter houses. Concerns arise in regard to the safe disposal of waste entrails and blood of the slaughtered animals as inappropriate disposal of biological waste could lead to pollution of soil and water bodies in addition to posing a health safety concern.
  - (i) Effective waste disposal mechanism following national/international standards will need to be put in place and this aspect must be reflected in the bidding document during the call for bids for the construction of the slaughter houses.

### **Standard 3 Cultural Heritage**

Although proposed interventions can be assumed not to pose any risks to tangible cultural heritage, two outcomes of the basic project approach can bring about intangible changes in cultural practices.

The predominant agricultural practice among all communities in Mizoram is shifting cultivation, locally called jhum.

Jhumming is carried out in community land and a participating household holds annual tenurial rights to a plot that is allocated through lottery conducted by the Village Council. As tenure to agricultural plots are for a year only, a longer term of tenurial security has been introduced by FOCUS 1.0 with land leases of 10 years. This intervention, in addition to ensuring security of tenure also intends to facilitate the transition to settled agricultural practices and reduce deforestation caused by the practice, thereby supporting the Government of Mizoram's land use policy and intent of eradicating shifting cultivation.

This approach however, overlooks the fact that it would trigger a change in the traditional access regime and affect a transition from Common Property regime to Private Property regime, the possibility of elite capture, privatisation of common property resources and the emergence of landlessness.

#### **Anticipated Mitigation Measures**

Under Component 2, the project proposes to target 30% of households for agriculture intensification (and transition to settled agriculture with a longer lease period) and another 30% for animal husbandry options, leaving 40% of households practising jhum outside the purview of direct project interventions. Establishment of cash/commodity crops and the sedentarisation of agriculture in the Zaus on community land will result in the reduction of area available for jhum and the resultant shortening of jhum cycles. As all households practising shifting cultivation will not be included in Zau activities, the jhum practice of the excluded jhumiyas will become further marginalised, adversely affecting their yields (and potentially the household food security). This raises serious concerns and requires carefully thought-out risk reduction measures, keeping in perspective IFAD's declared principle of 'doing no harm'.

As pointed out under Biodiversity, the promotion of cash/ commodity crops in the agriculture intensification cluster or Zaus can result in a depletion (and possible erosion) of agro-biodiversity, particularly non-cereal tubers, leafy vegetables, legumes and spices. These NUS crops are perceived as climate smart, nutrient dense crops and extremely critical for maintaining the seasonal dietary diversity and nutritional security, especially of poor households. These crops also help to enhance adaptive capacities of the rural poor.

Although crop combinations to be adopted by Zau cluster members will be left to the choice of the households, a possible outcome of cash/commodity crop promotion in the Zaus will be either (i) a reduction of the area under paddy in Zau plots, or (ii) the total replacement of area under paddy with cash/ commodity crops. This raises concerns for the household's staple (cereal) security through the year, as studies across the uplands of NER suggest a four-to-six-month staple security that is met from self-production from jhum fields.

To safeguard against such impacts (and the emergence of second-generation issues)<sup>6</sup>,

---

<sup>6</sup> See Choudhury, D., Bhuchar, S., Thomas, S. (2021). *Transitioning shifting cultivation to resilient farming systems in South and Southeast Asia*. Resource book. ICIMOD.

- the formal registration of the long-term lease (or licence) issued by the Revenue department should be to the Village Council and not individual households and
- the lease should not allow the conversion of the license issued to a permanent land patta in the name of any individual.

This needs to be a mandatory conditionality included in the MoU to be signed with Village authorities of all participating villages in all districts.

Establishment of cash/commodity crops and the sedentarisation of agriculture in the Zaus on community land will result in the reduction of area available for jhum and the resultant shortening of jhum cycles. As all households practising shifting cultivation may or may not be included in Zau activities, the jhum practice of the excluded jhumiyas will become further marginalised, adversely affecting their yields (and potentially the household food security). This raises serious concerns and requires carefully thought-out risk reduction measures. To mitigate adverse outcomes, the project should:

- (i) initiate discussions with the Village Council to explore willingness of the village to try and increase the cultivation phase of their jhumming to at least two years from the present practice of annual access. This could be made conditional to the village's inclusion in the project and should figure prominently in the MoU to be signed with FOCUS 2.0.
- (ii) Support need to be extended to households for enhancing land capability within their jhum plots so that cultivation can be continued for at least a second year (if not more). Land capability enhancement can be possible through the introduction of agro-ecological practices and the introduction of EM inoculants or biofertilizers.
- (iii) These households must be included in all capacity building events focused on soil fertility enhancement, crop management and introduction of improved crop cultivation methods.
- (iv) FPIC process must include a thorough discussion of the issue and the conclusions/agreements are formally recorded, duly signed and endorsed by all parties.
- (v) Conduct the Participatory Landuse Planning and Mapping as a central part of the FPIC process to clearly demarcate (a) the Zau cluster(s) identified for FOCUS 2.0 with the individual plots (if possible) (b) all non-Zau jhum plots to be cultivated for that year (c) all jhum clusters within the village territory together with the jhum cycles for each cluster (d) catchment protected areas identified for tapping streamflows/riverlets for irrigation purposes (e) fallows that are accessed for wild edibles and forest produces (f) Village Supply and Reserve Forests, and (g) pastureland to be used for grazing of goats (where applicable). The project team should facilitate this mapping on RS imageries/Google map printouts which are possibly on a 1:10000 scale. This PLUPM will serve as a concrete record of a thorough FPIC process having taken place and should also serve as a monitoring tool/means of verification of project interventions undertaken.

Although crop combinations to be adopted by Zau cluster members will be left to the choice of the households, a possible outcome of cash/commodity crop promotion in the Zaus will be either (i) a reduction of the area under paddy in Zau plots, or (ii) the total replacement of area under paddy with cash/ commodity crops. This raises concerns for the household's staple (cereal) security through the year, as studies across the uplands of NER suggest a four-to-six-month staple security that is met from self-production from jhum fields. The project assumptions that staples/cereal insecurity will not increase consequent to promotion of cash/ commodity crops because (i) project intervention in Zaus should improve soil fertility and hence yields – therefore, even if households reduce the area under paddy, productivity and yields should improve following inputs and improved practices, sufficiently

compensating for the reduction in area under paddy (ii) most households are dependent on rice procurement through the Public Distribution System. Allocation of rice through the PDS in the case of NER hill states is adequate to meet the annual requirements of the family. Additionally, to factor in disruption in communication during monsoons, PDS outlet(s) are located in the village and storage facilities established within the village to hold a buffer stock for at least two months to tide over such exigencies. (iii) The project will encourage mixed crops and include seasonal as well as short-gestation cash crops to facilitate cash generation within a season. This should provide the household with the means to procure staples from the market if the need arises.

#### **Standard 4 Indigenous Peoples**

The target groups identified for FOCUS 2.0 comprise completely of tribal communities (or indigenous peoples). The risks related to Indigenous (tribal) Peoples are perceived to be moderate, as the project will build upon local traditional knowledge and promote full and effective participation of the tribes present in the area. With 100% tribal community as target group, FOCUS does not require a separate Indigenous/Tribal Peoples Plan. All social mobilisation, project awareness raising, consultations on project objectives, components and eligibility will be conducted under an FPIC framework approach. An outline of the FPIC implementation plan is provided below. An in-depth assessment of risks related to the project approach and mitigation measures developed considering the customary laws among the target groups and the tribal governance system among them suggests that the SECAP Review Note at PCN stage overlooked certain nuances as outlined in the above section. Although these concerns do not suggest a need to upgrade the risk category, they certainly suggest the need for specific attention and appropriate action.

#### **FPIC Implementation Plan Outline**

| <b>Sl</b> | <b>FPIC activity</b>                                                                                                                    | <b>Readiness Action Plan Activity Description &amp; serial number</b>       | <b>Officers responsible</b>                                                  | <b>Timeline (Corresponding to RAP timeline)</b> |

### Standard 5 Labour and Working Conditions

The PDT had proposed a moderate risk ranking for labour and working conditions, the reassessment at Design stage confirms this rate. Clear provisions outlining safeguards against sexual harassment/discrimination and abuse (SHEA), wage disparity and child labour must be included in all bid documents and strict adherence ensured by the project teams during execution of infrastructure/farm road activities.

### Standard 6 Community health and Safety

The SECAP Note at PCN stage did not list Community Health and Safety as a concern. However, given the proposed activities for the Project Components at Design stage, inclusion of this category is strongly suggested as the present assessment suggests a moderate risk categorisation.

#### SECAP concerns:

- The risks arise from two aspects of proposed project activities, all of which have been discussed under Biodiversity, Resource Efficiency and Pollution Prevention and Indigenous Peoples sections above. The first (elaborated under the Biodiversity and Indigenous Peoples categories) is in regard to the depletion of agrobiodiversity subsequent to the establishment of cash/commodity crops. A reduction in agrobiodiversity has implications for seasonal dietary diversity, and by extension, serious ramifications for nutritional security, especially of children, expectant and nursing mothers and the aged.
- The establishment of slaughterhouses and safe disposal of biological waste has concerns for community health and safety. Again, these have been elaborated under the Resource Efficiency and Pollution Prevention section and the required remedial action outlined in the relevant section.
- Lastly, road construction and minor infrastructure development requiring temporary labour carries a risk of increased community exposure to disease(s) and/or SHEA incidents, in instances where construction and/or related labour camps are nearby.

The risks in relation to this standard in the context of the project arise from three aspects of proposed project activities, two of which have been discussed under Biodiversity and Resource Efficiency and pollution prevention sections above while the third is related to labour conditions.

- The first (elaborated under the Biodiversity category) is in regard to the depletion of agrobiodiversity subsequent to the establishment of cash/commodity crops. A reduction in agrobiodiversity has implications for seasonal dietary diversity, and by extension, serious

ramifications for nutritional security, especially of children, expectant and nursing mothers and the aged. Remedial measures have been suggested under the Biodiversity section and are therefore, not repeated here.

- The establishment of slaughterhouses and safe disposal of biological waste has concerns for community health and safety. Again, these have been elaborated under the Resource Efficiency and Pollution Prevention section and the required remedial action outlined in the relevant section.
- Road construction and minor infrastructure development requiring temporary labour carries a risk of increased community exposure to disease(s) and/or SHEA incidents, in instances where construction and/or related labour camps are nearby. In addition to the precautions and mitigation measures related to Labour Conditions (e.g. with SHEA safeguards included in bidding documents of contractors), the PIU/DPIU safeguards staff must sensitize communities located near these activities on the related risks & preventative measures/reporting procedures prior to the commencement of those activities.

#### **Standard 7 Physical and economic resettlement**

The risk screening at PCN stage presumed that project interventions, particularly the establishment of Agriculture Intensification Clusters or Zau clusters would result in physical and economic resettlement. This assessment, however, is unfounded and the reassessment at Design stage suggests a downgrading of the risk category to low risk.

#### **Standard 8 Financial Intermediaries and Direct Investments.**

Risk rating for Financial interventions and procurement have been discussed and adequately addressed under the procurement section and hence are not elaborated here. However, it should be noted that all proposals for infrastructure, slaughterhouses, irrigation and farm roads should be treated as sub-projects, each requiring an ESCMP. Safeguard measures suggested in the respective ESCMP must be included in the contract clauses by the Procurement unit at PIU/DPIU as the case may be.

#### **Standard 9 Climate change**

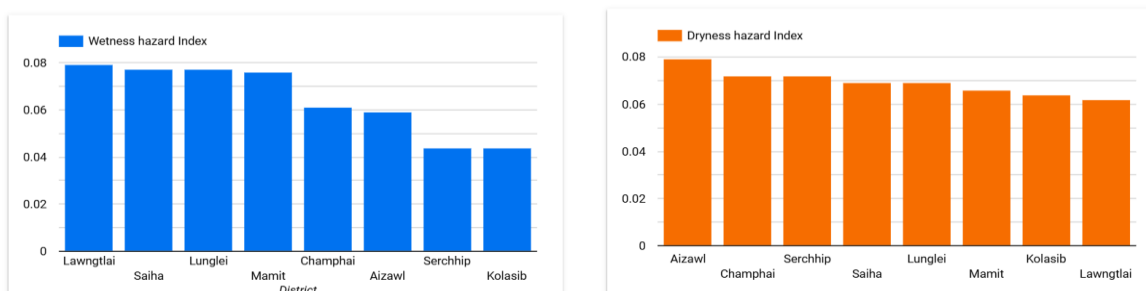

Downscaled climate projections for the state of Mizoram are unavailable in the relevant portals (Climate Change Knowledge Portal) and therefore the updated SAPCC prepared by the Nodal department (EF&CC) under the aegis of the Executive Council on Climate Change served as the immediate reference point for assessing climate risks pending the availability of downscaled projections. The SAPCC suggests a trend of increasing temperatures (both summer and winter temperatures) and a decrease in rainfall patterns, suggesting deficit rainfall for the state.

Projections for precipitation suggest a decrease in the number of rainy days but a stable overall magnitude of rainfall. This trend is reported by all the published studies with the 2021 study reporting a decreasing rate of 5.22 mm/yr. Heavy precipitation days (R20mm) were projected to increase by up to 14 days, suggesting more days with intense rainfall and the possibility of extreme events. These projected changes have significant ramifications for water resources, agriculture, health, and connectivity and infrastructure in the region.

Interactions with the communities during field visits, discussions with officials of relevant departments and interactions with district teams during the stakeholder workshop confirm some of the assertions made. Increased summer temperatures, erratic rainfall patterns, extreme events (hailstorms, high intensity rainfall) and an increase in dry periods are observed to be on the rise. The SAPCC indicates three of the northern districts – Mamit, Serchip and Champhai - as having a high combined climate risk (assessed 2017), while most of the other districts are projected with moderate combined climate risks. The State

Climate Change Cell of the Mizoram Science, Technology and Innovation Council, in its Climate Change dashboard also provides information on the vulnerability status of each district to climate hazards. The figure below compiled by MISTIC provides an indication of the vulnerability of each district to excessive rainfall (and flash floods) as well as dryspells (leading to drought like conditions).

**DISTRICT LEVEL WETNESS (FLOOD) AND DRYNESS (DROUGHT) RISK PROFILE**

Source: <https://mistic.mizoram.gov.in/sccc-dashboard/>

#### SECAP concerns:

- An interpretation of such assessments, combined with the climate induced disaster trends over the last few years indicate the possibility of prolonged dry periods, deficit rainfall and increased extreme events increasing heat and water stress for crops, and possible outbreaks of pests and diseases impacting crop performance and yields.
- Delayed onset of monsoons and the increased incidence of dry spells early in the season can result in crop desiccation and a need for replanting. Often farmers do not have saved seeds or access to seeds for replanting resulting in a possible food insecurity and distress.
- Increased temperatures and high humidity can result in pest and pestilence build up and frequency of pest outbreaks can be expected to increase. Further, increases in storms, hailstorms and cyclonic weather events, particularly later in the year can have serious impacts on horticulture and/or on standing crops leading to loss of yield, incomes and food insecurity.
- The climate projections and their impacts have serious implications for the value chain promotion activities proposed under the project. Extreme events, particularly the increase incidences of heavy rainfall could trigger risks of landslides and disruption of communication with serious implications for value chain activities and market access.

Based on the observations narrated above and following the SECAP climate risk checklist, the climate risk is assessed as moderate. No specific steps are required to further address climate, however steps were taken during project design to ensure climate considerations are made for any agricultural practices supported under Component 2 and infrastructure developed for resilience and adaptation.

Incidences of crop wilting soon after seed germination consequent to delayed rainfall and dry spells are expected to increase, necessitating the need for replanting of crops. Often farmers do not have saved seeds or access to seeds for replanting resulting in a possible food insecurity and distress.

- To ease access to seeds in cases of replanting, community seedbanks are recommended and the setting up of a community seed exchange mechanism, particularly for the support of the poorest and marginalised households.

- ii. Increased temperatures and high humidity can result in pest and pestilence build up and frequency of pest outbreaks can be expected to increase. This can pose serious challenges for the farmer as well as the extension workers. While the classic response is to use chemical pesticides and fungicides, with FOCUS 2.0 adopting an agro-ecological approach, steps need to be well in place to meet such challenges employing botanicals or organic pest control methods. Efforts should be made to promote biological pest control methods, starting with the risk-spreading approach traditionally practised in jhum – that of increasing crop diversity within fields. These risks call for adequate response measures and the need for setting up a Climate Emergency Response mechanism as well as an effective crop insurance framework.
- iii. The climate projections and their impacts have serious implications for the valuechain promotion activities proposed under the project.
- iv. As a first principle to respond to climate risks, extreme care should be taken in selection of the valuechain commodities and a high preference adopted for non-perishables.
- v. If perishable crops are included in VCD options, specific attention should be given for semi-processing and value addition. Possible value chain commodities identified at Design stage include perishables such as ginger and Mizo chilli. An immediate risk reduction practice would be to promote drying of the commodities and the grinding of the commodities to produce powdered spices. These steps would help in immediately reducing risks from microbial spoilage resulting from high temperatures and humidity.
- vi. With extreme events projected to increase in frequency, particularly the increase in high intensity rainfall, disruptions in communication and transportation will become more frequent, adding to disruptions of the valuechain during the monsoon months. Such disruptions will have to be factored in while designing value chains and calculating profitability.
- vii. Lastly, given the probability of increased climate uncertainties in the coming years, a strong recommendation is made for exploring appropriate mechanisms for agricultural insurance.

It is pertinent to raise a point of caution here in the context of an overt dependence on irrigation for agricultural intensification clusters. While irrigation may provide immediate solutions for agricultural intensification in the project areas, climate projects predict, even in the short-term (2030), an increasing trend of high temperatures and dry days in a year, suggesting that water availability will be adversely affected. Agriculture in Mizoram (and many other mountain areas of the Himalayas) is heavy dependent on rainfall. As rainfall becomes increasingly deficit, streamflows will increasingly become seasonal and in many cases, could dry up. This will significantly affect irrigation and may prove to be a serious challenge in the medium and long-term. It may be advisable, therefore, to strengthen rainfed agricultural approaches, encouraging the conservation and management of stress tolerant (particularly water stress) crop varieties and practices that adopt 'more crop per drop' approaches.

## 9. Environmental, Social and Climate Management Framework Matrix

The ESCMP Matrix serves as a practical implementation tool that translates the overarching ESCMP framework into specific, actionable measures tailored to the types of environmental, social, and climate risks anticipated under the FOCUS 2.0 project. The matrix outlines concrete mitigation and enhancement measures, identifies responsible institutions, and defines means of verification and reporting frequency for each safeguard requirement. Its primary purpose is to support effective operationalization of the ESCMP by providing clear, site-level guidance to the implementation partners.

During project implementation, the matrix is to be used as a reference document for the preparation of sub-project-specific ESCMPs, ensuring that key safeguards measures—such as pollution prevention, occupational health and safety, and grievance handling—are consistently addressed. It may be updated to include specific actions related to FPIC implementation plan once this is prepared with full details. It also supports day-to-day monitoring by providing a structured format to track compliance, identify gaps, and inform adaptive management. As a living tool, the matrix may be updated as new risks emerge, activities evolve, or site-specific needs require enhanced mitigation measures. Its use is essential to maintaining alignment with IFAD's SECAP 2021 requirements and requirements by national legislation.

| ESCMF Matrix                                                                                                                                    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                                                                                                                                                                                                                                                      |                                                                                                                                                                                                                                                                                                                                    |                                                                    |                                                                                |

## **10. Grievance Redressal Mechanism**

IFAD requires an easily accessible grievance mechanism at project-level in order to receive and resolve concerns and complaints of people who may be adversely affected or potentially harmed by IFAD-supported projects that fail to meet the SECAP Standards and related policies. Furthermore, IFAD requires that project-affected people are informed about the existence and functioning of this mechanism in any easily understandable form and language, and to integrate it into the overall community engagement strategy. The grievance redress mechanism should incorporate existing formal and informal grievance mechanisms, strengthened or supplemented as needed for each specific project, and in proportion to the expected risks and impacts of the project. Project-affected people may use the grievance mechanism without retribution or reprisal, and the grievance mechanism should not impede access to other judicial or administrative remedies available under national law or through existing arbitration procedures or other accountability mechanisms.

The Project will establish a Grievance Redress Mechanism (GRM) designed to seek/generate feedback from and to project stakeholders and address/ respond to grievances, problems, issues or complaints related to project activities and project environmental and social performance. The Project will ensure through the GRM that all project stakeholders will be aware of their rights to access and/or will have access to the GRM at all project management levels, which will be provided in a transparent manner free of costs and without fear of reprisal or retribution on the part of aggrieved parties. In addition, the Project's GRM will help ensure that the rights and interests of project stakeholders are protected from unforeseen lapses in said project performance and that all concerns arising therefrom in all project phases will be effectively addressed. To achieve these ends, the Project will regularly engage project stakeholders and provide them information on the processes and means of raising and addressing grievances through the GRM.

### **Project level GRM**

The PIU shall provide appropriate channels for submission of grievances, which may include the following: (i) Grievance Drop Box: This provides a means for anonymous complainants to raise concerns without revealing their identities. Labelling the grievance box to a more culturally-sensitive term will be encouraged. (ii) Through the Project GRM social media platform (iii) An official physical address for Grievance Desk with Contact Persons/GRM Focal persons at every grievance level will be established and publicly disclosed, where complainants may send complaints through letters via personal, postal or courier delivery. (iv) A hotline number or call center at each level that can be publicly accessed via voice calls or SMS.

Note – This list is not exhaustive and other channels may be considered instead, as appropriate with due regard for language and accessibility. The overall responsibility for operationalizing the GRM will rest with PMO and the GRM will be reviewed and updated during early implementation.

### **IFAD Complaints Procedure**

IFAD Complaints Procedure also place mechanism to allow individuals and communities to contact IFAD directly if stakeholders or non-stakeholders believe that they are or might be adversely affected by an IFAD-funded project or program not complying with IFAD's Social and Environmental Policies and mandatory aspects of SECAP. They may submit a request to [SECAPcomplaints@ifad.org](mailto:SECAPcomplaints@ifad.org) and request that an impartial review be carried out by IFAD's Office of the Vice-President.

### **Monitoring and Reporting**

Meetings with stakeholders shall be documented, highlighting agreements and ways forward which will be monitored throughout project implementation.

### **Grievance Redressal Mechanism for Tier 1 (Village and Block level)**

At the village or Cluster level, the project proposes to set up two different approaches to collect and address grievances at local level, based on the components:

For Component 1 Market and Enterprise Development, the Collective Marketing Management Committees (CMC) that will be established as part of the project activities will establish a Grievance Redressal Cell (CMC-GRC) with the aim of receiving grievances, and designate a responsible person as the Grievance Redressal Focal Point (CMC-GRF).

Grievances related to aggregation operations, infrastructure access, user fees, service quality, and market transaction disputes will probably feature at this level and are expected to be addressed at the CMC Management Committee level.

For Component 2 Crop and Livestock Activities, the project will establish Farmers Markets at Block level for aggregation, storage and market related activities. A Farmers Market Management Committee (FMMC) will be established, composed of FPOs, SHGs and entrepreneurs, ensuring inclusive representation of both service providers and users. The FMMC will establish a Grievance Redressal Cell (FMMC-GRC) and nominate a Grievance Redressal Focal Point (FMMC-GRF) responsible for handling of grievances.

**Step 1. Grievance Intake.** The Grievance Redress Focal Point of the different Committees will be responsible for receiving and recording grievances and details of the complainant, including the date of reception and other relevant information (template for recording grievances is available in annex 3). Grievances by a complainant may also be submitted to the Committee office in writing. In case a complainant prefers to maintain anonymity, the Focal Point will record the grievance, keeping sensitive information reserved or complainant will be contacted and asked if there is a need for confidentiality. =

In the context of meeting(s) convened at communities/villages in the context of stakeholder engagement and project implementation activities, time should be specifically dedicated to inform about the existence and functioning of the grievance redress mechanism and when possible, the grievance redress focal points should attend the meetings. Any grievances recorded in the context of a village meeting will be communicated by the CLF Community Worker/Cluster Focus Coordinator with the corresponding grievance redress focal point to the district Asst Manager M&E and SECAP. This report should also point out any grievance that could not be resolved at the village/CLF level, thus requiring action at the district level. Details of the grievance and all related information should then be forwarded to the Asst Manager, M&E and SECAP for placing the same to the District Grievance Redressal Committee for resolution.

**Step 2. Verification and Assessment.** Once a grievance is received, the Focal Point calls for a meeting of the Committee, to assess the eligibility and severity of the grievance. The CMC will decide whether a personal hearing is necessary to gather additional information, or if the grievance can be redressed, needs to be upscaled or dismissed if found ineligible.

**Step 3. Resolution and Communication.** Following the CMC meeting, the Focal Point will be responsible for recording the information in the logbook and informing the complainant of the decision by the Committee.

If the grievance can be resolved by the Committee directly, the necessary action is initiated.

Communication of the decision by the CMC to the complainant should not exceed three weeks from the day of receipt and registration of the grievance.

In case a grievance needs resolution at a higher level, the CMC-GRF will forward the information the District Grievance Redressal Committee at the District Project Management Project Unit (DPIU).

The FMMC-GRF will maintain a Grievance Register to record all grievances received, with details of the complainant and date of receipt, except in cases where the complainant insists on anonymity. The FMMC will examine all grievances received and take appropriate decisions, advising a personal hearing of both parties if necessary, or immediately deciding on the redressal to be provided or recommending the dismissal of a grievance if found irrelevant or superficial. The FMMC-GRF will record the decisions against each grievance, particularly of those dismissed, recording the reasons thereof, in the Grievance Register and communicate to the complainant not later than three weeks from the date of receipt of the grievance.

The CMC-GRF will maintain a logbook with all information, including resolved grievances, stakeholders involved and dates. This information will be reported regularly to the PIU fortnightly put up all grievances and related information recorded to the Collective Marketing Management Committee for hearing and redressal.

Grievance redressal mechanisms usually require a grievance to be registered in writing. IN the context of this project, this could represent an impediment to file grievances, as complainants may prefer to present them verbally. A cultural sensitivity and respect for this tradition is to be considered in the design and operationalization of the project-level grievance redress mechanism.

### **Grievance Redressal Mechanism for Tier 2 (District and Hub levels)**

For grievances that cannot be addressed at village or Committee level, the District Project Management Unit (DPIU) will set up a District level Grievance Redressal Committee. The Committee will comprise of the Asst Managers Crop Productivity, Business Development, Gender and Capacity Building and include a representative each from CMC and FMMC (on rotation basis annually). The Committee should be chaired by the District Manager with the Asst Manager M&E and SECAP as convenor.

The Convenor, after receiving the communication with the grievance from the Committee Focal Points, or from the CLF , should call for a meeting of the District Grievance Redressal Committee (DGRC) within 48 hours to address the issue. The Asst Manager, M&E and SECAP will also include any grievances received about DPIU at the DGRC meeting.

DGRC meetings will be chaired by the District Manager and the committee will examine each upscaled grievance and suggest redressal action as appropriate. If a meeting with the complainant is required, hearing is organized within 7 days to discuss with the complainant. To avoid inconvenience to the aggrieved parties, hearings can be conducted at the Cluster/Block level at regular intervals. All decisions taken in regard to the grievances registered must be recorded in the DGRC meeting minutes, including grievances considered not eligible. The reasons for dismissal of the grievance must be clearly recorded in the minutes. Decisions of the DGRC must be communicated to the complainants not later than two weeks from the date when the DGRC meeting was held. In case any grievance cannot be resolved at the DGRC level, or is against the DPIU management, the same should be forwarded for resolution to the PIU.

FOCUS 2.0 also proposes to establish Business promotion Hubs in selected districts, catering to multiple districts. It is advised that each of the Hubs should set up a Grievance Redressal Cell under the supervision of the Hub management committee. The Hub Management Committee should designate a responsible person as the Grievance Redressal focal point (H-GRF) whose duties will be receiving and recording, aligned to those of the CMC-GRF and FMCC-GRFs. Given the multi-district scale and private sector engagement through PPP models, grievance redress will be more formalized. Operators will be required

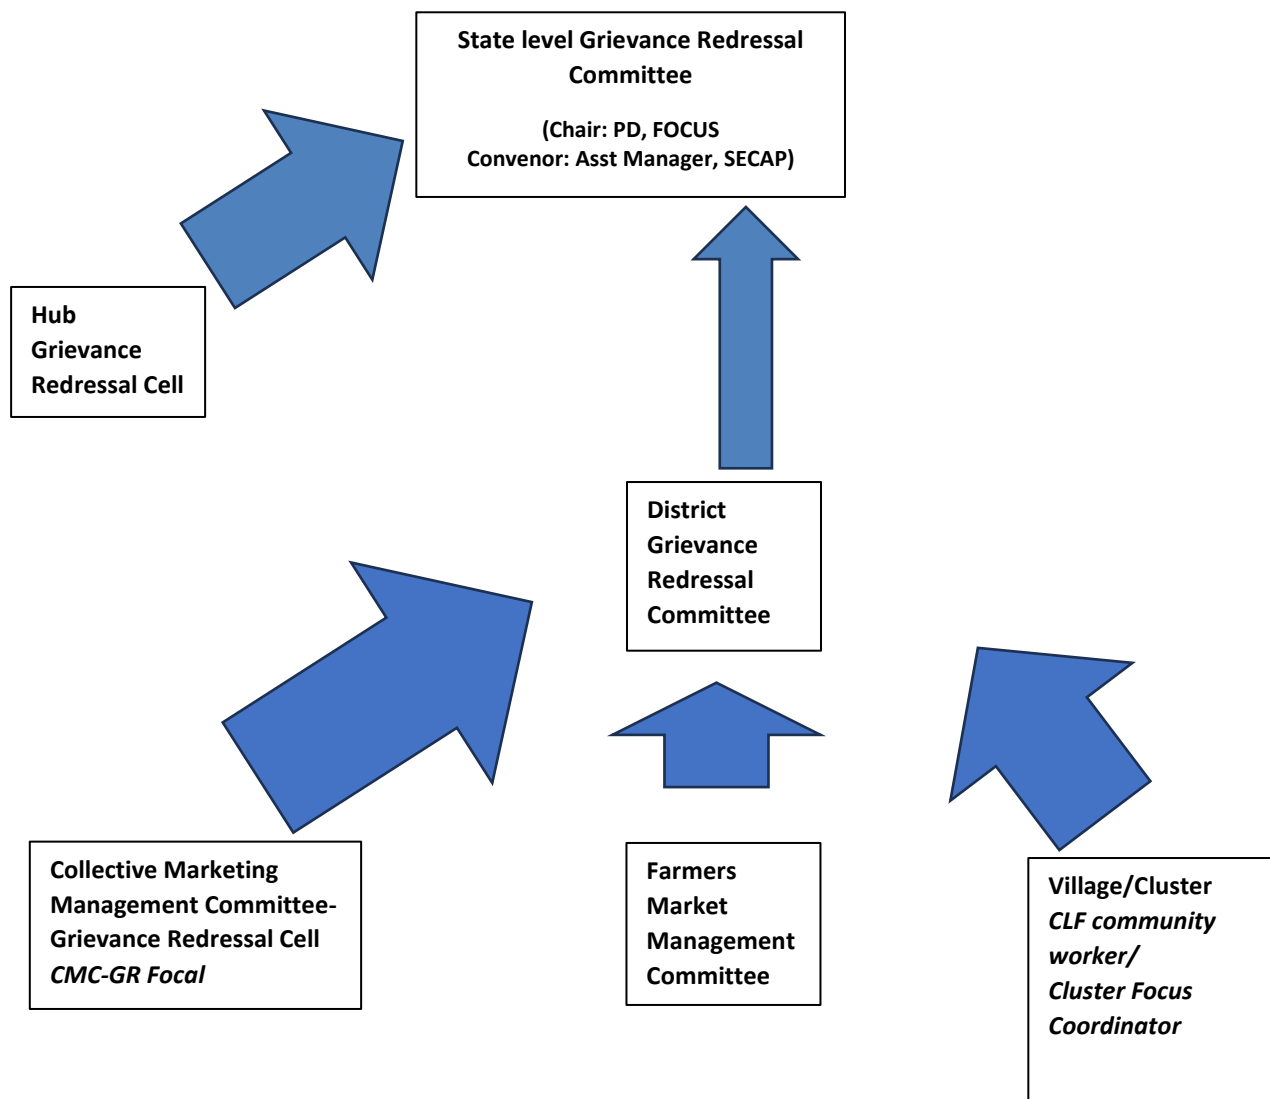

to maintain transparent records of complaints, response timelines, and resolution actions. The H-GRF should be convened once a grievance received and fix dates not later than a fortnight to hear aggrieved parties and facilitate negotiations. As far as possible, redressals should be provided within a month of the hearing.

### **Grievance Mechanism Tier 3 (National/State level)**

In case the grievance cannot be resolved at the district level (or District officers are the subject of the grievance) or the Hub, the grievance should be communicated immediately to the PIU level where the PD will chair a Grievance Redressal Committee with Asst Manager, SECAP and Asst Manager, Gender and Capacity Building as members. Representatives from FPO federations, SHG apex bodies, rural enterprise association and the Women's commission should also be included to this State level Grievance Redressal body on a rotation basis for tenures of two years. As a rule, receipt of the grievance registration at the district level (or the Hubs) should be communicated immediately to the individual (if the complaint is not anonymous) within a week. Decisions taken at the District GRM or H-GRM meeting should be conveyed to the aggrieved party within a week from the meeting.

The Grievance Redressal Mechanism should have provision for appeals in case redressal decisions are not found satisfactory or contested. As a rule, the next highest GR Committee should be the appellate body, and appeals made to such appellate bodies in writing. Contact numbers of CMC-GRF, FMMC-GRF, Assistant Manager, M&E and SECAP, as well as District Manager, DPIU and the Assistant Manager, SECAP at PIU should be prominently displayed in the respective offices and widely circulated in print media so that any stakeholder who wishes to register a grievance can contact the focals to do so.

**Schematic flowchart of proposed Grievance Redressal Mechanism for FOCUS 2.0**

## 11. Stakeholder Engagement Plan (SEP)

The institutional canvas for FOCUS 2.0 will be broadened to include several new partners across government departments and agencies, the non-government sector and the traditional institutions. The guiding principle of FOCUS 2.0 will be to leverage existing opportunities for collaboration, partnerships, skill and resource sharing through active convergence with these agencies and their ongoing programmes. While the Department of Agriculture will continue as the lead implementation agency, strong partnerships will be formalised with several line departments that have the expertise required in meeting the objectives of the project. New partnerships will be forged with the Mizoram State Rural Livelihood Mission to capitalise on their impressive institutional network at the grassroot level for forging the 'last mile' bridge and delivery mechanism with communities. Partnership with Directorate of Commerce and Industry attains importance as fundamental thrust of the project is to strengthen market linkages through value chain development. In addition, Department of Irrigation and Water Resources, Soil Conservation, Environment Forest and Climate Change are additional departments who will be important partners, the latter being critical stakeholders in those districts which host important protected areas such as National Parks and Tiger Reserves. These partnerships will help improve coordination and complementarity while laying the ground for the project's exit strategy and long-term sustainability. Among other government agencies, strong partnerships will be explored with NABARD, NeDFi and NEC for convergence of schemes and programmes in rural financing and infrastructure. Technical partnerships are proposed with the Mizoram Science and Technology Council, particularly the Geospatial and Climate Change units. Collaboration with MiRSAC is critical for identification of Zau clusters and also the PLUMP exercise that is proposed in the FPIC process. Similarly, collaboration will be explored with the Horticulture Department of Mizoram University for technical expertise and a collaboration with the Incubation Centre set up to support Start Ups and entrepreneurship development. A strategic partnership is proposed with SELCO, a national non-government organisation specialising in non-conventional energy, and presently working in Mizoram to leverage their experience in the energy sector and strengthen the project's objective of providing energy solutions for Component 1 while meeting the fundamental goal of promoting climate resilience. At the community level, partnerships will be forged with the Cluster Federations set up by MiZSRLM in the context of product aggregation, storage and processing for value chains, while at the village level, Village Councils and Village Organizations (VOs) will be critical partners for the smooth implementation of project activities. The Stakeholder Engagement Plan (SEP), therefore, must be broad, multi-pronged and continuous given the wide spectrum of stakeholders that need to be sensitised and pro-actively engaged for establishing effective collaboration and ensuring compliance to SECAP requirements. The basic aim of the SEP will be to:

- Identify all potential project stakeholders, including affected parties and interested parties (a continuous exercise as the project progresses)
- Consult with project stakeholders to understand their concerns, development needs, priorities, particularly those of potential adversely affected group;
- Set out a concrete mechanism to ensure stakeholders' feedback is timely solicited, considered and incorporated into project design and implementation;
- Identify strategies to notify and disclose project information to identified stakeholders, particularly those who are negatively affected groups to collect their meaningful feedback;
- Specify methods for consulting with project stakeholders, collect opinions, and incorporate feedback into project design;
- Ensure grievance redress mechanism in place
- Ensure appropriate human and financial resources are arranged to ensure timely and effective implementation of SEP

The SEP is considered a living document that may be updated, as needed, during project implementation to ensure it reflects the needs of the project. It has been prepared during design and, as project information becomes available during early implementation, it is expected to be reviewed and updated accordingly.

The Stakeholder spectrum for FOCUS 2.0 can broadly be clustered at four levels – (i) community and community level institutions, (ii) private sector (market and value chain related actors) (iii) government departments and government agencies, and (iv) technical partners and service providers (university, research organisations).

- (iv) Engagements with the village/cluster level organisations, including the traditional Village Council and Village Organisations are envisaged not only at the initiation of the project during the sensitisation exercises, but regularly during project implementation. After the first sensitisation meeting with the Village Council, Village Organisation and households residing in the village, the project will have a series of meetings to introduce the project objectives and components, select primary beneficiaries and conduct the FPIC process. The project will also setup mechanisms for improving marketing facilities and this will require engagement with producers and potential entrepreneurs at the village and cluster level. FOCUS 2.0 also proposes to set up Farmer Fields Schools and also support Community level knowledge exchange platforms for experience sharing and peer learning. These platforms can provide crucial foras for stakeholder engagement and interaction as well as mediums for dissemination of important information about project interventions and initiatives, including through a dedicated UTube platform. In addition, as project implementation progresses, the project envisages to put in place a Grievance Redressal Mechanism and the GRM would provide an additional means for stakeholder engagement.
- (iv) FOCUS 2.0 aims to improve market linkages and strengthen valuechains through the establishment of Collective Marketing Centres (CMCs) at farm-gate, Farmers' Markets (FMs) at the cluster or Block level and multi-district Value addition Hubs. These exercises will call for intense and meaningful engagements with producers, FPOs, SHGs and their federations, local entrepreneurs, traders and the private sector. Engagements and strong collaboration are also foreseen with banks and credit institutions as well as the Department of Commerce and Industry. Engagements with the wide array of stakeholders under this category will continue during planning and form the core of SEP process. The project plans to set up management committees for the CMCs as well as the FMs. These management committees provide an effective platform for engagement with producer groups, FPOs, SHGs and their federations and local traders and members of the private sector. In addition, as the project implementation progresses, a GR mechanism is expected to be operationalised which will then provide an additional means for engagement by aggrieved stakeholders. A state-level Private sector Round Table or Conference is proposed in the first year to initiate engagement with this critical set of stakeholders and is expected to provide insights for refining stakeholder mechanisms with this sector.
- (iv) Chapter 3 of the PDR, under section 3.1 (Organisational Setup and Governance) outlines the establishment of State level Project Management Committee, chaired by the Secretary Agriculture and the State level Project Steering Committee chaired by the Chief Secretary with members drawn from different departments and the State Policy Coordination Committee. The Project Director, FOCUS 2.0 will function as the Member Secretary for the Project Management Committee while the Secretary, Agriculture will function as the Member Secretary for the Steering Committee. These fora at the State level provide a platform for regular engagement of key stakeholders, and will function as a communication and decision-making channel, informing members of the progress as well as of issues that require their advice and support.

At the district level, the project will set up the District Project Coordination Committee, chaired by the Deputy Commissioner of the district and members drawn from all the relevant departments. The District Committee will also have members drawn from the Banking sector (NABARD) and thus provide a channel for engagement and interaction with this important sector. A key best practice institutionalized in the previous phase – specifically: maintaining a standing agenda item for community feedback – will be formalized across all districts under FOCUS 2.0. This mechanism allows farmers and community-based organizations to present concerns and recommendations directly to district authorities, reinforcing the project’s commitment to participatory planning, grassroots accountability, and responsive programme delivery, reinforcing a meaningful stakeholder engagement mechanism.

FOCUS 2.0 covers several districts which host important Protected Areas, including National Parks and a Tiger Reserve. The Park authorities in the concerned districts and the Forest Environment and Climate Change department (in particular the Wildlife and Parks directorate) are particularly important stakeholders with whom the project needs to engage closely. While clear engagement needs and necessary action have been outlined in PIM under the Biodiversity SECAP category, the senior management at the PIU (PD and relevant thematic managers) must set up regular meetings with the Chief Wildlife Warden and his team to appraise them of project interventions (particularly land based production related activities) planned for the project villages in fringe areas and the buffer zone of the protected areas and the preventive steps adopted to avoid infringement into PA core area boundaries and steps taken to avoid habitat degradation. Such meetings should be organised to facilitate strong cooperation and develop strategies to avoid any conflict of interests.

- (iv) The fourth category of stakeholders are primarily technical partners or service providers. Agencies such as the Mizoram Science and Technology Council, specifically the Geospatial Unit will be engaged for preparation of GIS based LULC maps, including the PLUP maps. The latter can serve as a useful M&E tool if applied judiciously. Engagement with S&T Geospatial unit must be regular and with the required intensity. Similarly, engagement with different departments of the Mizoram University will be specifically for technical purposes. Special attention needs to be paid for collaboration and engagement with Mizoram University’s Incubation Centre for capacity building of entrepreneurs (especially youth) and also hand-hold them for Startup initiation. Such engagement will be on a need basis and interactions would predominantly be with the PIU officials. Formal engagement plans will need to be developed as project implementation gets off the ground and the specific needs and their intensity becomes more concretised.

### **Preliminary Stakeholder Engagement Plan Matrix**

The preliminary stakeholder engagement matrix included in this section presents an initial mapping of the key stakeholders identified during the project design phase. It outlines stakeholder groups’ characteristics, their potential interest and influence in the project, key concerns, and suggested engagement strategies. This matrix is a critical tool for operationalizing the Stakeholder Engagement Plan (SEP) and is intended to serve as a living resource for guiding inclusive and meaningful stakeholder engagement throughout implementation.

During project execution, this matrix will assist the PIU, DPIU and Technical Service Providers (TSPs) in planning and prioritizing engagement activities based on stakeholder relevance, influence, and potential vulnerability. It provides a structured approach for:

- Identifying which stakeholders require targeted outreach, ongoing consultation, or more intensive participation;
- Tailoring communication channels and consultation formats to the needs and capacities of different stakeholder groups (e.g., women, Indigenous Peoples, financial intermediaries, POs);
- Integrating engagement actions into the Annual Work Plan and Budget (AWPB) and site-specific planning, including the design of sub-project ESCMPs;
- Tracking the frequency and effectiveness of engagement activities to inform adaptive management;
- Ensuring that engagement with marginalized or vulnerable groups is systematically pursued and documented.

The matrix will be reviewed and updated regularly—at least annually or whenever new sub-projects are identified—based on monitoring data, community feedback, and evolving stakeholder dynamics. As such, it complements the ESCMP and supports compliance with IFAD’s SECAP 2021 by ensuring transparency, accountability, and inclusion in the planning and implementation of project interventions.

#### Outline Stakeholder Engagement Matrix

(Stakeholders listed in tentative order of influence and impact; non-exhaustive, to be updated and refined as project needs are further crystalised)

| Stakeholder                                                                                                                 | Concerns                                                                                                | Engagement methods                                                                                                | Relevant information disclosure                                                                                           | Frequency of Engagement             | Responsible                                    | Timeline      |
|-----------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------|-------------------------------------|------------------------------------------------|---------------|
| State-level Steering Committee (senior decision makers, including members from State Policy Coordination Committee)         | Project performance (including financial); convergence between departments and agencies, project impact | Regular committee meetings, necessary briefings with Chair as required; submission of regular performance reports | Project performance, target achievements, financial performance and budgetary issues, coordination and convergence issues | As mandated in Agreement /PDR norms | Secretary, Agriculture assisted by PD and team | Project cycle |
| State level Project Management Committee (senior decision makers drawn from relevant departments, agencies and FI partners) | Project performance, project management, partnership building and convergence effectiveness             | Regular committee meetings, necessary briefings with Chair as required; submission of regular performance reports | Project performance, target achievements, financial performance and budgetary issues, coordination and convergence issues | Quarterly or as required            | Project Director                               | Project cycle |
|                                                                                                                             |                                                                                                         |                                                                                                                   |                                                                                                                           |                                     |                                                |               |

|                                                                                          |                                                                                                                                                                                                                   |                                                                                        |                                                                                                                                                                                                                                              |                                                                 |                                                                                                                |                          |
|------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------|--------------------------|
| Wildlife Wing, Mizoram Department of Environment, Forest and Climate Change              | Infringement of project activities in Protected areas, particularly excluded areas of Tiger Reserve and National Parks                                                                                            | Regular meetings with Chief Wildlife Warden and team                                   | Project activities in fringe villages and villages within Buffer Zone of National Parks and Tiger Reserve; incidences of Human-wildlife conflicts if any and remedial steps                                                                  | As and when required                                            | Project Director, assisted by concerned District Manager and relevant thematic managers from PIU and districts | Project cycle            |
| Park Director and officials                                                              | Project activities in fringe villages and villages within Buffer Zones of Parks/Reserve: discussions on activity locations to avoid infringement into core areas and areas where human activities are not allowed | Regular meetings and exchange of information, consultation and examination of Zau maps | List of proposed activities in fringe villages, villages located within Buffer area; location of AICs ensuring that these are in permitted areas, any incidence of crop/animal depredation by wildlife, remedial steps to be adopted jointly | Monthly meetings in concerned districts                         | District Manager, assisted by Asst Managers Crop production, Livestock and SECAP                               | Throughout project cycle |
| Representatives of private sector, FPOs, SHGs and their Federations, local entrepreneurs | Marketing and Value chain development                                                                                                                                                                             | Regular meetings organised by Hub committees, by Farmers Market Management Committees  | Availability and volume of produces, pricing, storage, value addition options, transportation and other value chain related issues                                                                                                           | Regular (frequency as decided by the respective committees)     | Business Development Managers at PIU and Districts, together with Thematic Managers                            | Throughout project cycle |
| FPOs, SHGs and their Federations, local entrepreneurs                                    | Market related issues                                                                                                                                                                                             | Regular meetings of CCMCs and FMMCs                                                    | Produce availability, pricing, storage, transportation; input sourcing, technical capacity building                                                                                                                                          | Regular (frequency as decided by the respective CMCs and FMMCs) | Business Development and Thematic Managers at Districts                                                        | Throughout Project cycle |
| Village Council and Village Organisation                                                 | Project intervention related land access issues, issues related to NRM, project implementation issues,                                                                                                            | Regular meetings                                                                       | Project implementation issues                                                                                                                                                                                                                | Regular (Frequency decided by respective VO, VCs)               | DPIU officers                                                                                                  | Throughout project cycle |
| Technical Service                                                                        |                                                                                                                                                                                                                   | Need based                                                                             |                                                                                                                                                                                                                                              | Need based                                                      |                                                                                                                |                          |

| providers/Research partners                                                                                    | Technical services                                                                                            |                                                                                                              | Technical support/ trainings/ material      |                                    | Technical Managers at PIU     | Throughout Project cycle |

## Annex 1. Sub-project Screening and IFAD's Exclusion List

| SECTION A: General Information                                                                                                                 |  |
|------------------------------------------------------------------------------------------------------------------------------------------------|--|
| Date:                                                                                                                                          |  |
| Name:                                                                                                                                          |  |
| Sub-project:                                                                                                                                   |  |
| Sub-project location:                                                                                                                          |  |
| Proposed sub-project duration:                                                                                                                 |  |
| Sub-project Description.<br>Briefly describe the sub-project activities, particularly as they interact with the environment and social context |  |
| Categorize sub-project activities into high, substantial, moderate, and low risk activities.                                                   |  |

Include a map of the sub-project site and activities.

### SECTION B: Exclusion List Screening

Can you confirm that none of the activities involved those listed in the Exclusion List? (see list at the end of this annex ): **Y** / **N**

### SECTION C: Potential Environmental/Social Risks Impacts of Activities

| Applicable Impacts/Risks/activities                                                                                                                                                                                                              | Y | N | Unknown | Comments                                                                                                                               |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---|---|---------|----------------------------------------------------------------------------------------------------------------------------------------|
| <b>General Assessment and Management of Environmental and Social Risks and Impacts</b>                                                                                                                                                           |   |   |         |                                                                                                                                        |
| Is a full Environmental and/or Social Impact Assessment required for the sub-project based on national legislation of Cambodia?                                                                                                                  |   |   |         | Ensure compliance with national regulations (permits, approvals, etc as relevant) is obtained as early as possible.                    |
| Have there been any complaints raised by local affected peoples or groups or NGOs regarding conditions of the sub-project area or, if relevant, facility to be used?<br><i>If so, will project financing be used to remedy these complaints?</i> |   |   |         | Ensure the SEP and GRM include a focus to consistently address grievances                                                              |
| Is there a risk that sub-project benefits may not reach truly vulnerable populations?                                                                                                                                                            |   |   |         | Ensure this is identified and addressed through the SEP and GRM                                                                        |
| Is there a risk that the selection of the activity location or beneficiaries will lead to conflict?                                                                                                                                              |   |   |         | Ensure this is identified and addressed through the SEP and GRM                                                                        |
| <b>Labour and Working Conditions</b>                                                                                                                                                                                                             |   |   |         |                                                                                                                                        |
| Do activities include any risks of child labour?                                                                                                                                                                                                 |   |   |         | Site specific ESCMP will identify specific activities to be performed by children under 18 that will not represent harmful conditions. |

| Applicable Impacts/Risks/activities                                                                                                                                                                                                                                                                     | Y | N | Unknown | Comments                                                                                                                                       |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---|---|---------|------------------------------------------------------------------------------------------------------------------------------------------------|
| Will works financed include construction, reconstruction, or demolition works?                                                                                                                                                                                                                          |   |   |         | Site specific ESCMP includes provisions for works in relation to waste, OHS, labour and working conditions and community health and safety     |
| Does the implementing agency or subcontractor have valid operating permits, licenses, approvals, etc.? If not, please explain. Permits to screen for include: construction permits, operational/use permits, waste management permits, environmental permits, land permits, water management permits... |   |   |         | Ensure compliance with all legal requirements are clarified and obtained as early as possible.                                                 |
| Does the activity include primary agricultural activities?                                                                                                                                                                                                                                              |   |   |         |                                                                                                                                                |
| Is there a risk that the operation and maintenance of sub-project facilities cause OHS issues?                                                                                                                                                                                                          |   |   |         | Ensure relevant OHS and community health and safety management procedures are included in the site specific ESCMP and consistently enforced.   |
| Is there a risk of lacking OHS for workers at the construction site?                                                                                                                                                                                                                                    |   |   |         | Ensure relevant OHS and community health and safety management procedures are included in the site specific ESCMP and consistently enforced.   |
| <b>ESS 3?: Resource Efficiency and Pollution Prevention Management</b>                                                                                                                                                                                                                                  |   |   |         |                                                                                                                                                |
| Will the activity result in the production of solid waste? (directly by the sub-project or by workforce)                                                                                                                                                                                                |   |   |         | Site specific ESCMPs will include all relevant waste management measures to ensure adequate practices in line with local legislation.practices |
| Will the activity result in the production of toxic or hazardous/biohazardous waste? (e.g. used oils, inflammable products, pesticides, solvents, industrial chemicals, ozone depleting substances, animal remains, blood from slaughter, etc.)                                                         |   |   |         |                                                                                                                                                |
| Will the activity result in the generation of dust and noise?                                                                                                                                                                                                                                           |   |   |         | Site specific ESCMPs include provisions to address this risk                                                                                   |
| Will the activity result in soil erosion?                                                                                                                                                                                                                                                               |   |   |         | Site specific ESCMPs include provisions to address this risk                                                                                   |
| Will the activity produce effluents (wastewater)?                                                                                                                                                                                                                                                       |   |   |         | Site specific ESCMPs include provisions to address this risk                                                                                   |
| Will the activity result in increased levels of vibration from construction machinery?                                                                                                                                                                                                                  |   |   |         | Site specific ESCMPs include provisions to address this risk                                                                                   |
| Will the activity disturb any fauna and flora?                                                                                                                                                                                                                                                          |   |   |         | Site specific ESCMPs include provisions to address this risk                                                                                   |
| Can the sub-project affect the surface or groundwater in quantity or quality? (e.g. discharges, leaking, leaching, boreholes, etc.)                                                                                                                                                                     |   |   |         | Site specific ESCMPs include provisions to address this risk                                                                                   |

| <b>Biodiversity Conservation and Sustainable Management of Living Natural Resources</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                            |   |   |         |                                                                                                                                 |
| Will the activity impact sensitive and/or protected areas?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |   |   |         | Activity non eligible under this project                                                                                        |

| Applicable Impacts/Risks/activities                                                                                                                                                                                                     | Y | N | Unknown | Comments                                                                                                                                                                                                               |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---|---|---------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Is there a risk that the sub-project will cause (i) changes to landscapes and habitat; (ii) habitat fragmentation; (iii) blockages to migration routes; (iv) increased water consumption; and/or (v) contamination of natural habitats? |   |   |         | Activity non eligible under this project                                                                                                                                                                               |
| Is there a risk that the activity causes loss of precious ecological assets?                                                                                                                                                            |   |   |         | Activity non eligible under this project                                                                                                                                                                               |
| <b>Stakeholder Engagement and Information Disclosure</b>                                                                                                                                                                                |   |   |         |                                                                                                                                                                                                                        |
| Is there a risk that the activity fails to incorporate measures to allow meaningful, effective and informed consultation of stakeholders, such as community engagement activities?                                                      |   |   |         | The SEP and GRM of the project will include provisions to ensure these risks are assessed and identified as early as possible, and addressed through relevant activities, depending on the sub-project specific needs. |
| Are women likely to participate in decision-making processes regarding the activity?                                                                                                                                                    |   |   |         |                                                                                                                                                                                                                        |
| Is there a risk that exclusion of beneficiaries will lead to grievances?                                                                                                                                                                |   |   |         |                                                                                                                                                                                                                        |
| Is there a risk that the activity will have poor access to beneficiaries?                                                                                                                                                               |   |   |         |                                                                                                                                                                                                                        |

## Exclusion List of Activities

Any sub-project that meets one or more of the following screening criteria will not be approved for financing under the project:

- Infrastructure schemes that require land acquisition or entail physical or economic displacement
- Activities that would likely create adverse impacts on ethnic minorities within the village and/or in neighboring villages, or activities that are unacceptable to the affected ethnic minorities living in an ethnic homogenous village or a village of mixed ethnic composition.
- Cause damage or loss to cultural property, including sites having archeological (prehistoric), paleontological, historical, religious, cultural and unique natural values.
- Resources access restriction (e.g. restricted access to farming land) that could not be mitigated and will result in adverse impacts on the livelihoods of ethnic groups and disadvantage peoples. **Any sub-projects that may be considered high-risk or substantial risk as per IFAD's SECAP, or by national requirements.**

## Scope of environmental impacts

- Sub-activities that require full EIA will not be financed.

## Purchase of agricultural inputs

- Purchase of banned pesticides, insecticides, herbicides and other unbanned pesticides, unbanned insecticides and unbanned herbicides and dangerous chemicals exceeding the amount required to treat efficiently the infected area. However, if pest invasion occurs, the use of small amounts of eligible and registered pesticides in Cambodia will be allowed if supplemented by additional training of farmers to ensure pesticide safe uses in line with IFAD policies and procedures. Highly Hazardous Pesticides (HHP) will not be used by the project.
- Purchase of destructive farming gear and other investments detrimental to the environment.

## Use of chemicals

- Any projects that will use or induce the use of hazardous materials (including asbestos) or any banned chemicals.

## Introduction of farming technologies

- Introduction of non-native species, unless these are already present in the vicinity or known from similar settings to be non-invasive.
- Significant conversion or degradation of natural habitat or where the conservation and/or environmental gains do not clearly outweigh any potential losses.

## Illegal Trading and Production

- Production or trade in any product or activity deemed illegal under national legislation or regulations or international conventions and agreements, or subject to international bans.
- Trade in any products with businesses engaged in exploitative environmental or social behavior.

## Labor & Working Condition

- Labor and working conditions involving harmful, exploitative, involuntary or compulsory forms of labor, forced labor, child labor or significant occupational health and safety issues

## **Annex 2. Sub project Environmental, Social and Climate Management Plans (ESCMP)**

A sub-project ESCMP consists of a set of mitigation, monitoring, and institutional measures to be taken during implementation and operation of a sub-projects to manage adverse environmental and social risks and potential impacts, offset them, or reduce them to acceptable levels. The ESCMP also includes the measures and actions needed to implement these measures and is implemented in line and consistent with any requirements by national legislation.

This annex provides a standard template and guidance for the development of sub-project **(ESCMPs)**. These sub-projects may include small-scale infrastructure investments, value chain technical assistance, production support, and other localized interventions. The objective is to ensure that each sub-project is screened, assessed, and the adequate risk management measures identified and implemented in accordance with IFAD's SECAP 2021 and Cambodian national legislation.

Following sub-project screening, an ESCMP is prepared with the relevant mitigation measures that will be monitored according to the activities of the sub-project. The template supports operational consistency across sub-projects and ensures that mitigation, monitoring, and stakeholder engagement measures are tailored to specific contexts and activities. It complements the overarching ESCMP by applying its principles and procedures at the sub-project level.

Each sub-project identified as requiring an ESCMP—based on risk screening—must use this template to prepare a site-specific plan before implementation begins. The plan must be:

- Prepared by the PMO or designated TSP in consultation with local stakeholders;
- Disclosed and validated at the provincial level by the PDoC;
- Submitted for review and clearance by the PMO safeguards team;
- Cleared by IFAD prior to implementation, when required.

The following is a sample Table of Contents for a site-specific ESCMP, which consists of:

### **1. Subproject Overview**

- a. Sub-project title and code
- b. Location (province, commune, village)
- c. Objectives and summary of activities
- d. Implementing agency and partners

### **2. Summary of Screening Results**

- a. Risk classification (based on SECAP screening tool)
- b. Applicable SECAP standards
- c. Exclusion list check confirmation

### **3. Description of Environmental, Social, and Climate Risks**

- a. Identified risks and potential impacts (e.g., waste, pollution, land, labor, IPs, biodiversity)  
Environmental and social risks and impacts identified with the involved subproject. Potential subproject impacts should cover direct, indirect impacts. Where relevant, include cumulative impact assessment;
- b. Risk justification and context-specific factors
- c. Brief summary of applicable legal frameworks (National legislation laws and requirements, and applicable IFAD SECAP requirements Environmental) including gap filling measures.

### **4. Mitigation Measures**

- a. Specific actions to avoid, minimize or mitigate each identified risk.
- b. Timeline for implementation
- c. Responsible entity for each measure

### **5. Monitoring Plan**

- a. Monitoring indicators for each safeguard area
- b. Means and frequency of verification

- c. Roles and responsibilities (PMO, PDoC, TSP, FI)
- d. Reporting formats and timelines
- 6. **Stakeholder Engagement and Disclosure**
  - a. Summary of engagement activities conducted
  - b. Key stakeholders consulted and feedback received
  - c. Actions taken in response to stakeholder input
  - d. Future engagement and consultation plan
- 7. **Grievance Redress Mechanism**
  - a. Local-level access points for GRM
  - b. Roles and responsibilities for complaint handling
  - c. Integration of feedback into project planning
- 8. **Budget for Environmental and Social Measures**
  - a. Cost estimates for mitigation, training, GRM, and monitoring
  - b. Funding source and budget line
- 9. **Annexes**
  - a. Site photos, maps, and design diagrams (as relevant)
  - b. Screening checklist and classification form
  - c. Signed documentation of land donation (if applicable)
  - d. Consultation attendance sheets and records

**SAMPLE TABLE FOR ESCMP MONITORING**

| IDENTIFIED ENVIRONMENTAL, SOCIAL AND CLIMATE RISKS AND IMPACTS | MITIGATION MEASURES | MONITORING INDICATOR | COSTS | RESPONSIBLE | FREQUENCY/TIMING | STATUS AND COMMENTS |
|----------------------------------------------------------------|---------------------|----------------------|-------|-------------|------------------|---------------------|
|                                                                |                     |                      |       |             |                  |                     |
|                                                                |                     |                      |       |             |                  |                     |
|                                                                |                     |                      |       |             |                  |                     |

### Annex 3. Sample Grievance Receipt and Response Forms

The proposed **sample grievance receipt form** serves as a tool for documenting complaints and concerns raised by stakeholders during the implementation of the AIMS Additional Financing (AF) project. This form is a core component of the project's **Grievance Redress Mechanism (GRM)** and supports the project's commitment to transparency, accountability, and inclusive engagement, as set out in the Stakeholder Engagement Plan (SEP) and IFAD's SECAP 2021.

The form is designed to:

- Enable affected persons or other stakeholders to formally record grievances related to project activities, impacts, or stakeholder interactions;
- Ensure that complaints are registered systematically, acknowledged promptly, and resolved fairly;
- Provide a written record of grievances, including follow-up actions and outcomes;
- Support project teams in identifying systemic issues or recurring risks requiring corrective action;
- Facilitate reporting to IFAD on the performance and responsiveness of the GRM.

The grievance receipt form is to be used by project personnel, as indicated in section xx of the ESCMF:

The form should be accessible to all stakeholders. Where needed, oral grievances may be transcribed by staff on behalf of the complainant, ensuring inclusivity for illiterate or differently abled individuals.

The grievance receipt form must be completed:

- Upon receiving a complaint through any project channel (e.g., consultation meeting, office visit, hotline, or field activity);
- During or after stakeholder engagement sessions where issues are raised;
- As part of routine implementation, particularly in high-risk sub-projects or locations with vulnerable populations.

Once completed, the form should be submitted to the designated GRM focal point, who is responsible for ensuring proper registration, tracking, and follow-up. The PIU safeguards team consolidates this data quarterly and includes summaries in reporting to IFAD.

By using this form consistently and transparently, the project ensures that all grievances are handled in a timely, culturally appropriate, and fair manner, contributing to conflict prevention and improved stakeholder trust.

## Record f Grievances Form

## Annex 4. Sample Grievance Record Matrix

The **Grievance Record Matrix** is a project-level tracking tool established to operationalize the Grievance Redress Mechanism (GRM) under the FOCUS 2.0 project. This matrix supports the systematic documentation, monitoring, and resolution of all complaints and feedback received from stakeholders, and is essential to ensure transparency, accountability, and continuous improvement in project delivery.

This matrix forms part of the project's broader commitment to stakeholder engagement, as articulated in the Stakeholder Engagement Plan (SEP), and aligns with IFAD's SECAP 2021 requirements and national good practices.

The matrix enables project teams to:

- Maintain a **centralized and transparent log** of grievances received across provinces and implementation levels;
- Monitor the **timeliness and effectiveness** of responses and resolutions;
- Identify and address **systemic issues or recurring concerns**;
- Report grievance trends and resolution status to **IFAD and national oversight bodies**;
- Ensure that affected persons, particularly vulnerable groups, have access to a functioning, culturally appropriate, and timely complaints process.

The Grievance Record Matrix is maintained by the **PIU safeguards focal point**, with inputs collected from the CMCC- GRF, FMCC-GRF, CLF, and District level Grievance Redress Focal Points.

The PMO ensures data consistency across provinces and prepares consolidated summaries for inclusion in quarterly and semi-annual safeguard reporting to IFAD.

The matrix is updated on a quarterly basis and entries must be supported by accompanying documentation (e.g., grievance form, photos, meeting records), and unresolved or serious complaints must be flagged to the PMO for escalation.

The Grievance Record Matrix is a central tool for the implementation of both the ESCMF and SEP, ensuring that stakeholder feedback directly informs adaptive project management and risk mitigation. It also facilitates incident reporting, as the PIU is required to notify IFAD of serious issues within 48 hours, including SEA/SH allegations, fatalities, and community-level disruptions, as outlined in the ESCMP incident protocols.

Regular analysis of the matrix will help the PIU identify trends and inform capacity building, engagement strategies, and safeguards adjustments as needed.

| Case No | Information on the Complainant |      |       |        |         |                   | Info on grievances |         | Forwarded         |                     |                             | Case closure                     |               |                     |                                     |

## Annex 5. Annual SECAP Progress Report

### 1. General information

- Acronyms
- Project name:
- Project ID:
- Country:

### 2. Implementation of Environmental and Social Safeguards

#### 2.1. SECAP Documents Reviewed and/or Prepared

List of key documents reviewed (e.g., ESCMP) and prepared (e.g., site specific ESCMP) against the required

| SECAP document required | Status (under preparation, under revision, finalized) | Date of finalization | Main lead for the preparation of the document (e.g E&S specialist, consultant, M&E specialist, ect) |
|-------------------------|-------------------------------------------------------|----------------------|-----------------------------------------------------------------------------------------------------|
|                         |                                                       |                      |                                                                                                     |
|                         |                                                       |                      |                                                                                                     |

#### 2.2. Implementation of management plans

Detail the progress in the implementation of the mitigation measures in the ESCMP and the management plans with the achievements on the indicators

| Project interventions/Sub-project | Location (site) | Environmental and social risks | Mitigation measures | SECAP Documents | Period of implementation (mm/yy-mm/yy) | Status of the implementation of the mitigation measures (not started; on-going; completed) | Indicators |
|-----------------------------------|-----------------|--------------------------------|---------------------|-----------------|----------------------------------------|--------------------------------------------------------------------------------------------|------------|
|                                   |                 |                                |                     |                 |                                        |                                                                                            |            |

#### 2.3. Environmental, Health and Safety permits and licenses (If applicable)

List of the environmental permits and licences obtained if applicable

| EHS Permit / License | Reason for permit / license | Issuer of permit / license | Issue date | Expiry date | Compliance status (Compliant-C-/Non Compliant -NC-) | Observation |
|----------------------|-----------------------------|----------------------------|------------|-------------|-----------------------------------------------------|-------------|
|                      |                             |                            |            |             |                                                     |             |

### 3. Environmental and Social Safeguards Compliance Monitoring

#### 3.1. Updates on the corrective actions taken (from supervision missions)

Overview of compliance with environmental requirements, highlighting any corrective measures taken. (e.g., biodiversity, pollution control, resource management, displacement, community health and safety, indigenous peoples' rights, etc.).

| Project interventions/<br>Sub-project | Location<br>(site) | E&S issues | Corrective action | Person/entity responsible | Current status of corrective action (not started; on-going; completed) | Evidence of the status (if any) |
|---------------------------------------|--------------------|------------|-------------------|---------------------------|------------------------------------------------------------------------|---------------------------------|
|                                       |                    |            |                   |                           |                                                                        |                                 |

### 3.2. Updates on the corrective actions taken *(from previous periods)*

Overview of compliance with environmental requirements, highlighting any corrective measures taken. (e.g., biodiversity, pollution control, resource management, displacement, community health and safety, indigenous peoples' rights, etc.).

| Project interventions/<br>Sub-project | Location<br>(site) | E&S issues | Corrective action | Person/entity responsible | Current status of corrective action (not started; on-going; completed) | Evidence of the status (if any) |
|---------------------------------------|--------------------|------------|-------------------|---------------------------|------------------------------------------------------------------------|---------------------------------|
|                                       |                    |            |                   |                           |                                                                        |                                 |

### 3.3. Compliance monitoring *(during the reporting period)*

Summary of fieldwork conducted, including site visits and inspections, with a focus on environmental compliance during the reporting period.

Overview of compliance with environmental requirements, highlighting any non-conformances and recommendation for corrective measures taken. (e.g., biodiversity, pollution control, resource management, displacement, community health and safety, indigenous peoples' rights, etc.).

| Project interventions/<br>Sub-project | Location<br>(site) | Environmental and social issue identified<br>(SECAP standards) | Monitoring Findings | Recommendations for corrective action | Timeline for the implementation of the corrective action | Person/entity responsible |
|---------------------------------------|--------------------|----------------------------------------------------------------|---------------------|---------------------------------------|----------------------------------------------------------|---------------------------|
|                                       |                    |                                                                |                     |                                       |                                                          |                           |

## 4. Environmental and Social incidents

Please describe any incidents from the previous reporting period if the status is still active.

| Incident | Date | Summary details | Action taken | Current Status<br>(Active, Closed) |
|----------|------|-----------------|--------------|------------------------------------|
|          |      |                 |              |                                    |

## 5. Grievance Redress Mechanism (GRM)

Assess the operationalization of the GRM, critical for addressing community concerns.

Summary of grievances raised and how they were addressed, including issues related to employment practices and compensation claims.

| Details of Complaint or Grievance | Complainant (employee, community member, etc.): | Date Received | Action taken | Current Status (Active, Closed) |
|-----------------------------------|-------------------------------------------------|---------------|--------------|---------------------------------|
|                                   |                                                 |               |              |                                 |

## 6. Cross-Cutting Issues

Discuss issues that span across environmental, social, and climate safeguards, such as stakeholder engagement, capacity building, and gender equality

- Analysis of stakeholder engagement processes and their effectiveness.
- Assessment of capacity-building initiatives for implementing safeguards.
- Gender equality considerations and how they have been integrated across safeguards.
- Challenges in addressing cross-cutting issues and proposed strategies.

## 7. Challenges and Lessons Learned

Reflect on the challenges encountered during the reporting period and identify key lessons learned.

## 8. Recommendations and Next Steps

Provide actionable recommendations based on the findings of the monitoring report.

- Specific recommendations for improving the implementation of environmental, social, and climate safeguards.
- Proposed actions (priority and timeline) for the next monitoring period.
- Timeline and responsibility for implementing the recommended actions.

## 9. Appendices

Provide additional data, detailed case studies, or supplementary information that supports the main content of the report.

- Detailed tables, graphs, or charts with monitoring data.
- Full case studies or project reports.

Any other relevant documentation

### **Fostering Climate-Resilient Upland Farming Systems in the Northeast (FOCUS) 2.0 Project Design Report**

#### **Free Prior and Informed Consent or FPIC implementation plan**

Mission Dates: 31 March – 18 April 2025

Document Date: 04/09/2025

Project No. 2000004677

Report No. 7262-IN

Asia and the Pacific Division  
Programme Management Department

### FPIC Implementation Plan Outline (extract from the ESCMF)

The target groups identified for FOCUS 2.0 comprise completely of tribal communities (or indigenous peoples). The risks related to Indigenous (tribal) Peoples are perceived to be moderate, as the project will build upon local traditional knowledge and promote full and effective participation of the tribes present in the area. With 100% tribal community as target group, FOCUS does not require a separate Indigenous/Tribal Peoples Plan. All social mobilisation, project awareness raising, consultations on project objectives, components and eligibility will be conducted under an FPIC framework approach. An outline of the FPIC implementation plan is provided below. An in-depth assessment of risks related to the project approach and mitigation measures developed considering the customary laws among the target groups and the tribal governance system among them suggests that the SECAP Review Note at PCN stage overlooked certain nuances as outlined in the above section. Although these concerns do not suggest a need to upgrade the risk category, they certainly suggest the need for specific attention and appropriate action.

#### FPIC Implementation Plan Outline

| SI | FPIC activity                                                                                                                           | Readiness Action Plan Activity Description & serial number                  | Officers responsible                                                         | Timeline (Corresponding to RAP timeline) |
|----|-----------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------|------------------------------------------------------------------------------|------------------------------------------|
| 1. | FPIC sensitisation for Project team members                                                                                             | Training of Project staff (#7, Table 15 in PDR)                             | PD, Manager M&E, Asst Managers, SECAP                                        | Oct-Dec, 2025                            |
| 2. | FPIC sensitisation of Village Council and other field partners                                                                          | Sensitize village councils and other important partners on the ground (#16) | DPIU (District Manager, Asst Manager, M&E, SECAP); PIU (Asst Manager, SECAP) | Oct-Dec, 2025                            |
| 3. | FPIC sensitisation of community-based cadres (CLF, VO, Zau & AH; include CMC and FMCC members)                                          | Induct and sensitize the last mile delivery cadre (# 17)                    | DPIU (District Manager, Asst Manager, M&E, SECAP); PIU (Asst Manager, SECAP) | Nov-Dec, 2025                            |
| 4. | FPIC meeting with all HHs for outlining project interventions and potential SECAP concerns, documenting community concerns/reservations | Select beneficiaries and start FPIC process (#23)                           | DPIU (District Manager, Asst Manager, M&E, SECAP); PIU (Asst Manager, SECAP) | Nov-Dec, 2025                            |
| 5. | Participatory Landuse Planning and Mapping (PLUPM)                                                                                      | Select beneficiaries and start FPIC process (#23)                           | DPIU (District Manager, Asst Manager, M&E, SECAP); PIU (Asst Manager, SECAP) | Dec, 2025-Feb, 2026                      |
| 6. | Repeat FPIC during AWPB exercise, revisit                                                                                               |                                                                             | DPIU (District Manager, Asst                                                 |                                          |

### **Fostering Climate-Resilient Upland Farming Systems in the Northeast (FOCUS) 2.0 Project Design Report**

#### **Stakeholder Engagement Plan**

Mission Dates: 31 March – 18 April 2025

Document Date: 04/09/2025

Project No. 2000004677

Report No. 7262-IN

Asia and the Pacific Division  
Programme Management Department

## 11. Stakeholder Engagement Plan (SEP)

The institutional canvas for FOCUS 2.0 will be broadened to include several new partners across government departments and agencies, the non-government sector and the traditional institutions. The guiding principle of FOCUS 2.0 will be to leverage existing opportunities for collaboration, partnerships, skill and resource sharing through active convergence with these agencies and their ongoing programmes. While the Department of Agriculture will continue as the lead implementation agency, strong partnerships will be formalised with several line departments that have the expertise required in meeting the objectives of the project. New partnerships will be forged with the Mizoram State Rural Livelihood Mission to capitalise on their impressive institutional network at the grassroot level for forging the 'last mile' bridge and delivery mechanism with communities. Partnership with Directorate of Commerce and Industry attains importance as fundamental thrust of the project is to strengthen market linkages through value chain development. In addition, Department of Irrigation and Water Resources, Soil Conservation, Environment Forest and Climate Change are additional departments who will be important partners, the latter being critical stakeholders in those districts which host important protected areas such as National Parks and Tiger Reserves. These partnerships will help improve coordination and complementarity while laying the ground for the project's exit strategy and long-term sustainability. Among other government agencies, strong partnerships will be explored with NABARD, NeDFi and NEC for convergence of schemes and programmes in rural financing and infrastructure. Technical partnerships are proposed with the Mizoram Science and Technology Council, particularly the Geospatial and Climate Change units. Collaboration with MiRSAC is critical for identification of Zau clusters and also the PLUMP exercise that is proposed in the FPIC process. Similarly, collaboration will be explored with the Horticulture Department of Mizoram University for technical expertise and a collaboration with the Incubation Centre set up to support Start Ups and entrepreneurship development. A strategic partnership is proposed with SELCO, a national non-government organisation specialising in non-conventional energy, and presently working in Mizoram to leverage their experience in the energy sector and strengthen the project's objective of providing energy solutions for Component 1 while meeting the fundamental goal of promoting climate resilience. At the community level, partnerships will be forged with the Cluster Federations set up by MiZSRLM in the context of product aggregation, storage and processing for value chains, while at the village level, Village Councils and Village Organizations (VOs) will be critical partners for the smooth implementation of project activities. The Stakeholder Engagement Plan (SEP), therefore, must be broad, multi-pronged and continuous given the wide spectrum of stakeholders that need to be sensitised and pro-actively engaged for establishing effective collaboration and ensuring compliance to SECAP requirements. The basic aim of the SEP will be to:

- Identify all potential project stakeholders, including affected parties and interested parties (a continuous exercise as the project progresses)
- Consult with project stakeholders to understand their concerns, development needs, priorities, particularly those of potential adversely affected group;
- Set out a concrete mechanism to ensure stakeholders' feedback is timely solicited, considered and incorporated into project design and implementation;
- Identify strategies to notify and disclose project information to identified stakeholders, particularly those who are negatively affected groups to collect their meaningful feedback;
- Specify methods for consulting with project stakeholders, collect opinions, and incorporate feedback into project design;
- Ensure grievance redress mechanism in place
- Ensure appropriate human and financial resources are arranged to ensure timely and effective implementation of SEP

The SEP is considered a living document that may be updated, as needed, during project implementation to ensure it reflects the needs of the project. It has been prepared during design and, as project information becomes available during early implementation, it is expected to be reviewed and updated accordingly.

The Stakeholder spectrum for FOCUS 2.0 can broadly be clustered at four levels – (i) community and community level institutions, (ii) private sector (market and value chain related actors) (iii) government departments and government agencies, and (iv) technical partners and service providers (university, research organisations).

- (iv) Engagements with the village/cluster level organisations, including the traditional Village Council and Village Organisations are envisaged not only at the initiation of the project during the sensitisation exercises, but regularly during project implementation. After the first sensitisation meeting with the Village Council, Village Organisation and households residing in the village, the project will have a series of meetings to introduce the project objectives and components, select primary beneficiaries and conduct the FPIC process. The project will also setup mechanisms for improving marketing facilities and this will require engagement with producers and potential entrepreneurs at the village and cluster level. FOCUS 2.0 also proposes to set up Farmer Fields Schools and also support Community level knowledge exchange platforms for experience sharing and peer learning. These platforms can provide crucial foras for stakeholder engagement and interaction as well as mediums for dissemination of important information about project interventions and initiatives, including through a dedicated UTube platform. In addition, as project implementation progresses, the project envisages to put in place a Grievance Redressal Mechanism and the GRM would provide an additional means for stakeholder engagement.
- (iv) FOCUS 2.0 aims to improve market linkages and strengthen valuechains through the establishment of Collective Marketing Centres (CMCs) at farm-gate, Farmers' Markets (FMs) at the cluster or Block level and multi-district Value addition Hubs. These exercises will call for intense and meaningful engagements with producers, FPOs, SHGs and their federations, local entrepreneurs, traders and the private sector. Engagements and strong collaboration are also foreseen with banks and credit institutions as well as the Department of Commerce and Industry. Engagements with the wide array of stakeholders under this category will continue during planning and form the core of SEP process. The project plans to set up management committees for the CMCs as well as the FMs. These management committees provide an effective platform for engagement with producer groups, FPOs, SHGs and their federations and local traders and members of the private sector. In addition, as the project implementation progresses, a GR mechanism is expected to be operationalised which will then provide an additional means for engagement by aggrieved stakeholders. A state-level Private sector Round Table or Conference is proposed in the first year to initiate engagement with this critical set of stakeholders and is expected to provide insights for refining stakeholder mechanisms with this sector.
- (iv) Chapter 3 of the PDR, under section 3.1 (Organisational Setup and Governance) outlines the establishment of State level Project Management Committee, chaired by the Secretary Agriculture and the State level Project Steering Committee chaired by the Chief Secretary with members drawn from different departments and the State Policy Coordination Committee. The Project Director, FOCUS 2.0 will function as the Member Secretary for the Project Management Committee while the Secretary, Agriculture will function as the Member Secretary for the Steering Committee. These fora at the State level provide a platform for regular engagement of key stakeholders, and will function as a communication and decision-making channel, informing members of the progress as well as of issues that require their advice and support.

At the district level, the project will set up the District Project Coordination Committee, chaired by the Deputy Commissioner of the district and members drawn from all the relevant departments. The District Committee will also have members drawn from the Banking sector (NABARD) and thus provide a channel for engagement and interaction with this important sector. A key best practice institutionalized in the previous phase – specifically: maintaining a standing agenda item for community feedback – will be formalized across all districts under FOCUS 2.0. This mechanism allows farmers and community-based organizations to present concerns and recommendations directly to district authorities, reinforcing the project’s commitment to participatory planning, grassroots accountability, and responsive programme delivery, reinforcing a meaningful stakeholder engagement mechanism.

FOCUS 2.0 covers several districts which host important Protected Areas, including National Parks and a Tiger Reserve. The Park authorities in the concerned districts and the Forest Environment and Climate Change department (in particular the Wildlife and Parks directorate) are particularly important stakeholders with whom the project needs to engage closely. While clear engagement needs and necessary action have been outlined in PIM under the Biodiversity SECAP category, the senior management at the PIU (PD and relevant thematic managers) must set up regular meetings with the Chief Wildlife Warden and his team to appraise them of project interventions (particularly land based production related activities) planned for the project villages in fringe areas and the buffer zone of the protected areas and the preventive steps adopted to avoid infringement into PA core area boundaries and steps taken to avoid habitat degradation. Such meetings should be organised to facilitate strong cooperation and develop strategies to avoid any conflict of interests.

- (iv) The fourth category of stakeholders are primarily technical partners or service providers. Agencies such as the Mizoram Science and Technology Council, specifically the Geospatial Unit will be engaged for preparation of GIS based LULC maps, including the PLUP maps. The latter can serve as a useful M&E tool if applied judiciously. Engagement with S&T Geospatial unit must be regular and with the required intensity. Similarly, engagement with different departments of the Mizoram University will be specifically for technical purposes. Special attention needs to be paid for collaboration and engagement with Mizoram University’s Incubation Centre for capacity building of entrepreneurs (especially youth) and also hand-hold them for Startup initiation. Such engagement will be on a need basis and interactions would predominantly be with the PIU officials. Formal engagement plans will need to be developed as project implementation gets off the ground and the specific needs and their intensity becomes more concretised.

### **Preliminary Stakeholder Engagement Plan Matrix**

The preliminary stakeholder engagement matrix included in this section presents an initial mapping of the key stakeholders identified during the project design phase. It outlines stakeholder groups’ characteristics, their potential interest and influence in the project, key concerns, and suggested engagement strategies. This matrix is a critical tool for operationalizing the Stakeholder Engagement Plan (SEP) and is intended to serve as a living resource for guiding inclusive and meaningful stakeholder engagement throughout implementation.

During project execution, this matrix will assist the PIU, DPIU and Technical Service Providers (TSPs) in planning and prioritizing engagement activities based on stakeholder relevance, influence, and potential vulnerability. It provides a structured approach for:

- Identifying which stakeholders require targeted outreach, ongoing consultation, or more intensive participation;
- Tailoring communication channels and consultation formats to the needs and capacities of different stakeholder groups (e.g., women, Indigenous Peoples, financial intermediaries, POs);
- Integrating engagement actions into the Annual Work Plan and Budget (AWPB) and site-specific planning, including the design of sub-project ESCMPs;
- Tracking the frequency and effectiveness of engagement activities to inform adaptive management;
- Ensuring that engagement with marginalized or vulnerable groups is systematically pursued and documented.

The matrix will be reviewed and updated regularly—at least annually or whenever new sub-projects are identified—based on monitoring data, community feedback, and evolving stakeholder dynamics. As such, it complements the ESCMP and supports compliance with IFAD’s SECAP 2021 by ensuring transparency, accountability, and inclusion in the planning and implementation of project interventions.

#### Outline Stakeholder Engagement Matrix

(Stakeholders listed in tentative order of influence and impact; non-exhaustive, to be updated and refined as project needs are further crystalised)

| Stakeholder                                                                                                                 | Concerns                                                                                                | Engagement methods                                                                                                | Relevant information disclosure                                                                                           | Frequency of Engagement             | Responsible                                    | Timeline      |
|-----------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------|-------------------------------------|------------------------------------------------|---------------|
| State-level Steering Committee (senior decision makers, including members from State Policy Coordination Committee)         | Project performance (including financial); convergence between departments and agencies, project impact | Regular committee meetings, necessary briefings with Chair as required; submission of regular performance reports | Project performance, target achievements, financial performance and budgetary issues, coordination and convergence issues | As mandated in Agreement /PDR norms | Secretary, Agriculture assisted by PD and team | Project cycle |
| State level Project Management Committee (senior decision makers drawn from relevant departments, agencies and FI partners) | Project performance, project management, partnership building and convergence effectiveness             | Regular committee meetings, necessary briefings with Chair as required; submission of regular performance reports | Project performance, target achievements, financial performance and budgetary issues, coordination and convergence issues | Quarterly or as required            | Project Director                               | Project cycle |
|                                                                                                                             |                                                                                                         |                                                                                                                   |                                                                                                                           |                                     |                                                |               |

|                                                                                          |                                                                                                                                                                                                                   |                                                                                        |                                                                                                                                                                                                                                              |                                                                 |                                                                                                                |                          |
|------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------|--------------------------|
| Wildlife Wing, Mizoram Department of Environment, Forest and Climate Change              | Infringement of project activities in Protected areas, particularly excluded areas of Tiger Reserve and National Parks                                                                                            | Regular meetings with Chief Wildlife Warden and team                                   | Project activities in fringe villages and villages within Buffer Zone of National Parks and Tiger Reserve; incidences of Human-wildlife conflicts if any and remedial steps                                                                  | As and when required                                            | Project Director, assisted by concerned District Manager and relevant thematic managers from PIU and districts | Project cycle            |
| Park Director and officials                                                              | Project activities in fringe villages and villages within Buffer Zones of Parks/Reserve: discussions on activity locations to avoid infringement into core areas and areas where human activities are not allowed | Regular meetings and exchange of information, consultation and examination of Zau maps | List of proposed activities in fringe villages, villages located within Buffer area; location of AICs ensuring that these are in permitted areas, any incidence of crop/animal depredation by wildlife, remedial steps to be adopted jointly | Monthly meetings in concerned districts                         | District Manager, assisted by Asst Managers Crop production, Livestock and SECAP                               | Throughout project cycle |
| Representatives of private sector, FPOs, SHGs and their Federations, local entrepreneurs | Marketing and Value chain development                                                                                                                                                                             | Regular meetings organised by Hub committees, by Farmers Market Management Committees  | Availability and volume of produces, pricing, storage, value addition options, transportation and other value chain related issues                                                                                                           | Regular (frequency as decided by the respective committees)     | Business Development Managers at PIU and Districts, together with Thematic Managers                            | Throughout project cycle |
| FPOs, SHGs and their Federations, local entrepreneurs                                    | Market related issues                                                                                                                                                                                             | Regular meetings of CCMCs and FMMCs                                                    | Produce availability, pricing, storage, transportation; input sourcing, technical capacity building                                                                                                                                          | Regular (frequency as decided by the respective CMCs and FMMCs) | Business Development and Thematic Managers at Districts                                                        | Throughout Project cycle |
| Village Council and Village Organisation                                                 | Project intervention related land access issues, issues related to NRM, project implementation issues,                                                                                                            | Regular meetings                                                                       | Project implementation issues                                                                                                                                                                                                                | Regular (Frequency decided by respective VO, VCs)               | DPIU officers                                                                                                  | Throughout project cycle |

### **Fostering Climate-Resilient Upland Farming Systems in the Northeast (FOCUS) 2.0 Project Design Report**

#### **Annex 7: Financial Management Assessment**

Mission Dates: 31 March – 18 April 2025

Document Date: 04/09/2025

Project No. 2000004677

Report No. 7262-IN

Asia and the Pacific Division  
Programme Management Department

**Detailed FM arrangements in the Project Design Report (PDR) (Annex 7)**  
**India: FOCUS 2.0**

**I. Summary of Financial Management arrangements<sup>1</sup>**

1. The mission assessed FM arrangements for FOCUS 2.0 in the Mizoram state during March 24-April 6, 2025. It concluded that the Inherent FM Risk is Substantial due to (i) potentially weak financial management staff capacity at both the PMU and DPMU levels, (ii) internal control issues arising from insufficient staff capacity among implementing partners, (iii) inadequate maintenance of Tally software and delays in account reconciliations, and (iv) possible delays in audit reports from the local CAG office.
2. Strengths and weaknesses of proposed FM arrangements.  
Key strengths of the FOCUS 2.0 FM arrangements are:
  - Senior experienced civil servants deputed by local governments to manage IFAD-funded projects.
  - Previous experience in IFAD-funded operations.
  - Reliable funds flow arrangements for pre-financing IFAD-funded project activities by local governments.However, the most challenging issues for FOCUS 2.0 FM arrangements are:
  - State-level burdensome bureaucracy.
  - Frequent disagreements between state governments and project implementation units.
  - Weak internal control framework within IFAD-funded projects, which resulted in inaccurate bank reconciliations between PMUs and MPAs/other partners, inadequate filing of supporting documents, and high level of unjustified advances.
  - Weak staff capacity.

Both Inherent and Residual risks are substantial for FOCUS 2.0 due to the abovementioned weaknesses. Residual risk will be revised when mitigation measures are implemented.

The design of FOCUS 2.0 includes mitigation measures to minimize potential risks and integrates current strengths into overall FM arrangements. Therefore, FOCUS 2.0 design includes recruitment of FM staff or external consultants for the new project to strengthen FM capacity. The project should not limit the recruitment of additional FM resources to

---

<sup>1</sup> Normally this summary will be included only in the main design report under Financial / Fiduciary section, Annex 7.

Mizoram only to mitigate potential weak FM staff capacity risk. Fully customized and well-maintained Tally accounting software, to be in place before project effectiveness and to control and manage the financial operations of the project, including operations at DPMUs, will mitigate internal control risks. In addition, the Project Implementation Manual (PIM), including FMM should detail procedures and processes to ensure a sound internal control system and proper segregation of duties. As a result, the FM arrangements for FOCUS 2.0 are satisfactory to IFAD. First Disbursement conditions in the FA will be PIM approval.

## **II. Project financial profile<sup>2</sup>**

3. The project costs were developed in close consultation with staff of the state government and all other stakeholders of the project on the basis of a(n): (i) 6-year project implementation period from FY 2025/26 to FY 2030/31; (ii) local inflation rate of 4%, which was used to compute the price contingencies ; (iii) current exchange rate of INR 85.5 for 1 US\$; (iv) 18% tax for most of the cost items; and (v) physical contingency rate of 2%. Expenditure and Disbursement Accounts are in line with the IFAD standardization of expenditure categories based on circular IC/FOD/02/2013.
4. The total project cost, inclusive of taxes and duties, amounts to USD 88.1 million over a six-year implementation period. All costs are estimated based on currently prevailing prices in Mizoram, India. Project costs are presented by component in Table 11. Project financing, including 5% contingencies by component, are: US\$ 22.7 million for Component 1 – Market access and enterprise development (25.8 percent of project costs); US\$ 49.9 million for Component 2 – Agricultural productivity and climate resilience (56.7 percent of project costs); and US\$ 15.4 million for Component 3 – Project Management, Convergence and Knowledge Management.
5. Table 1. FOCUS 2.0 costs by component (and subcomponents) and financier (US\$ thousands)

---

<sup>2</sup> Note that COSTAB and Financing Plan may be finalized at a later date after the design mission. In such cases this section, as well as other relevant information, should be revised and updated by the Finance Officer before the President's Report is presented in Scriptoria for FMD clearance.

6. The project is planned to be implemented over a six-year period. The project estimated cost is US\$ 88.14 million, including US\$ 45.78 million (51.9%) from IFAD financing, US\$ 14.45 million (16.4%) from Government Counterpart funds investment, USD 2.87 million (3.3%) from beneficiary contribution, US\$ 6.18 million (7.0%) from other convergence (centrally sponsored and state sponsored schemes of line departments) and US\$ 6.96 million (7.9%) from formal financial institutions. Additionally, a financing gap of US\$11.87 million (13.5%) will be addressed during the project implementation. The project's legal documents will include retroactive financing provisions for an approximate US\$ 1 million to finance consultancy contracts from February 1, 2025 until entry into force. Consultants will prepare AWPB and other procurement documents for the initial year of program activities. In addition, consultants will be responsible for other arrangements necessary to start program activities immediately after entry into force of the program.

8. Beneficiaries are expected to contribute in-kind contributions.
9. At the request of the GoM, a sum equivalent to US\$ 1.0 million is provisioned as retro-active financing for meeting the following specific expenditures that are related to the project: (i) undertaking all preparatory works such as staff recruitment, recruitment of services providers and cost of project staff salaries; (ii) purchasing of critical office equipment for the PMU and DPMUs; (iii) identification of agencies for developing and installing software for MIS, Tally accounting software, digital extension, etc.; and (iv) capacity building of PMU and DPMU staff. Expenditures for retroactive financing, to be pre-financed by the government, should be pre-authorized by IFAD and will only be eligible for expenditures incurred from February 1, 2025, until project enters into force. SCRAM PMU will have to submit a separate withdrawal application for all eligible expenditures incurred between 1 February 2025 and the date of project effectiveness.
10. Description of cost categories and eligible expenditures:  
The FOCUS 2.0 will have (i) Works, (ii) Consultancies and Training, (iii) Equipment and Materials, (iv) Grants and Subsidies and (v) Operating costs, including Salaries and Allowances categories.  
For the IFAD loan, the ratio of recurrent expenditures to total IFAD project financing is 11.5 percent, which is within the 15 percent limit. The project management costs are 10.1 percent of the total costs, which is also within the recommended threshold of 15%.

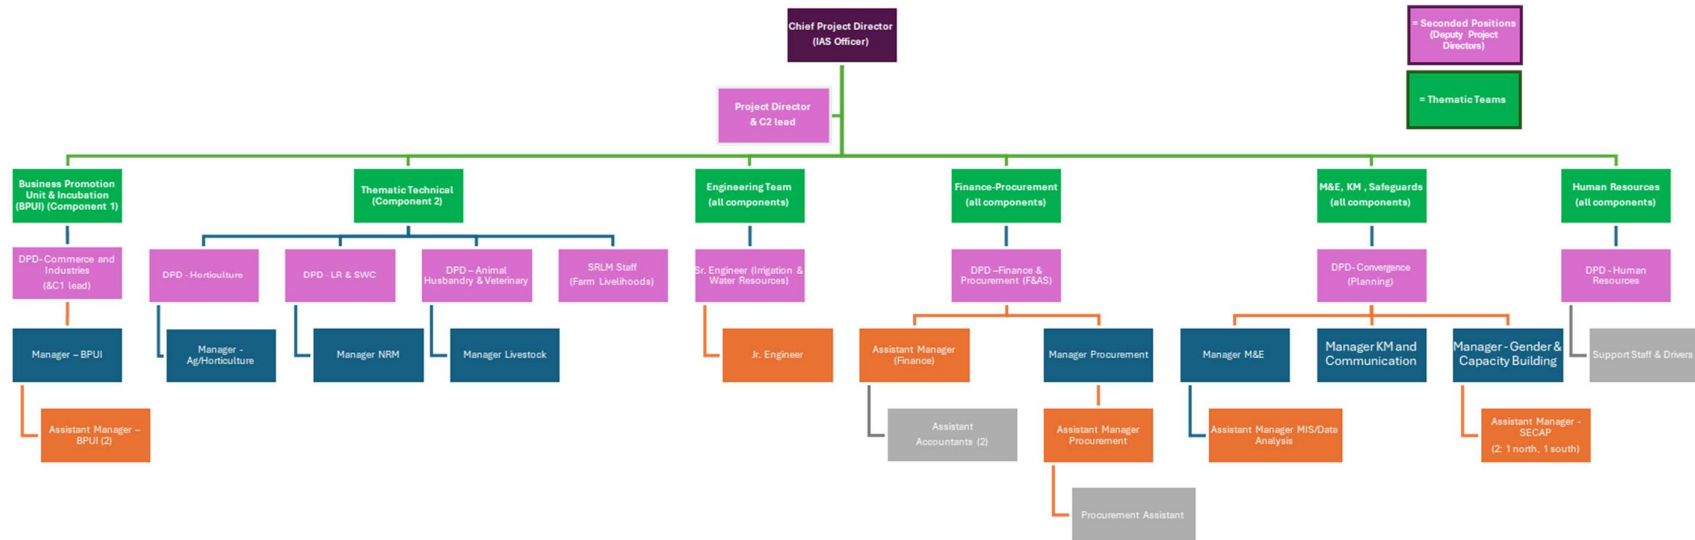

### **III. Implementation Arrangements**

11. **Organizational Structure:**

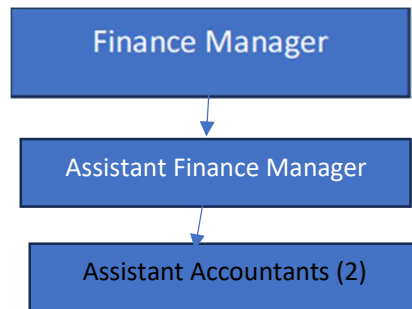

12. SCRAM PMU under the GoM will be responsible for the project's overall financial management and compliance requirements, comprising consolidated AWPB and procurement plan preparation, consolidated M&E and MIS, preparation of withdrawal application, audit and procurement guidance, and support.
13. Organigram of the SCRAM PMU is presented below. All contractual staff recruitments will be on a competitive basis in compliance with IFAD guidelines.
14. Overall PMU structure:

**Note:**  
There will be external consulting support for the finance team: TSP for GIS and Remote Sensing and various technical areas. The project may also enable provision of International Technical Assistance (enabling provision)

15. FM staffing arrangements. FOCUS 2.0 will employ the existing management structure of SCRAM PMU. FM unit will be headed by Finance Manager
16. Overall FM structure of the SCRAM PMU.

Additionally, in each District Project Management Unit (DPMU), the Assistant DPMU Manager for Finance will oversee financial management arrangements specific to their respective district.

#### **IV. Financial Management Risk Assessment<sup>3</sup>**

17. Project risk assessment

**Inherent risk: Substantial**

**Transparency International (TI)**

India's 2024 Transparency International Corruption Perception Index (CPI) score stands at 38, reflecting a decrease of one point from the 2023 index. Consequently, India has fallen from 93rd place in 2023 to 96th in 2024. Government

---

<sup>3</sup>

reforms intended to address corruption-related issues have yet to show significant results, and the effective implementation of relevant measures continues to pose challenges.

**Public Financial Management (PFM) and Debt Assessment.**

18. Despite a challenging global environment, India continues to be the world's fastest-growing major economy, with a robust growth rate of 8.2 percent in FY23/24. In the medium term, growth is projected to stay stable, particularly in the services sector, reaching 7 percent in FY24/25 and remaining strong through FY25/26 and FY26/27. Strong global demand for outsourcing, driven by the pandemic, propelled service export growth to a decade-high in FY2022/23, contributing to an increase in net exports. Additionally, the technology-driven modernization of the public sector (GovTech) has enabled India to enhance tax compliance, streamline service delivery, and create a platform for innovation. India currently faces a moderate overall risk of sovereign debt stress, with its debt-to-GDP ratio standing at 82.7 percent in FY2023/24, projected to remain elevated in the medium term. The slow pace of fiscal consolidation indicates that debt levels are expected to hold steady around this figure before gradually declining from FY2025/26 onwards.
19. FM risk summary.

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                    |                    |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------|--------------------|
| <b>Overall</b><br>Key risks include: (i) potentially weak financial management staff capacity at both the PMU and DPMU levels, (ii) internal control issues arising from insufficient staff capacity among implementing partners, (iii) inadequate maintenance of Tally software and delays in account reconciliations, and (iv) possible delays in audit reports from the local CAG office.<br><br>The capacity of FM staff at the PMU and DPMUs poses a significant challenge. Additionally, developing and enforcing internal controls among implementing partners (DPMUs) and the PMU will be critical. Maintaining high-quality accounting records and generating timely financial reports is another area of weakness. Furthermore, ensuring the timely allocation of funds to project implementing partners and facilitating payments to project contractors will require considerable effort from the PMU. | <b>Substantial</b> | <b>Substantial</b> |
| <b>Organization and Staffing</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Substantial        | Substantial        |

|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------|-------------|
| <b>Risk:</b> While India boasts a well-developed accounting profession, IFAD-funded projects struggle to attract high-quality financial management staff due to low salaries and limited career advancement opportunities. Additionally, the accounting profession in Mizoram is less developed than in other regions of India. Therefore, a transparent selection process for key financial management positions is essential for the project's success. |             |             |
| <b>Mitigation:</b><br>Complete competitive selection of adequately qualified and experienced FM staff for PMU and DPMUs                                                                                                                                                                                                                                                                                                                                   |             |             |
| <b>Budgeting</b>                                                                                                                                                                                                                                                                                                                                                                                                                                          | Moderate    | Moderate    |
| <b>Risk:</b> Budgeting will adhere to government regulations. However, gathering initial budget inputs from all implementing partners, including DPMUs and line departments, will be a challenging task.                                                                                                                                                                                                                                                  |             |             |
| <b>Mitigation:</b> PIM/FMM will have clear roles and responsibilities for budgeting and timelines.                                                                                                                                                                                                                                                                                                                                                        |             |             |
| <b>Funds flow and Disbursement Arrangements</b>                                                                                                                                                                                                                                                                                                                                                                                                           | Substantial | Substantial |
| <b>Risk:</b> The state government will pre-finance project expenditures, while IFAD will reimburse on a quarterly basis. Timely allocation of funds by state and processing of payments by the PMU will be crucial.                                                                                                                                                                                                                                       |             |             |
| <b>Mitigation:</b> Project legal documents will have a provision for advance of IFAD funds, if government will not allocate funds timely. Local commercial bank online banking module will be implemented to timely allocation of funds and payments                                                                                                                                                                                                      |             |             |
| <b>Internal Controls</b>                                                                                                                                                                                                                                                                                                                                                                                                                                  | High        | High        |
| <b>Risk:</b> Potential internal control weaknesses exist at the implementing partners' level (DPMUs). Line departments will be responsible for collecting supporting documents and submitting them to PMU and DPMU for payment. Weak staff capacity and weak discipline at the implementing partners' level (line departments) may result in delayed and inadequate submission of supporting documents. PMU                                               |             |             |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |  |  |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|
| <p>and DPMUs may also have difficulty collecting and adequately filing supporting documents for all transactions. Monthly reconciliation of DPMUs and PMU accounts will be challenging.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |  |  |
| <p><b>Mitigation:</b> - - the development of PIM and FMM with clear roles for supporting documents filing and accounting record keeping for all implementing partners. PIM and FMM will be revised to include the following essential controls:</p> <ul style="list-style-type: none"> <li>• DPMUs will have sub-accounts under the main account of PMU HQ, with all sub-account activities controlled by PMU HQ.</li> <li>• Mandatory monthly closing of accounts in Tally and reconciliation will be enforced.</li> <li>• If a DPMU fails to complete adequate reconciliation or provide necessary supporting documents for any transaction, their bank accounts will be blocked until the issues are resolved.</li> <li>• Google Drive/Dropbox or government's e-office system services will be used for uploading and storing supporting documents for each transaction.</li> <li>• Advances will not be issued to line departments; instead, funds will be transferred directly to beneficiaries and suppliers by DPMUs upon receipt of all required supporting documents.</li> <li>• Finance staff at HQ PMU and DPMUs will be safeguarded from undue pressure from senior project staff and government officials. They will have the right to decline payments if full supporting documents are not provided for any payment request. The CPD will ensure that finance staff are protected from retaliation and unnecessary pressure.</li> <li>• Finance units will deduct amounts from employees' salaries if advances are not cleared within two weeks following the completion of relevant events, such as business travel or other activities.</li> </ul> <p>- External consultants will conduct internal audits every semester.</p> |  |  |

|                                                                                                                                                                                                                                                             |             |             |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------|-------------|
| <b>Accounting and Financial Reporting</b>                                                                                                                                                                                                                   | Substantial | Substantial |
| <b>Risk:</b> Accounting records must be maintained for all DPMUs in one accounting software. Staff capacity to maintain cloud-based Tally software is weak.                                                                                                 |             |             |
| <b>Mitigation:</b> Implementation of Tally accounting software for accounting record keeping, financial reporting and accounts reconciliations. Support from external consultants to train PMU and DPMU staff on Tally and monthly accounts reconciliation. |             |             |
| <b>External Audit</b>                                                                                                                                                                                                                                       | Moderate    | Moderate    |
| <b>Risk:</b> State-level CAG will audit project financial statements. The audit may be delayed due to a shortage of staffing resources and other priorities of CAG.                                                                                         |             |             |
| <b>Mitigation:</b> PMU will actively follow-up with State- level CAG to complete the audit on time.                                                                                                                                                         |             |             |

20. Overall risk: The Inherent FM risk is Substantial due to (i) potentially weak financial management staff capacity at both the PMU and DPMU levels, (ii) internal control issues arising from insufficient staff capacity among implementing partners, (iii) inadequate maintenance of Tally software and delays in account reconciliations, and (iv) possible delays in audit reports from the local CAG office.
21. FOCUS 2.0 design will include the following to mitigate the risks:
- Recruitment of FM staff or external consultants for the new project to strengthen FM capacity. The project should not limit the recruitment of additional FM resources to Mizoram only to mitigate potential weak FM staff capacity risk.
  - Fully customized and well-maintained Tally accounting software, to be in place before project effectiveness and to control and manage the financial operations of the project, including operations at DPMUs, will mitigate internal control risks.
  - In addition, the Project Implementation Manual (PIM), including FMM should detail procedures and processes to ensure a sound internal control system and proper segregation of duties.

## **V. Financial Management and Disbursement Arrangements**

22. **Disbursement:** The disbursement arrangements will be governed by the Project Financial Management and Financial Control Arrangements Letter (FMFCL) issued by IFAD.
- Mizoram government will pre-finance FOCUS 2.0 expenditures and request reimbursement from IFAD every quarter. The advance for the project will be provided by the Mizoram government through the Central Treasury when needed. However, an advance from IFAD option will be included in the project legal documents in the event that the state government encounters challenges in allocating funds for the project in a timely manner. DEA/CAAA (MOF) will maintain the project Designated Account (DA) at the federal level and use it to transmit funds from IFAD to Mizoram Treasury, which will transfer IFAD funds to the Project Account (PA) to be maintained by PMU. PA at PMU will be maintained in a commercial bank operating in Mizoram territory with existing online banking services. PMU will have a specific PA sub-account for each DPMU to monitor adequate budget allocations and control spending. Once all supporting documents sent by project partners are approved by the heads of PMU or DPMU, the PMU/DPMU will release funds to project beneficiaries and contractors. The project will submit to IFAD quarterly WAs to reimburse IFAD's share of project expenditures. Report-based disbursement modality will be applied to request funds from IFAD. The PMU will submit consolidated quarterly IFRs within 30 days from the end of the relevant quarter. CAAA (MOF) will submit WA for reimbursement for IFAD's share of the amount spent each quarter. There will be no advances to line departments.
23. At the request of the GoM, a sum equivalent to US\$ 1.0 million is provisioned as retro-active financing for meeting the following specific expenditures that are related to the project: (i) undertaking all preparatory works such as staff recruitment, recruitment of services providers and cost of project staff salaries; (ii) purchasing of critical office equipment for the PMU and DPMUs; (iii) identification of agencies for developing and installing software for MIS, Tally accounting software, digital extension, etc.; and (iv) capacity building of PMU and DPMU staff. Expenditures for retroactive financing, to be pre-financed by the government, should be pre-authorised by IFAD and will only be eligible for expenditures incurred from February 1, 2025, until project enters into force. SCRAM PMU will have to submit a separate withdrawal application for all eligible expenditures incurred between 1 February 2025 and the date of project effectiveness. Additionally, startup advance provisions will be integrated into the project financing agreement to reduce the risk of funding shortfalls during the initial phase of project implementation.
24. **Staffing:** The PMU HQ SCRAM will be staffed with one Deputy Director Seconded from Finance and Account Services of the State Finance Manager, supported by an Assistant Finance Manager and two Assistant Accountants. Each DPMU will have an Assistant DPMU Manager Finance position. Additionally, an external consulting firm will provide support to the finance team at HQ to maintain the Tally system, train PMU and DPMU staff on Tally, reconcile accounts, close monthly financial reports, and generate consolidated financial statements.
25. At each DPMU Assistant Manager (Finance) will have the support of a dedicated Assistant (Accounts & Procurement) to aid in both financial and procurement tasks. All procurements at the district level will be managed or overseen by the Finance Unit

26. **Planning and budgeting:** FOCUS 2.0 budgeting will be fully integrated into the overall government budgeting process. The PMU HQ finance team will prepare initial budget estimates and submit them to the Agriculture Department of Mizoram for inclusion in the government's annual budget. Budget execution control will be managed in the government's CFMS. In addition, the PMU will generate monthly budget execution reports and provide analysis. The PMU finance team will also collect data from project partners and DPMUs, prepare consolidated FOCUS 2.0 budgets in IFAD-approved formats, and agree on them with IFAD. The draft AWPB, split by components, categories, and sources of funds, will be sent to IFAD 60 days before the start of the relevant financial year.
27. **Internal control:** Financial operations and transactions related to FOCUS 2.0 will adhere to the internal approval procedures established by the Mizoram government. Additionally, FOCUS 2.0-specific internal controls and policies will be incorporated into the Project Implementation Manual (PIM) and the Financial Management Manual (FMM). The finance teams at both the PMU and DPMU levels will be responsible for collecting comprehensive supporting documents from project partners prior to releasing funds. PMU HQ will establish an electronic filing system to store all supporting documents from the DPMUs for easy access and reference. Given the limited capacity of government internal audit units, external consultants will perform a semi-annual internal audit of the project operations. PIM and FMM will be revised to include the following essential controls:
- (i) DPMUs will have sub-accounts under the main account of PMU HQ, with all sub-account activities controlled by PMU HQ.
  - (ii) Mandatory monthly closing of accounts in Tally and reconciliation will be enforced.
  - (iii) If a DPMU fails to complete adequate reconciliation or provide necessary supporting documents for any transaction, their bank accounts will be blocked until the issues are resolved.
  - (iv) Google Drive or Dropbox services will be used for uploading and storing supporting documents for each transaction.
  - (v) Advances will not be issued to line departments; instead, funds will be transferred directly to beneficiaries and suppliers by DPMUs upon receipt of all required supporting documents. Advances to suppliers and project beneficiaries will be provided upon the submission of necessary supporting documents to HQ PMU (SPMU) and DPMUs. These documents can include a signed contract with suppliers and contractors with advance payment provisions, as well as reports from village-level organizations that justify the advances to project beneficiaries for activities such as land development at the village level.
  - (vi) Finance staff at HQ PMU and DPMUs will be safeguarded from undue pressure from senior project staff and government officials. They will have the right to decline payments if full supporting documents are not provided for any payment request. The CPD will ensure that finance staff are protected from retaliation and unnecessary pressure.

- (vii) •The finance units of the SPMU and DPMUs will deduct amounts from employees' salaries if advances are not cleared within two weeks after the completion of relevant events, such as business travel or other activities, provided that there is prior approval from the PD or SPD for the relevant report and request.

28. **Accounting systems, policies, procedures, and financial reporting:** The PMU HQ will complete the customization of an advanced cloud-based version of the Tally accounting software to facilitate accounting record-keeping and financial reporting for FOCUS 2.0. This customization will be finalized by May 30, 2025, and will enable the automatic generation of consolidated Interim Financial Reports (IFRs). The project will adhere to Indian National Accounting Standards when preparing financial statements and reports.
29. **External audits:** The State-level Comptroller and Auditor General (CAG) office of Mizoram will be responsible for auditing the project's annual financial statements to promote the use of country systems in India. The Mizoram CAG office aims to issue audit reports within six months following the end of the financial year. While there may be delays in the issuance of these reports due to the local CAG's limited resources and other prioritizations, the project will actively collaborate with the State CAG to ensure timely delivery of audit reports.
30. **Country systems:** Government staffing, budgeting, funds flow, accounting and audit standards, and the local statutory audit institution (CAG) will be used to implement FOCUS 2.0.
31. **Lessons learned:** IFAD-funded projects in India have issues maintaining accurate financial records for hundreds of implementing partners such as DPMUs, VDCs, MPAs, and FNGOs. In addition, projects have problems collecting and filing supporting documents for the accounting transactions recorded for implementing partners. The original FOCUS project exhibited comparable weaknesses. Furthermore, limited staff capacity at both the PMU and DPMU levels led to insufficient quality in financial records and reports, as well as delays in reconciliations and the provision of supporting documents. However, FOCUS 2.0 will have a central PA with a unique sub-account for each DPMU to release funds. Funds will be released to contractors by PMU and DPMUs from centrally managed PA. As a result, there will be no outstanding advances with DPMUs or line departments, and all supporting documents will be electronically collected at the central PMU level, minimizing the risk of missing accounting supporting documents. Furthermore, staff capacity will be enhanced by seconding government personnel to the project and recruiting external consultants to improve overall internal controls within project operations. Incorporating startup advance and retroactive financing provisions into the project Financing Agreement will enhance the management of funds flow risks.

## VI. Implementation Readiness

32. Table 3: FM Actions Summary: The actions needed to mitigate FM risks are summarised below:

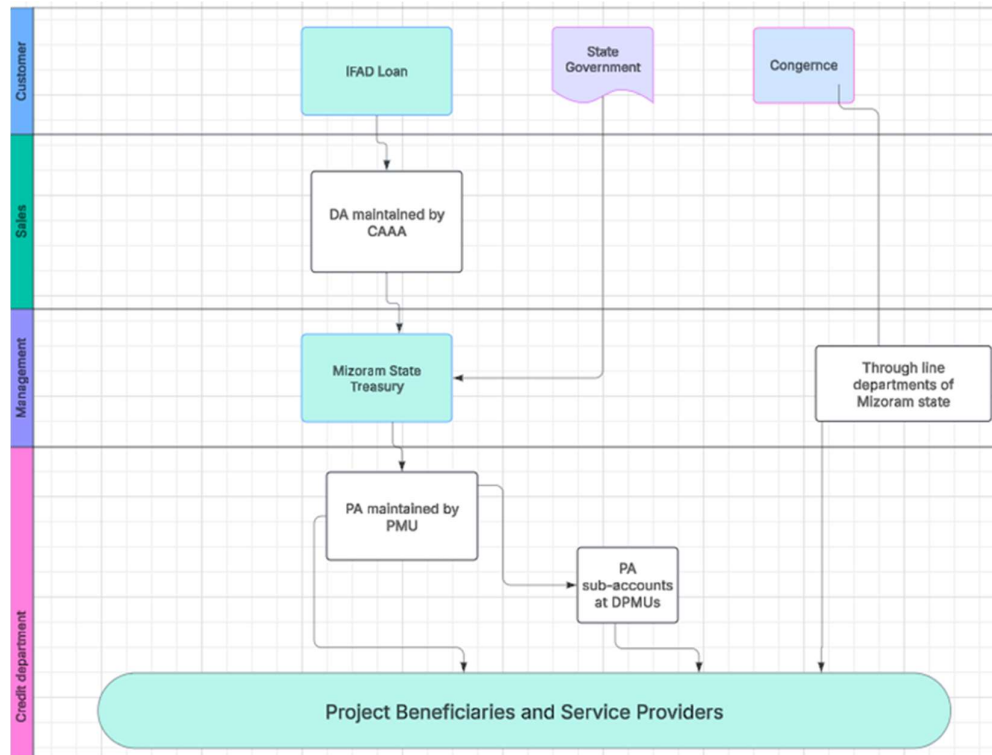

|    | Action                                                                            | Responsible Party / Person | Target Date / Covenants <sup>4</sup>             |
|----|-----------------------------------------------------------------------------------|----------------------------|--------------------------------------------------|
| 1. | PIM and FMM development.                                                          | FOCUS 2.0 PMU (SCRAM)      | (By the entry into force<br>FA Covenant required |
| 2. | Tally accounting software purchase and customization.                             | FOCUS 2.0 PMU (SCRAM)      | (By the entry into force                         |
| 3. | Recruitment of experienced and qualified FM staff.                                | FOCUS 2.0 PMU (SCRAM)      | (By the entry into force                         |
| 4. | Budget allocations are agreed and approved for pre-financing project expenditures | FOCUS 2.0 PMU (SCRAM)      | (Within two months from entry into force         |
| 5. | Include retrospective financing arrangements                                      | IFAD/GoI                   | During negotiations                              |

## 33. FM Supervision plan

FMS or FO will join the IFAD Supervision mission once a year. In addition, FMS will participate in the Implementation Support Mission every year until project residual risk is reduced to Medium.

#### **Annex 9: Project Implementation Manuals**

Mission Dates: 31 March – 18 April 2025

Document Date: 04/09/2025

Project No. 2000004677

Report No. 7262-IN

Asia and the Pacific Division  
Programme Management Department

# Fostering Climate-Resilient Upland Farming Systems in the Northeast (FOCUS) 2.0

## Project Implementation Manual (PIM)

Project ID: 2000004677  
Society for Climate Resilient Agriculture in Mizoram (SCRAM)  
Government of Mizoram  
India

30 July 2025

## Currency Equivalents:

1 Indian Rupee (INR) = 0.012 US Dollar (US\$)

1 US\$ = 85.42 INR

As of 19 May 2025

## Weights and Measures:

1 Crore = 10,000,000 (10 million)

1 lakh = 100,000 (100 thousand)

1 hectare (ha) = 10,000 m<sup>2</sup>

1 acre = 2.471 hectares

## Glossary of Terms

The following terms, some of which are commonly used within the State of Mizoram, are described below.

**Bana Kaih:** *Bana Kaih* is a state-endorsed handholding scheme in Mizoram that promotes close technical, financial, and institutional support to farmers and farming communities. It emphasizes coordinated planning, convergence of departmental services, and sustained capacity building to ensure successful adoption of improved agricultural practices and rural development interventions. FOCUS 2.0 is seen as a special purpose vehicle for delivering the *Bana Kaih*.

**Bank Sakhi:** A rural financial inclusion initiative under National Rural Livelihood Mission (NRLM) that empowers women from SHGs to serve as Banking Correspondents (BC Sakhis), providing doorstep banking services in underserved rural areas. **Sakhi** means **friend** in Hindi. In various government schemes, it refers to women facilitators or community workers who support grassroots-level implementation, such as Bank Sakhi (banking facilitator) or Pashu Sakhi (livestock extension worker).

**Kisan Credit Card:** The Kisan Credit Card (KCC) is a government-backed credit scheme in India designed to provide affordable and timely credit to farmers for their agricultural and related needs. Introduced in 1998 by the Reserve Bank of India (RBI) and National Bank for Agriculture and Rural Development (NABARD), the KCC aims to help farmers access short-term loans at subsidized interest rates.

**Participatory Land Use Mapping and Planning (PLUMP):** Participatory Land Use Mapping and Planning is a bottom-up, community-driven process that enables rural communities (especially Indigenous Peoples, smallholders, women, and marginalized groups) to map existing land use, identify opportunities and constraints, and collaboratively develop land use plans that reflect social, economic, cultural, and environmental priorities. Core objectives of PLUMP are to empower communities to make informed decisions on land use and resource management; clarify and visualize land tenure arrangements, resource boundaries, and customary rights; reduce conflict over land and natural resources through transparent and inclusive negotiation; support environmental sustainability by identifying zones for conservation, cultivation, settlement, grazing, and reforestation; and inform investment planning—especially in projects involving infrastructure, land development, or agricultural intensification. The process and tools typically involved are: (i) Community Mobilization & Awareness-Raising; (ii) Participatory Mapping Exercises (e.g. sketch maps, GIS-enabled mapping, or satellite imagery interpretation; identification of land use types); (iii) Resource Inventory & Use Analysis; (iv) Negotiation & Zoning; (v) Land Use Plan Formulation; (vi) Validation by the Community and Local Authorities; and (vii) Documentation and Integration into Local Planning Systems. The process is congruent with and supports Free, Prior, and Informed Consent (FPIC), gender and social inclusion, alignment with national land policies and decentralization frameworks, sustainability, and conflict sensitivity.

**Participatory Social Assessment (PSA):** According to IFAD, a Participatory Social Assessment is a structured analysis of social dynamics, institutions, and vulnerabilities that affect how different groups – particularly the poor, women, youth, and Indigenous Peoples – may benefit from or be excluded by a project. It is typically carried out during project design or early implementation, often as part of an SECAP (Social, Environmental and Climate Assessment Procedures) analysis. The purpose is to: (i) identify vulnerable and marginalized groups; (ii) understand power relations, gender dynamics, and social barriers; and (iii) inform targeting strategies, social inclusion measures, and safeguards. Outputs of a PSA may include social inclusion plans, gender action plans, Indigenous Peoples' frameworks, and Grievance Redress Mechanisms.

**Participatory Rural Appraisal (PRA):** PRA is a set of participatory tools and techniques used at the community level to enable local people to analyze their own situation, identify priorities, and contribute to planning. It is often applied during project identification or community mobilization and focuses on building local ownership and gathering bottom-up information. The purpose is to: (i) enable communities to express needs, resources, and challenges; (ii) support participatory planning and local empowerment; and (iii) complement technical design with local knowledge. Common tools for PRA include social/resource mapping, development of seasonal calendars, wealth ranking, and focus group discussions.

Key differences between PSA and PRA, as related but different approaches, are summarized below:

| Aspect             | Approach                                                    |                                                            |
|--------------------|-------------------------------------------------------------|------------------------------------------------------------|
|                    | Participatory Social Assessment (PSA)                       | Participatory Rural Appraisal (PRA)                        |
| Focus              | Social structures, vulnerability, inclusion/exclusion risks | Local perceptions, needs, and development priorities       |
| Level of Analysis  | Policy/institutional and community levels                   | Primarily community/household level                        |
| Purpose            | Inform targeting, safeguards, and social risk management    | Support planning and community engagement                  |
| Timing             | During design and SECAP process                             | During identification or local planning                    |
| Led by (typically) | Social/gender experts or safeguard specialists              | Facilitators or community mobilizers                       |
| Output             | Social analysis, action plans                               | Community development priorities, participatory maps, etc. |

**Pradhan Mantri Gram Sadak Yojan (PMGSY):** a centrally sponsored scheme primary objective is to provide all-weather road connectivity to unconnected rural habitations (with populations of 500 and above in plain areas, and 250 and above in hilly, tribal, and desert regions), thereby enhancing access to essential services and promoting economic development in rural areas.

**Rashtriya Krishi Vikas Yojana (RKVY):** A centrally sponsored scheme promoting comprehensive agricultural development by incentivising states to boost public investment in agriculture and allied sectors.

**Tribes:** In Mizoram, "tribes" refers to the ethnically distinct Scheduled Tribes recognized under the Indian Constitution, who comprise the vast majority of the state's population. These include major Mizo groups and sub-tribes, such as the Lai, Mara, and Chakma, (amongst others). Each tribe maintains its own cultural practices, language, and customary laws, and several are governed under Autonomous District Councils (ADCs) (as seen in Lawngtlai District), established under the Sixth Schedule for decentralized administration and cultural preservation.

**Zau:** According to the State Government of Mizoram, *Zau* refers to an Agricultural Intensification Cluster, a localized, contiguous, and coordinated farming area where farmers collectively implement agricultural practices based on the agro-ecological zone and slope gradient. In the context of FOCUS 2.0, *Zaus* serve as the spatial and institutional units for synchronized production, input distribution, extension services, and market linkage, enabling economies of scale and convergence with government schemes, with a focus on implementing climate-resilient, market-oriented agricultural practices.

| Annex 1: Eligibility and Selection Criteria for FPOs and Community Institutions ..... | 419 |
| Annex 2: Technical Note on Value Chain .....                                          | 421 |
| Annex 3: Technical Note on Rural Finance.....                                         | 437 |
| Annex 4: Value Chain Analysis – Selected Commodities.....                             | 445 |
| Appendix 14 – Component 2 Annexes .....                                               | 456 |
| Annex 1: SOP for Goat interventions in Zaus/Individually .....                        | 456 |
| Annex 2: SOP for Pig Breeding and Fattening .....                                     | 458 |
| Annex 3: SOP for Broiler Production .....                                             | 460 |
| Annex 4: SOP for Brown Egg Production.....                                            | 462 |
| Annex 5: SOP for CAHW .....                                                           | 464 |
| Appendix 15 – Component 3 Annexes .....                                               | 465 |

# Chapter 1: PIM Document

## 1.1 Function and Status

1. This Project Implementation Manual (PIM) serves as an official country-level document guiding the implementation of the FOCUS 2.0 project. It provides detailed procedures, institutional arrangements, and operational guidance aligned with the project's design and the Financing Agreement. The PIM becomes effective only upon:

- Approval by the designated national authority, such as the Project Steering Committee (PSC) or other competent body; and
- Receipt of a formal no-objection from the International Fund for Agricultural Development (IFAD).

2. This validation process equally applies to any specialized manuals developed under the project (included as annexes to this PIM), including but not limited to the Financial Management Manual, Procurement Guidelines, and Monitoring and Evaluation (M&E) Manual.

3. Revisions to the PIM or any related specialized manuals (or their sections) may occur at any point during the project's implementation to reflect evolving needs, lessons learned, or updated IFAD or government policies. All changes will be documented in the Revisions Log (Section 1.3 of this Manual), clearly stating the date of approval by the competent authority and the issuance of IFAD's no-objection.

## 1.2 Overview of Contents

4. This PIM provides a comprehensive guide to the implementation of FOCUS 2.0. It is structured to reflect the project's components, implementation arrangements, financial and procurement procedures, safeguards, M&E systems, knowledge management, and reporting requirements. The manual is complemented by detailed annexes like the Financial Management Manual, Procurement Guidelines, and Monitoring and Evaluation Manual, which provide further operational details.

5. As a living document, this PIM will be updated as needed to incorporate and account for any elements outlined during project design. Specifically, further updates may include (but are not limited to):

- The Sustainability, Scaling, and Exit Strategy, which will be further developed into a formal Exit Plan and Scaling Plan (or a combined Sustainability Plan) during implementation;
- The Gender Action Plan, which will be updated during the first year of implementation and re-integrated into the PIM in alignment with the latest project timelines and gender mainstreaming activities.

6. Other operational instruments, such as site-specific Environmental, Social, and Climate Management Plans (ESCMPs), where required or planned, will also be incorporated as annexes once finalized.

## 1.3 Revisions Log

7. All revisions to the PIM and its annexes will be documented in the following format:

Table 1: PIM Revisions Log

| PIM Version | Date of Revision<br>(DD/MM/YY) | Section(s) Revised | Approved by<br>(PSC/Authority) | IFAD No-Objection Date | Summary of Changes |
|-------------|--------------------------------|--------------------|--------------------------------|------------------------|--------------------|
| 1.0         | 09/05/25                       | Initial Manual     | PSC/Governing Council          | [Insert Date]          | Initial version    |
| 1.1         |                                |                    |                                |                        |                    |

8. The PIM is a living document and may be updated at any time throughout the course of the project cycle.

## Chapter 2: Project Description

### 2.1 For use in reports

9. FOCUS 2.0 is an IFAD-supported initiative of the Government of Mizoram that is designed to address structural challenges faced by rural households around low agricultural productivity, limited market access, and weak value addition. The project aims to address these challenges by enabling a transition toward climate-resilient, market-linked agri-food systems. The project will directly benefit 75,000 households across all 11 districts, with a particular focus on smallholders, ethnic minorities, women, and youth. Tribal communities comprise more than 94% of Mizoram’s population, so it is expected that project beneficiaries will be almost 100% tribal. Its implementation is grounded in the Theory of Change (please refer to Appendix 1), which posits that if communities are organized and supported with productive infrastructure, financial services, climate-smart technologies, and market linkages, they can sustainably improve their incomes and resilience.

10. As per the project’s Theory of Change, FOCUS 2.0’s goal, objective, and targeted outcomes are as follows:

- **Goal:** To contribute to economic prosperity and enhanced climate resilience in rural Mizoram.
- **Project Development Objective:** To enhance the economic, social, and climate resilience of targeted rural households through strengthened agricultural value chains.
- **Outcomes:**
  - Enhanced market access and value addition with reduced post-harvest losses
  - Enhanced climate-resilient crop and livestock productivity

11. The project is comprised of three components, as follows:

#### **Component 1: Market Access and Enterprise Development**

12. This component improves access to markets and value addition opportunities for agricultural and livestock products through a tiered *hub-and-spoke* model. It finances the development of Collective Marketing Centres (CMCs) at the village level, block-level Farmers’ Markets, and district-level Value Addition Hubs (“Hubs”), all connected through improved first-mile<sup>1</sup> rural roads. It also supports entrepreneurship through an incubation fund, capacity building in business skills, and improved access to

<sup>1</sup> IFAD uses “first-mile” to denote the links/delivery to farmers as primary producers and the “first-mile” of production, to emphasize the importance of farmers as producers, as opposed to a more centralized perspective

credit and insurance services. Financial inclusion is promoted through project-linked credit products, digital profiling of beneficiaries, and use of Kisan Credit Cards (KCCs).

### **Component 2: Agricultural and Livestock Productivity**

13. Component 2 supports the sustainable intensification of agriculture and livestock systems through a cluster-based approach. Subcomponent 2.1 strengthens crop productivity via the operationalization of approximately 700 *Zaus* (Agricultural Intensification Clusters), land development for non-*Zau* households, and promotion of climate-smart agricultural practices such as agroforestry, improved crop rotation, and soil and water conservation. Subcomponent 2.2 enhances livestock production by supporting pig breeding, backyard and broiler poultry, goat and egg production, and disease management (especially African Swine Flu (ASF)). Community Animal Health Workers (CAHWs), artificial insemination (AI) technicians, and improved biosecurity infrastructure will ensure first-mile<sup>2</sup> service delivery.

### **Component 3: Institutional Strengthening and Project Management**

14. This component ensures effective coordination, planning, and oversight of the project through the Society for Climate Resilient Agriculture in Mizoram (SCRAM), under the Planning and Programme Implementation Department. The project will be led by a Chief Project Director (IAS) to facilitate convergence across departments, and a Project Director from the Department of Agriculture. Capacity development of implementing teams, knowledge management, M&E, safeguards, and learning are also supported under this component, alongside dedicated technical support providers (TSPs) embedded at cluster and district levels.

## **2.2 Summary description for use in brochures**

15. FOCUS 2.0 is a Government of Mizoram and IFAD-supported initiative designed to improve the economic, social, and climate resilience of targeted rural households across all 11 districts. The project has three components: **(1) Market Access and Enterprise Development**, which supports rural infrastructure (including Collective Marketing Centres, Farmers' Markets, and Hubs), and promotes enterprise incubation, financial access, and rural road connectivity; **(2) Improved Agricultural Productivity**, which enhances crop and livestock systems through Agricultural Intensification Clusters (Zaus), land development, climate-smart practices, improved livestock practices, and disease risk management; and **(3) Project Management and Institutional Strengthening**, which ensures effective coordination, convergence, capacity building, and knowledge sharing through SCRAM and decentralized structures.

16. **Implementing Agency:** Society for Climate Resilient Agriculture in Mizoram (SCRAM), Planning and Programme Implementation Department, Government of Mizoram

## **Chapter 3: Project Management**

18. The institutional systems and capacities established under the earlier phase of the Society for Climate Resilient Agriculture in Mizoram (SCRAM) will provide the foundation for the implementation arrangements of the new phase. The Planning and Programme Implementation Department, Government of Mizoram, through the SCRAM Society, serves as the lead implementing agency. The project will follow

---

<sup>2</sup>Idem.

a three-tier implementation structure at the State, District, and Village levels, facilitating decentralised planning and ensuring effective delivery.

19. In the new phase, this institutional structure will be further strengthened, with a specific focus on enhancing financial management, procurement systems, environmental and social safeguards, and promoting stronger convergence mechanisms at both the district and community/village levels.

### 3.1 Management principles

20. The project management principles for the SCRAM initiative will focus on the following core values to ensure effective, decentralised, and community-driven project implementation:

- **Decentralisation:** The SCRAM project will embrace decentralised management at all levels, ensuring that decisions are made as close to the communities as possible. This will empower local bodies, District authorities, and Village-level institutions to take an active role in managing and implementing project activities, creating a more responsive approach to community needs.
- **Coordination and Cooperation:** Effective coordination between multiple stakeholders, including government agencies, technical line agencies, and other relevant partners, will be critical. The project will facilitate collaboration between various departments (agriculture, rural development, and others) to ensure a holistic approach to rural development.
- **Integrated Management:** An integrated approach will be followed across various disciplines and sectors. This means that when decisions are made at the District or block level, they will be based on inputs from different technical experts from relevant fields. The aim is to create synergies across sectors like agriculture, infrastructure, finance, and community development, which will help in resolving complex challenges at the community level.
- **Flexibility and Adaptability:** Given the diversity of communities and challenges across the project area, flexibility will be a key principle. The project will be adaptable to local conditions and will encourage innovative solutions tailored to meet the unique needs of each area. This will help ensure that the project is responsive to changes and can take corrective actions as needed.

21. These principles will guide the management of the SCRAM project, ensuring that it remains responsive, efficient, and effective throughout its implementation.

### 3.2 Project preparation and start-up

22. A coordinated project preparation and start-up process will ensure a smooth transition from project design to effective implementation. The following actions will be undertaken by the Government of Mizoram, the SCRAM Society (as Lead Implementing Agency), DEA, and IFAD to facilitate project readiness:

#### **Legal and Administrative Clearances:**

23. The Government of Mizoram will formally request DEA to initiate loan negotiations with IFAD. DEA will obtain the Project Readiness Checklist and an authorisation letter from the State nominating its negotiation delegation. IFAD will share the draft legal agreements, which will be reviewed by DEA and the State Government in advance of the negotiations. The process will culminate in loan negotiations conducted in a hybrid format, following DEA's internal preparations

#### **Budgetary Arrangements and Planning Instruments:**

24. The project will be included in the State budget, with the first 18-month Annual Work Plan and Budget (AWPB) and Procurement Plan finalised to outline key activities and expenditures for the initial period.

Counterpart financing will be released in accordance with the Financing Agreement to ensure timely disbursements.

25. To address liquidity challenges from the previous phase, the Government of Mizoram may request a Start-up Advance in consultation with the DEA.

**Start-up Advance:** IFAD may provide a start-up advance upon entry into force, prior to fulfilling conditions for withdrawal.

- **Purpose:** To fund initial activities, such as preparing the Project Implementation Manual (PIM), procuring accounting software, and recruiting key staff.
- **Withdrawals:** The advance is drawn through submission of a withdrawal application.

### **Recruitment and Staffing:**

26. Core staff at the State Project Implementation Unit (SPIU) and District Project Implementation Units (DPIUs) will be appointed. Terms of reference will be finalised, and recruitment initiated for technical experts, safeguards personnel, and block-level facilitators.

### **Institutional Set-up and Orientation:**

27. Project Steering Committees at the State and District levels will be notified or reconstituted. Induction and capacity-building activities will be held for key project staff, covering IFAD's fiduciary, safeguard, operational, and M&E requirements. The Project Implementation Manual (PIM) will be finalised and disseminated.

### **Partnerships and Convergence:**

28. Formal convergence mechanisms will be initiated with key line departments and agencies through **MoUs signed with SCRAM Society**, enabling joint delivery in areas such as nutrition, market access, climate resilience, and extension. Collaborations with research institutions and market actors will also be pursued, based on their relevance to the value chains supported through FOCUS 2.0. Potential partners may include, but are not limited to the: National Bank for Agriculture and Rural Development (NABARD); Mizoram State Rural Livelihood Mission (MizSRLM); Mizoram Rural Bank; Directorate of Commerce (Department of Commerce and Industries); Department of Irrigation and Water Resources (Nodal Agency for Zau Implementation), etc.

### **Private Sector Engagement:**

29. A **Private Sector Roundtable Conference** will be organised to engage agribusinesses, horticulture producers, investors, and potential partners, highlighting Mizoram's agricultural and horticultural production strengths, along with the enabling infrastructure improvements planned under FOCUS 2.0. The conference will serve as a platform to foster collaboration and explore co-investment opportunities along key agricultural and horticultural value chains, focusing on inclusive public-private partnership (PPP) models. This engagement will attract private sector investment, facilitate technology transfer, and create sustainable business opportunities that contribute to enhanced productivity and rural livelihoods.

### **Procurement Activities and Start-up Plan:**

30. Procurement of essential goods and services (e.g. vehicles, IT systems, baseline studies, safeguards assessments) will be initiated. Early-stage mobilisation at the village level and participatory planning processes will mark the operational roll-out.

**Start-up Plan:** IFAD will assist SCRAM in organizing a start-up workshop, which will serve as a platform to train SPIU, DPIUs, partners, and TSPs on the project approach, implementation modalities, IFAD's financial management and procurement procedures, AWPB, and M&E. Additionally, IFAD will offer backstopping support to the SPIU during the project implementation. This support will include necessary technical assistance from experts in value chain development, infrastructure, SECAP, and agriculture/NRM to refine implementation strategies, but based on emerging/ revolving needs of the project. Special emphasis will be initially placed on establishing strong financial management and procurement systems, as well as robust planning, M&E, and MIS frameworks to ensure effective project implementation.

### **Project Readiness Action Plan:**

31. FOCUS 2.0 will be implemented over a six-year period, with full-scale implementation expected to begin in FY 2025-26. To ensure a seamless transition from the previous phase of the project (FOCUS) to FOCUS 2.0, a set of preparatory actions will be undertaken during the interim readiness period. These include: (i) recruitment of key/additional staff; (ii) initiation of procurement processes for **Technical Service Providers and goods**; (iii) launch of baseline and safeguards surveys; and (iv) updating of MIS platforms. A six-month **Readiness Action Plan** is provided in Table 2 to guide these initial activities and minimise delays in project implementation.

**Table 2. FOCUS 2.0 Project Readiness Action Plan: August 2025 – January 2026 (6 months)**

| # | Key Activities                                                                                                                       | Action                                                                                                      | Responsibility | Months |      |     |     |     |     |     |      |

|  |  | Disseminate IFAD policy on gender equality and women's empowerment among staff and partners                                    | Gender, nutrition and social inclusion specialist, SPIU |  |  |  |  |  |  |  |  |  |
|  |  | Advertise Eols for various gender and women related studies                                                                    |                                                         |  |  |  |  |  |  |  |  |  |
|  |  | Selected/contracted TSPs to undertake the studies (TSP under activity #15)                                                     |                                                         |  |  |  |  |  |  |  |  |  |
|  |  |                                                                                                                                | <b>Fiduciary aspects</b>                                |  |  |  |  |  |  |  |  |  |
|  |  | Draft ToR for a contractor                                                                                                     | SPIU                                                    |  |  |  |  |  |  |  |  |  |
|  |  | Review and finalise TOR and advertise                                                                                          | SPIU                                                    |  |  |  |  |  |  |  |  |  |
|  |  | Complete process on OPEN System and obtain necessary approvals                                                                 | SPIU & IFAD                                             |  |  |  |  |  |  |  |  |  |
|  |  | Procure and initiate a contract                                                                                                | SPIU                                                    |  |  |  |  |  |  |  |  |  |
|  |  | Fully customize the Tally system for existing DPIUs and the SPIU                                                               | SPIU                                                    |  |  |  |  |  |  |  |  |  |
|  |  | Install the customized Tally system for the additional DPIUs (new FOCUS 2.0 districts)                                         | SPIU                                                    |  |  |  |  |  |  |  |  |  |
|  |  | Prepare a WA with start-up expenses & submit to IFAD                                                                           | SPIU                                                    |  |  |  |  |  |  |  |  |  |
|  |  |                                                                                                                                | <b>Engagement with beneficiaries</b>                    |  |  |  |  |  |  |  |  |  |
|  |  | Based on selection criteria for each sub-component, select beneficiaries in consultative, inclusive and participatory approach | DPIUs                                                   |  |  |  |  |  |  |  |  |  |

|    |                                       |                                                                             |                                  |  |  |  |  |  |  |  |  |  |
|----|---------------------------------------|-----------------------------------------------------------------------------|----------------------------------|--|--|--|--|--|--|--|--|--|
|    |                                       | Raise beneficiary awareness and sensitization on FOCUS 2.0 (FPIC meeting 1) | DPIUs                            |  |  |  |  |  |  |  |  |  |
|    |                                       | FPIC meeting 2 (related to various mapping under Activity #24; #25; #26)    | DPIUs                            |  |  |  |  |  |  |  |  |  |
|    |                                       |                                                                             | <b>Component-wise activities</b> |  |  |  |  |  |  |  |  |  |
| 24 | Initiate Sub-component 1.1 activities | Map existing and potential market infrastructure (TSP under Activity #15)   | SPIU                             |  |  |  |  |  |  |  |  |  |
| 25 | Initiate Sub-component 2.1 activities | Map areas for Zaus (TSP under Activity #15)                                 | SPIU                             |  |  |  |  |  |  |  |  |  |
| 26 | Initiate Sub-component 2.2            | Map potential Zaus for goat rearing (TSP under Activity #15)                | SPIU                             |  |  |  |  |  |  |  |  |  |

### 3.3 Project actors and entities – Project governance

32. The institutional systems and capacities established under the earlier phase of the Society for Climate Resilient Agriculture in Mizoram (SCRAM) will serve as the foundation for Phase II. Given the elevated significance of FOCUS 2.0—particularly its mandate to function as a Special Purpose Vehicle (SPV) for implementing the state’s Handholding Policy (Bana-Kaih)—the Planning and Programme Implementation Department (P&PID) will serve as the lead implementing agency in this phase. Phase II will retain the three-tier implementation structure (State, District, and Village levels), facilitating decentralized planning and ensuring effective delivery. Phase II will retain the three-tier implementation structure — State, District, and Village — facilitating decentralised planning and ensuring effective delivery.

33. In the new phase, this structure is being further strengthened, with emphasis on:

- Financial management and procurement systems
- Environmental and social safeguards
- Stronger convergence mechanisms at district and community levels
- Elevating inter-departmental coordination and strategic alignment

34. The implementation framework continues to rest on two core pillars:

- A. **Governance** — through structured committees at the State, PIU, and District levels chaired by Government officials, ensuring policy oversight and inter-departmental alignment.
- B. **Management** — through the SCRAM PIU, District Project Implementation Units, and community-level bodies, ensuring decentralised, community-led implementation.

#### **Governance Structure – Oversight, Policy Direction, and Convergence**

35. Governance mechanisms ensure policy guidance, cross-sectoral alignment, and institutional accountability. FOCUS 2.0 builds on and significantly strengthens the original governance architecture from FOCUS. State and district-level governance are described below.

##### **State-Level Governance**

36. **State Level Project Steering Committee/Governing Council (GC):** At the State level, the project will be overseen by a high-level Governing Council, now chaired by the Hon’ble Chief Minister of Mizoram. The Principal Adviser-cum-Additional Secretary, Planning and Programme Implementation Department (P&PID) will serve as the Member Secretary.

37. **Expanded Membership for Cross-Sectoral Collaboration:** The membership has been significantly expanded to reinforce cross-sectoral convergence and ensure coordinated support from all relevant departments and institutions. Members will include:

- C. All concerned Ministers
- D. Vice Chairman, Mizoram State Planning Board (MSPB)
- E. Vice Chairman, Mizoram State Policy Coordination Committee (MSPCC)
- F. Adviser to the Chief Minister (Finance and Planning)
- G. Chief Secretary
- H. Finance Commissioner
  - I. All concerned Administrative Secretaries, including the State Nodal Officer, MGNREGA, and the State Mission Director, Mizoram State Rural Livelihoods Mission (MzSRLM)

38. This broadened composition reflects the project’s multi-sectoral approach, enabling strategic oversight, policy alignment, and institutional accountability across key focus areas such as livelihoods, infrastructure, agriculture, and natural resource management.

## Project Management Committee (PMC)

39. **The second tier of governance**, i.e., the PMC, will continue to play a central role in overseeing operational planning and implementation. The PMC will now be chaired by the Principal Adviser-cum-Additional Secretary, Planning and Programme Implementation Department (P&PID), with the Chief Project Director, SCRAM, serving as Member Secretary. The PMC is tasked with ensuring effective inter-departmental coordination for smooth programme delivery

40. **Phase II Enhancements:** In Phase II, the composition of the PMC will be expanded to mirror the broadened membership of the Governing Council, incorporating representatives from the Directorate of Commerce and Industries, Department of Irrigation and Water Resources, Power and Electricity Department, and Mizoram State Rural Livelihoods Mission (MzSRLM) and a representative from SPCC. This expanded structure is designed to further reinforce cross-sectoral collaboration and ensure alignment between policy-level decisions and operational execution. Members will now include:

- All concerned Heads of Departments (HoDs)
- Managing Director, Mizoram Agricultural Marketing Board
- Principal Scientist, Mizoram Science, Technology & Innovation Council
- Principal Scientist, Mizoram Remote Sensing Application Centre (MIRSAC)
- Mission Director, MGNREGA
- Chief Executive Officer, Mizoram State Rural Livelihoods Mission (MzSRLM)
- Chief Executive Officer, Mizoram Startup Mission
- Team Lead, Programme Implementation, Monitoring & Evaluation Unit, State Institute for Transformation
- 

41. **Strategic Participation for Policy Alignment:** To further embed the project within the state's overarching policy and planning framework, the PMC will also include representation from the **Mizoram State Policy Coordination Committee (SPCC)**. This enhanced participation is expected to: (i) ensure stronger alignment between project interventions and state-wide development strategies, particularly the *Bana-Kaih* Handholding Policy; and (ii) facilitate effective convergence and coordinated implementation across sectors, especially for complex and cross-cutting initiatives.

## District-Level Governance:

42. **At the District Level,** To streamline governance and reinforce convergence at the district level, the earlier District Level Coordination Committee (DLCC) will be subsumed into the existing District Planning Committee (DPC) chaired by the Deputy Commissioner. This shift eliminates the need for a separate governance layer while leveraging an established institutional platform for oversight, alignment, and inter-departmental coordination.

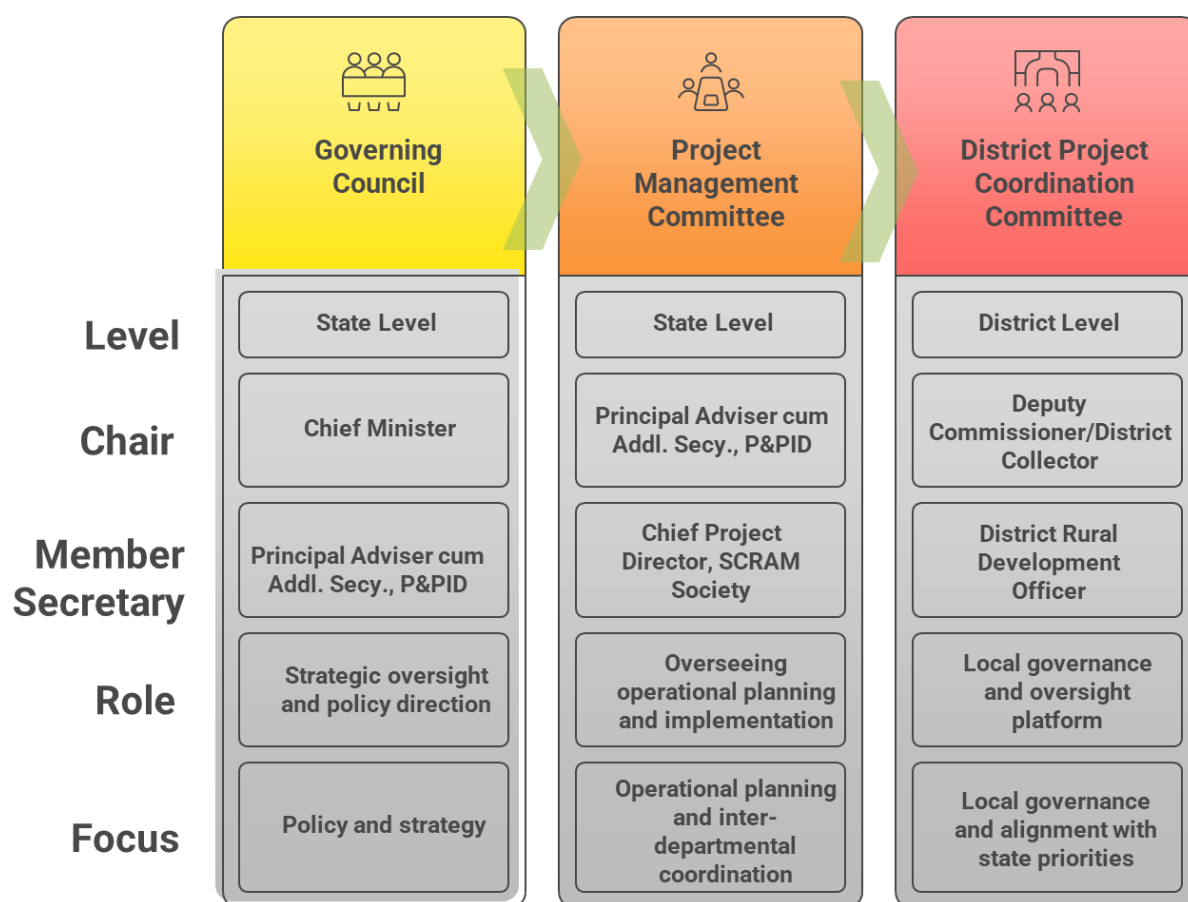

43. **Phase II Enhancements:** The DPC will act as the primary forum for strategic review and convergence of project activities and may be convened as and when required, ensuring flexibility and responsiveness to local needs. In alignment with the broader financial ecosystem, representatives from NABARD and the Lead Bank will be invited to participate in DPC meetings, as relevant.

*As part of an innovative participatory approach, representatives from Farmer Interest Groups (FIGs) were periodically invited to the District Level Coordination Committee (DLCC) meetings to directly present their concerns, priorities, and suggestions. This mechanism not only fostered grassroots accountability and transparency but also significantly empowered community members by building their confidence to engage with and influence decision-making processes across various government departments. It will be continued through DPC, providing communities even a stronger platform for feedback*

44. A key institutional best practice from Phase I—maintaining a standing agenda item for community feedback—will be continued under FOCUS 2.0. This mechanism will allow farmers and community-based organizations to share concerns and recommendations directly with district authorities, reinforcing the project’s commitment to participatory planning, grassroots accountability, and adaptive delivery.

45. The governance structure of FOCUS 2.0 is summarized below:

### 3.4 Project actors and entities – Project implementation

46. Project management of FOCUS 2.0 covers three key functions: (i) operational planning; (ii) technical execution; and (iii) results-based monitoring. Phase II builds on the existing institutional framework by

strengthening core implementation structures and clarifying leadership roles to enhance efficiency and responsiveness. Implementation follows a three-tier structure:

- **State Project Implementation Unit (SPIU)** – The SPIU will be headed by the Chief Project Director, an officer at the Joint Secretary level, and seconded by the Project Director, an officer at the Deputy Secretary level. Officers at the level of Deputy Director will be deputed from stakeholder departments through an application-based process; any vacant positions thereafter will be filled through departmental nominations. All other SPIU staff will be engaged on a co-terminus basis. The SPIU will provide strategic direction, technical oversight, and interdepartmental coordination.
- **District Project Implementation Units (DPIU)** – The DPIU will be headed by the Deputy Commissioner of the respective district and seconded by the Project Director, DRDO. DPIUs will be housed within the District Rural Development Office (DRDO) and will be supported by co-terminus project staff as well as DRDO-assigned personnel (clerical, engineering, and support staff). DPIUs will lead localized planning, implementation, supervision, and ensure convergence with district-level institutions.
- **Village-level institutions** and community-based staff – including CLFs, VOs, and Zau Resource Persons – serve as the interface with beneficiaries and ensure last-mile delivery.
- 

### State Project Implementation Unit

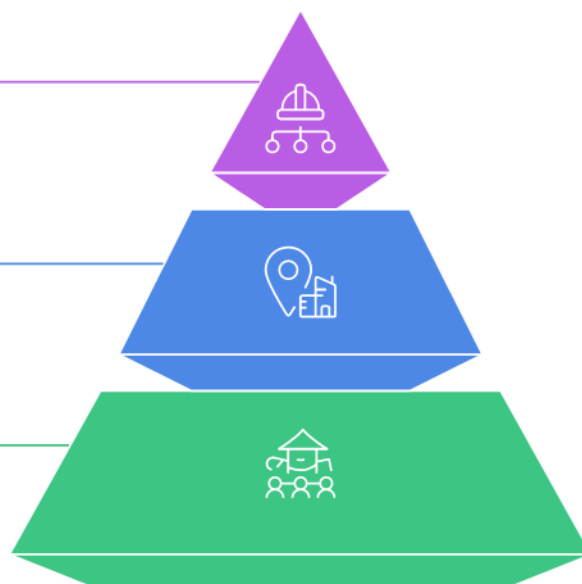

Provides strategic direction and coordination

### District Project Implementation Units

Lead localized planning and supervision

### Village-Level Institutions

Interface with beneficiaries for last-mile delivery

47. **Executing Agency:** The Planning and Programme Implementation Department (P&PID) will serve as the lead implementing agency for FOCUS 2.0, reflecting the project's elevated role in driving cross-sectoral convergence and its alignment with state-wide development priorities. The State Project Implementing Unit (SPIU), housed within the SCRAM Society, will be responsible for day-to-day implementation.

48. Project funds—including IFAD loan proceeds, grant resources, and the Government of Mizoram's counterpart contribution—will be channelled from the state budget to the SCRAM Society, which will continue to serve as the financial and administrative conduit for project operations.

49. The SCRAM Society, through the SPIU and DPIUs, will be responsible for fund allocation, planning, execution, monitoring, and reporting, in accordance with the Project Design Report (PDR) and Project Implementation Manual (PIM). With the expanded governance structure, redefined leadership roles, and enhanced implementation capacity, FOCUS 2.0 is positioned to deliver more integrated, accountable, and results-oriented execution.

## Phase II Enhancements:

| Role                          | Designation                           | Key Responsibilities                                   |
|-------------------------------|---------------------------------------|--------------------------------------------------------|
| <b>Nodal Department</b>       | Planning and Programme Implementation | Increased coordination                                 |
| <b>Chief Project Director</b> | IAS Officer                           | Strategic oversight, interdepartmental coordination    |
| <b>Project Director</b>       | Joint Director and above rank         | Day-to-day operations, planning, technical supervision |

50. **Leadership:** A key enhancement in this phase is the restructuring of the project's leadership position. The role previously designated as the Mission Director — held ex-officio by the Director of Agriculture — has will be redefined as the Chief Project Director (CPD). The CPD will be an officer from the Indian Administrative Service (IAS), bringing elevated administrative authority, stronger inter-departmental convening power, and improved alignment with the state's development priorities. This adjustment is intended to ensure more effective cross-sectoral coordination and reinforce the project's strategic positioning within the broader government machinery, both at the state and district levels. This adjustment is designed to:

- Elevate the institutional standing of the project within the state's governance framework;
- Strengthen collaboration with departments such as Horticulture, Animal Husbandry & Veterinary Services, Irrigation-Water Resources, Directorate of Commerce and Industries, and SRLM;
- Enhance the project's convening power and ability to resolve cross-sectoral implementation challenges.

51. The Project Director (PD), can now be from any concerned department at level of minimum Joint Director or above, will lead day-to-day implementation, working under the strategic guidance of the CPD. This two-tier structure enhances both strategic oversight and operational agility.

52. **Strengthened Government Secondment Structure:** To foster inter-departmental collaboration and ensure technical convergence at all levels, Phase II introduces:

- Seconded officers from: Planning & Programme Implementation, Irrigation & Water Resources, Horticulture, AH&VS, Commerce & Industries, and a livelihoods specialist from MzSRLM. A particularly important addition is the **Convergence Officer**, to be seconded from the Planning & Programme Implementation Department, who will be specifically tasked with ensuring effective coordination among all relevant line departments.
- These secondments deepen sectoral integration and improve decision-making responsiveness.
- These secondments will be an application-based process based on the ToR prepared for each of the post.

53. **Technical and Operational Support Team:** The project's implementation will be supported by a well-structured team of qualified project staff across all key technical and operational areas.

- *Business Promotion Unit:* Enterprise development and market linkages
- *Thematic Technical Managers:* Agriculture, Horticulture, NRM, GIS, and Livestock
- *Engineering Team:* Civil, irrigation, and infrastructure works
- *Core Support Functions:* Finance, Procurement, M&E, Gender, Capacity Building, MIS, SECAP compliance, and KM
- *District-Level Teams:* Thematic and operational staff ensure last-mile implementation and convergence

54. **First-Mile Support Structure:** To ensure first-mile delivery, community ownership, and efficient service delivery, FOCUS 2.0 builds on a decentralized implementation setup below the block level. This includes a network of community-based actors operating at the Cluster Level Federation (CLF), Village

Organization (VO), and Zau Group levels. These actors serve as vital intermediaries for planning, fund flow, monitoring, and technical support, while also ensuring convergence with line departments and community engagement. A critical building block for the same is formalisation of MoU with Mizoram State Rural Livelihood Mission (MizSRLM).

**Cluster Level Federation (CLF):**

- 84 CLFs, each staffed with **1 community-level worker** (not part of SPIU costs).
- Role: Oversee FOCUS activities across VOs and Zau Groups within the cluster.
- **Payment modality:** Service fee of 0.5–1% from project funds, routed from **District Collector** (as approved by the District Level Coordination Committee, but paid out from the DPIU) → **CLF** → **VO** → **Zau Group**.

**Village Organization (VO):**

- **Bookkeeper (1 per village):** Manages accounts and tracks fund flows that the VO is handling on behalf of the Zau group, and any transactions that the Zau group does.
- **Community Animal Health Worker (1 per village):** Delivers basic veterinary services to households, strengthening livestock health and productivity.

**Zau Groups (within each village or cluster):**

- **Zau Resource Person (1 per Zau):** Acts as a master trainer and coordinates planning and implementation of Zau-level activities. Reports to the VO and receives technical/coordination support from the CLF-level worker.

55. **Appendix 4** provides organizational charts for state, district, and village levels, respectively.

### 3.5 Agreements for project implementation

56. Successful implementation of the project requires a robust set of institutional agreements that define the roles, responsibilities, and collaborative modalities between various stakeholders involved. This section outlines the key agreements including financing arrangements and strategic partnerships.

57. **Financing Agreement:** The primary legal foundation for the project is the Financing Agreement between IFAD and the Government of India, represented by the Department of Economic Affairs (DEA), Ministry of Finance. This agreement outlines the terms and conditions related to financing, implementation responsibilities, reporting, and compliance requirements. Final loan covenants, to be agreed upon post-negotiation, will replace the current draft covenants and guide implementation throughout the project lifecycle.

58. **Co-financing Arrangements:** There are no external co-financiers for this project beyond IFAD and the Government of Mizoram, which contributes counterpart funding. The modalities of the government's contribution are detailed in the Financing Agreement and reflected in the annual budgetary planning through the State Finance Department.

59. **Memoranda of Understanding (MoUs):** To enable smooth and coordinated implementation, a series of MoUs is being planned with key government departments, financial institutions, academic institutions, and civil society organizations. These partnerships are critical for leveraging technical expertise, enhancing delivery systems, and ensuring convergence with ongoing schemes. The following entities are being considered for formal partnership through MoUs:

**Government Departments and Agencies:**

- Directorate of Commerce & Industries
- State Rural Livelihoods Mission (SRLM)
- National Bank for Agriculture and Rural Development (NABARD)
- North-Eastern Development Finance Corporation Ltd (NEDFi)
- North-Eastern Council (NEC)
- MIRSAC (Mizoram Remote Sensing Application Centre, Science & Technology)

#### NGOs / CSOs / Private Sector:

- Mizoram University
- Mizoram Rural Bank
- SELCO Foundation
- Digital Green

60. These MoUs are currently under internal discussion and will be formally tabled in the Project Governing Council in the coming weeks, as highlighted in the Readiness Action Plan. Upon approval, the process for formalisation of these agreements will commence, in alignment with project governance protocols.

61. **Private Sector:** As part of the project's strategy to engage private sector stakeholders in value chain development and market linkage, a Private Sector Roundtable Conference will be organised. Through this platform, the project aims to secure Letters of Intent (LoIs) from interested private sector actors who are aligned with the project's objectives. These LoIs will facilitate non-binding collaborations for piloting innovations, supporting farmer-producer organisations, and promoting inclusive agri-business models.

62. **Appendix References:** All draft or signed agreements and formats of MoUs and LoIs will be compiled and included in Appendix 6 for reference and future monitoring.

### 3.6 Social, Environmental and Climate Assessment Procedures

63. In this section, key social, environmental, and climate assessment procedures (SECAP) that require attention and action by safeguards-related project staff are listed by key SECAP category (e.g. Biodiversity, Labour Conditions, etc.). The categories below were identified as relevant based on the FOCUS 2.0 project activities, and the related key steps for action (e.g. to screen for the specific risk in sub-project areas and then mitigate those risks, where present) are described based on relevant project activity. Safeguards staff in FOCUS 2.0 are housed within the "M&E, KM & Safeguards" thematic team of the SPIUSPIU, and include two Assistant Managers (SECAP) covering northern and southern districts, respectively, and supported by an Assistant Manager – Planning, MIS, SECAP within the DPIU (please refer to Appendix 6 for the full organisational charts). Terms of Reference which clarify specific responsibilities, reporting lines, and collaboration/delegation requirements are available in Appendix 5. This section of the PIM should be read as complementary to the project's main Environmental, Social, and Climate Management Framework (ESCMF), and the ESCMF should therefore be consulted for full details on: (i) SECAP screening at sub-project sites; (ii) how, when, and what to document for SECAP throughout project implementation; and (iii) the Grievance Redress Mechanism.

64. FOCUS 2.0 aims to enhance the economic, social, and climate resilience of targeted rural households in Mizoram by supporting/developing demand-driven agricultural value chains (both business and production), combined with climate-resilient natural resources management. The project builds upon achievements and lessons learned from the FOCUS project, which was launched in 2019 and concluded in July 2024. Component 1 focuses on market access and enterprise development, through value chain analysis and mapping, infrastructure development, capacity development, facilitating access to financial services, and investing in "Information Communication Technologies for Development" (hereafter: ICT4D) solutions. Component 2 aims to improve agricultural productivity (both crop and livestock) and climate resilience by adopting sustainable practices and leveraging economies of scale. Activities include capacity building, establishing production clusters, soil and water conservation, irrigation infrastructure, support for livestock production infrastructure (e.g. Boar Semen Stations), access to quality inputs, facilitating long-term leases for landless farmers, and support for agroforestry.

65. The SECAP Review Note (SRN) provides analysis of the social and environmental context of the project as well as an assessment and description of the environmental, social and climate risks associated with the proposed interventions. The project is categorised social, environmental and climate risks as Moderate. Risks identified are related to biodiversity, resource efficiency and pollution prevention, cultural heritage, indigenous peoples, labour and working conditions and physical and economic resettlement. The following sections outline details of the risks assessed for each category and outlines the action required:

## **Biodiversity**

66. While noting that Mizoram had many Protected Areas across the state harbouring several rare and endangered wildlife species in her National Parks and Wildlife Sanctuaries, assured that 'the project will adhere to stringent protocols to ensure no activities occur within or near protected areas, safeguarding their ecological integrity'. To ensure adherence to the assurance given, the following steps need to be adopted during project implementation:

### **1.1 Zau establishment around Protected Areas**

67. Operationalising project interventions, particularly pertaining to Component 2 (establishment of Zau clusters for agricultural intensification) calls for extra caution and focused attention around Protected Areas (Wildlife Sanctuaries, Tiger Reserves and National Parks) especially in the districts of Champhai, Lawngtai, Lunglei and Mamit.

68. Step 1.1.1: Prior to the operationalisation of activities under sub-component 2.1 (Sustainable intensification of climate resilient cropping), DPIU team (Agri/Horti/Livestock Managers) must procure a list of fringe villages and villages in the buffer zone of National Parks and Tiger Reserve from the Park/Tiger Reserve authorities. The identification of Zau clusters for these villages as well as the construction of farm link roads must avoid core areas of the National Parks/Tiger Reserve and should be within areas where agricultural/human activities are permitted. It is advisable that the DPIU team of the concerned districts hold detailed consultations with the Park/Reserve authorities and obtain GIS maps/RS Imageries (as available) of the Protected Area with the Park/Reserve boundary cleared marked out and the Buffer zone demarcated. This document should be used as reference when project activities for fringe villages/villages within Buffer Zone are planned and require further discussions with the relevant Park/Reserve authorities.

69. Step 1.1.2: To ensure that project activities are undertaken within permitted areas of the respective PA, Zau cluster maps (with coordinates) prepared during Zau identification exercises described under Component 2 activities (see Step 4.2 under section 1.3.3 referred above) for establishment of Zau clusters in the fringe villages/ villages within buffer zones of the protected areas should be cross checked with the Park/Reserve maps described above and used during discussions with the Park/Reserve authorities to confirm that the proposed Zau clusters fall within areas permitted for agricultural/human activities and outside the core zone, thus confirming adherence to the assurance given. It is advisable to obtain a written approval post confirmation from the Park/Reserve authorities for Zau clusters to be established all fringe villages/ villages within buffer zone of National Parks/Tiger Reserve for records. This exercise should be the responsibility of the concerned DPIU team (Agri/Horti Manager) under supervision and guidance of District Manager and the oversight of Project Director at SPIU.

### **1.2: Minimising tree-felling during Zau cluster establishment and mitigation measures thereof**

70. Step 1.2.1: DMPU teams (Agri/Horti/NRM Managers) and VO will ensure during initial discussions as part of FPIC, that Zau members agree to restrict tree felling to the minimum and totally avoid clear-felling. This is particularly relevant in villages near Protected Areas and where Hoolok Gibbon and/or Phayre's leaf eating monkeys are present. DMPU team will obtain a written agreement to this effect.

71. Step 1.2.2: DMPU and VO should encourage the introduction of useful tree species in jhum plots that are far from the village which villagers normally avoid using for jhumming. Increase in tree cover can also be executed through assisted forest regeneration, requiring minimal labour and inputs. These plots should be clearly identified during PLUP and demarcated in the PLUP map (using the LULC map prepared for Step 4.2 of 1.3.3). DMPU team to ensure this is done and Asst Manager (SECAP) at SPIU to include this as an indicator of compliance and regularly monitor progress.

72. Step 1.2.3: Where tree felling has been substantial during Zau cluster establishment (or clear felling necessitated particularly in bamboo covered fallows), DMPU and VO should encourage the VC and village members to expand the area of Village Safety and Supply Reserves. These should be identified and clearly demarcated in the PLUP maps prepared as part of FPIC. DMPU team to ensure this is done and Asst Manager (SECAP) at SPIU to include this as an indicator of compliance and regularly monitor progress.

### **1.3: Prevention of disease introduction to wild ungulates through import of livestock**

73. Step 1.3.1: To prevent the accidental introduction of infectious diseases/parasites to wild populations of ungulates (serows, sambhar and other deer species), particularly in villages at the fringe or buffer zone of

Protected Areas, DMPU team, in particular the Asst Manager, Livestock must ensure that all precautionary measures are taken (screening, vaccination, etc) to avoid the accidental introduction of diseases into project villages during the import of livestock, particularly goats. Asst Manager, Livestock will insist that the CLF worker (with AH & Vety) maintain regular records of each instance of import of livestock to the village and the Asst Manager, Livestock will maintain records detailing preventive steps taken to avoid accidental import of diseased animals. In addition, he/she should facilitate the setting up of an early warning network utilising village level AH resource persons for reporting early symptoms/incidences of the outbreak of any diseases among the animals. In such cases, the affected animals should be isolated and kept penned pending examination and treatment by a veterinary doctor. There will be provisions of quarantine sheds in the Goat Zaus to monitor any disease introductions and also the farmers will be encouraged to purchase/procure locally adapted animals.

#### **1.4: Avoidance of incidents of livestock depredation by wildlife and prevention of Human-Wildlife Conflicts**

74. Step 1.4.1: Goat rearing is an integral part of the proposed project activities. The project envisages that goats will not be penned but grazed in open pastures identified within the village territories. In fringe villages or villages in the buffer zone of Protected Areas, open grazing in pastures may increase the risk of predation by wildlife. DPIU team, in particular the Asst Manager, Livestock, together with VO members must assess the need for strong shelters in the grazing areas and prepare a DPR (with budget requirements) for the concerned villages. It should be noted that the majority of goat promotion will be done in fenced Zau to avoid grazing conflicts, and strong shelters and fencing of zau will be promoted to avoid predation.

75. Step 1.4.2: Asst Manager, Livestock, concerned households rearing livestock and VO members must chalk out a night vigil and wildlife conflict prevention plan to prevent incidences of livestock depredation by wildlife.

#### **1.5: Remedial measures for addressing the depletion of agro-biodiversity consequent to the promotion of cash/ commodity crops in Zau clusters**

76. Step 1.5.1: As Zau intensification will centre around cash/commodity crop(s) and promote gradual transition to settled agriculture, the risks of depletion of agro-biodiversity becomes very real and significant. This has ramifications for dietary diversity and can trigger concerns in regard to nutrition. DMPU teams (Agri/Horti Managers) together with VO members must encourage and support participating households to introduce/relocate a wide variety of the leafy vegetables and other NUS crops grown in their jhum fields to the household's kitchen gardens. Asst Manager SECAP at SPIU should ensure inclusion of the number of households adopting this measure as a monitoring indicator. In addition, biannual sample monitoring exercise should be conducted to assess the dietary diversity of households to monitor nutritional diversity.

77. Step 1.5.2: DMPU teams (Agri/Horti managers) encourage the introduction of several of the NUS crops, particularly perennials into Zaus as 'companion crops' and/or cover crops. This will serve multiple purposes- provide a diversification in the Zaus thus strengthening risk aversion measures for the household and also safeguard the dietary diversity – hence nutritional security – over seasons. As above, Asst Manager SECAP at SPIU should ensure inclusion of the number of households adopting this measure as a monitoring indicator. In addition, biannual sample monitoring exercise should be conducted to assess the dietary diversity of households to monitor nutritional diversity.

### **Resource Efficiency and Pollution Prevention**

#### **2.1: Diversion of streamflow for irrigation purposes: remedial measures to ensure sustainability of water availability**

78. Step 2.1.1: As proposed under Step 8 under 1.3.3 of Sub-component 2.1, it is recommended that for every irrigation intervention that involves the diversion of local stream flows, a catchment treatment plan be made mandatory. In each case, the DMPU team (Manager Agri/Horti/Irrigation AE) should organise a site visit together with the Village Council and Zau Cluster members to clearly identify the catchment area of the water body.

79. Step 2.1.2: Once the catchment of the water source is identified, the DPIU team will engage with the Village Council members to convince them (and other villagers) on the need for protecting the catchment to ensure long-term availability of water from the source and thus, the sustainability of the irrigation project.

Following the discussions, DMPU team and the Zau cluster members must ensure that a written agreement is arrived at to declare the catchment area as a Catchment Reserve disallowing any type of agricultural land use for posterity (see Step 6 of 1.3.3). The signed agreement with the Village Council and demarcation of the catchment reserve in the PLUP map can be taken as evidence of the intent for setting up the Catchment Reserve. The number of catchment reserves set up can be adopted as indicator to monitor adherence to this SECAP concern. Asst Manager SECAP at SPIU to keep regular records and monitor adherence and progress for assigned districts.

80. Step 2.1.3: DMPU team, in consultation with the Zau members and VO draw up a catchment management plan to enhance percolation and groundwater recharge through measures that draw from Springshed Recharge and Management approaches. This reiterates the description outlaid under Step 8 of 1.3.3.

81. Step 2.1.4: SPIU (Managers Agri/Horti/Irrigation/NRM) to assess the magnitude of Springshed Recharge Management needs for catchment treatment, assess available capability and capacity available at districts and draw up capacity building plan. This will require the engagement of a Technical Service Provider (TSP) specialised in Springshed Management approaches and techniques. Once the need assessments are completed, the SPIU should take steps to float an Expression of Interest from national/international TSP(s). This should not duplicate activities proposed under Step 8 of 1.3.3 of Sub-component 2.1 for engagement of a TSP for developing capacities for catchment treatment through Springshed approaches.

#### **Step 2.2: Soil erosion control measures during construction of terraces**

82. Step 2.2.1: Contour bunding using biological approaches that build on traditional practices should be the first option adopted. Traditionally, farmers lay logs along contours to reduce erosion. Split bamboo 'mattings' are also used by certain communities as low fencing to prevent erosion and help in terrace formation. DPIU team (Agri/Horti/NRM managers) should explore the availability of community knowledge holders and assess the viability and efficacy of traditional methods. Advice should also be sought from the Soil Conservation department for technical feasibility.

83. Step 2.2.2: DPIU team should encourage Zau members to layout contour hedgerows using legumes to complement log structures or bamboo mattings laid along contours to further strengthen erosion prevention measures. Legumes such as pigeon pea or soyabean are good options and these legumes should be planted in rows above and below the logs/bamboo mattings. Such measures can help in terrace building with minimal costs and low labour requirements while also enhancing soil nutrient and moisture retention capacities through nitrogen fixing and mulching the nitrogen rich biomass after harvest. These measures should complement soil erosion control measures suggested under relevant sections of Component 2 and not duplicate efforts.

#### **Step 2.3: Safety measures for prevention of agro-chemical use**

84. Step 2.3.1: Although the project proposes adoption of agro-ecological approaches such as Natural farming and the use of organics (see footnote 25 and 26 of section 1.3.3 of Sub-component 2.1), precautions must be taken to prevent health and safety incidences from the use of chemical pesticides/herbicides etc. SPIU team (Agri/Horti Managers), in conjunction with DMPU teams must organise regular training of VO and Zau Cluster members in the protection, safe use and disposal of agro-chemicals. Further, regular awareness campaigns must be conducted to encourage the adoption of agro-ecological approaches. Such approaches and trainings have been outlined under Sub-component 2.1 activities.

#### **Step 2.4: Safe and Hygienic disposal of bio-waste in slaughterhouses**

85. Step 2.4.1: Bid documents invited for the setting up of slaughterhouse must include a technical plan and description for safe disposal of bio-waste resulting from the slaughter of animals. A technical sub-committee consisting of officers from Animal Husbandry, Health and Pollution Control should be set up to assess the technical feasibility and effectiveness of the technical plan and bio-waste disposal description submitted by each bidder. Selection of the contractor for execution of the slaughterhouse construction must be made based on the Technical Sub-Committee's recommendations.

86. Step 2.4.2: DPIU Manager, Livestock must draw up a safety monitoring framework and schedule to conduct regular monitoring checks for adherence to the terms agreed for safe disposal of bio-waste.

## Cultural Heritage

87. Project activities do not pose any risk to tangible cultural heritage. However, the project's fundamental thrust to bring about a change in the traditional land access arrangement through executing a long-term lease of at least 10 years from the present annual access raises concerns in regard to changes in tenurial access regimes traditionally practised. Increasing tenurial access to land is required for facilitating investment in the farmer's land resource and operationalises the Government of Mizoram's Land-Use policy, however, this shift will irreversibly change the traditional Land Access Framework from a Common Property Regime to that of Property Regime. This will not only influence cultural heritage and institutions but has implications for changing social structures. A simple safeguard against this potentially unintended outcome is to ensure the continuance of collective/community ownership while allowing access to individual households.

### 3.1: Safeguarding cultural heritage: Preventing privatisation and elite capture of commons

88. Step 3.1.1: DMPU team when drawing up agreements with the Village Council and Zau members for the issuance of a long-term lease (see Step 6 of section 1.3.3 of Sub-component 2.1), should facilitate discussions around the issue and suggest that the long-term lease/licence of 10 years to be issued by the Revenue authorities should be in the name of the Village Council and not individual members. Should the Zau cluster members decide to continue cultivating the Zau plots, the extension of the license/lease should continue to be in the name of the Village Council and not be converted to land *pattas* in the name of individual members. SPIU team, particularly the Project Director and Managers should ensure that this approach is adopted as a principle across the Project in all districts.

## Indigenous Peoples

### 4.1: Free, Prior Informed Consent (FPIC) Process

89. As all the villages to be covered by FOCUS 2.0 are inhabited by tribal communities, the project qualifies to be categorised as a 100% Indigenous Peoples' project. Consequently, a Free, Prior Informed Consent process needs to be conducted in all the villages. The FPIC process in the case of FOCUS 2.0 will need to be: (a) staggered; and (b) repeated annually at the time of AWPB preparations. The steps, below, provide guidance on how FPIC will be conducted, however full details are available in the Environmental, Social, and Climate Management Framework (ESCMF) and should be consulted, accordingly. [An outline of the FPIC implementation plan is provided below.](#)

90. Step 4.1.1: Introductory Meeting. The FPIC Introductory Meeting should be attended by all households, particularly the husband and wife of each household and should also include youth (male and females). Attendance by members of the Village Council and the VO should also be ensured. The Awareness Raising meeting mentioned in Step 4 of section 1.3.3 of Sub-component 2.1 is expected to have introduced the households to the objectives, components, eligibility and implementation framework of the Project. The FPIC introductory meeting should outline, in as much detail as possible, the major activities to be taken up under each component (ie Zau cluster establishment, agricultural intensification, animal husbandry activities, marketing and value chain development, etc). After the DMPU team has outlined the major activities under each component, the meeting should be opened by to take opinions, especially any concerns that members of the community may have. As far as possible, the DPIU team members should answer queries and try to build up trust for the project.

91. Step 4.1.2: Participatory Land-Use Mapping and Planning (PLUMP). A second FPIC process related meeting should be fixed after beneficiaries have been selected and Zau clusters identified for the village. Step 4.2 of section 1.3.3 of Sub-component 2.1 mentions the preparation of Land-Use and Landcover maps at 1:10000 scale for each village for the identification of Zaus. DPIU team and VO members should use the same map to facilitate the Participatory Land-Use Mapping and Planning exercise (PLUMP). The Participatory Land-Use Planning and Mapping should be conducted to clearly demarcate (i) the Zau cluster(s) identified for FOCUS 2.0 with the individual plots (if possible) (ii) all non-Zau jhum plots to be cultivated for that year (iii) all jhum clusters within the village territory together with the jhum cycles for each cluster (iv) catchment protected areas identified for tapping streamflows/ riverlets for irrigation purposes (v) fallows that are accessed for wild edibles and forest produces (vi) pastureland to be used for grazing of goats (where applicable) (vii) Village Supply and Reserve Forests, including expansions to compensate for substantial tree removal during Zau establishment. This PLUMP will serve as a concrete record of a thorough FPIC process

having taken place and should also serve as a monitoring tool/means of verification of project interventions undertaken.

92. Step 4.1.3: FPIC meetings during AWPB preparation. DPIU teams should include a FPIC discussion meeting during the Annual Work Plan and Budget preparation. Such discussions will provide the opportunity for review of FPIC agreements conducted at the start of the project, help identify departures from agreed plans and also provide a forum for discussing good practices while providing an opportunity to discuss activities proposed for the year. Such periodic FPIC focused meetings will contribute to trust building and greater ownership – and therefore sustainability - of project activities.

### FPIC Implementation Plan Outline

| <u>Sl</u> | <u>FPIC activity</u>                                                                                                                           | <u>Readiness Action Plan Activity Description &amp; serial number</u>              | <u>Officers responsible</u>                                                              | <u>Timeline (Corresponding to RAP timeline)</u> |

| <u>2.</u> | <u>FPIC sensitisation of Village Council and other field partners</u>                                                                          | <u>Sensitize village councils and other important partners on the ground (#16)</u> | <u>DPIU (District Manager, Asst Manager, M&amp;E, SECAP); SPIU (Asst Manager, SECAP)</u> | <u>Oct-Dec, 2025</u>                            |
| <u>3.</u> | <u>FPIC sensitisation of community-based cadres (CLF, VO, Zau &amp; AH; include CMC and FMCC members)</u>                                      | <u>Induct and sensitize the last mile delivery cadre (# 17)</u>                    | <u>DPIU (District Manager, Asst Manager, M&amp;E, SECAP); SPIU (Asst Manager, SECAP)</u> | <u>Nov-Dec, 2025</u>                            |
| <u>4.</u> | <u>FPIC meeting with all HHs for outlining project interventions and potential SECAP concerns, documenting community concerns/reservations</u> | <u>Select beneficiaries and start FPIC process (#23)</u>                           | <u>DPIU (District Manager, Asst Manager, M&amp;E, SECAP); SPIU (Asst Manager, SECAP)</u> | <u>Nov-Dec, 2025</u>                            |
| <u>5.</u> | <u>Participatory Landuse Planning and Mapping (PLUPM)</u>                                                                                      | <u>Select beneficiaries and start FPIC process (#23)</u>                           | <u>DPIU (District Manager, Asst Manager, M&amp;E, SECAP); SPIU (Asst Manager, SECAP)</u> | <u>Dec, 2025-Feb, 2026</u>                      |
| <u>6.</u> | <u>Repeat FPIC during AWPB exercise, revisit PLUP maps and incorporate any changes needed (Repeat each year)</u>                               |                                                                                    | <u>DPIU (District Manager, Asst Manager, M&amp;E, SECAP); SPIU (Asst Manager, SECAP)</u> | <u>Annual activity as per AWPB schedule</u>     |

#### **4.2: Reduction in area available for shifting cultivation subsequent to establishment of permanent agriculture through Zau clusters and marginalization of remaining shifting cultivation households**

93. Establishment of cash/commodity crops and the sedentarization of agriculture in the Zaus on community land will result in the reduction of area available for jhum and the resultant shortening of jhum cycles. As households practising shifting cultivation who are (i) outside of the project's eligibility criteria;

and/or (ii) have actively chosen to not participate in Zau activities, the jhum practice of those excluded jhumiyas will become further marginalised, adversely affecting their yields (and potentially the household food security). This raises serious concerns and requires carefully thought-out risk reduction measures. Keeping IFAD's policy of 'doing no harm' in perspective, the following action is suggested to address this concern:

94. Step 4.2.1: DPIU team (Agri/Horti/Livestock Managers), together with VO should initiate discussions with the Village Council and suggest all shifting cultivation households, particularly those not included in the Zau clusters increase the cultivation phase of their jhumming to at least two years from the present practice of annual cultivation on a trial basis.

95. Step 4.2.2: Willing households should be provided input support in the form of EM inoculants/Biofertilizers and given preference during trainings and capacity building events on soil fertility enhancement techniques, crop management and related topics. They should also be included during Farmer Field School events. This should figure in the MoU to be signed with FOCUS 2.0.

96. **A supplementary note in this context:** Although crop combinations to be adopted by Zau cluster members will be left to the choice of the households, a possible outcome of cash/commodity crop promotion in the Zaus will be either (i) a reduction of the area under paddy in Zau plots (i.e. cash crops replace paddy as the primary crop in the plot), or (ii) the total replacement of area under paddy with cash/ commodity crops. This raises concerns for the household's staple (cereal) security through the year, as studies across the uplands of NER suggest a four-to-six-month staple security that is met from self-production from short-cycle jhum. Members of the Design team assume that staples/cereal insecurity will not increase consequent to promotion of cash/ commodity crops because (i) project intervention in Zaus should improve soil fertility and hence yields – therefore, even if households reduce the area under paddy, productivity and yields should improve following inputs and improved practices, sufficiently compensating for the reduction in area under paddy (ii) most households are dependent on rice procurement through the Public Distribution System (PDS). Allocation of rice through the PDS in the case of NER hill states is adequate to meet the annual requirements of the family. Additionally, to factor in disruption in communication during monsoons, PDS outlet(s) are located within villages with storage facilities established to hold buffer stocks for at least two months to tide over such exigencies. (iii) The project will encourage mixed crops and include seasonal as well as short-gestation cash crops to facilitate cash generation within a season. This should provide the household with the means to procure staples from the market if the need arises.

## **Labour Conditions**

**5.1: Although the PDT had proposed a moderate risk ranking for labour and working conditions, the reassessment at Design stage suggests a low risk.**

97. However, clear provisions outlining safeguards against sexual harassment/discrimination and abuse (SHEA), exploitation wage disparity and child labour must be included in all bid documents and strict adherence ensured by the project teams during execution of infrastructure/farm road activities. Special attention must be paid for safeguards and preventive measures against sexual harassment and abuse risks linked to influx of migrant labour during infrastructure and farm road construction. Health safety measures must be adopted and assured by all contractors to the labour engaged particularly during the construction of infrastructure assets funded by FOCUS 2.0. SPIU and DPIU teams (Agri/Horti/Business Development Managers, Junior Engineers) must include clauses covering labour conditions for all infrastructure and road building bidding calls. SPIU/DPIU procurement unit must ensure the inclusion of these clauses in all contracts. Dereliction of compliance to these conditions, particularly in regard to gender disparity in wages, sexual discrimination and child labour should invite immediate action.

## **Community Health and Safety**

**6.1: Seasonal dietary diversity concerns subsequent to promotion of commodity/ cash crops**

98. With the promotion of commodity/ cash crops in Zau clusters, a depletion in crop diversity, especially non-cereal vegetables, tubers and other NUS crops is expected. This will potentially reduce the seasonal dietary diversity of households and thus may adversely impact nutritional security and health, particularly of

children, expectant and nursing mothers and the elderly. SPIU (Agri/Horti Managers, SECAP Asst Managers) and DMPU team (Agri/Horti/NRM Managers) should refer to Step 1.5.1 and 1.5.2 under Biodiversity for remedial action.

## **6.2: Safe disposal of bio-waste in slaughterhouses**

99. Health safety concerns arise from the disposal of bio-waste that will be generated in slaughterhouses proposed under the project. Unless a clear mechanism is put in place for the treatment and safe disposal of the entrails and blood of slaughtered animals, this may raise health safety risks of communities around the slaughterhouses as well as increase the risk of soil and water contamination. SPIU (Livestock/Business Development Managers, Asst Manager SECAP) and DPIU team (Livestock/Business Development Manager) should refer to Step 2.3 of Resource Efficiency and Pollution Prevention for the remedial actions.

## **6.3: Increased risk of exposure to disease and/or SHEA due to temporary influx of labour for construction-related activities:**

100. Step 6.3: Road construction and minor infrastructure development requiring temporary labour carries a risk of increased community exposure to disease(s) and/or SHEA incidents, in instances where construction and/or related labour camps are nearby. In addition to the precautions and mitigation measures related to Labour Conditions (e.g. with SHEA safeguards included in bidding documents of contractors), the SPIU/DPIU safeguards staff must sensitize communities located near these activities on the related risks & preventative measures/reporting procedures prior to the commencement of those activities.

## **Physical and Economic resettlement**

101. The SECAP reassessment at Design stage does not foresee any need for physical or economic resettlement due to project interventions and has therefore, downgraded the risk to low. No remedial action is therefore called for.

## **Financial Interventions and Procurement**

102. Finance and Procurement staff at SPIU/DPIU to note that any proposal for infrastructure related to value chain, irrigation, farm link roads and slaughterhouse must have an ESC management plan as part of the DPR. All relevant bid calls must prominently list the safeguard concerns and ensure that bidders include proposals of how the concerns will be addressed. Procurement staff must also ensure that suitable clauses are included in the contract finally awarded to bind the contractor to address concerns that fall within the purview of action of the contractor.

## **Climate Change**

103. The weather trends (including climate induced disasters) in Mizoram over the last few years indicate the possibility of prolonged dry periods, deficit rainfall and increased extreme events increasing heat and water stress for crops, and possible outbreaks of pests and diseases impacting crop performance and yields. Delayed onset of monsoons and the increased incidence of dry spells early in the season can result in crop desiccation and a need for replanting. Further, increases in storms, hailstorms and cyclonic weather events, particularly later in the year can have serious impacts on horticulture and/or on standing crops leading to loss of yield, incomes and food insecurity. Extreme events, particularly the increased incidences of heavy rainfall could trigger risks of landslides and disruption of communication with serious implications for value chain activities and market access. Overall, project risks pertaining to climate are considered moderate, thus actions to ensure climate adaptability and resilience are mainstreamed within (i) decision making processes (re: value chain selection, agricultural practices, etc.); and (ii) component design. Further details are below.

### **9.1: Enhancing access to seeds for replanting exigencies**

104. Step 9.1: Incidences of crop wilting soon after seed germination consequent to delayed rainfall and dry spells necessitate the need for replanting of crops. Farmers, particularly the poor, often lack saved seeds or access to seeds for replanting resulting in possible food insecurity and distress. DPIU team (Agri/Horti Managers) together with VO and Cluster Federation members to initiate dialogue with Zau Cluster members and other villagers to set up a community seed bank to ease access to seeds in cases of replanting.

Traditionally, households saved grains for exigencies in community granary. A similar mechanism could be encouraged to set up a community seed bank which could be accessed by households that lack saved seeds during exigencies requiring replanting. Seed borrowers should replenish the seed bank post-harvest but with an additional portion returned as thanksgiving.

### **9.2: Preventive steps for climate induced pest/pestilence breakouts**

105. Step 9.2: Increased temperatures and high humidity can result in pest and pestilence build up and frequency of pest outbreaks can be expected to increase. This can pose serious challenges for the farmer as well as the extension workers. While the classic response is to use chemical pesticides and fungicides, with FOCUS 2.0 adopting an agro-ecological approach, steps need to be well in place to meet such challenges employing botanicals or organic pest control methods. DPIU team (Agri/Horti Managers) should ensure discussions on biological pest control are included in Farmer Field School topics. Additionally, farmers should be encouraged to increase crop diversity in their fields as a risk spreading strategy as practised traditionally in jhum. In addition, training modules on agro-ecological approaches, as elaborated under Component 2 activities will include organic pest control methods. Finally, these risks call for adequate response measures and the need for setting up a Climate Emergency Response mechanism as well as an effective crop insurance framework. SPIU team (Agri/Horti/Livestock Managers) must explore the introduction of crop insurance mechanism for the project beneficiaries.

### **9.3: Reducing climate risks in value chains**

106. Step 9.3: The climate projections and their impacts may have serious implications for the value chain promotion activities proposed under the project. As a first principle to respond to climate risks, extreme care should be taken in selection of the value chain commodities and a high preference adopted for non-perishables. SPIU team (Business Dev/Agri/Horti Managers) must make extra efforts to ensure that, specific attention be given for semi-processing and value addition if perishable crops are included in VCD options. Possible value chain commodities identified at Design stage include perishables such as ginger and Mizo chilli. SPIU/DPIU teams should note that an immediate risk reduction practice would be to promote drying of the commodities and the grinding of the commodities to produce powdered spices. These steps would help in immediately reducing risks from microbial spoilage resulting from high temperatures and humidity.

### **9.4: Responses to climate induced disruptions in transport and communication**

107. Step 9.4: With extreme events projected to increase in frequency, particularly the increase in high intensity rainfall triggering landslides, disruptions in communication and transportation will become more frequent, adding to disruptions of the value chain during the monsoon months. Such disruptions will have to be factored in while designing value chains and calculating profitability. Proposals for increasing storage capacities within districts has been included in the project. Lastly, given the probability of increased climate uncertainties in the coming years, a strong recommendation is made for exploring appropriate mechanisms for agricultural insurance.

## **3.7 Targeting and Gender**

### **Area(s) of Intervention**

108. The project will be implemented in all 700<sup>3</sup> Villages in the 28 Rural Development (RD) blocks of 11 districts of the Mizoram state. In every village, at least one Intensive Zau Cluster will be promoted, prioritizing the participation of the landless<sup>4</sup>, single women and female-headed households, and resource-poor families. In addition to the six districts covered under FOCUS (check Tables 8, 9, and 10 at the end of this chapter (3.7) for details about district level targeting and development pathways), FOCUS 2.0 will also cover the remaining five districts, emphasizing the inclusion of the poorer southern districts of Siaha, Lawngtlai, and Hnathial, where the poverty rate is high, the human development index rank is low, and a majority of ethnic religious minorities, such as Chakma and Reang (Bru) tribes, reside. According to a survey released by the Mizoram State Planning and Implementation Department, Mizoram has 56,584 families under the Below Poverty Line

<sup>3</sup> According to the 2011 census, Mizoram has 829 villages. However, after 2011, many village councils under Aizwal and Lunglei districts have been notified as NACs (Notified Area Councils), and that explains the reduction in the total number of villages

<sup>4</sup> Landless here means households not have secure tenurial rights and are completely dependent on VC for Jhum land

(BPL). Champai district has the lowest percentage of BPL families at 9.45 percent, while Mamit has the highest percentage of 35.64 BPL families in the state. Poorer districts will be given higher priorities for building community infrastructure by promoting market centers and farmer markets, creating an enabling environment for economic upliftment. A summary of project outreach is provided in **Table 3**.

**Table 3: Project Outreach in FOCUS 2.0 compared with Mizoram's Population**

|                            | Total Population | Total Villages | Blocks | Total Rural Population | Total Tribal Population | Women    | Youth   |
|----------------------------|------------------|----------------|--------|------------------------|-------------------------|----------|---------|
| Mizoram <sup>5</sup>       | 1,097,206        | 700            | 28     | 5,25,431               | 1,036, 115              | 541, 867 | 122,887 |
| FOCUS 2.0 Project coverage | 150,000          | 700            | 28     | 150,000                | 150,000                 | 75,000   | 22,500  |

**FOCUS 2.0 Targeting Snapshot: Main Target Group(s)**

700 Intensive Zau Clusters targeting 21,000 HHs  
 Non-Intensive Zau Clusters:  
 Land Development Beneficiaries  
 Poultry Farmers (for meat): 1400 HHs  
 Poultry Farmers (for egg production): 900 HHs  
 Pig Farmers Benefitted by the ASF toolkit: 35,000 HHs  
 Pig farmers (fattening, breeding): 7700 HHs  
 Goat Farmers: 400 HHs  
 Boar Semen Centre Beneficiaries: 35,000 HHs  
 300 units of Village/ cluster level CMC, each targeting 100 active producers: 30,000 HHs  
 13 Block-level farmers market units, each targeting 20-40 CMCs: 2600-5200 HHs  
 5 Multi-district value-addition Hubs, each targeting 5000 producers: 25,000 HHs  
 Beneficiaries with new jobs: 140 individuals (70 women, 70 youth)  
 70 Rural producer organizations: 10,000 HHs (50 percent women, 30 percent youth)  
 110 Rural enterprises: 110 individuals  
 Households with increased access to rural financing services: 13,000 HHs  
 Persons trained in financial products/services: 12,000 Individuals (50 percent female, 30 percent youth)  
  
 Women: 75,000 individuals  
 Youth: 22,500 individuals

### Socio-Economic Targeting

109. The economic targeting strategy will focus on targeting economically vulnerable, resource-poor communities, with a main focus on the following categories: (i) Poorest of the Poor – identified as those who are landless and not having enough capital to invest in land, but having household labor to engage in Zau cultivation; (ii) Poor – identified as those having some land (< 2 hectares), either homestead or agricultural, and some capital (monthly expenditure more than INR 3773<sup>6</sup>) to invest on land development/management or shed preparation or animal management; and (iii) Progressive marginal poor – identified as those who have exposure to value-chains, financial institutions, market and have experience of handling small-scale businesses. The selection of poor families will be done by using the wealth-ranking conducted by the Mizoram

<sup>5</sup> Mizoram Population data is of Census, 2011. Collected from Economic Survey of Mizoram, 2024-25, [economic-survey-2024-2025.pdf](#)

<sup>6</sup> Based on recent Consumer Expenditure Survey conducted by Niti Aayog

State Rural Livelihoods Mission (MizSRLM) using participatory social assessment at the village level. Criteria used to rank the economic status of the families include the household's landholding, household income from agriculture and allied activities, income from other sources, number of earning household members, dependent family members, and household assets.

## Target Groups

110. The project will reach out to a total of 75,000 households, benefiting a total of 150,000 individuals.<sup>7</sup> The primary target group includes resource-poor, single women and female-headed households, rural youth, religious ethnic minorities, and marginalized livestock keepers. FOCUS 2.0 aims to build resilience of the rural poor by improving their annual income from land-based resources and livestock through productivity enhancement, value-chain development, and market linkages. In addition to targeting vulnerable, marginalized communities, the project will also target skilled rural and urban youth for entrepreneurship promotion, providing services and information to villagers.

111. Project's some of the key criteria for selection of the beneficiary are: (i) landless households who are completely dependent on Jhum land for agricultural production, (ii) female-headed households and single women, (iii) poor families based on the wealth-ranking conducted by the MzSRLM, (iv) ethnic religious minorities, (v) Poor families having periodic patta, LSC<sup>8</sup> and are interested for land development, (vi) livestock keepers rearing backyard poultry and small-scale piggery units prioritizing who lost their pig herds to ASF outbreak, (vii) Women-led business and institutions- to level the playing field, the project will prioritize women-led businesses and institutions and female entrepreneurs for enterprise development support and public-private partnerships in its interventions. A stakeholder engagement strategy will be prepared as part of the project design to support the project implementation.

112. The project will engage distinct groups through a differentiated support strategy:

- **Ethnic minority groups:** Targeted efforts will focus on minority tribes such as the Chakma and Bru, predominantly residing in southern districts and experiencing significant socio-economic marginalization.
- **Female-headed households:** Support will be tailored to and targeted at women managing land with limited labor resources, including training, access to agricultural inputs, and financial services. Divorced and separated women will be prioritized, given their heightened vulnerability.
- **"Landless" and smallholder families:** Households depending on annual Village Council land allocations and lacking secure tenure will receive targeted support to stabilise and enhance agricultural livelihoods.
- **Rural youth (men and women):** In response to high unemployment rates and vulnerability to social risks, the project will facilitate vocational training, prioritise youth for enterprise development support, and market linkages to empower young people.
- **Women-led business and institutions:** To level the playing field, the project will prioritize women-led businesses and institutions and female entrepreneurs for enterprise development support and for public-private partnerships in its interventions.

113. Differentiated interventions will ensure that the needs and constraints of each group are addressed appropriately. For instance, marginalized women may require specific capacity building in agricultural technologies and leadership, while unemployed youth may need targeted skills development and access to entrepreneurship opportunities. The project will also collaborate with Youth Mizo Associations and other community structures to enhance outreach and engagement, capitalizing on the strong culture of volunteerism in Mizo society.

---

<sup>7</sup> According to NFHS-5 (2019-21), the mean household size of rural households in Mizoram is 4.

<sup>8</sup> LSC is Land Settlement Certificate, which is considered as the permanent land pattas for which holders have to pay land tax regularly to the land revenue department. LSC are of two types- agriculture land settlement certificate and homestead land settlement certificate

## Phase II Enhancements

114. Improvements for Phase II based on the lessons learned from FOCUS are summarized below.

115. **Leveraging Village Councils for Targeted Interventions and community centric development:** The Village Council (VC), as a grassroots-level institution of local self-governance, plays a pivotal role in shaping community dynamics and advancing social equity. Recognizing the influential position of VCs in local decision-making, FOCUS 2.0 will strategically engage with them from the outset of project implementation to foster inclusive development and gender equity. A notable example of the transformative potential of VCs can be seen in Khawzwal, where the VC proactively issued a notification to raise the wage rate for female agricultural labourers from 350 INR to 450 INR per day, effectively narrowing the gender wage gap from 150 INR to 50 INR. Building on this precedent, FOCUS 2.0 will prioritize early and sustained engagement with VCs to drive systemic social change, particularly in promoting women's land rights, addressing gender wage disparities in agriculture, and advocating for inclusive rural development practices. In FOCUS, engagement with VCs was initiated at a relatively late stage during the Integrated Farming System-CADA (IFS-CADA) intervention. Drawing on this lesson, FOCUS 2.0 will actively engage VCs as key partners in implementing targeted interventions, ensuring that project activities align with local governance structures to maximise outreach and impact.

116. **Long-Term Land-Leasing:** As part of IFS-CADA, FOCUS was able to introduce a long lease system in Jhum land allocation by making VCs sign an MoU for 10 years instead of annual allocation by the lottery. This has brought a significant change in land and soil health investment, and a reduction in the frequency of burning in jhum land. However, participation of women in IFS-CADA is limited to female-headed households only; married women contributed to the agriculture production as supporting farmhands without participating in the decision-making process or training. Taking the learning from FOCUS, in FOCUS 2.0 SPIU will ensure that the jhum land is allocated in the joint names, and the document mentions the names of both husband and wife separately, instead of treating them as a HH unit. Participation of both husband and wife in decision-making processes and technology training will be ensured.

117. **Drudgery Reducing Equipment:** FOCUS took the initiative of introducing several small agricultural equipment required for agricultural intercultural operations, such as a brush cutter, power weeder, etc., for reducing women's drudgery, which is a major concern in Mizoram. FOCUS 2.0 will take this initiative forward and will conduct a study in collaboration with the Indian Council of Agriculture Research (ICAR) and the Directorate of Research on Women in Agriculture (DRWA), Bhubaneswar, to analyze the suitability and impact of the introduced and other available agriculture equipment for the mountain women of Mizoram. The study results will be used to remodel the existing equipment, adjusting to the needs and aptness of women farmers.

118. **Phased Approach to Gender Training:** In Mizoram, women play a significant role in food production, livestock management, especially rearing of poultry birds and small ruminants, and retail-marketing of agro-produces. Even in the activities promoted by FOCUS, may it be IFS-CADA or poultry units, women contributed both as farmhands and unit managers. However, gender-neutral reporting of technical activities, considering gender activities in silos and limiting it to gender studies and trainings, missed out many gendered achievements of the project, for instance, bridging of gender wage gap in IFS-CADA, Khawzwal. In FOCUS 2.0, the gender training of SPIUSPIU and SPIU will be phased out in two phases:

- **Phase 1:** A peer learning and sharing workshop will be organised to disseminate findings on gender and social inclusion, fostering knowledge exchange and identifying best practices.
- **Phase 2:** A dedicated mid-term assessment will be conducted to evaluate the integration of gender concerns across project implementation, monitoring, and reporting, ensuring that gender outcomes are systematically captured and reported.

119. **Early Action for Improved Engagement:** Some of the initiatives related to gender and youth engagement were planned at quite a later stage of the project implementation, almost at the exit stage, when there was not much time left to reap benefits from the planned activities. For instance, a training on "Breaking the Barriers: Promoting Women's Participation" was organised on January 25th, 2024, and youth skill development on agricultural skills, digital literacy, and entrepreneurship development was organized in February 2024. In FOCUS 2.0, gender and social inclusion trainings will be planned at the beginning of the

project implementation to ensure mainstreaming of gender and social concerns in the project throughout the implementation period. Further, some training will be conducted periodically or in a phased manner to increase the effectiveness of the training programmes.

120. **Collaborating through Convergence:** FOCUS has built some notable collaborations with key stakeholders and resource organizations related to gender and development, such as All Mizoram Women's Federations (AIWF). FOCUS 2.0 will benefit from those networks and will utilize them effectively in ensuring mainstreaming gender and active participation of women in the project implementation. However, there are some of the major stakeholders with whom FOCUS failed to create alliances and who could have been significant contributors toward ensuring gender equality and social inclusion (GESI), such as MzSRLM, the Directorate of Women and Child Development (DWCD), Mizo Youth Association, etc.

121. In FOCUS 2.0, an MoU will be signed with MzSRLM to utilise their community institution mechanisms as a platform for implementing livelihood activities. This partnership will not only help achieve the target of reaching 49 percent women beneficiaries but also contribute to effective women's economic empowerment. Additionally, FOCUS 2.0 will collaborate with DWCD and the State Commissions for Women to implement key project activities, further strengthening the project's GESI outcomes.

## Targeting Strategy

122. Target Group categories and development pathways provided in the Appendix will lay out different targeting strategies for different target groups. The Gender Action Plan and Social Inclusion Strategy (see Appendix 12) will be used to ensure active participation of vulnerable social groups, including single women and female-headed households, youth, and ethnic and religious minorities.

123. **Focus on Poverty and Those Lacking Resources:** FOCUS 2.0, following the targeting strategy of FOCUS, will have "poverty" as one of the key criteria for beneficiary selection. The target groups will be categorized as:

- **Poorest-of-the- Poor (referred as "landless" in the FOCUS):** a) HHs do not have temporary pass and land settlement certificate for any land other than residential plot and depending on accessing tenurial rights to jhum plot via the lottery allocation system b) have participated in the jhum land cultivation in last three years continuously, c) depending on wage labour as primary or secondary source of income, d) do not have any family members working in the government, and e) falls on the lowest category in the wealth rank conducted by MzSRLM;
- **Poor:** a) having land ownership of less than 2 Ha, either temporary land pass or agricultural land settlement certificate (LSC) or homestead land settlement certificate (LSC) other than residential plot; b) practicing agriculture cultivation in last three years continuously, c) falling under "median" category in the MzSRLM wealth ranking, d) do not have any family members working in the government;
- **Progressive poor:** a) who has land ownership of 2-5 Ha land as temporary pass or land settlement certificate for land other than residential plot, b) practicing commercial agricultural/ horticulture/ livestock rearing for last three years at least, c) higher rank in the MzSRLM wealth ranking.

124. FOCUS 2.0 will use the wealth ranking done by MzSRLM at the village level, using the social participatory assessment, as one of the key criteria for the beneficiary selection. Around 15 per cent of the targeted beneficiaries will be selected in the poorest of the poor category, around 70 per cent in the poor category, and the remaining 15 per cent will be in the entrepreneurial-oriented poor category. The beneficiary selection process is elaborated below.

125. FOCUS 2.0 will adapt participatory development approaches and Participatory Rural Appraisal (PRA) tools, such as Participatory Resource Mapping and/or Participatory Social Assessment for selection of the beneficiaries. The wealth ranking conducted by MzSRLM at the village level will be used as a base document for the PRA exercises. After introducing the project at the village level and conducting an initial discussion on the "entry point activities", the project will organize a two-day-long process of resource mapping and social

assessment with the participation of all the village members. Assistant Manager – Gender and Capacity Building and SECAP expert (Social, Environmental, and Climate Assessment Procedures) will be responsible for ensuring the inclusion of landless, women, youth, and religious ethnic minority groups in the PRA exercises. In addition to the wealth ranking updating using social assessment, transect walks will be conducted to assess the land resources for locating Zau patches. Manager- Natural Resource Management (NRM)/ Agriculture/ livestock will lead the resource assessment process.

126. **Gender:** FOCUS 2.0, with a strong focus on the inclusion of women, will ensure participation of at least 49 percent<sup>9</sup> of Women beneficiaries. It will include single women and female-headed households, married women, and young women aged 18-35 years. FOCUS 2.0 will categorize women beneficiaries according to their resource base, vulnerability, and skill level, and will plan the interventions with them accordingly. The collaboration with MzSRLM for implementing the project activities, especially using their community-based institutions, cluster-level federations (CLF) for launching the project activities, would ensure inclusion and effective participation of women beneficiaries. MzSRLM (Mizoram State Rural Livelihoods Mission) has been actively working to empower women through various livelihood initiatives. Under the Mahila Kisan Sashaktikaran Pariyojana (MKSP), the mission focuses on mobilizing women into Self-Help Groups (SHGs) and supporting them with financial assistance, training, and sustainable agricultural practices. One of the learning from FOCUS, which was not successful in mainstreaming gender concerns in the project implementation that it failed to utilize the platform created and strengthened by MzSRLM for the inclusion of women beneficiaries and strengthen the community-based organizational structure at the ground. Hence, FOCUS 2.0 decided not to reinvent the wheel by investing in the formation and strengthening of community-based institutions separately, but rather to create convergence with MZSRLM for utilising their effective institutional mechanisms operating on the ground successfully. However, considering the burdensome work responsibilities of the women of Mizoram who contribute significantly to the household chores in the informal workforce, the SPIU will ensure participation of the men in the crop/ livestock/ activity selection meetings, crop/ animal management trainings, etc., to ensure shared work responsibilities and joint decision-making at the household level. The project component leads and the Manager- Gender and Capacity Building will ensure participation of both men and women in project meetings.

127. The female-headed households and single women who have household members to be engaged as farmhands or capital to hire agricultural laborers will be prioritized in the Intensive Zau cultivation, as the production system covering two seasons in a year is labor-intensive. The female-headed households and single women who have periodic pattas or agricultural land settlement certificates will be included in the “land development” interventions. In Mizoram, women are primarily involved in backyard poultry and pig rearing, FOCUS 2.0 will design the livestock interventions keeping women at the center. The project will ensure participation of both men and women in meetings related to crop/ livestock selection, crop/ livestock management training, business development, and market linkages for shared responsibility and knowledge transformation at the household level. (Please check Table 2 for the project component-wise targeting strategy.)

128. **Ethnic Religious Minorities:** FOCUS 2.0 will focus on the inclusion of the ethnic religious minorities, such as Chakma and Raeng (Bru), considering their lack of access to mainstream institutions, poverty, and poor performance in development indicators. Most of the Chakma, Raeng, Marra, and Lai families practice agriculture and horticulture in the jhum land, keep different livestock, including poultry, piggery, and Mithun for livelihood purposes. Hence, clear synergy between project activities and livelihood choices of ethnic religious minority groups will make targeting easier. The project will ensure the use of different ethnic languages for the development of communication and knowledge products. Lack of disaggregated data on religious ethnic groups would create constraints in targeting minority ethnic tribes. Most of the district and state-level data, except the ADC data, are clubbed as “Scheduled tribe” under social groups without any further disaggregation. However, as most ethnic tribes live in hamlets together, prioritization of specific geography and villages would ensure the inclusion of the ethnic minority groups.

---

<sup>9</sup> Mizoram Male and Female Population in 2025, according to Census of India Projection Data, are 6.35 lakh (50.4 percent) and 6.25 (49.6 percent) respectively

129. Besides these key target groups, FOCUS 2.0 will work with the larger communities to create an enabling atmosphere for the development of the rural poor. Promoting entrepreneurship, developing value-chains for several agriculture and horticultural crops, and livestock products, and developing farmer markets are some of the key objectives of FOCUS 2.0. Resource-poor people without proper safety nets and risk-taking capacity, and lacking experience in handling even small-scale businesses, would not be suitable for such activities, as they might end up incurring more losses. People having some asset base, experience in doing business, and entrepreneurial aptitude will be selected for these activities. Youth will be encouraged to take up such activities, and the project will devise a strategy to utilize their interest, exposure, and techno-savvy nature for effective project implementation. Further, the income and resilience of young men and women will be promoted by engaging them in project activities as community resource persons, knowledge service providers, paravets, etc. This will increase the well-being of the rural youth by increasing their income and social stature, and will ensure beneficiaries' access to services at their doorstep.

130. **Minimizing Duplication of Direct Beneficiaries:** FOCUS 2.0 will include all the districts/ blocks/ villages covered in FOCUS. However, the project will ensure that households that received significant investment in the last cycle won't receive the major high-ticket project activities support. The 874 households that were part of the intensive agriculture cluster in the first phase of FOCUS, through IFS-CADA, will be excluded from the Intensive Zau cluster, however, they will be eligible to receive other project benefits such as training and capacity building, value-chain development support, market linkages, and insurance coverage. (Please check Table 1 for details on the targeting strategy in old districts)

131. Some of the component-II project activities, such as Intensive Zau Cultivation, Pig Breeding, and fattening unit promotion, backyard poultry, and component 1 activities like promotion of 40 entrepreneurs, are capital-intensive project activities. To increase project outreach and effective utilization of resources, the project will ensure that households supported by one big-ticket project activity wouldn't receive any other major benefit except some secondary and tertiary level support for market linkages, insurance coverage, or training and capacity building. The HHs having one family member in a government job will also be excluded from the Intensive Zau cultivation and receiving support for livestock units. The project will develop a monitoring framework to capture targeted, unique households. The DPIU M&E team will be responsible for verifying and ensuring unique household coverage.

## **Gender, Youth, and Social Inclusion Strategy**

132. **Gender Equality and Women's Empowerment:** Rural women in Mizoram contribute significantly to crop production, both subsistence farming and commercial cultivation, with their contribution spanning across traditional jhum cultivation, vegetable farming, fruit orchards, and floriculture. On average, 40.26 percent of the total farm workforce in Mizoram is constituted by females, with 39.96 percent of the main cultivators being women, majorly engaged in Jhum cultivation. The project will focus on women's economic empowerment by recognizing their contribution to the farming and livestock sector, increasing their access to institutional credit, agriculture training, knowledge systems, and their role in decision-making positions.

133. Despite a significant contribution to the agriculture sector, due to patriarchy, women don't have land ownership on any kind of land, including Jhum land. The project will ensure to mention "joint control on land", "joint decision-making", and "joint participation in training" for married women while making an MoU with the VC for Intensive Zau Cultivation. The project will also negotiate with VC to intervene to bridge the gender wage gap existing in the farming sector.

134. In Mizoram, besides contributing to farm production, unpaid care work and retail marketing are primarily done by women. The project will include men in meetings related to crop/ livestock selection, marketing of the produce for developing shared responsibility building, while women will be encouraged to attend trainings related to agriculture technology, livestock management for shared knowledge development. FOCUS 2.0 will also make an effort to understand and inform the agriculture equipment development for women in hilly terrain to reduce their drudgery. Building of agriculture link roads will ease its access and transportation of the agro-produce in the kharif season, especially for women who are primarily engaged in intercultural operations and work even during pregnancy.

135. **Actions in FOCUS 2.0:** The project will ensure women's 50 percent representation and participation in the community-based institutions, farmer field schools, and training programmes. Women's representation in the decision-making positions in the community-based institutions, as President or Secretary, will be ensured by the SPIU. Gender sensitization trainings will be conducted at every level – state-level training for SPIUSPIU and district-level DPIU, Block and village level for block-level staff and rural communities. The Manager- (gender and capacity building) will be responsible for organizing the gender sensitization training for SPIUSPIU and DPIU staff; a consultant/ agency will be hired to conduct the training. The Manager-Gender and Capacity Building and the consultant hired will be responsible for the preparation of the gender module. The Assistant Managers- Gender and Capacity Building based at the district level will be primarily responsible for the field-level gender sensitization training and which they will conduct under the guidance of the Manager-Gender and Capacity Building. Gender Resource Centers promoted by MzSRLM will be used for training and sensitization of women on various issues, including health and nutrition, protection against violence against women, legal rights, etc. The Manager- Gender and Capacity Building and the Assistant Manager- Gender and Social Inclusion will be responsible for ensuring collaboration with different departments for imparting all the training and ensuring mainstreaming of gender concerns in project implementation. The most impactful activities in the project to support women are listed in **Table 4**.

**Table 4: Gender Activities in FOCUS 2.0 (Ranked by Impact Potential)**

| Sl. no | Gender Activities (ranked according to impact)                                                                                                       | Expected Impact                                                                                                                                                                                                                                                                                                                              | Budgeted/ Not-budgeted                                                                                                          |
|--------|------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------|
| 1      | Ensuring the participation of women in the Initial beneficiary selection processes (PRA, FPIC)                                                       | It is the key activity as it would ensure the achievement of the 49 percent women's participation target of the project. (convergence with MzSRLM will ensure it, and Gender and Capacity Building-Manager, and Assistant Manager will be responsible for it                                                                                 | Not separately budgeted                                                                                                         |
| 2      | Gender mainstreaming training of the SPIU                                                                                                            | Sensitization of SPIU members is key to ensuring mainstream gender concerns in project components                                                                                                                                                                                                                                            | Budgeted                                                                                                                        |
| 3      | An on-field assessment of agricultural tools and remodeling the equipment for Mizoram women                                                          | Significant for reducing the drudgery of women, which is a major concern in Mizoram                                                                                                                                                                                                                                                          | Budgeted                                                                                                                        |
| 4      | Ensuring registration of married women's names in the tenurial rights (MoU with the VC), and decision-making positions in the community institutions | Increased access to land tenures and decision-making positions in the community institutions will bring gender transformative changes by changing the social and cultural norms                                                                                                                                                              | No additional budget required. Sensitization of SPIU and clear guidelines in the implementation plan will be helpful            |
| 5      | Gender sensitization of the women farmers and the field staff                                                                                        | Gender sensitization training of the CRPs and VC level workers is highly impactful (should be ranked in 3), but it is clubbed with gender sensitization of women farmers, which, although is highly impactful in capacity building and right-based framework, from the project perspective, the results won't be visualize in the short term | Not budgeted; will be conducted in convergence with MzSRLM Gender Resource Centre. Human Resources are allocated in the project |

|   |                                       |                                                                                                                                                                                                                                                                                |          |

| 5 | A State status paper on Mizoram Women | There is a general belief that Mizoram is an egalitarian society and both gender enjoys equal rights, which is not true. This belief constrains the implementation of gender mainstreaming activities. The study will also explore the status of women across different tribes | Budgeted |
|---|---------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|

136. **Youth:** Mizoram is largely a young society with a median age of 23.7 years<sup>10</sup>. However, Unemployment is a serious problem in Mizoram, as about 23 percent of the people in the workforce are without any gainful employment. The unemployment rates are substantially higher for females (34%) as compared to males (14%). For Aizawl and Lawngtlai, the unemployment rates for females are above 40 percent. In the absence of gainful employment, young men and women are falling prey to harmful and illegal practices such as drug use and prostitution, which are becoming major causal factors for increased HIV cases in Mizoram. According to the Mizoram State AIDS Control Society, around 1.19 out of every 1000 people in Mizoram have been diagnosed with HIV, and the occurrence rate is highest among youngsters aged 25 to 34 years. During COVID, most youth working outside of the state returned and are now preferring to work in the state. Table 7 below provide social analysis information on youth and women belonging to specific ethnic tribes.

137. **Actions in FOCUS 2.0 for Youth:** FOCUS 2.0 will be implemented with a strong focus on “youth engagement”. In the baseline assessment, a specific section will be dedicated to youth to capture their concerns, interests, and aspirations. Based on the findings, the project will engage youth in various activities. Some of the project activities where the youth, both men and women, will be encouraged to engage are – farmers’ market, CMC, Community Resource Persons, Paravets, food-processing units, marketing of animal products such as egg, meat, considering their mobility. Technology-proficiency. Manager- Gender and Capacity Building and Manager- M&E will be primarily responsible for ensuring the inclusion of youth in the project activities and monitoring their engagement throughout the project implementation period by incorporating dedicated indicators for youth engagement in the project logframe. All the project component leads, especially Market, Livestock, and Agriculture, will ensure the participation of youths in project beneficiary selection to capacity building workshops. The project will engage rural youth in various skill training programmes to promote them as community trainers. The project will organize training on “youth engagement” to sensitize the project team. The Manager- Gender and Capacity Building will be responsible for imparting the training.

138. **Ethnic Religious Minorities:** Mizoram is predominantly inhabited by Scheduled Tribes (STs), who constitute approximately 94.4%<sup>11</sup> of the state's population, making it one of the highest tribal population percentages among Indian states. The state is home to six tribes and eleven sub-tribes, with some tribes having assimilated more into mainstream institutions compared to others due to historical context, religious practices, and different languages (see **Table 7** for an overview of tribe characteristics and livelihoods). These tribes collectively form the vibrant social and cultural fabric of Mizoram. The first six (Lusei, Hmar, Ralte, Paite, Lai, and Mara) are often grouped under the broader "Mizo" identity, while the Chakma and Bru (identified in **Table 5** under the category “others”) are considered to have distinct ethnolinguistic roots. Three Autonomous District Councils – Chakma Autonomous District Council (CADC), Lai Autonomous District Council (LADC), and Marra Autonomous District Council (MADC) – were recognized under the sixth schedule of the Constitution of India preserves the culture and language of different

**Table 5:** Population (number and percent) of Tribes in Mizoram

| Tribe | Estimated Population | Percentage (%) |
|-------|----------------------|----------------|

139. ethnic groups and promotes their economic empowerment. A few socio-economic assessments conducted in Mizoram found that the Chakma tribes have been living as refugees, struggling with poverty, a low literacy rate, and unemployment. Many Reang families living in the southern states have faced displacement and marginalization, impacting their economic stability. Dependence on subsistence farming, inadequate infrastructure, and limited access to markets restrict the income of the semi-nomadic Bru ethnic tribe in Mizoram.

**Table 6** provides a broader summary of the population statistics in Mizoram.

|        |          |       |
|--------|----------|-------|
| Hmar   | 3,18,645 | 26.53 |
| Lusei  | 257,689  | 21.46 |
| Ralte  | 216,728  | 18.05 |
| Lai    | 154,654  | 12.88 |
| Marra  | 72,586   | 6.04  |
| Paite  | 67,252   | 5.60  |
| Chakma | 96,972   | 8.07  |
| Others | 16,437   | 1.37  |

140. **Actions in FOCUS 2.0 for Ethnic Religious Minorities:** The project has a stakeholder engagement process which provides opportunity for differentiated needs of minority groups to be heard, recognized, and incorporated into the project activities through approaches of Participatory Rural Appraisal (including PLUMP and other activities housed under Component 2).

| Major Tribes | Livelihood Practices                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Language, Culture, or Traditional Practices                                                                                                                                                                                                                                                                                                                                | Community Governance Practices                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|--------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Lusei        | Agriculture, shifting cultivation, is the primary occupation of the Lusei tribe. Main crops- Rice, Maize, sesame, ginger, turmeric, sweet potato, yam, chili, mustard, string beans, coriander, and brinjal. Horticulture crops like pineapple, orange production is common. Livestock- pigs, poultry, goats, and cattle. Other livelihood activities- NTFP collection; weaving (women are mainly engaged), bamboo craft, cane furniture; youth are engaged in hospitality, construction, | The most influential and dominant tribe of Mizoram. One of the major Mizo tribes of the Christian faith forms the core of Mizo identity. They are predominantly found in the central and northern parts of Mizoram, especially Aizawl, Serchhip. They speak the Lusei dialect, which is the standard Mizo language. Churches play a significant role in their daily lives. | The Lusei community first formed the Young Lusei Association, which later turned into the Youth Mizo Association (YMA). Women, traditionally, had a subservient role and were expected to take care of household responsibilities and not participate in Village Councils or take up leadership positions in community institutions. However, this tradition is changing with time. Youth are most influenced by churches and YMA. Substance abuse is a key concern. |

| <b>Table 7: Ethnic Tribes and Their Cultural and Livelihood Practices</b> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                                                                                                                                                                                                                                                                                                                                                                                                    |                                                                                                                                                                                                                                                                                                                                                                                                                  |

|                                                                           | retail, and transport work, wage labour, and government job.                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                                                                                                                                                                                                                                                                                                                                                                                                                    |                                                                                                                                                                                                                                                                                                                                                                                                                  |
| Hmar                                                                      | Agriculture is the primary occupation of the Hmar tribe. Traditionally, they practice shifting cultivation, but have gradually practiced settled agriculture with the support of the government schemes like the New Land Use Policy (NULP). Main agriculture and horticulture crops- Rice, Maize, sesame, ginger, turmeric, banana, orange, pineapple, areca nut, Sugarcane. Livestock- Pig rearing (both for commercial sale and personal use), poultry, goats, and cow. Handloom- a traditional occupation, practiced mainly by women. | One of the major Mizo tribes of the Christian faith, and closely related to Lusei, Paite, and Lai tribes of Mizoram. Mostly found in North Mizoram districts- Saitul, Aizawl, and Kolasib. They speak Hmar dialect, which is akin to the Mizo language but has distinct vocabulary and pronunciation. Churches play a central role in education, health services, and social organisations. High literacy rates.   | Hmar Inpui is the supreme traditional and cultural council of the Hmar tribe, serving as the highest representative body for community affairs. It plays a crucial role in preserving the Hmar identity, overseeing social governance, and uniting Hmar people across Mizoram, Manipur, Assam, and beyond. Youth are active in student unions, church youth groups, especially Hmar Youth Association, and NGOs. |
| Paite                                                                     | Shifting cultivation is one of their key traditional practices. Gradually, they are shifting to settled agriculture with the support of government programmes. Main agriculture and horticulture Crops- Rice, Maize, millet, pulses, beans, chili, pumpkin, banana, papaya, orange, and pineapple. Livestock- Pig (High demand both culturally and commercially), Poultry (highly popular); goats and cows (small extent) Weaving is traditionally done by women. Weaved Shawls, bags, wraps are sold in the market.                      | One of the major Mizo tribes of Christian faith is concentrated mostly in Champhai, Khawzwal, and Saitul districts. They are close to the Lusei, Hmar, Lai, and Thadou tribes. Paite means people from the plain. The Paite language is similar to the Mizo language. Church plays a significant role in daily lives. A high literacy rate among women who are often encouraged by the church through fellowships. | Zomi Council- A pan-Zo ethnic organization that includes Paites along with related groups like Hmar, Simte, Zou, etc. It aims to unite all Zomi (Zo) people under a common identity and advocate for autonomy and rights. Paite Students' Welfare Association, a student and youth organization, works for education, awareness, and development.                                                                |
| Lai (paw)                                                                 | Shifting cultivation is one of their key traditional practices. Gradually, they are shifting to settled agriculture with the support of government programmes. Main agriculture and horticulture Crops- Rice, Maize, millet, pulses, beans, chili, pumpkin, banana, papaya, orange, and pineapple.                                                                                                                                                                                                                                        | One of the recognized Scheduled Tribes of Mizoram having close linguistic, cultural, and ethnic similarities with Lusei, Hmar, and Mara. They are predominantly inhabited in the southern part of Mizoram, especially in the Lawngtlai district, which is home to the Lai                                                                                                                                          | The Lai Autonomous District Council (LADC) is one of the three Autonomous District Councils in Mizoram, created under the Sixth Schedule of the Constitution of India to safeguard the rights and identity of the Lai tribal people. It provides limited self-governance in tribal-majority areas within                                                                                                         |

| <b>Table 7: Ethnic Tribes and Their Cultural and Livelihood Practices</b> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

|                                                                           | <p>Livestock- Pig (High demand both culturally and commercially); poultry (broiler and duck); goats and cattle (lesser extent)</p> <p>Women practice handloom.</p>                                                                                                                                                                                                                                                                                             | <p>Autonomous District Council. Besides, they also live in Lunglei and Siaha districts. Lai has several dialects that are used in schools, local administration, and churches in Lai LCDC. Lai language is similar to Mizo language.</p>                                                                                                                                                                                                                                                                                                                                                                                                  | <p>Mizoram. Lai Student's Unions and Young Lai Association promote education and leadership among youth, and focus on community services.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| Mara (or Lakher)                                                          | <p>Primarily, an agrarian society depends on jhum cultivation. Some of the major crops are Rice, maize, and pumpkins. They are supported by the government for cultivating horticultural crops like ginger, turmeric, pineapple, and banana.</p> <p>Livestock- Pigs, poultry, and cattle</p> <p>Handicrafts and bamboo work- bamboo basket, furniture, mats</p>                                                                                                | <p>The Mara are one of the major indigenous tribes of southern Mizoram, primarily residing in the Siaha district. They are ethnically related to other tribes like the Lai, Chakma, and Lusei. Their language, Mara or Lakher, although different from the Mizo language, does have some similarities. The church plays a critical role and influences their personal, social, and cultural matters.</p>                                                                                                                                                                                                                                  | <p>Mara has their own Autonomous District Council (MADC) under the Sixth Schedule of the Indian Constitution. MADC exercises authority over subjects like land administration, forests, education, public health, and customary laws. The Mara Youth Association (MYA) is the principal youth organization of the Mara community in Siaha District, Mizoram. Established to promote unity, cultural identity, and development among Mara youth. MYA runs drug awareness drive for addressing drug abuse cases among the youth.</p>                                                                                                                                 |
| Chakma                                                                    | <p>Agriculture is the primary occupation of the Chakma tribes. They mainly practice jhum cultivation, settled cultivation in valleys, and on riverbanks. Main crops- rice, maize, chili, ginger, turmeric, sesame, and vegetables. Horticulture crops- Banana, pineapple, and orange.</p> <p>Other livelihood activities include- fishing, NTFP collection, pig rearing, poultry, goats, and cattle.</p> <p>Handicraft- weaving, bamboo craft, and pottery</p> | <p>A non-Mizo tribal community of Buddhist faith lives in the southwestern part of Mizoram, especially in the Lawngtlai district. Monasteries play a significant role in governing people's lives. They use the Chakma language, which has similarities with Pali and Burmese, but is different from the Mizo language. They have their script, "Ajhā Pāṭh," which is used in traditional settings and schools in the autonomous council. Women play a key role in the handloom textile production. Marriages in Chakma are mostly arranged, unlike Mizos. Traditional diet- rice, fermented dishes, bamboo shoots, fish. Pig meat is</p> | <p>The Chakma Autonomous District Council is an autonomous council for ethnic Chakma people, formed under the Sixth Schedule to the Constitution of India on April 29, 1972. It holds legislative, executive, and judicial authority over designated departments within its jurisdiction. CADC has a population of 62,094, which roughly constitutes half of the total ethnic Chakma population in Mizoram. In CADC general elections to the VC, women members are elected according to the Mizoram Village Council Bill, 2025. Social and language discrimination, and lack of inclusion in mainstream discourse are some of the challenges for Chakma youth.</p> |

| <b>Table 7: Ethnic Tribes and Their Cultural and Livelihood Practices</b> |                                                                                                                                                                                                                                                                                                                                                                                                             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

| Reang (Bru)                                                               | <p>They primarily practice Jhum cultivation. Some of the major crops are rice, maize, millet, beans, pumpkin, chili, yam, and horticultural crops- banana, pineapple, orange, and jackfruit.</p> <p>Livestock- Pig rearing is most popular. Also rears poultry, goats, and cattle.</p> <p>NTPF- Bamboo, medicinal plants, and fruits</p> <p>Women weave clothes, bamboo products to sell in the market.</p> | <p>A minority non-Mizo tribal group of Vaishnavism (Hinduism) faith lives in the western area near the Tripura border- Mamit district, Kolasib, and also in Lunglei district. Some of them follow animism too. Their dialect, “Kau Bru” is mainly oral. They use the Devanagari script (close to the Hindi language). In 1997, around 30,000 to 40,000 Bru tribe members shifted to Tripura after a period of violence with the Mizo tribe. In January, 2020 the Government of India signed BRU repartition agreement with Tripura and Mizoram, and around 30,000 Bru tribe members accepted permanent settlement in Tripura. Only a few thousand left in Mizoram.</p> | <p>Raeng tribe’s demand for Autonomous District Council in Mizoram was one of the key reasons of violence between Mizo and Bru community. Each Bru village have a Chief called “Bichhu” who is supported by VC and is responsible for dispute settlement, allocating land for jhum farming, etc. The reang community follows customary laws passed down orally. Women have limited rights and participation in property ownership, community decision-making, and political leadership. Many Raeng youth are engaged in mobilization related to land rights and rehabilitation.</p> |

## Implementation Responsibilities

141. **SPIU Level:** The Manager – Gender and Capacity Building and the two Assistant Managers – SECAP (one for northern districts, the other for southern districts) will be responsible for providing strategic guidance on inclusion of the target groups, namely: women (especially female-headed households and single women), youth, and ethnic religious minorities. Their responsibilities will include preparing guidelines for ensuring active participation of target groups in village-level meetings, conducting PRA exercises, and beneficiary selection. After selection of the beneficiaries at the village level, the Manager and Assistant Managers would have to check the beneficiary list to ensure key target groups are covered in the project activities. In addition, they must conduct occasional checks with the Manager – M&E to ensure participation of the vulnerable, targeted groups. The Manager – NRM will be responsible for ensuring the inclusion of landless communities in Intensive Zau cultivation. The Manager – M&E will be responsible for ensuring data collection on the inclusion of target groups and preparing a learning note based on data analysis to guide the thematic team on social inclusion. The Manager – Gender and Capacity Building, and the two Assistant Managers – SECAP, will support the Manager – M&E in data analysis and learning note preparation. They will also work with the Business Production Unit team to ensure: (i) women-led enterprises and entrepreneurial youth are included in the enterprise development; and (ii) geographies with maximum ethnic religious population are covered by CMC and farmers’ markets.

142. **DPIU Level:** The Assistant Manager – Gender and Capacity Building and Assistant Manager – Planning, MIS & SECAP will both be responsible for ensuring active participation of the target groups in the village meetings, PRA exercises, and beneficiary selection process. The presence of one of them is essential when

conducting the PRA exercises and the beneficiary selection process. After beneficiary selection, they will be responsible for: (i) verifying target goals and achievements related to inclusion; and (ii) informing Manager – M&E. The Assistant Manager – Gender and Capacity Building will be responsible for ensuring the participation of target groups in capacity building meetings and CLF meetings. The MzSRLM field officer will assist him/her in their day-to-day functionalities. The thematic component leads (e.g. AM – NRM, AM – Crop Production, AM – Livestock) are responsible for ensuring the inclusion of the poorest-of-the-poor and poor category beneficiaries in project component activities. The District Project Manager and Manager – M&E will be responsible for overall implementation and monitoring.

**143. Village-Level (Field Team and Community Resource Persons (CRPs)):** Field team and CRPs will be trained by the Assistant Manager – Gender and Capacity Building and the Assistant Manager – Planning, MIS & SECAP on gender and social inclusion, and environmental and social safeguards. The field team and CRPs will be responsible for: (i) cross-verification of the data collected during the PRA processes; (ii) conducting frequent check-ups on the marginalized group(s) to ensure their active engagement in project activities; and (iii) informing the DPIU and SPIUSPIU if there are any discrepancies and/or capacity needs and requirements.

**144.** Tables 5, 6, and 7 provide a summary of (i) targeting for old vs. new districts; (ii) targeting by project activity (including person(s) responsible); and (iii) development pathways foreseen under FOCUS 2.0 for each project group.

**Table 8: FOCUS and FOCUS 2.0 – Targeting Strategies for New and Old**

|     |           | B. Market Access for Poultry Eggs/ Goat Meat | <ul style="list-style-type: none"> <li>- Beneficiaries covered under component 2.2 under “Poultry value chain” and “goat value chain” will be prioritized</li> <li>- FOCUS beneficiaries rearing layer birds or rearing goat will be eligible</li> <li>- Progressive Poor HHs having their own layer bird farm or goat production units</li> </ul>                                                                    | <p>In addition, progressive poor HHs that are practicing commercial agriculture/ horticulture/ poultry/ goat rearing will be provided access to the market infrastructure, as it would increase the volume of the produce and would reduce the unit expenditure cost for transportation, handling, human resources, and miscellaneous costs. Mizoram, characterized by its hilly terrain and increasing extreme weather events, faces frequent disruptions in the collection of produce and its supply to market areas. Studies have highlighted the state’s infrastructural constraints and challenging geography, which hinder effective disaster response and long-term resilience-building efforts. Supporting market access for rural smallholders helps farmers harvest their produce on time, reduce post-harvest losses, maintain product quality, access markets year-round, secure better prices, and increase their incomes, thereby strengthening their adaptive capacity to the adverse impacts of climate change.</p> | <p>Livestock Component Leads- DPIU for day-to-day activity implementation<br/>Business Promotion &amp; Incubation Lead,<br/>Livestock and Market Component Leads:<br/>Strategic Guidance<br/>M&amp; E Manager, District Project Manager,<br/>Assistant Manager- Planning, MIS &amp; SECAP for monitoring the activities from time to time</p> |

|     |           | A. Value Addition and Enterprise Development | Progressive poor who are engaged in commercial production and marketing have experience in trading; youth entrepreneurs running small-scale businesses; women-led businesses, female entrepreneurs; SHG groups engaged in food processing and marketing. | Some personality traits and business acumen would be essential for enterprise development - risk-taking capability, resilience, business, and financial literacy, communication and negotiation, marketing and sales, and leadership and management. The project would select rural entrepreneurs who have some previous experience in running small-scale businesses, dealing with the market. Women and youth entrepreneurs, women-led businesses will be prioritized. | Business Promotion and Incubation lead, Manager, and Assistant Manager- Business promotion, and District project manager |

|     |                                                 | A. Support to Non-Zau Households    | Poor and progressive poor HHs, female-headed households and single women who do not have labour support for intensive Zau clusters, Poultry and Goat value-chain beneficiaries, IFS-CADA beneficiaries | Poorest of the poor- landless poor who depend on the jhum land for agriculture production, female-headed households who practice Jhum cultivation and have household labor support for two-season crop production will be prioritized for the intensive-Zau cultivation. As Intensive Zau promotion involves high unit cost, progressive poor HHs who have land between 2-5 Ha wouldn't be eligible for this activity. Similarly, poor HHs who have a member employed in a government job wouldn't be eligible for the Zau cluster. The updated wealth ranking of MzSRLM will be used to exclude HHs from the Zau cluster. IFS-CADA beneficiaries who received support in the last project cycle for lease farming or Zau clusters won't be eligible for the Intensive Zau cluster in this cycle, as the main objective of the project is to benefit the most vulnerable communities and reach out to the most people. The benefits of digital extension services will be available to both Zau and non-Zau clusters, both old and new Zau clusters. | Agriculture/ Horticulture/ NRM component leads will provide strategic guidance. The Manager- Horticulture/ Agriculture of DPIU will be provided with day-to-day support. Civil engineers, GIS experts will be provided support in land development and zoning planning. |

ASF Management in Piggery       | Pig value-chain beneficiaries (poor and progressive poor)                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                                                                                                                                                                                                                   |
|     |           | C. Support to Poultry Value Chain  | Broiler Farmers - Beneficiaries included in the “Poor” category- having at least a landholding (periodic patta/ homestead land settlement certificate), Median category in MzSRLM wealth ranking<br>Layers Bird Rearers- Beneficiaries included in the “Poor” category, having at least some permanent land ownership (Periodic Patta/ LSC) up to 2 Ha, falling in the median category in MzSRLM wealth ranking.<br>Female-headed households and single women with homestead land would be considered for layer bird rearing. | Homestead land would be required for constructing the shed for the backyard poultry. Disease breakouts can cause total loss, so HHs having land and asset ownership, falling under the median category, would have better risk-taking and shock absorption capacity. Progressive poor who can manage bigger units can become a role model for other smallholders. Beneficiaries who benefited under the poultry value chain, as the unit cost is not high, would be eligible to get other benefits, such as non-Zau cluster support. |                                                                                                                                                                                                                                   |
|     |           | D. Support to the Goat Value Chain | Goat Rearers - The poorest of the Poor and the Poor practicing Zau cultivation will be eligible for goat rearing.                                                                                                                                                                                                                                                                                                                                                                                                             | Goat rearing will be promoted in the Zau land, hence poorest of the poor HH covered under the Zau cultivation will be eligible for goat rearing. As the unit cost of goat rearing is not high, beneficiaries who benefit from goat rearing will also be                                                                                                                                                                                                                                                                              |                                                                                                                                                                                                                                   |

| <p><b>Poorest of the Poor: -</b><br/>(referred as “landless” in the FOCUS)- a) HHs do not have temporary pass and land settlement certificate for any land other than residential plot and depending on accessing tenurial rights to jhum plot via the lottery allocation system b) have participated in the jhum land cultivation in last three years continuously, c) depending on wage labour as primary or secondary source of income, d) do not have any family members working in the government, and e) falls on the lowest category in the wealth rank conducted by MzSRLM,</p> <p>15 percent of total beneficiaries will fall under this</p> | <p>These HHs are resource-poor, do not have economic assets, and depend on Jhum land for food production, where they don’t have control over the kind of land they will have for a particular year, as it depends on the lottery system. They do small-scale subsistence farming, production mostly used in household consumption. They have unemployed earning hands/ surplus agricultural laborers who need gainful engagement. They keep a few poultry birds in the backyard or a few pigs, which are often used for distress sale. Income from agriculture is not sufficient, so they depend on earning wages from agricultural labour, construction works of the MGNREGS.</p> | <p>Individuals, SHGs, Vos, PGs, CLFs</p> | <p>Intensive Zau cultivation (sustainable crop intensification intervention interventions based on market-driven crop selection and agro-ecological farming)- Signing MoUs with VCs for long-term collective leases for at least 10 years for promoting settlement farming; production of agricultural and horticultural crops using integrated farming techniques, IPM, and investing in soil health improvement, multi-storey and multi-season cropping;</p> | <p>Most of these HHs are already practicing mixed cropping in the Jhum cultivation without using almost any chemical inputs. The project will streamline the leasing process from VC processes to ensure investment in land development and soil improvement. Crops will be selected in a participatory manner with communities and based on market demand, agro-ecological requirements. CRPs and block-level staff will provide technological and handholding support regularly.</p> |

| <u>Category of Beneficiaries</u>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <u>Characterization</u>                                                                                                                                                          | <u>Individual/ Group/ Organization</u> | <u>Activities</u> | <u>Livelihoods and Value Chain Development Pathways</u>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------|-------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>category, which means 11,380 HHs</p> <p>Note: The population data and land data were not both updated. All the population data are from 2011 census. According to that data, only 3.77 percent population of Mizoram lives below the poverty line. The project is using land ownership, resource base, government job as some of the key indicators for defining poverty. In the absence of the updated land data, the selection of beneficiaries will be done on the basis of PRA exercises done at the village level. These percentages of poverty categories and numbers will be changed and updated after the PRA. This categorization is a mean to show that which criteria will be prioritised in the beneficiary selection</p> | <p>Female-headed households and single women, single women who practice Jhum cultivation for small-scale subsistence farming, and have surplus labour at the household level</p> |                                        |                   | <p>Resource-poor female-headed HHs and single women are one of the most vulnerable groups who face both social and economic vulnerability. They mostly practice subsistence-level farming and try to survive with the support of agricultural labourers' work or different government support. Due to a lack of resources, they prefer not to select capital-intensive vegetable and horticultural crops, and often cultivate WLR and some vegetables. In the absence of collective marketing, they often sell their produce, if any, in the nearby village. FOCUS 2.0 will provide capital investment support to these HHs for investing in crop production technologies and land improvement. Further, it will help the families to sell their produce in distant markets, sometimes with proper branding and packaging, at a higher price, and thereby increase their income from agricultural cultivation.</p> |

| <u>Category of Beneficiaries</u>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <u>Characterization</u>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <u>Individual/ Group/ Organization</u>   | <u>Activities</u>                                                                                                                                                                                                                                                                                                                                            | <u>Livelihoods and Value Chain Development Pathways</u>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

| <p><b>Poor:</b> <u>a) having land ownership of less than 2 Ha, either temporary land pass or agricultural land</u> settlement certificate (LSC) or homestead land settlement certificate (LSC) other than residential plot; b) practicing agriculture cultivation in last three years continuously, c) falling under “median” category in the MzSRLM wealth ranking, c) do not have any family members working in the government;</p> <p>The largest proportion of beneficiaries falls under this category – 70 percent, which means 53,140 HHs</p> | <p>These HHs are better-off in comparison to the poorest of the poor category- having some amount of permanent land ownership- periodic patta or LSC, but still doing jhum cultivation; some of them might be having horticultural orchards or oil palm cultivation on their land, doing rice or mixed cultivation on the jhum land; this group can be divided into two categories –</p> <ul style="list-style-type: none"> <li>i. Some who have very marginal land ownership, less than 1 Ha</li> <li>ii. those who have land ownership between 1 Ha and 5 Ha</li> </ul> | <p>Individuals, SHGs, Vos, PGs, CLFs</p> | <p>Intensive Zau cultivation (sustainable crop intensification interventions based on market-driven crop selection and agro-ecological farming); promoting value-chain and providing market linkage support with promotion of Farmers’ market, CMC</p> <p>Providing land development support, linking with the market, and providing value-chain support</p> | <p>These HHs are more entrepreneurial and commercially oriented than the first category. Some of the problems they face are – i. improper crop selection &amp; not following proper package of practices, (ii) lack of investment in land development and soil health leads to poor soil fertility, and erosion, (iii) lack of collective marketing and often leads to distress sale, (iv) lack of proper marketing channel, (v) no ware-house or cold storage support for storing produce to avoid market fluctuation, (vi) due to lack of exposure to market and business development skill not able to earning sufficient income, (vii), lack of technical support during production system makes them to incur losses due to disease outbreak etc. FOCUS 2.0 will take the initiative to address production and market challenges to strengthen the value chain. Further, the project will help them to focus on a few key products for brand development.</p> |

| <u>Category of Beneficiaries</u> | <u>Characterization</u>                                                                                                                                                                                                                                                                                                                                                     | <u>Individual/ Group/ Organization</u> | <u>Activities</u>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <u>Livelihoods and Value Chain Development Pathways</u>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|----------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                  | Livestock keepers who rear small-scale backyard poultry, piggery, or goats and sell the products to the middlemen/traders or sell in the local market. Most of these small livestock units are run and managed by women of the HH. Livestock rearing is their primary source of income, and they practice WLR and mixed cropping in the jhum land for consumption purposes. | Individuals, SHGs, Vos, PGs, CLFs      | Providing shed support and input costs for poultry/ piggery/ goat units; providing livestock management training; providing support for breed improvement in case of Pig rearing by promoting the Boar semen center; reducing the animal mortality rate by providing vaccination and health care support; providing insurance support to coverup any loss incurred due to disease outbreak such as ASF, exploring and promoting sustainable market both within the district, state and outside the state; promote meat processing centers for providing better marketing opportunity. | Almost all HHs in Mizoram keep one or two pigs, as it has cultural significance. Backyard poultry is also pretty prevalent in the state. The operating scale is small and, in most cases, lacks the market and veterinary support. FOCUS 2.0 does not introduce any new breed or species that locals are not acquainted with. Rather, the project will analyze the loopholes existing in the current value chain and will plug all the holes by providing veterinary and insurance support, linking with the market, promoting paravets, and taking initiative to reduce the feed cost. |
|                                  | <p>i. Female-headed HHs and single women who have some kind of permanent land ownership, who have more capital and asset base</p> <p>ii. Female-headed HHs and single women who are engaged in backyard</p>                                                                                                                                                                 | Individuals or part of SHGs            | <p>Land development support, supporting forward and backward linkages for crop production; supporting promotion of vegetable and horticultural crop production;</p> <p>Providing shed support and input costs for poultry/ piggery/</p>                                                                                                                                                                                                                                                                                                                                               | Some of the key-challenges faced by female-headed households are – i) lack of access to technology, information, services, (ii) in the absence of the person power they rarely explore distant market and sale the produce in the village or nearby markets, (iii) lack of training on production technology and livestock                                                                                                                                                                                                                                                              |

Women contribute more than 80 percent work responsibility but are rarely represented in the social, political, and decision-making spaces.                                                                                                |                                        |                                                                                                                                                                                                     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b><u>Youth (Young men and women)</u></b> , this category includes young men and women aged 15-24 years + 24-35 years. | Youth in Mizoram are characterized by being educated, exposed to the outer world, but lack vocational skill training, limited access to resources, and a lack of proper infrastructure are some of the major bottlenecks for rural youth in Mizoram. Unemployment is a serious problem in Mizoram. | Individual                             | The gainful employment for youth will be ensured through the project by creating an enabling atmosphere for business development through capacity-building training, exposure, and matching grants. | The project baseline will try to capture the skills, interests, concerns, and aspirations of youth, and based on the findings, the youth will be provided with capacity-building training, exposure, and capital investment support to promote them as paravets, AI Workers CRPs, etc. Skilled and enterprising young individuals will receive support to launch their businesses through training, matching grants, and mentorship. Educated youth will be assisted in starting their ventures through suitable incubation services. Those who succeed in building start-ups or businesses may serve as role models for unemployed youth." |
| <b><u>Ethnic Minorities</u></b>                                                                                        | This HH belongs to the ethnic minorities of Chakma, Lai, Marra, and Raeng. Ethnic religious                                                                                                                                                                                                        | SHGs, POs, VOs, CLFs, FPOs,            | Providing support to increase agricultural and livestock production by adapting better                                                                                                              | FOCUS 2.0 will ensure inclusion of the ethnic religious minorities group by targeting the districts/ blocks/ villages                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

| <u>Category of Beneficiaries</u> | <u>Characterization</u>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <u>Individual/ Group/ Organization</u> | <u>Activities</u>                                                                                              | <u>Livelihoods and Value Chain Development Pathways</u>                                                                                                                                                                                                                                                                                                                                                                                                              |
|----------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------|----------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                  | <p>minorities such as Chakma and Raeng reside primarily in the poverty-stricken southern districts of Mizoram and the Mamit district. They depend on agriculture and allied activities such as livestock rearing and fisheries for their life and livelihoods. Chakma people place a lot of emphasis on higher education for their children and prefer to go out of the state for a job. Raeng community practice WLR, vegetable cultivation, and orcharding. Backyard poultry and pig rearing are also prevalent among these communities. All of them have separate tribe languages, and most of them do not understand Mizo, especially Chakma and Raeng. Lia and Marri have a better association with Mizo communities.</p> |                                        | <p>production technology, and getting more income for their produce through market and value-chain support</p> | <p>where they reside. The project will use their specific ethnic tribe language in the development of communication or knowledge products, in capacity-building trainings for ensuring their effective participation. In the districts where the population of Chakma, Reang tribes is high, the project will make an effort to hire at least one DPIU person (preferably Assistant Manager- gender and social inclusion) who has proficiency in tribe language.</p> |

### 3.8 Procurement

145. Procurement of goods, works, and services under the project, financed from resources provided or administered by IFAD, will be undertaken in accordance with IFAD's Procurement Guidelines and Handbook (dated December 2020) and as amended from time to time. In the absence of national law which safeguards the interests of transparency, fairness, and grievance redressal of the participating bidders/suppliers, IFAD Procurement Guidelines shall be followed both at the central and at the decentralized levels by all implementing entities. For full details on Procurement (including responsible actors), please refer to Appendix 3B.<sup>12</sup>

146. **Phase II Enhancements:** Though the previous project followed IFAD Project Procurement Framework, there were significant weaknesses noted by the Missions and Audit reports, mainly due to non-availability of skilled procurement staff at the district level and many activities were given to the community institutions to procure, without adequate assessment of capacity and internal controls. The implementation arrangements for FOCUS 2.0 have been improved as one of the key mitigation measures to address the substantial ranking of the Procurement Risk Management assessment and the lessons learnt on the moderately satisfactory performance of procurement functions in FOCUS.

147. **Procurement Staffing:** FOCUS 2.0 will have procurement staffing for both SPIU and DPIU level. Focus 2.0 will have one Manager Procurement and two Asst. Manager Assistant Manager Procurement s at SPIU. Each DPIU will have one Asst. Procurement Manager except Aizawl district. The Procurement team at SPIU will look after all the procurement activities for DPIU Aizawl as well. This arrangement for deployment of Asst. Managers at DPIU level is being proposed as risk mitigation for the project towards efficient procurement operation at district level and monitoring of Community procurement at DPIU level

148. **Capacity building support:** Trainings will be provided to all the Procurement staff engaged under FOCUS 2.0. IFAD will arrange Procurement training on Project Procurement guidelines and Procurement Handbook 2020 including orientation on procurement planning and Contract Management steps on OPEN<sup>13</sup> portal. Other capacity building programmes in Government of India training institutes or ITC/ILO besides implementation support and technical assistance will be explored. The proposal for capacity building for procurement staff will ensure avoidance of risk observed during capacity assessment of the LPA.

149. **Implementation partners:** The project will engage implementation partners and line departments for IFAD financed activities or convergence activities. These partners will follow IFAD Project Procurement Framework for IFAD-financed activities. The current community procurement guidelines issued by FOCUS will be used with appropriate modifications. The project will ensure audit of procurement transactions at all levels by the internal auditor as well external auditor, reporting directly to the Chief Project Director.

150. **Adherence to IFAD Policies:** The project, shall adhere to the IFAD Anti-corruption policy and Policy on preventing sexual harassment and exploitation and abuse (SHEA) including contracted service providers, suppliers and individual consultants<sup>14</sup>. Other good governance measures are incorporated in Appendix 3b (Procurement Manual).

151. **Standard Procurement Documents and Procurement Methods:** FOCUS 2.0 will use standard Bidding Documents of IFAD for all the contracts in first 18 months approved Procurement Plan and subsequent plans duly approved by IFAD on the OPEN Portal. National Shopping under SPIU/DPIU should be done through GEM portal to ensure better outreach to market, transparency and value for money. The project will follow procurement methods prescribed as per the thresholds prescribed in PPA to be issued to SCRAM (the Lead Project Agency for FOCUS 2.0) under Planning and Programme Implementation Department, Government of Mizoram.

152. **Contract Management:** The project will establish an effective contract management system which includes all contracts and its administration. All contracts irrespective of value should be entered into IFAD

Client Portal-Contract Monitoring Tool. ICP-CMT is an online tool, which is dynamic and enables good data harvesting and analysis. For access credentials, the Project shall request IFAD by nominating users. The Procurement Manager and the Assistant Manager Procurement shall monitor and update the contract details until completion and closing of contracts. Exceptions and Cost over-run items should be reported to the Chief Project Director / Project Director.

153. **Dispute resolutions:** In the event of any dispute between the Borrower/Recipient and a bidder or contractor, the process for this dispute will be as outlined in the bidding documents, contract or state / national laws of the country as applicable. In these circumstances, IFAD shall not be appointed as an arbitrator or requested to appoint an arbitrator. The Project will have an online GRM to lodge any procurement related complaints on its website, aligned with the GRM described in the Environmental, Social, and Climate Management Framework (ESCMF).

154. **Mis-procurement:** IFAD will not finance expenditures for goods, works or services that have not been procured in accordance with these Guidelines and the financing agreement. In such cases, IFAD may take remedial action as outlined in the financing agreement. The issuance of a no-objection for the award of a contract shall not prevent IFAD from declaring mis-procurement upon finding that the no-objection was issued on the basis of incomplete, inaccurate or misleading information, or that the contract was modified without IFAD's approval.

155. **Procurement Supervision Plan:** IFAD will undertake procurement review during supervision missions and will generally include the following activities:

- Supervision of procurement-related start-up activities by the borrower/Implementing Agency;
- Review of individual procurement operations;
- Procurement follow-up and management via a review of the project's procurement plan and data in the Contract Monitoring Tool.
- Supervision and Implementation Support Missions.
- Project Completion Mission.

### 3.9 Annual Work Plan and Budget (AWPB) and Procurement Plan (PP)

- **Development of AWPB**
- Before the beginning of each fiscal year for the project, the Finance Manager (SPIU) should in consultancy with other project staff, MPAs and stakeholders, prepare the AWPB for the next year reflecting any updates to the project cost tables detailed in the project design. AWPB should be prepared based on state-level budget allocations agreed and included in the state budget of Mizoram. The budget and financing plan should be prepared and presented on a quarterly basis. The data on the number of activities to be implemented in the coming year and the estimates of the total funds needed to finance them should be presented by component and sub-component, by expenditure category as well as by financier. The estimates should be based on the project's (up to date) cost tables. In addition to the financial information described above, the budget should also take into account the physical outreach of the project (number of farmer's to be trained etc.).
- When preparing the AWPB the following aspects should be taken into consideration:
  - Consistency with other financial reports: It is practical to prepare the budget and financing plan in the same format as the periodic (financial) progress reports and the project financial statements of the project.
  - Contingency provisions (physical and price) and allocation of funds from the unallocated expenditure category.
  - Post implementation activities e.g. arrangements for after life of project, disposal of project assets (computers, vehicles etc.), future repair and maintenance.
  - Availability for funds and arrangements for all audits.
  - After preparing the draft AWPB, the Finance Manager (SPIU) will send it to the Chief Project Director and Governing Council for review and clearance/approval before sending it to IFAD for no objection. In accordance with the Financing Agreement, a draft AWPB has to be submitted to IFAD no later than 60 days before the beginning of the relevant fiscal year of the project. If required the SPIU/LPA could

propose adjustments in the AWPB during the relevant project year, which would become effective after IFAD' approval.

- Please refer to Appendix 3a of this PIM for the 1st Year Annual Work Plan and Budget (AWPB), and the separate Excel file ("PIM – Appendix 3a: Procurement Plan") for the procurement plan, along with the accompanying Appendix 3b (Procurement Manual) and Appendix 8 (Financial Management Manual).
- The AWPB must be accompanied by a procurement plan prepared by the Assistant Manager Procurement . The first Procurement plan should cover the first 18 months of the project lifecycle while the subsequent procurement plans should cover 12 months of the project lifecycle.

### 3.10 Financial Management

156. All information related to the project's financial management can be found in the Project Financial Management Manual (FMM), located in Appendix 8. The Financial Management Manual will be tailored by the SPIU with support from the FO using the Financial Management Manual Sample provided in Appendix 8 of this template.

157. The project's financial management manual in Appendix 8 outlines the financial procedures to be followed by the SPIU, DPIUs and other implementing partners during the preparation and planning, implementation, and completion of the project. The manual aims to describe in detail the necessary steps to be undertaken by the relevant project and finance staff, in particular, when undertaking actions related to: a) planning and budgeting; b) accounting; c) records management; d) internal controls; e) flow of funds; f) withdrawal of financing proceeds; g) processing of payments; h) financial reporting; i) fixed asset management; j) audit arrangements; k) supervision by IFAD; and l) project completion and loan closure.

158. The following are key financial management arrangements that the project will follow during the implementation:

- a) IFAD's FM policies and procedures and Government regulations for accounting and budgeting will be mandatory to follow during the implementation of the project.
- b) The project will be pre-financed by the state government and will use a reimbursement disbursement method to reimburse IDAD's share of project expenditures. However, advance from IFAD option will also be available in the project legal documents.
- c) The project team and CAAA will use ICP to request funds from IFAD. The latest IFRs will be linked to each WA and submitted via the Finance Execution Model of ICP. The IFAD Client Portal (ICP) with a new module, called the Financial Execution module (FE module), is used to direct upload of certain project financial reports into the IFAD Client Portal (ICP). The CAAA (Role of 'Borrower Author' in ICP) will upload the IFR into the system and link the WA to the IFR before submitting it to the Borrower/Recipient for approval in ICP and final submission to IFAD.
- d) IFAD's anti-corruption guidelines<sup>15</sup> will be mandatory during the project implementation.
- e) FM roles will include Finance Manager, Assistant Finance Manager and two assistant accountants at the SPIU level, one Assistant Manager Finance and one assistant at each DPIU level. SPIU and DPIUs accountants will maintain accounting records in Tally. Roles and responsibilities for key FM staff are included in the FMM.
- f) Budgeting will follow internal government budgeting regulations, and a draft AWPB will be submitted to IFAD 60 days before the start of the relevant FY. Detailed budgeting guidelines are provided in FMM.
- g) Internal controls: The project will employ necessary FM resources, including FM staff and consultants, to carry out monthly reconciliation of DPIUs' books of accounts with Tally records maintained for all DPIUs at central SPIU. The online banking system of local commercial bank and cloud storage software systems will mitigate the risk of inadequate accounting record

---

15 [www.ifad.org/en/anticorruption](http://www.ifad.org/en/anticorruption)

keeping and filing of supporting documents. Consultants will be hired to prepare internal audit reports each semester.

- h) Indian National Accounting Standards will be applied to prepare project financial statements. Cloud-based Tally accounting software will be used for accounting record-keeping and financial reporting. The software will automatically generate quarterly IFRs.

159. Internal controls are the weakest FM area for the project. Therefore, FMM has detailed policies on how to improve internal controls over operations and accounting record keeping.

### 3.11 Human Resource Management

160. This section outlines the policies and procedures governing the recruitment, remuneration, performance evaluation, and contract renewal of project staff, ensuring alignment with both national standards and the specific requirements of Externally Aided Projects in the State.

#### Recruitment and Staffing

161. Staff recruitment will adhere to transparent and merit-based processes, ensuring compliance with applicable government regulations and the specific guidelines of the funding agency. Recruitment will be carried out based on Terms of Reference (ToR) for each position, which are detailed in Appendix 5 of the Project Implementation Manual (PIM). The ToRs will outline the roles, responsibilities, qualifications, and required experience for each position, ensuring clarity and consistency in the recruitment process.

162. Key staff positions, as outlined in the Financing Agreement, will be recruited with priority. These positions include:

- **Finance Team:** Responsible for overseeing project financial management, including budgeting, accounting, and financial reporting.
- **Procurement Specialist:** To manage procurement processes, ensuring compliance with project regulations and international best practices.
- **SECAP (Social, Environmental, and Climate Adaptation) Specialist:** To ensure that project activities align with environmental and social safeguards, as well as climate resilience strategies.
- **Monitoring & Evaluation (M&E) Manager:** Responsible for developing and implementing the project's monitoring and evaluation framework, tracking project outcomes, and ensuring accountability and transparency.

#### Remuneration and Benefits

163. Staff remuneration will be competitive and aligned with industry standards, subject to the availability of funds and in accordance with the project's budgetary provisions. Salary scales will be reviewed periodically to ensure they remain attractive and equitable, considering the project's financial constraints and the need to retain skilled personnel.

#### Performance Evaluation

164. Performance evaluation is a critical component of human resource management, serving to assess staff effectiveness and inform decisions regarding contract continuation and professional development. Evaluations will be conducted annually by the Manager of HR, in collaboration with the State Project Director (SPD) and the Chief Project Director (CPD). The evaluation process will include:

- **Objective Setting:** Clear, measurable goals aligned with project objectives.
- **Mid-Year Review:** An informal check-in to assess progress and provide feedback.
- **Annual Appraisal:** A comprehensive review of achievements, challenges, and areas for improvement.

165. Based on the performance evaluations:

- **Contract Renewal:** Decisions regarding the continuation of staff contracts will be influenced by performance outcomes, ensuring that only those who meet or exceed expectations are retained.

- **Annual Increment:** Salary increments will be determined based on performance ratings and will be within the range specified in the HR Manual, which has been duly approved by the Governing Council (GC).

### HR Manual and Approvals

166. The SCRAM will build upon the **HR manual developed in Phase 1**, adapting the manual, it will outline the project's staffing policies, procedures, and guidelines. This manual will provide comprehensive direction on recruitment, performance management, remuneration, and other HR-related processes. The manual will be subject to approval by the Governing Council (GC), and IFAD's No Objection will also be obtained as part of the overall Project Implementation Manual (PIM) approval process.

## 3.12 Monitoring and Evaluation (M&E)

167. The Monitoring and Evaluation (M&E) framework for the project builds on key lessons from the implementation of FOCUS. During the earlier phase, several challenges were identified, including the absence of household-level data collection, insufficient activity-wise and district-level disaggregation, and weak feedback loops for adaptive management. These shortcomings have informed the design of a more robust and integrated M&E system under the current phase.

168. The overarching objectives of the M&E framework are to:

- Establish household-level tracking of project interventions to accurately capture the reach and effectiveness of activities.
- Integrate a Remote Sensing (RS) and Geographic Information System (GIS) module, in collaboration with state-level technical institutions, to support real-time planning, geotagging, and spatial tracking of activities.
- Ensure interoperability and data exchange with the Mizoram State Rural Livelihoods Mission (MSRLM), to leverage their existing MIS and ensure consistency in household-level data collection and beneficiary tracking.

169. The M&E system will also include:

- Component-wise tracking of physical and financial progress;
- Results and Impact Management System (RIMS) aligned with IFAD's core indicators;
- A strong focus on disaggregated reporting by gender, youth, and social groups (for instance, different tribes) to enable inclusive impact assessment;
- A harmonized data management approach to ensure that all IFAD-mandated reporting uses a single source of truth, minimizing discrepancies across reports.

### Institutional Arrangements of M&E

170. To ensure robust implementation and effective use of the M&E system, the project will strengthen its M&E capacity through a combination of staff capacity development, onboarding of specialized personnel, and technical partnerships where necessary.

171. At the State Project Implementation Unit (SPIU) level, the M&E function will be led by a **Manager – M&E**, who reports to the Convergence Officer (Planning), and who will be directly supported by:

- **Manager – Knowledge Management and Communications**, responsible for ensuring effective documentation, dissemination of lessons, and communication of results;
- **Assistant Manager – MIS & Data Analysis**, responsible for managing the project's Management Information System and digital data tools, and who will ensure consistency, quality, and timely aggregation of data across project components

172. In addition, the Manager – M&E will serve as the reporting line for:

- **Manager – Gender & Capacity Building**, whose responsibilities are covered under section 3.6 (SECAP) and 3.7 (Targeting and Gender) of this PIM, but whose responsibilities to the Manager – M&E include: (i) ensuring integration of gender within the project M&E; and (ii) providing updates and statistics on gender and capacity building efforts under the project, when needed; and
- **2 Assistant Managers – SECAP**, responsible for managing SECAP work in the northern and southern districts, respectively (details outlined in section 3.6 of this PIM), and providing updates to the Manager – M&E, as needed, on the status of SECAP work.

173. This central M&E team will be supported by Assistant Managers – Planning, MIS, and SECAP at the district level, who will be responsible for:

- Regular updating and validation of district-level data;
- Ensuring harmonized data usage across planning, reporting, and compliance with Social and Environmental Climate Assessment Procedures (SECAP);
- Providing backstopping to field teams for real-time data capture and reporting.

174. The project will further leverage its block-level staff and Community Resource Persons (CRPs), as well as data generated from Self-Help Groups (SHGs) under the Mizoram State Rural Livelihoods Mission (MzSRLM), to facilitate continuous, ground-level data collection and feedback.

175. The Manager – M&E will oversee all core functions including planning, monitoring, evaluation, learning, knowledge management, reporting, and results communication. This role will also be responsible for ensuring the relevance, accuracy, and efficiency of systems for targeting and beneficiary tracking.

176. The structure ensures that the same data sources are consistently used across all levels of planning and reporting, strengthening accountability and supporting evidence-based decision-making throughout the project cycle.

### **Project Logical Framework:**

177. The project’s logical framework, or “log frame”, will serve as the foundation for a **three-tiered Monitoring and Evaluation (M&E) system**, structured to capture results across the results chain:

- **Output Monitoring:** Focused on tracking the delivery of physical and financial inputs, implementation of planned activities, and achievement of tangible outputs.
- **Outcome Monitoring:** Focused on measuring the direct and intermediate benefits to households and communities resulting from project interventions.
- **Impact Assessment:** Focused on evaluating the long-term effects of the project on the target population, measured against the overall objectives and development goals.

178. The log frame (refer to Appendix 2) provides a coherent and simplified framework for identifying, measuring, and reporting on the project’s **performance indicators**. It also articulates the **Theory of Change**, reflecting the logical linkages between inputs, outputs, outcomes, and impacts, and justifying the selection of interventions to achieve the project’s development objectives. To maintain focus and manageability, the log frame includes a **limited set of core indicators**, which will be complemented by a broader set of **detailed progress indicators** tracked through the MIS and field monitoring tools.

179. All the M&E data collection, analysis, and reporting will be **disaggregated by gender, indigenous peoples groups (in the context of Mizoram, different tribes), and youth**, in alignment with the project’s commitment to inclusion and equity. A comprehensive M&E plan has been developed (refer to Appendix 9) based on the log frame, which includes indicators to be tracked through the **Management Information System (MIS)** and **Core Outcome Indicator (COI) Surveys (Baseline, Midline, Endline)**, as appropriate.

### **Results and Impact Management System (RIMS):**

180. The project will adopt a **locally adapted RIMS** approach to support structured impact evaluation. Two main quantitative surveys—a baseline survey and an endline survey—will be carried out by an independent third-party technical agency. These will serve to:

- Establish the initial socio-economic conditions of the target population;
- Measure changes attributable to the project at completion; and
- Verify results and generate lessons for scaling and broader policy dialogue.

181. In addition to the baseline and endline surveys, **COI surveys** will be conducted from **Project Year 2 (PY2)** onwards to monitor progress on key outcome indicators and understand the dynamics of change resulting from project activities. These surveys will generate valuable evidence on intermediate results and provide feedback for adaptive project management.

182. The M&E system will be **participatory and decentralized**, ensuring that community voices and local realities are reflected in data collection and analysis. All data, analysis, and reporting will be **disaggregated by gender, age, and social groups** in line with IFAD's inclusion and equity principles. The project will also commission **additional thematic studies and evaluations**—through independent consultants or specialized agencies—to explore critical areas of interest, identify emerging lessons, and inform implementation strategies. These may include deep dives into climate resilience, social inclusion, or market systems, depending on emerging priorities.

183. Data and insights generated through these tools will feed into the preparation of **Annual Work Plans and Budgets (AWPBs)** and **Annual Progress Reports (APRs)**, ensuring compatibility with IFAD's **Operational Results Management System (ORMS)**. **Dedicated budget allocations** have been made for all knowledge generation activities, including baseline and endline surveys, outcome monitoring, thematic studies, and the project completion review.

### Components of the M&E System

184. The M&E system is designed to collect reliable, timely, and disaggregated data to measure the project's performance and progress toward achieving its intended results. It will serve as a tool for:

- Performance monitoring and identification of implementation challenges;
- Adaptive management, by enabling evidence-based course corrections;
- Strategic decision-making, by supporting critical reflection on project strategies and operations;
- Learning and accountability, both within the project and for external stakeholders.

185. In the early years of implementation, the system will focus on tracking how activities are being rolled out and identifying areas requiring adjustment. In later stages, the M&E system will serve as a tool for assessing the achievement of project outcomes and impacts, in line with the project's Theory of Change. The system will assess the relevance, efficiency, and impact of interventions on the lives of the target groups. In line with IFAD principles, the M&E system will be participatory and decentralized, involving project beneficiaries, community institutions, and frontline staff to ensure inclusivity and ownership. To ensure its effectiveness, the project will recruit competent M&E personnel and invest in capacity strengthening at all levels, from the SPIU to district and field teams.

186. The M&E system will consist of the following interconnected elements:

- Management Information System (MIS):** The MIS will enable household-level tracking of activities and outputs across project components. It will integrate a RS/GIS module to support geo-tagging of civil works, physical assets, and agriculture interventions, improving spatial transparency and accountability.
- RS/GIS Module in Partnership with MIRSAC:** A specialized geospatial module will be developed with the Mizoram Remote Sensing Application Centre (MIRSAC) to facilitate the planning and monitoring of agriculture clusters and natural resource management (NRM) activities. This will allow visualization of asset coverage, land use changes, and cluster performance.
- Baseline Survey:** A comprehensive baseline survey will be conducted to establish the initial socio-economic conditions of target households and communities. It will serve as the foundation for measuring progress against the log frame indicators.
- Impact Evaluation:** The Impact evaluation will consist of:

- COI Surveys (at baseline, midline, and endline) designed to assess progress on outcome indicators and provide insights into the project's causal pathways.
  - Endline Survey which will serve as the final benchmark for measuring long-term changes and project impact.
- e) **Thematic Studies and Case Documentation:** Periodic deep-dive studies will be undertaken to explore key areas of interest, assess emerging challenges or innovations, and generate actionable recommendations. These will also inform knowledge management, including the development of case studies, best practices, and lessons learned.

## **A. Project MIS**

187. The Management Information System (MIS) will be the central platform for collecting, managing, analyzing, and disseminating data across all components of the project. Developed in collaboration with the M&E team and technical specialists, the MIS will serve as a critical tool for results-based management, enabling timely decision-making, transparent reporting, and adaptive implementation. The MIS will be designed to:

- Capture household-level, activity-wise, and district-wise data;
- Track results against the Logframe and Annual Work Plan and Budget (AWPB);
- Support validation of the Theory of Change;
- Enable geospatial and temporal analysis of project activities;
- Generate customized dashboards and reports for project stakeholders.

188. It will be developed in consultation with M&E specialists and technical staff, and will integrate data from CRPs, SHGs under SRLM, block and district functionaries, and external sources. The MIS will also support offline functionality and mobile access to ensure field operability in remote areas.

## **Key Functional Areas of the MIS**

189. The MIS will incorporate the following functional categories:

### **Data Acquisition (DA)**

- Flexible form design and deployment for various project interventions;
- Offline data entry and synchronization to enable remote data capture;
- Beneficiary and intervention tracking through dedicated databases;
- Data importation and system integration from legacy systems or external sources.

### **Data Quality (DQ)**

- Data verification and validation protocols (including field checks and approval workflows);
- Automated data cleaning and consistency checks;
- Auditing and user feedback loops to improve data reliability;
- Uniqueness enforcement for beneficiaries and location data, ensuring disaggregated analysis by gender, youth, and other groups.

### **Results Logic (RL)**

- Logframe management, including digital tracking of indicators and results chains;
- AWPB integration for financial and physical tracking of annual targets;
- Support for testing the Theory of Change based on collected evidence;
- Results tracking and quarterly assessments to measure progress against targets.

### **Analysis and Reporting (AR)**

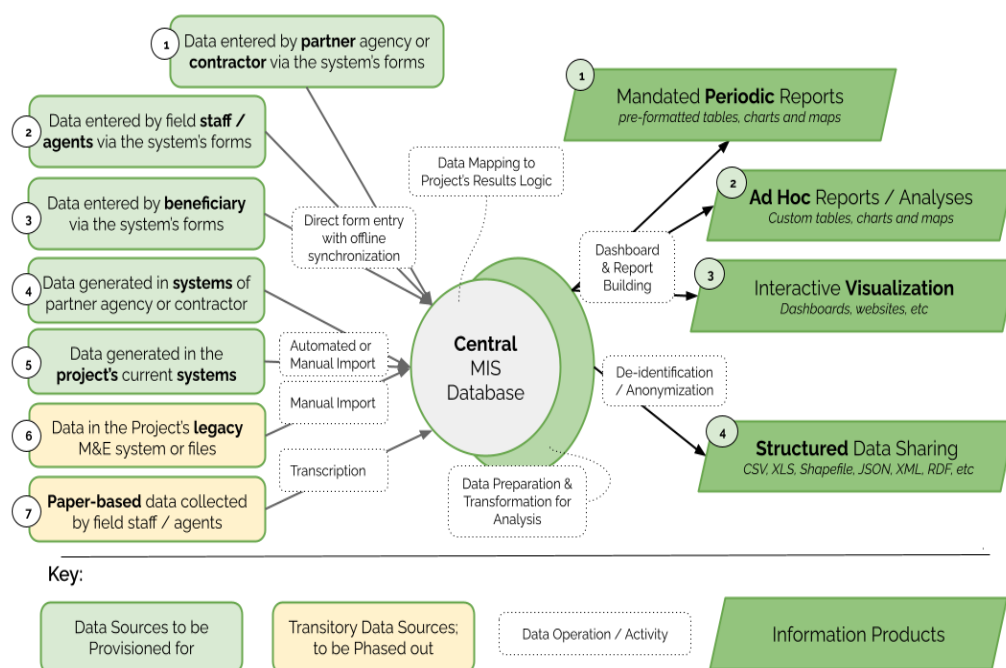

- Interactive dashboards, charts, and tables for stakeholder-specific views;
- Automated report generation aligned with IFAD's RIMS and project templates;
- Ad-hoc querying for thematic or location-specific analysis;
- Geospatial analysis and mapping for visualizing activity coverage and asset tracking.

### **Collaboration and Workflow (CW)**

- Role-based access control aligned to the project organogram;
- Workflow automation for approvals, reviews, and field validations;
- Data export in multiple formats (CSV, Excel, PDF, SHP, JSON, etc.);
- User support and training tools, including help menus, tutorials, and manuals.

### MIS Data Flow

190. The MIS will follow a layered data flow structure (as shown in the accompanying diagram), with data acquisition from multiple sources—online, offline, paper-based, and legacy systems—streamlined into a central MIS database. From there, data will be processed, validated, and mapped to the results framework. The system will generate a range of information products, including dashboards, standard reports, maps, and thematic insights for use by SPIU, district teams, CRPs, and IFAD.

191. The MIS will consist of multiple interlinked modules that support the comprehensive monitoring of project activities, outputs, and outcomes. Each module is tailored to capture specific dimensions of the project's implementation and results.

192. **Household Module** This module will serve as the **foundational database** for tracking project outreach at the household level. It will capture baseline socio-economic data, beneficiary profiles, and disaggregated information (gender, youth, IP status). This module will act as the primary reference point for linking all project interventions and monitoring beneficiary-level outcomes.

193. **Livestock Module:** Focused on Component 2.2, this module will track the implementation progress and results of livestock-related activities. Sub-modules will include:

- Tracking of Artificial Insemination (AI) services and uptake
- Geo-tagging of livestock assets such as animal sheds, pig breeding units, and collection centres.
- Monitoring livestock productivity and service delivery outcomes.

194. **Marketing Module:** This module will monitor the implementation of value chain and enterprise-related interventions under Component 1. It will capture:

- Business transactions of Farmer Producer Organizations (FPOs),
- Operational performance of value addition hubs and enterprises,
- Use and management of project-financed grants, loans, and subsidies,
- Key financial indicators such as revenues, profits, and input costs for supported enterprises.

195. **Training Module:** The training module will record and track all capacity-building activities, including:

- Type, location, and frequency of trainings,
- Participation by beneficiary categories (e.g., women, youth, IP)
- Trainers and institutions involved,
- Training feedback

196. **Community Service Provider (CSP) Module:** This module will support the planning, deployment, and performance monitoring of key community-based service providers such as Community Animal Health Workers (CAHWs), Zootechnical Service Providers (ZSPs), and others. It will facilitate:

- Task assignment and tracking,
- Service coverage and delivery verification,
- Performance analytics to inform incentives and support.

197. **Results Monitoring:** This module will enable the entry of decentralised data at the district and block levels, aligned with the project's AWPB. In addition, the module will link AWPB activities to corresponding log frame indicators and enable regular updates against AWPB implementation (physical and financial). The module will also support generate customised reports, including disaggregation of progress data based on gender, youth, IP, etc.

## ***B. RS/GIS Module in Partnership with MIRSAC***

198. To enhance the planning, implementation, and monitoring of project interventions, the project will establish a dedicated Remote Sensing (RS) and Geographic Information System (GIS) module, developed in technical partnership with the Mizoram Remote Sensing Application Centre (MIRSAC). This module will serve as an integral part of the MIS, providing a spatial layer of analysis and reporting that supports real-time decision-making, asset management, and transparency. The module will:

- **Identify and prioritise agriculture clusters:** The module will be developed using high-resolution satellite imagery, secondary geospatial datasets (e.g., from NRSC, Bhuvan, Soil Health Cards), and primary GPS data collected by field teams and CRPs. All spatial data will be integrated into a centralized database aligned with the MIS structure, allowing for seamless linkages between spatial and non-spatial indicators. MIRSAC will provide the technical guidance and infrastructure for:
  - Image processing and data layer development;
  - Spatial modelling and cluster analysis;
  - System maintenance and upgrades;
  - Capacity building of project staff at SPIU and district levels.

Using geospatial layers such as land gradient/slope, soil type, land use/land cover (LULC), proximity to water sources, and existing infrastructure, the module will support the identification of **suitable clusters for agriculture development**. This analysis will help ensure that clusters are selected based on their physical potential and alignment with the project's technical criteria.

- **Monitor agriculture cluster performance:** Once clusters are selected, the RS/GIS module will support their **monitoring and evaluation**, including:
  - Mapping of activities and physical progress within each cluster;
  - Assessment of land use changes and productivity improvements over time;

- Detection of deviations or underperformance based on satellite imagery and field-verified data.
- **Geo-tagging of project assets:** The module will enable **geo-tagging and spatial tracking** of all relevant project-supported infrastructure and assets, such as:
  - Livestock sheds and breeding units
  - Collection and aggregation centres,
  - Water harvesting structures,
  - Nurseries, demonstration plots, and NRM interventions.

This will provide a spatial record of asset location, status, and usage, enhancing transparency and accountability in asset deployment.

- **Spatial reporting and visualisation:** The RS/GIS platform will feed into the MIS to generate **map-based dashboards and spatial reports**, enabling stakeholders at various levels (SPIU, districts, blocks) to visualize:
  - Geographic distribution of interventions,
  - Progress across agricultural clusters and target areas,
  - Spatial disparities or gaps in implementation,
  - Overlaps with existing government schemes and infrastructure.

199. **Role of MIRSAC:** MIRSAC will provide the technical assistance, share infrastructure (hardware, software, server, etc.) for the following:

- Image processing and data layer development
- Spatial modelling and cluster analysis
- System maintenance and upgrades
- Capacity building of project staff at SPIU and district levels.

### ***C. Baseline Survey***

200. The baseline survey is meant to provide the basis for measurement of results and comparisons over time for the mid-term review, and ex-post evaluations. The baseline survey will be undertaken to better understand the socio-economic conditions in the targeted villages. The survey will also help measure key phenomenon among the targeted households such as women empowerment, community-based decision-making processes, agriculture and livestock practices, access to finance and markets, etc. Certain modules of the baseline survey will specifically target the community institutions such as SHGs and VOs promoted by SRLM, women and youth to better understand their issues. The baseline survey will be undertaken during the first six months after the start of project implementation.

### ***D. Impact Assessment***

201. Outcome monitoring will be conducted through COI Surveys (baseline, midline, and endline) to assess the immediate outcomes/effects resulting from project interventions— such as adoption of improved technologies, starting new enterprises, access to services and resources, and increasing farm and value addition, etc. These surveys are to be conducted annually, with the objective of: (a) regularly measure positive or negative changes taking place at the household level; (b) provide early evidence of project success and failure; (c) provide timely performance information so that corrective action can be taken if required; and (d) assess efficiency of targeting. The COI Surveys will also support the project in **tracing the causal pathways** leading to observed changes in intermediate outcomes and will offer insights for potential **course correction** and refinement of strategies.

202. The Impact Evaluation will assess the project's overall contribution toward achieving its development goal. It will be informed by data collected through the baseline, mid-term, and endline surveys, enabling rigorous measurement of change over time. The evaluation will be designed to produce statistically valid estimates for key log frame indicators. For core indicators included in the project's results framework, the survey will adhere to IFAD's recommended guidelines for indicator definition, questionnaire design, and calculation methodologies. Where necessary, indicator questions will be adapted or expanded beyond the standard COI Survey templates to better reflect the project context while ensuring comparability with

broader datasets. Together with the COI Surveys, the Impact Evaluation will help validate the theory of change, assess attribution, and provide evidence for scaling, replication, and policy learning.

203. The **COI Surveys** will be coordinated by the **Manager – Monitoring and Evaluation (M&E)** at the State Project Implementation Unit (SPIU), with support from qualified survey firms and technical specialists.

### ***E. Thematic Studies***

204. Thematic studies will be implemented on a need basis. The studies will help deep dive and improve the understanding of project outcomes. One of the key thematic studies that needs to be implemented by the project includes a study on measuring the project goal indicator on reduction in soil erosion rates. The project will adopt a **sample plot-based approach** to estimate soil erosion and loss over time, using standardized field methods and empirical models.

205. The methodology of the study will include the following:

#### **Selection of Sample Plots**

- Representative **sample plots** from the zau clusters will be selected across various agro-ecological zones, slopes, soil types, and land use types.
- Control plots (non-zau clusters) will be paired with treated plots to allow comparative analysis.

#### **Plot Design**

- Standard **runoff plots** (typically 2–6 meters wide and 10–30 meters long) will be laid out on slopes.
- Plots will be bounded and equipped with runoff and sediment collection systems (e.g., troughs, tanks, or sediment traps).

#### **Data Collection**

- **Rainfall, runoff, and sediment yield** will be recorded during rainfall events
- Soil loss will be calculated by measuring the **weight or volume of sediments** collected from each plot.
- Observations will be repeated across seasons to capture variation.

#### **Erosion Modelling**

- Field data may be used to calibrate and validate erosion prediction models such as **Universal Soil Loss Equation (USLE)** or **Revised USLE (RUSLE)**.
- Key parameters include rainfall erosivity, soil erodibility, slope gradient, slope length, crop cover, and conservation practices.

## **3.13 Knowledge Management**

206. Effective Knowledge Management (KM) is essential to the success of FOCUS 2.0 which aims to enhancing climate resilience, productivity and market access for rural communities. The overall aim of the KM strategy is to define a structured approach to capturing, organizing, sharing, and applying knowledge across all levels of the project—from grassroots village clusters to state-level institutions. By promoting continuous learning, efficient communication, and inclusive information exchange, best practices, innovations, and lessons learned will be systematically documented and used to inform decision-making. The overall objective is to:

- Enhance the communication of FOCUS 2.0's opportunities, eligibility requirements, activities and results to relevant project stakeholders through the use of traditional and digital communication channels.
- Strengthen learning by developing and implementing innovative and effective ways to strategically capture and share knowledge, leverage good practices, and improve the effectiveness of FOCUS 2.0.
- Promote inclusive knowledge exchange with emphasis on women and youth.

## **Coordination Structure:**

207. Knowledge Management will be overseen at the state level by the M&E, Knowledge Management (KM) and Safeguards Unit in the SPIU. A Manager for KM & Communications or “KM Specialist” will be responsible to develop and implement the KM strategy for FOCUS 2.0 in close collaboration with the SPIU M&E Manager as well as DM for Gender and Capacity Building as well as the technical specialist for agriculture, horticulture, livestock, NRM, Business promotion, incubation and others. The KM specialist will also coordinate with relevant service providers including:

- Service Providers for improving productivity of ZAU (Zonal Agricultural Units)
- Service Provider for livestock management
- Service Provider for Digital Extension Services
- Service Provider for Enterprise Incubation and Market Access
- Relevant counterparts at SRLM, NABARD, and other partners

## **Reporting and Knowledge Management:**

208. **Project Website:** The project will establish and maintain a dedicated webpage that will:

- Provide information on the project's vision, design, and implementation strategy
- Link to IFAD and other relevant institutional partners
- Showcase achievements, case stories, innovations, and pilot successes
- Provide access to MIS, Dashboard, GIS maps
- Offer a repository for downloading knowledge products
- Share contact details and a platform for grievance redressal
- Host training resources, photos, videos, and community content wherever available

209. **Knowledge Products:** The project will produce high-quality, evidence-based knowledge products like:

- Quarterly newsletters
- Technical notes, and case studies
- Training modules and learning videos in collaboration with TSP in component 1, 2
- Infographics and visual materials for rural stakeholders
- Success stories from ZAU productivity gains, market access improvements, and enterprise support
- Spatial visualization of beneficiary coverage, ZAU locations, and economic clusters
- Maps of infrastructure, service delivery, and enterprise development in coordination with GIS specialist/TSP in the project
- Key learnings from baseline survey, thematic studies and COI surveys

### **210. Community-Level Knowledge Exchange**

Building on innovations from projects like MLAMP, FOCUS 2.0 will introduce Community Talk forums—peer-led, field-based knowledge sessions where progressive farmers, CAHWs, or rural entrepreneurs share their experiences with others in the cluster. These events will create a culture of bottom-up learning and social proofing of new ideas. Local dialect content will be used wherever possible.

### **211. KM Partners**

The project has identified a set of strategic Knowledge Management (KM) partners who will play a dual role as both implementation collaborators and support learning and innovation. These include: Digital Green – support digital extension to farmers using AI, farmer feedback loops, and data-driven analysis will offer insights of farmer needs, cropping patterns as well as adoption of extension services by different farmers. Lessons drawn from the pilot

implementation will offer lessons and knowledge for full scale-up potentially engaging with rollout of pan-India scheme “VISTAAR”.

National Insurance Academy (NIA) – contributing to the design and implementation of bundled risk instruments (insurance, social protection linkages), while also serving as a KM hub for capacity-building, policy dialogue, and documentation of insurance innovations in fragile agro-ecosystems.

SELCO Foundation – co-developing decentralised renewable energy solutions for agri-processing and cold storage, while also generating knowledge products on energy access, enterprise models, and sustainability in hill regions.

Mizoram University- will incubate early stage start-ups in agri-processing, logistics, livestock management (including cold-chain) and digital technologies providing both technical and business mentorship to youth, women and other entrepreneurs. This will be one of first such incubation programmes in the state specifically targeted at agri/livestock innovations and will support both push for innovation in the sector but also valuable knowledge and lessons for IFADs portfolio in India.

These partnerships are designed not just for delivery, but to facilitate continuous learning, documentation of best practices, and support in policy engagement. During implementation, a broader KM and learning platform will be formalised under Component 3, involving these and other technical institutions (e.g., universities, KVK centres, TSPs) for peer learning, innovation showcases, and cross-state knowledge exchanges.

212. **Use of knowledge:** The State Project Implementation Unit (SPIU) will document emerging experiences, lessons learned, and best practices throughout the project and share them widely with stakeholders. Verified and accessible quantitative and qualitative data on project results will be critical for scaling up successful models.

213. To support the production of high-quality knowledge products, the SPIU will engage additional technical assistance when necessary.

214. The knowledge generated by the project will be used to:

- Improve project implementation and performance
- Adapt to changing needs and contexts
- Capture and share innovations, including both successes and failures
- Support innovation and scale-up of successful models
- Inform and influence policy engagement at the state level

215. Special focus will be placed on documenting innovative models tested through the project. These insights will be shared with policymakers and used to attract private sector investment.

216. To ensure continuous learning and communication, KM activities will promote the effective flow of information among project teams, beneficiaries, and other partners. A detailed Knowledge Management Action Plan will be developed early in the project to guide this work.

217. The KM system will:

- Enable project teams to generate, document, and apply practical knowledge
- Use data from the M&E system to create high-quality case studies, briefs, and reports
- Support improved performance and stronger outcomes

218. The project will make innovative use of digital platforms—including social media—as an integral part of its knowledge management (KM) strategy. These tools will be embedded across all project components, especially in training, capacity-building, and awareness activities. To increase visibility and promote wider outreach, **FOCUS 2.0** will:

- Engage with local and national media to highlight project achievements and activities
- Develop and disseminate posters, information videos, and other multimedia materials relevant to target value chains
- Promote environmentally friendly and innovative solutions in agriculture and allied sectors
- Document and preserve traditional knowledge specific to Mizoram for future learning and policy advocacy

219. **Continuous Learning and Documentation:** Capturing and sharing lessons and innovations will be a continuous process throughout the project, supported by:

- Ongoing data collection and analysis
- Monthly, quarterly and semi-annual progress reports
- Thematic studies and reviews

220. The **KM function in collaboration with M&E** will document and disseminate knowledge through:

- **Internal channels** such as learning events, stakeholder workshops, and review meetings (bi-annual and annual)
- **External channels** such as the project website and social media platforms

221. **Expected outputs:**

- A detailed Knowledge Management (KM) Action Plan developed and operationalized early in project implementation.
- An interactive and regularly updated project website serving as a central hub for resources, communication, and active user base established
- high-quality knowledge products including newsletters, case studies, technical briefs, training modules, videos, infographics, and GIS-based visualizations as well as quarterly newsletter is produced.
- Continuous documentation of innovations, lessons learned, and best practices through data collection, reports, and thematic studies.
- Increased visibility of project activities through strategic use of social media, local and national media coverage (at least 50 over the duration of the project), and multimedia content related to value chains.
- Regular learning events, review meetings, and stakeholder workshops to promote knowledge exchange and adaptive project management. (at least 2 per year)
- Tailored knowledge materials developed to engage and empower women and youth and capture their roles in agricultural and rural transformation.
- Improved coordination and knowledge sharing platforms established at community, district, and state levels, including collaboration with service providers and partners.
- A communication system (potentially through use of WhatsApp) established to reduce the information gap between field-level beneficiaries and project staff.

## 3.14 Reporting

### Reporting and Deliverable Management

222. To ensure quality, consistency, and timely delivery of all project documentation, the project will adopt a structured process for the production, review, and approval of reports and key deliverables. This process will include:

- A clearly defined timeline for the preparation and submission of each report or deliverable.
- A multi-stage quality control mechanism to ensure adherence to agreed standards, technical accuracy, and alignment with project objectives.

- A review and feedback loop involving relevant technical and administrative stakeholders at the state and district levels.
- A final approval process to ensure all outputs meet IFAD's quality assurance requirements and those of co-financing partners, where applicable.

223. This structured approach to reporting is intended to foster transparency, enable evidence-based decision-making, and uphold high standards across all project documentation, while supporting proactive and responsive management throughout the project cycle.

224. **Indicative Reporting Requirements:** The State Project Implementation Unit (SPIU) is required to produce an Annual Progress Report based on the approved Annual Work Plan and Budget (AWPB) and the corresponding budget allocations received from the Government of Mizoram. This report serves as a key mechanism for recording and disseminating implementation progress to various stakeholders, including the Line Departments of the Government of India, the Department of Economic Affairs (DEA), and participants in the Tri-Partite Performance Review (TPR) meetings conducted for IFAD-financed projects in India.

225. In addition to the annual report, several other reporting requirements arise under the project's Monitoring and Evaluation (M&E) framework. These include (*cross reference to 3.12*):

- Annual and semi-annual M&E reports, capturing progress against logframe indicators, implementation challenges, and corrective actions.
- Joint Mission Reports, including those produced during Supervision and Implementation Support Missions and the Mid-Term Review Mission—jointly prepared by the SPIU and IFAD mission team to assess performance and suggest course corrections.
- Annual updates to the project logframe in line with IFAD's Results Impact and Development Effectiveness (RIDE) exercise, which monitors corporate performance against the Results Management Framework (RMF).

226. The above list is indicative and subject to refinement based on implementation needs and specific requirements of IFAD

## Governance Meetings and Oversight Reporting

227. In addition to routine reporting, structured and periodic meetings will be held among key governance and supervisory bodies to ensure continuous oversight and timely decision-making. The project will institutionalize the following meeting schedule:

- The **Governing Council** (*cross reference to section 3.4*) shall convene **once every six months** to review strategic direction, overall performance, and policy-level decisions.
- The **Project Management Committee (PMC)** (*cross reference to section 3.4*) will meet on a **quarterly basis** to assess implementation progress, address inter-departmental coordination issues, and provide operational guidance.
- The **District Level Coordination Committees (DLCCs)** (*cross reference to section 3.4*) will also meet **quarterly**, focusing on local-level implementation, convergence with line departments, and issue resolution.

228. To support effective governance, these meetings will follow a structured agenda and will be supported by relevant dashboards, progress briefs, and decision logs. Meeting minutes will be formally recorded and shared with relevant stakeholders to ensure accountability and follow-through.

229. Where appropriate, the State Project Implementation Unit will prepare concise oversight reports or dashboards ahead of these meetings, providing a summary of key performance indicators, implementation bottlenecks, financial progress, and proposed corrective actions.

### 3.15 Risk Management

230. The SCRAM will regularly monitor key risks across financial management, procurement, safeguards, institutional coordination, climate events, and socio-political factors. A structured mechanism for periodic risk review will be embedded into project governance, including quarterly updates and course corrections through Project Steering Committee meetings and internal review processes. Given Mizoram's remote and hilly geography, compounded by cross-border fragility (e.g., ASF outbreaks and regional unrest), the SPIU will remain particularly vigilant to biosecurity, logistics, and climate-related risks. If any major risk materialises, the SPIU will work in close coordination with IFAD and line departments to trigger mitigation protocols such as reallocation of resources, deployment of contingency plans, or activation of technical assistance. Proactive risk management will be supported by strengthened MIS, field-level reporting, and adaptive planning tools.

### 3.16 Sustainability Strategy<sup>16</sup>

231. FOCUS 2.0 is designed with a strong emphasis on long-term sustainability, institutional ownership, and scalability of results. Beyond achieving time-bound outputs, the project aims to embed resilient systems, strengthen local institutions, and create scalable models that can inform future programs in Mizoram and beyond. This chapter outlines the strategy for sustaining project results, handing over responsibilities, and scaling up successful models beyond the duration of IFAD financing.

232. **Project Outcomes Linked to National Policy Goals:** FOCUS 2.0 is closely aligned with the development priorities of the Government of Mizoram, including the *Bana Kaih* handholding policy, the supporting Zau papers for agricultural intensification, and convergence with centrally supported schemes such as PMKSY, RKVY, and the National Livestock Mission. These alignments ensure that project outcomes contribute directly to longer-term government programs and policy frameworks that will continue beyond the project's timeline. The Project Steering Committee (PSC) and district-level platforms include key line departments, reinforcing integration with the state machinery.

233. **Sustainability of Results and Handing-Over Strategy:** The project avoids a “build-then-handover” model by ensuring early and continued community ownership of all interventions. Specifically, project-financed assets and services are developed through participatory processes, with clear plans for community-led management and cost recovery. Key sustainability elements include:

- Zau clusters institutionalized as operational units for production and market coordination, supported by trained Zau Resource Persons (ZRP).
- Livestock service systems, including Boar Semen Stations, Community Animal Health Workers (CAHWs), and Artificial Insemination (AI) technicians, structured around community-based models with linkages to the Department of Animal Husbandry and Veterinary Services (AH&VS).
- Market infrastructure, including Collective Marketing Centres (CMCs), Farmers' Markets, and PRIME Hubs, operated through public-private or community-managed models with built-in business and maintenance plans.
- Capacity development of farmer groups, producer organizations, and local service providers embedded throughout implementation to ensure ownership, continuity, and skills transfer.

234. Operations and maintenance (O&M) responsibilities are assigned from the outset, with handover embedded in the planning and construction processes.

235. **Scaling-Up and Scaling-Out Strategy:** FOCUS 2.0 has been deliberately structured to produce models that can be scaled up by the state or replicated in other regions. Scaling efforts will follow three pathways:

- **Policy mainstreaming:** Successful models (e.g., *Zaus*, Small Farmers–Large Fields, livestock clusters) will be integrated into state guidelines and sector programs.
- **Budgetary replication:** Convergence with existing government schemes will facilitate continued financing for project-initiated interventions.

---

<sup>16</sup> [Annex V - Technical note – Developing exit strategies in IFAD projects](#)

- **Knowledge dissemination:** Lessons learned will be documented and shared through M&E, knowledge platforms, and partnerships with research institutions, allowing wider uptake.

236. Digital systems developed under the project, such as beneficiary profiles, digital service records, and enterprise tracking, will enhance the government's ability to monitor and scale similar initiatives beyond project financing.

237. **Institutional Strengthening for Long-Term Impact:** The project is implemented through the Society for Climate Resilient Agriculture in Mizoram (SCRAM). Leadership from a Chief Project Director (IAS) enables cross-sectoral coordination and convergence. The institutional arrangements are designed not only for project delivery but also for long-term rural development planning and execution by the Government of Mizoram. By embedding ownership across all levels (i.e.: government, community, and private sector), FOCUS 2.0 establishes durable systems and capacities to sustain and expand its impact long after project closure.

### 3.17 Supervision and Implementation Support (SIS)

238. **Start-up workshop:** In the first year, a workshop will be organized to sensitize all project stakeholders, key line departments, SPIUSPIU staff and District Offices about the approach of the project, its key components and implementation arrangements, and related safeguards requirements. The Start-up workshop will aim at developing a common understanding of the project's underlying design principles, processes and development objectives. The workshop will also allow partners to understand their role in the project and reflect on the Theory of Change and log frame (including verification of indicators, baselines, and target values). The tools and procedures for financial management, procurement, selection of beneficiaries for different components, strategies for M&E and KM, and safeguards will also be introduced to key staff undertaking these key functions. Similar workshops would subsequently be organized in every participating district to sensitize local partners about the project.

239. **Supervision and implementation support missions:** Annual supervision missions and implementation support missions will be conducted jointly with the Government of Mizoram and IFAD, in close collaboration with other relevant stakeholders (for instance, line departments). IFAD will mobilize expertise to facilitate supervision missions and review missions jointly with the state government as an opportunity to assess achievements and lessons-learned, review innovations, and reflect on improvement measures. These supervision missions will, therefore, be an integral part of the KM cycle, with mission members playing a supportive role. There will be six supervision missions and six implementation supervision missions each (approximately one of each type per year), over the six-year project's lifecycle.

240. **Mid-term Review (MTR):** An MTR will be conducted halfway through implementation (either at the end of Project Year 3 or the beginning of Project Year 4) to assess the performance of the project based on results attained against the established objective(s), and the efficiency and effectiveness of project management. The MTR will evaluate whether FOCUS 2.0 is on-course to achieve the Project Development Objective and will identify any constraints and recommend remedial measures to achieve them. The recommendations will consider the likelihood of achieving the Project's targets during the remaining time and may modify those targets. Before completion, an impact assessment will be undertaken to inform the Project Completion Report (PCR), which will provide an assessment of the accomplishments of the project and analysis of its performance.

241. **Project Completion Review:** As the project reaches completion point, the SPIUSPIU will prepare a Project Completion Report. IFAD and the Government of Mizoram will then undertake a project completion review before the loan closing date.

## Chapter 4: Detailed Project Implementation Plan

### 4.1 Overview

242. This chapter provides the strategic roadmap for executing FOCUS 2.0 across the 11 districts of Mizoram, with a structured approach on how to translate project inputs into outcomes and impacts (and by whom). Based on the Logical Framework (Appendix 2) and the Theory of Change (Appendix 1), the following sub-sections outline how activities are phased, sequenced, and interlinked to sustainably improve the economic, social, and climate resilience of the targeted households in rural Mizoram. In this chapter, each component (with subcomponents) is detailed based on: (i) context; (ii) outcome; (iii) Phase II improvements; (iv) steps for implementing the sub-component activities; (v) overall implementation roles and responsibilities; (vi) implementation-related risks and mitigation measures; and (vii) exit strategy. Each Component section clarifies the phasing of activities and, where needed, is supplemented by an Appendix with background studies/technical notes (Appendix 13, 14, and 15 of this PIM, respectively). Any additional details provided, beyond those aforementioned, are component-specific only. This chapter may be updated, as needed, by the State State Project Implementation Unit (SPIUSPIU), with revisions captured in the revisions log (please refer to Chapter 1.3).

243. **FOCUS 2.0 builds directly on the foundations laid by FOCUS.** Many rural households supported under the first phase (especially in climate-resilient agriculture, livestock rearing, and producer organizations) are now poised to transition into more structured, market-responsive engagement. These (more) “production-ready” households will benefit early from the interventions under **Component 1: Market Access and Enterprise Development**, which provides critical downstream infrastructure and services at three main nodes, specifically:

- **CMC (Farmgate/Village Level/Zau Cluster level):** This is the first point of aggregation focused on primary sorting, grading, and basic post-harvest management. It serves as the initial collection and sales center at the village level.
- **Farmers’ Markets (Block Level):** These are intended for both retail and wholesale transactions, functioning as intermediate nodes connecting multiple CMCs to Hubs (as needed).
- **Hubs (District Level):** These are higher-value nodes for advanced processing, packaging, and second-order value addition, preparing produce for institutional buyers and larger markets).

244. This backward linkage from markets to producers is central to the project's design and sequencing. The sequencing of FOCUS 2.0, with an emphasis on market-led, demand-driven interventions, also echoes the current policy priorities of the Government of Mizoram, specifically the flagship scheme *Bana Kaih*.

245. At the same time, **Component 2: Improved Agricultural Productivity**, will deepen outreach by supporting both Zau-based cluster development and targeted investments for new and/or underserved households, especially in the southern districts and more economically marginalized areas. Agricultural and livestock production interventions under Component 2 are strategically aligned with Component 1 to create forward linkages that connect increased productivity to functioning market systems and enterprise channels. For instance, poultry and piggery value chains will be integrated to aggregation, processing, and distribution systems financed under Component 1. Similarly, high-value crops like ginger, promoted in selected clusters under Component 2, will follow a phased pathway: initial grading and drying at CMCs, followed by advanced processing, packaging, and second-order value addition at district hubs, enabling bulk marketing to institutional buyers.

246. Finally, **Component 3: Project Management and Institutional Strengthening**, plays a much more pivotal integrative role than it did during FOCUS. Specifically, it responds to concerns of the GoM regarding convergence, and it ensures that the planning, implementation, and oversight of Components 1 and 2 are harmonized across government ministries, sectors, and geographies. The component supports robust M&E, digital MIS, safeguards, capacity development, and coordination platforms – all of which are critical to enabling the “whole-of-government” approach envisioned under the *Bana Kaih* policy.

247. There are multiple interdependencies across components, for example (but not exhaustively):

- Market infrastructure developed under Component 1 – Subcomponent 1.1 (Market Access Infrastructure) is phased to align with production scaling of crop and livestock under Component 2;
- Business development and enterprise support under Component 1 – Subcomponent 1.2 (Enterprise Development and Financial Inclusion) are directed toward Zau groups, producer collectives, and rural enterprises formed and capacitated through Component 2 – Subcomponent 2.1, as well as livestock producer groups supported under Subcomponent 2.2;
- Veterinary services and livestock value chain actors under Component 2 – Subcomponent 2.2 are directly linked to aggregation and processing infrastructure, as well as incubation and finance mechanisms provided through Component 1 – Subcomponent 1.2;
- Both production and market-focused interventions rely on the institutional coordination, technical assistance, and capacity development mechanisms established under Component 3.

248. The FOCUS 2.0 implementation approach is spatially phased, beginning with clusters and districts that already have an institutional or production base from FOCUS, and expanding to more remote or less-developed areas. The first-year Annual Work Plans and Budget (AWPB) and related 18-month Procurement Plan are available in Appendix 3, to support readiness-at-entry, and future AWPBs will be developed through a bottom-up planning process to determine geographic rollout and investment pacing. Sequencing of project activities is designed to consider: (i) community readiness; (ii) convergence opportunities; and (iii) value chain potential, allowing the project to maintain momentum while reaching new households over time.

249. Gantt charts/implementation flow diagrams are provided in each component sub-section (4.2, 4.3, and 4.4) to illustrate the temporal and operational sequencing of each component's key activities. These charts/diagrams may be updated as-needed (likely on an annual basis) to guide adaptive management, learning, and convergence with state and centrally-supported schemes.

250. This chapter should be read in conjunction with the Logical Framework (Appendix 2), Sustainability Strategy (Chapter 3.16), and the operational manuals on procurement (Appendix 3b), financial management (Appendix 8), and M&E (Appendix 9).

## 4.2 Component 1: Sequencing of Project Activities

### **Component 1 Context:**

251. Mizoram's agricultural sector is shaped by its unique hilly terrain, scattered settlements, and limited connectivity, leading to fragmented production systems and underdeveloped market linkages. Although the state possesses significant potential in high-value crops such as ginger, turmeric, Mizo chilli, banana, broom grass, and a variety of fruits and vegetables, the benefits of this potential remain largely untapped due to weak aggregation, minimal processing capacity, and limited integration with regional or national markets. As per the Economic Survey of Mizoram 2023–24, although the gross cropped area is approximately 1.56 lakh hectares, over 85% of holdings are small or marginal, and much of the cultivation remains rain-fed, with low average productivity levels and high post-harvest losses (Government of Mizoram, 2024).

252. Market-related bottlenecks are a critical constraint to rural income growth. The absence of structured aggregation systems, poor farm-to-market connectivity, lack of value addition infrastructure, and weak demand-side linkages (with buyers, traders, and institutional markets) severely limit farmer bargaining power. For example, Aizawl — the primary redistribution and consumption hub — sources 60–70% of its vegetables and fruits from outside Mizoram, especially Silchar in Assam, even though nearby districts like Lunglei, Champhai, and Kolasib have significant production surpluses (Thematic Note, 2025). Similarly, high-value produce, such as ginger, Mizo chilli, and broom grass, are often bulked in Assam or Meghalaya before being sold onward to northern India, bypassing the state's own aggregation and processing systems.

253. To address these systemic issues, Component 1: Market Access and Enterprise Development of FOCUS 2.0 is designed to establish a robust and inclusive market ecosystem. Anchored in a hub-and-spoke model, the component promotes structured aggregation and value addition aligned with the geographic and economic realities of Mizoram. The model is based on differentiated functions across Collective Marketing Centres (spokes), Farmers' Markets (mid-tier retail and relay nodes), and Value Addition Hubs (hubs) — all developed through a public-private partnership (PPP) approach. This structure enables backward and

forward linkages across production clusters and ensures that both short value chains (within-state consumption) and anchor value chains (interstate marketing and processing) are effectively supported.

254. FOCUS 2.0 draws heavily from lessons learned under FOCUS. While the earlier phase succeeded in piloting integrated production clusters (known as “*Zaus*”), it did not sufficiently address the downstream value chain infrastructure. Informed by the Phase I PCR and implementation feedback, Component 1 of FOCUS 2.0 therefore expands the scope to include physical market infrastructure, enterprise incubation, and financial-digital ecosystem development, ensuring that production gains translate into higher farmer incomes, entrepreneurship opportunities, and greater economic resilience. The component also aligns with Mizoram’s *Bana-Kaih* framework, which emphasizes market-driven agriculture, diversified livelihoods, and climate-smart practices, and seeks to serve as a scalable model of inclusive agri-market transformation in hilly regions of India and beyond.

## **Component 1 Outcome**

255. The outcome for Component 1 is “**Enhanced Market Participation of Rural Households**”. Specifically, the project aims to significantly increase the number of rural households transacting through structured or formal markets such as Farmer Producer Organizations (FPOs), co-operative societies, and enterprises. By the end of the project, at least **40,000** rural households (approximately 50% of targeted beneficiaries) are expected to be engaged in formal market transactions.

### **Sub-Component 1.1: Market Infrastructure**

256. Sub-component 1.1 of FOCUS 2.0 aims to address a foundational bottleneck in Mizoram’s agriculture and allied sectors: the lack of structured and value-chain-aligned market infrastructure. Despite significant production of high-value commodities such as ginger, turmeric, Mizo chilli, banana, broom grass, and horticultural fruits, the state’s market ecosystem remains fragmented due to dispersed production, challenging terrain, and limited access to aggregation and trading points. This sub-component proposes a tiered hub-and-spoke infrastructure model to connect producers to markets, reduce post-harvest losses, and enhance participation in local and inter-state value chains. By investing in Collective Marketing Centres at the village level, Farmers’ Markets at the block level, and multi-functional Value Addition Hubs at the district level, the project seeks to improve producer margins, enable private sector engagement, and create inclusive market systems that benefit both supply- and demand-side actors.

#### ***Context & Justification:***

257. The need for Sub-component 1.1 arises from deeply entrenched structural and geographic challenges in Mizoram’s agricultural economy. While the state produces several high-value commodities such as ginger (with over 3.19 lakh quintals produced across 11 districts), turmeric, and Mizo chilli (Economic Survey of Mizoram 2023–24), farmers continue to face limited market integration due to the absence of basic aggregation infrastructure and marketing platforms. This challenge is compounded by Mizoram’s hilly terrain and dispersed settlements, which increase logistics costs and limit the volume of produce that reaches structured markets.

258. As noted in the project’s Thematic Note on Value Chains (see Appendix 13) and stakeholder consultations during FOCUS 2.0 preparation, the state’s marketing bottlenecks are not limited to producers alone; they affect the entire value chain. Processors, buyers, and traders struggle with fragmented procurement, lack of quality assurance infrastructure, and the absence of centralized facilities for value addition and storage. This has discouraged private sector engagement and weakened price transmission from markets to farm gates.

259. The hub-and-spoke model proposed under this sub-component is justified by the evidence collected during field diagnostics and is directly informed by lessons learned under FOCUS. Key gaps such as the under-utilization of decentralized markets, poor condition of rural infrastructure, and missed opportunities for scale economies have all pointed to the urgent need for an integrated approach to market infrastructure. The model addresses both the supply and demand sides, ensuring that producers have access to local and external markets while enabling buyers and processors to operate more efficiently through streamlined aggregation and logistics systems.

## ***Phase II Improvements:***

260. The experience from FOCUS demonstrated important achievements in promoting climate-resilient production through Integrated Farming Clusters (IFCs) but also highlighted critical limitations in downstream market integration. While production volumes increased in several clusters, the absence of well-developed market infrastructure and aggregation points restricted farmers' ability to access remunerative markets. Farmgate sales dominated, leading to low price realization and persistent post-harvest losses. Furthermore, although farmer groups and community institutions were supported under FOCUS I, they lacked the scale, assets, and business orientation required to operate in value chains.

261. Another key limitation was the lack of alignment between production geography and infrastructure planning. Infrastructure was not always located based on actual production density, road access, or trade corridors, limiting their utilization. Additionally, while public infrastructure was created, its operation and maintenance models were weak—there was no structured approach for private or FPO-led participation in managing these assets. The limited investment in rural link roads also meant that even when production increased, movement to markets remained expensive and inefficient.

262. FOCUS 2.0 responds to these gaps through a redesigned market ecosystem based on a hub-and-spoke model, backed by clearer institutional roles, private sector engagement through leasing arrangements, and a strategic infrastructure investment approach that prioritizes access, functionality, and connectivity.

263. Key Changes Introduced in FOCUS 2.0:

- **Linking production clusters (IFCs) or Zaus to market-integrated infrastructure:** Linking IFCs/ Zaus to a tiered market infrastructure system—CMCs, Farmers' Markets, and Hubs—aligned to commodity flows and market potential.
- **Hub-and-spoke model for infrastructure:** Introduction of a structured model that allows aggregation, processing, and trade to take place in a spatially connected and economically logical manner.
- **Public-Private Partnership (PPP) for infrastructure management:** All infrastructure (CMCs, Farmers' Markets, and Hubs) will be publicly financed but leased to FPOs or private actors under performance-based contracts, ensuring accountability, efficiency, and market responsiveness.
- **Clear leasing authority and asset ownership structure:** Village Councils, District Authorities, or Departments (e.g., Commerce, Horticulture) will act as leasing authorities, depending on the facility, ensuring alignment with administrative capacities.
- **Commodity prioritisation and location planning based on data and demand:** Detailed district and block-level commodity mapping and market analysis (including trader consultation) were used to identify infrastructure locations and commodity focus, improving utilization and impact.
- **Stronger last-mile connectivity:** Investment in at least 150 km of farm link roads to ensure produce can be transported quickly and cost-effectively from farms/ Zaus to CMCs and higher market tiers.
- **Integrated livestock infrastructure:** Inclusion of egg aggregation, poultry slaughter facilities, and cold-chain elements within the hub-and-spoke model, addressing lessons from the exclusion of livestock marketing in FOCUS.

264. These enhancements reflect a shift toward commercialization, value chain integration, and sustainability, ensuring that public investments in infrastructure unlock tangible benefits for both producers and market actors.

## ***Objectives and Expected Results***

265. Sub-component 1.1 aims to build a foundational market ecosystem that enables the structured flow of agricultural and livestock commodities from dispersed production zones to structured markets and inter-state trade channels. The objective is to strengthen market access through tiered infrastructure, improve producer price realization, and create a conducive environment for private sector participation—including traders, processors, and buyers—across value chains. This will reduce post-harvest losses, strengthen value retention at the local level, and increase incomes for smallholder farmers and rural entrepreneurs, particularly women and youth.

**Outcome:** *Households engaged in transactions with structured or formal markets*

**Table 8: Component 1.1 Outputs and Targets**

| <b>Output</b>                                                            | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <b>Target</b>                                                                            |
|--------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------|
| Collective Marketing Centres (CMCs) established at village/cluster level | CMCs will act as the first-point aggregation facilities at the farmgate level, ranging between 500 to 1,000 sq. ft. These centres will be strategically located in clusters with over 100 households. Managed by Village Councils (VCs) or Farmer Producer Organizations (FPOs), they will be equipped with essential infrastructure like weighing scales, tarpaulins, and grading tables to facilitate quality sorting, transparent transactions, and collective sales. | 300 CMCs constructed and operational across key villages                                 |
| Block-level Farmers' Markets constructed and operational                 | Farmers' Markets will serve as semi-retail and wholesale markets, strategically located along transport corridors such as State and National Highways. These markets will support intra-state trade of perishables and livestock and will include amenities such as storage facilities, drainage, sanitation, livestock sections, and parking zones. They will also act as supply nodes to urban centres like Aizawl and relay commodities to higher market tiers.       | 13 Farmers' Markets constructed (1 per 2 blocks)                                         |
| Multi District-level Value Addition Hubs (PRIME Hubs) established        | These district-level hubs will serve as centralized platforms for bulk aggregation, value addition (drying, slicing, cold storage, packaging), and institutional marketing. They will also host incubation activities and training, and act as points for private sector engagement. Operated under a Public-Private Partnership (PPP) model, they will be managed by high-performing FPOs or private enterprises through lease agreements.                              | 5 district-level Hubs constructed and managed by FPOs/private players                    |
| Catalytic investment in scalable models for hub expansion                | The five hubs established under FOCUS 2.0 will serve as demonstration models, catalysing further investment. The project aims to scale these hubs to all 11 districts through convergence with other schemes (e.g., central government or Northeast Council).                                                                                                                                                                                                            | Model hubs in 5 high-potential districts, expansion to all districts through convergence |

| Output                                               | Description                                                                                                                                                                                                                                                      | Target                                                              |
|------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------|
| Farm link roads and last-mile connectivity developed | To ensure seamless movement of produce from farms to markets, the project will invest in approximately 300 km of farm link roads, including earthen roads, bridges, and ropeways. These will connect production clusters (Zaus) to CMCs and higher-tier markets. | 300 km of farm link roads and connectivity infrastructure developed |

266. This results framework provides the physical and institutional backbone for Component 1, ensuring that the market infrastructure not only facilitates producer access but also enables efficient engagement from the private sector—spanning traders, processors, retailers, and buyers. This inclusive model of infrastructure-led market development underpins the project’s broader vision of a resilient, market-responsive agricultural sector in Mizoram.

### ***Description of Activities, Approach, and Modalities of Implementation***

267. Under Component 1.1, the project will invest in a tiered market infrastructure system designed to connect producers with both local and external markets through an integrated hub-and-spoke approach. This includes the development of Collective Marketing Centres (CMCs), block-level Farmers’ Markets, district-level Value Addition Hubs, and a detailed feasibility and design study to ensure that infrastructure investments are demand-driven, spatially efficient, and aligned with commodity flows and market potential. Together, these interventions aim to strengthen last-mile aggregation, improve producer-buyer linkages, and catalyze private sector participation across the value chain.

**Key activities under component 1.1 are as follows:**

- **Feasibility Study and Market Infrastructure Planning:** District and block-level assessment to identify infrastructure gaps, map production clusters, and avoid duplication with existing warehouses and facilities through convergence with relevant departments.
- **Establishment of 300 Collective Marketing Centres (CMCs):** First-point aggregation facilities at the village/cluster level, equipped with basic infrastructure such as weighing scales, tarpaulin, and grading tables, managed by Village Councils, SHGs or FPOs.
- **Construction of 13 Block-level Farmers’ Markets:** Semi-wholesale and retail markets with infrastructure for vegetables, fruits, eggs, and livestock sales; complying with all the necessary safeguards as per local and national compliances, and storage, located near key transport corridors.
- **Development of 5 District-level Value Addition Hubs:** Multi-functional hubs equipped with facilities for second order value addition, bulk aggregation, grading, drying, packaging, cold storage, and incubation/training, operated by FPOs/private players under PPP.
- **Establishment of Poultry Slaughter and Processing Facility in Aizawl (Ibawk Block):** Development of a centralized poultry slaughter, chilling, and processing facility under a PPP model, with capacity for 500–1,000 birds/day, providing market access to broiler farmers, supporting food safety regulations, stabilizing producer prices, promoting organized waste management, and enabling expansion of value-added poultry supply chains across Mizoram.
- **Construction of 300 km of last mile connectivity:** Improving connectivity between production clusters (Zaus) to CMCs including suspension bridges and ropeways where needed.

268. **Note:** For specific details on the livestock-specific infrastructure and enterprise support, please refer to the PIM Chapter 4.3 (Component 2), subsection on Sub-Component 2.2: Livestock Production, as interventions are described there for simplicity given the heavy link to livestock production.

### ***Feasibility Study and Market Infrastructure Planning***

269. The first major activity under Sub-component 1.1 is a comprehensive Feasibility Study and Market Infrastructure Planning exercise, which will serve as the foundation for all subsequent infrastructure investments under the component. The objective is to ensure infrastructure investments are evidence-based, demand-driven, and spatially aligned with actual production patterns, market access potential, and trade flows.

270. The study will be conducted at both district and block levels using a participatory and data-led approach. It will identify production clusters (Zaus), assess road connectivity, analyze market flows, and map both demand and existing infrastructure. The study will also account for intra-district variations in agro-ecological zones—such as valleys and hill slopes—which significantly affect crop suitability and market access. This will ensure infrastructure investments are tailored to micro-clusters of production rather than being generalized at the district level.

271. The feasibility study will also cover both network-level and individual investment-level assessments to ensure a well-functioning and sustainable market infrastructure system. This includes mapping production volumes and locations to guide the optimal siting and sizing of Collective Marketing Centres (CMCs) and Farmers' Markets, along with convergence with existing infrastructure and ongoing government schemes. It will assess seasonal production and marketing cycles to align infrastructure use with cash flow needs, and conduct a sensitivity analysis to test financial and operational viability under various risk scenarios (e.g., price volatility, delayed construction, or under-utilization). The study will also evaluate land availability, potential relocation costs, and required approvals. A strategy will be developed to integrate existing private-sector-owned facilities into the network through leasing, co-investment, or service partnerships. Additionally, the study will define operating and governance models (e.g., FPO-led, PPP), and propose a phased implementation plan based on readiness criteria such as water availability, production density, and logistical connectivity.

272. In parallel, the study will map existing public infrastructure (godowns, rural haats, cold storage units, and logistics sheds) under departments such as Agriculture, Horticulture, AH&VS, and Commerce & Industries. Where feasible, FOCUS 2.0 will repurpose and upgrade existing assets through convergence, avoiding duplication and maximizing cost-effectiveness. The study will also examine convergence with existing schemes to identify similar initiatives, avoid duplication, and leverage these schemes for market infrastructure development.

273. This infrastructure planning is anchored in the district-specific commodity prioritization exercise conducted during project design. As detailed in the Technical Note on Value Chain Development, a two-stage process was followed:

- a. **State-wide participatory workshops** involving SHG, Businesses, FPOs, Village Councils, KVKs, and line departments to evaluate commodities using a weighted scoring framework across four parameters:
  - Production volume
  - Market potential (local and interstate)
  - Scope for value addition
  - Exposure to risk (climatic, pest, and market volatility)
- b. **Empirical triangulation** with district-level production data, trader interviews, and commodity flow assessments to validate anchor commodities and short value chains. This exercise produced a validated list of high-potential commodities across districts, aligned with both production realities and market demand. The outputs of this process directly inform infrastructure planning, ensuring alignment with real economic opportunities rather than top-down allocations. Further details on scoring and selection methodology are provided in the *Technical Note on Value Chains* (Appendix 13).

274. **Rationale for Block-Level Diagnostics:** Despite strong insights from the district-level commodity selection, granular block-level diagnostics remain essential to fine-tune infrastructure siting and ensure equitable targeting. Intra-district variability in production patterns, commercialization potential, and road connectivity is significant. For example, while Aizawl district has high aggregate banana production, only a few accessible blocks drive this output. Applying blanket infrastructure investments without this granularity would reduce impact and utilization.

275. In addition, opportunities for short value chains, intercropping, and livestock-based enterprises are often localized and may not emerge from district-aggregated data. Block-level diagnostics will help identify these, allowing the project to respond to micro-markets, seasonal surpluses, and value addition niches.

276. This exercise will support:

- Refinement of CMC and Farmers' Market locations
- Mapping and convergence with existing infrastructure
- Synergy identification with ongoing government schemes
- Logistics planning (farm link roads, ropeways)
- Participation of Village Councils in decentralized planning
- Assessment of seasonal production and marketing cycles to align infrastructure usage with cash flow support for producers and enterprises
- Sensitivity analysis to test financial and operational viability under different scenarios (e.g., price shocks, delays, under-utilization)
- Strategy for integration of private-sector-owned facilities into the network (e.g., through leasing, co-investment, or service contracts)
- Definition of governance and operating models for facilities (e.g., FPO-led, PPP arrangements, or cooperative-managed structures)
- Phased implementation plan based on criteria such as water availability, production density, logistical connectivity, and readiness for early piloting

277. **Market Flow Mapping:** The feasibility study will also integrate commodity flow assessments, for example:

- Vegetables and fruits consumed in Aizawl (60–70%) are sourced from Silchar and other parts of Assam
- Broom grass and ginger produced in Mizoram are transported to Guwahati for cold storage and staggered release
- Poultry and eggs often flow from outside the state to Aizawl, then redistributed southward

278. These insights will guide infrastructure placement, ensuring that hubs serve aggregation and processing, while Farmers' Markets act as retail and redistribution points for short value chains.

### ***Collective Marketing Centres (CMCs): Infrastructure and Governance Structure***

279. **Physical Structure and Functionality of CMCs** Each CMC will be a small-scale, village- or cluster-level aggregation facility serving as the first point of collection, sorting, and preliminary marketing for agricultural and livestock produce. CMCs will typically cover an area of 500–1,000 sq. ft., based on local land availability and the scale of surrounding production.

280. They will be equipped with:

- Weighing scales for accurate and transparent transactions
- Sorting and grading tables to ensure quality differentiation
- Tarpaulin sheets and basic roofing for protection from sun/rain
- Temporary storage space for daily or overnight holding
- Sanitation and water facilities, with separate provisions for men and women
- Notice boards or digital panels for price displays and advisories

281. In select cases, CMCs located near livestock-producing areas may also include:

- Designated animal holding pens

- Space for egg or poultry aggregation
- Feed supply stalls or coordination with veterinary inputs

282. These facilities aim to ease post-harvest handling, improve price discovery, and reduce transaction costs for both producers and traders.

283. **Governance Structure of CMCs:** CMCs will be community-owned and anchored in local governance structures for sustainability and accountability.

284. The governance framework will include:

- **Ownership:** CMCs will be constructed on community-contributed land (where feasible) and legally vested with the Village Council (VC) or a registered community institution (e.g., Multipurpose Primary Agricultural Credit Cooperative Society (M-PACs), SHG Federation, or FPO).
- **Management Entity:** Day-to-day operations will be delegated to a Managing Entity—either a local FPO, SHG Federation, or other producer institution—selected based on performance criteria and local context.
- **Management Committee:** A CMC Management Committee will be established, consisting of:
  - 2–3 representatives from the Village Council
  - 2 farmer members (including at least one woman)
  - 1 representative from the managing FPO or SHG federation
  - 1 youth entrepreneur (if incubated in the same cluster)

285. This committee will meet quarterly to review performance, address grievances, and facilitate local coordination. Selection Criteria for the CMC operator are detailed in Table 9.

**Table 9: Selection Criteria for the CMC Operator**

| Criterion                                    | Description                                                                                     | Eligibility Evidence / Means of Verification |
|----------------------------------------------|-------------------------------------------------------------------------------------------------|----------------------------------------------|
| <b>Legal Status</b>                          | Must be a registered legal entity (FPO, SHG federation, M-PACs, cooperative, or private entity) | Registration certificate                     |
| <b>Local Presence</b>                        | Based in or operating within the target cluster or adjacent areas                               | Address proof; operational footprint         |
| <b>Governance Structure</b>                  | Has a managing committee/board, meets regularly, and maintains basic records                    | Meeting minutes; governance documentation    |
| <b>Experience in Aggregation / Marketing</b> | Minimum 1 year experience in commodity aggregation, handling, savings/ credit or marketing      | Transaction records; buyer/seller references |
| <b>Inclusive Membership / Operations</b>     | Demonstrates outreach to women, youth, and smallholder farmers                                  | Membership lists; SHG/FPO structure          |

### Collective Marketing Centre Setup and Operation

| Criterion                                                                 | Description                                                                                              | Eligibility Evidence / Means of Verification                                          |
|---------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------|
| <b>Financial Capacity</b>                                                 | Maintains basic accounts and demonstrates ability to recover operational costs                           | Ledger records; income & expense statements                                           |
| <b>Financial Turnover</b>                                                 | Minimum annual turnover of INR 75,000 in the last financial year                                         | Audited accounts; bank statements                                                     |
| <b>Community Support</b>                                                  | Endorsed by the Village Council or other local governance structure                                      | Village Council resolution or endorsement letter                                      |
| <b>Performance Agreement Commitment</b>                                   | Willing to sign and adhere to a lease and performance agreement                                          | Signed agreement at the time of onboarding                                            |
| <b>Openness to Capacity Building / Sharing Documents with the Project</b> | Willing to engage with TSPs for training, business planning, and digital tools, and share reporting data | Statement of willingness; participation in orientation and capacity-building sessions |

286. **Community-Led Model for CMC Operation:** Given the small-scale nature of CMCs and their close integration with local agricultural activity, FOCUS 2.0 will adopt a community-managed approach for their operation and maintenance. The infrastructure will continue to be publicly financed, while day-to-day operations will be entrusted to local institutions such as SHG federations, M-PACs, or Village Councils (VCs), based on mutual agreement and capacity.

**Table 10: Key Features of the Community Management Model**

| Aspect                   | Description                                                                                                                                                                                                                                 |
|--------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Management Agreement     | A simple operational agreement will be drawn between the Village Council and the selected local institution (e.g., SHG federation, M-PACs, or progressive farmer groups), defining responsibilities for usage, upkeep, and local oversight. |
| User Charges             | Nominal service charges may be collected for services such as aggregation, weighing, or packaging. Charges will be decided in consultation with the community and transparently displayed.                                                  |
| Revenue Use              | Revenue will be used for routine operation, minor repairs, and local reinvestment. Any surplus may be used for VC-agreed development activities.                                                                                            |
| Oversight and Monitoring | The DPIU will support oversight through periodic review visits and guidance, ensuring effective use of the infrastructure and resolving conflicts if needed.                                                                                |
| Capacity Support         | FOCUS 2.0 will build the capacity of the managing entities in record-keeping, pricing transparency, and local market facilitation, with support from TSPs under Component 1.2.                                                              |

287. **Role of the Private Sector and Community Institutions:**

- **FPOs and SHG Federations:** Will manage aggregation, maintain the facility, negotiate with buyers, and link with Farmers' Markets or Hubs.
- **Private Input Suppliers or Traders:** May rent space at CMCs to supply agri-inputs or procure commodities under lease conditions.

288. This integrated CMC structure creates a foundation for last-mile aggregation, producer empowerment, and buyer confidence, thereby playing a catalytic role in linking farmers to structured markets. The governance and PPP model ensures community ownership, private efficiency, and long-term sustainability.

### ***Farmers' Markets – Structure, Operations, and PPP Model***

289. Farmers' Markets will function as block-level retail and semi-wholesale platforms, serving as mid-tier nodes within the hub-and-spoke architecture. Each market will be strategically located near transport corridors—such as National or State Highways or near large production clusters—to ensure accessibility for both producers and buyers. These markets will play a dual role: enabling direct-to-consumer sales of perishables and livestock, while also serving as aggregation and relay points for onward trade to District Hubs or urban centres like Aizawl.

290. **Infrastructure Design:** Each Farmers' Market will be constructed on a standard footprint of approximately 5,000–10,000 square feet depending upon the land availability, with provisions for:

- Covered stalls for produce, livestock, and agri-input retail
- Segregated zones for vegetables, fruits, eggs, poultry, and dry commodities
- Basic processing and packaging space (weighing, sorting, basic grading)
- Waste disposal units and sanitation blocks (with gender-segregated access)
- Drainage and water points for hygienic operations
- Parking and loading areas for small vehicles or carts

291. Wherever feasible, the project will upgrade existing market structures under the ownership of district authorities or line departments (e.g., Agriculture, Horticulture, or Local Administration) rather than building afresh. Asset mapping and convergence planning will be integral to avoid duplication and optimize public investment.

292. **Public-Private Partnership (PPP) Model:** Like CMCs and Hubs, all Farmers' Markets will be publicly financed but operated through a performance-based lease model.

- **Leasing Authority:** Typically, the District Administration or relevant line department will serve as the leasing authority.
- **Operators:** Eligible entities will include FPOs, cooperatives, SHG federations, M-PACs, or private retailers with experience in agri-marketing.

- Lease agreements will define the scope of operations, user fee guidelines, maintenance responsibilities, and performance reporting metrics.
- Operators will be encouraged to mobilize private investments in value addition (e.g., retail branding, traceability, digital point-of-sale systems) and input linkages (e.g., agri-input shops, veterinary services).
- In addition to serving as structured aggregation and retail platforms for producers, Farmers' Markets will allocate designated spaces on a rental basis to private sector actors—including poultry processors, egg and meat vendors, input suppliers (seeds, feed, veterinary products), and logistics service providers. These stalls will create backward and forward linkages within the local economy, ensuring that smallholders have access not only to fair and transparent selling opportunities, but also to critical production inputs and services. The participation of private actors will be governed through lease agreements managed by the market operator, with rental terms clearly outlined, including provisions for hygiene, pricing, and business hours. This approach is intended to stimulate rural enterprise development, crowd in private investment, and enhance the overall functionality of the market ecosystem.

| Farmers' Market Setup |                                                       |
|-----------------------|-------------------------------------------------------|
| Task                  | Description                                           |
| Site Selection        | Select block-level site near transport corridors      |
| Market Construction   | Construct market with zoning and essential facilities |
| Stall Allocation      | Allocate and lease stalls to various vendors          |
| Market Calendar       | Develop a market calendar for regular events          |
| Admin Structure       | Set up basic admin/management structure               |
| Daily Functions       | Enable daily market functions for smooth operation    |
| CMC Coordination      | Coordinate collection from CMCs for supply            |
| Transportation Links  | Organize transportation links to District Hubs        |
| Institutional Buyers  | Allow bulk orders from institutional buyers           |
| Data Collection       | Collect digital data on prices and volumes            |

293. **Role in Value Chain Integration:** Farmers' Markets serve both short value chains (within-district sales) and as relay nodes to Hubs or urban markets. For instance:

- Surplus produce collected at Farmers' Markets may be routed to District Hubs for processing or storage.
- Some operators may organize bulk transport to major markets (e.g., Aizawl, Lunglei, or Silchar) where demand for vegetables, eggs, or livestock products is higher.
- These markets will also host stalls for agricultural inputs, veterinary supplies, and digital service kiosks, building backward linkages into the value chain.

**Table 11: Selection Criteria for Farmers' Market Operators**

| Criterion                  | Description                                                                                                    | Eligibility Evidence / Means of Verification                      |
|----------------------------|----------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------|
| <b>Legal Status</b>        | Must be a registered legal entity (e.g., FPO, cooperative, M-PACs, private limited company, or SHG federation) | Registration certificate                                          |
| <b>Business Experience</b> | At least 2 years of experience in agri-marketing, retail operations, or aggregation                            | Transaction records; buyer/seller references; business license    |
| <b>Operational Scale</b>   | Demonstrated capacity to manage semi-wholesale or retail-level trade involving multiple product categories     | Sales data; market stall records; inventory or flow documentation |

| Criterion                                  | Description                                                                                          | Eligibility Evidence / Means of Verification                                            |
|--------------------------------------------|------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------|
| <b>Financial Turnover</b>                  | Minimum annual turnover of INR 2,00,000 in the last financial year                                   | Audited accounts; bank statements                                                       |
| <b>Inclusive Business Model</b>            | Demonstrated inclusion of women, youth, or marginalized producers as suppliers or members            | Supplier list; gender-disaggregated data; SHG/producer inclusion documentation          |
| <b>Facility Management Readiness</b>       | Capability to manage public infrastructure including waste disposal, sanitation, and retail sections | Record of prior facility management or operational SOPs                                 |
| <b>Community and Market Linkages</b>       | Endorsement by District Authorities or demonstrated relationship with buyer networks                 | Letter of support from District Administration; MoUs with buyers                        |
| <b>Performance Agreement Commitment</b>    | Willing to operate under a lease and performance-based agreement, including reporting and compliance | Signed agreement at onboarding; agreement template                                      |
| <b>Digital and Record-Keeping Capacity</b> | Willing to adopt basic digital tools for transactions, reporting, and traceability                   | Use of digital apps, POS systems, or willingness letter                                 |
| <b>Openness to Technical Support</b>       | Committed to engaging with TSPs and project staff for capacity building and compliance               | Statement of willingness; prior participation in capacity-building or training programs |

#### ***Value Addition Hubs – Structure, Operations, and PPP Model***

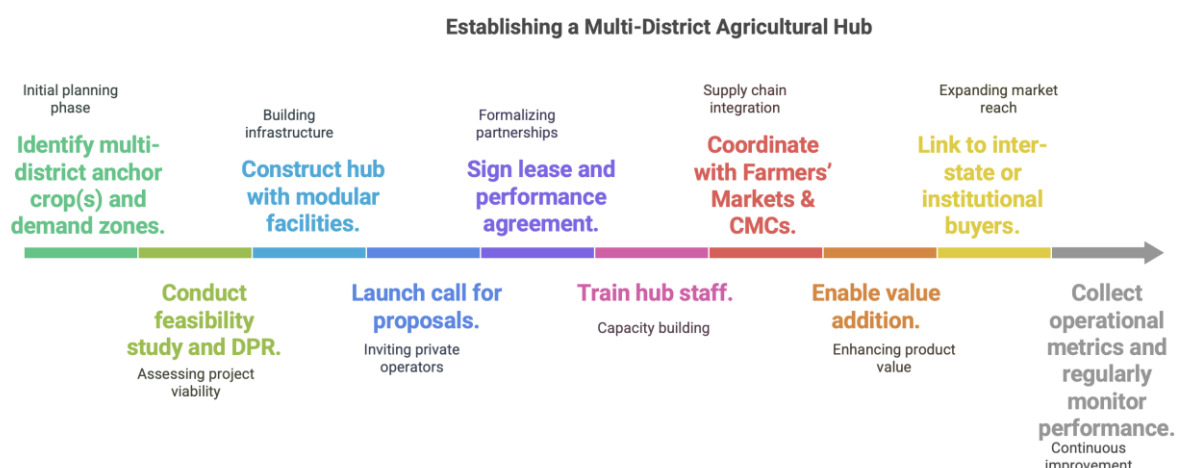

294. Value Addition Hubs will function as district-level or multi-district platforms within the hub-and-spoke system, acting as major nodes for bulk aggregation, processing, value addition, and inter-state or institutional marketing of agricultural and livestock commodities. The hubs are designed not just for physical aggregation but also for knowledge transfer, enterprise incubation, and strengthening market linkages. These facilities will be catalytic centres that enable both producers and private entrepreneurs to participate effectively in value chains.

295. **Infrastructure Design:** Each Value Addition Hub will be developed on a modular footprint, with flexible space allocation rather than pre-installed heavy machinery. Core infrastructure elements will include:

- Covered and open aggregation platforms
- Grading, basic packaging, and sorting areas
- Cold storage units for perishables (fruits, vegetables, poultry products)
- Warehousing zones for durable commodities (e.g., broom grass, spices)
- Modular spaces for entrepreneurs and FPOs to lease and install sector-specific equipment
- Discharge/loading bays designed for efficient vehicle movement
- Reliable electricity supply, drainage, and waste management facilities
- Basic facilities for staff operations (small office space, sanitation blocks)

296. Wherever feasible, the project will **leverage and upgrade existing facilities** (e.g., Agro-Processing Park in Aizawl managed by the Department of Commerce & Industries) to avoid duplication and optimize public investments. Convergence with relevant departments will be pursued to maximize asset utilization.

297. **Public-Private Partnership (PPP) Model:** All Value Addition Hubs will be publicly financed under the project but will operate under a PPP model that emphasizes operational efficiency, accountability, and private sector engagement.

- **Leasing Authority:** The Department of Commerce & Industries will act as the primary leasing authority, in collaboration with district authorities where required.
- **Operators:** Eligible operators will include high-performing FPOs, cooperatives, private processors, and agribusiness entrepreneurs selected through a competitive process.
- **Lease agreements** will specify infrastructure usage norms, maintenance responsibilities, value addition and aggregation targets, reporting obligations, and pricing transparency rules.
- Operators will be encouraged to mobilize private investments into sector-specific infrastructure (e.g., slicing/drying/packaging units) to deepen value addition capacity at the hubs.

298. **Role in Value Chain Integration:** Value Addition Hubs will serve as the backbone of the project's commercialization strategy:

- Act as primary aggregation and dispatch centres for anchor commodities (e.g., ginger, turmeric, Mizo chilli, banana) as well as livestock.
- Enable primary and secondary processing activities to improve quality, reduce wastage, and extend shelf life.
- Serve as consolidation points for linking with urban wholesale markets and inter-state buyers.
- Facilitate cold chain and quality preservation for sensitive products (e.g., fresh vegetables, eggs, processed poultry).
- Act as entrepreneurship incubation platforms by leasing modular spaces to small businesses, traders, or cooperatives focused on agriculture and allied sectors.

**Table 12: Selection Criteria for Value Addition Hub Operators**

| Criterion           | Description                                                                      | Eligibility Evidence / Means of Verification          |
|---------------------|----------------------------------------------------------------------------------|-------------------------------------------------------|
| Legal Status        | Registered entity (FPO, cooperative, company, private enterprise)                | Registration certificate                              |
| Business Experience | Minimum 3 years in agri-processing, logistics, marketing, or facility management | Business profile, transaction records, trade licenses |

| Criterion                              | Description                                                                                      | Eligibility Evidence / Means of Verification                                  |
|----------------------------------------|--------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------|
| Scale of Operations                    | Demonstrated capacity to handle aggregation, value addition, and inter-state marketing           | Past project implementation, turnover proof, infrastructure management record |
| Financial Turnover                     | Minimum INR5,00,000 annual turnover in the previous financial year                               | Audited financial statement, GST filings                                      |
| Technical and Infrastructure Readiness | Ability to manage multi-commodity processing, grading, and storage hubs                          | Technical proposal, resource plan                                             |
| Inclusive Business Practice            | Engagement with smallholders, women, and youth in supply chains                                  | Disaggregated beneficiary data, field engagement reports                      |
| Investment Commitment                  | Willingness to co-invest in hub facilities (e.g., installing processing lines, upgrading spaces) | Business plan with co-investment proposals                                    |
| Community and Stakeholder Endorsement  | Endorsement by district authorities or commodity-specific associations                           | Letters of support or MoUs                                                    |
| Digital Record-Keeping Capacity        | Ability to maintain digital inventory, sales, and processing records                             | Sample digital system demonstration, statement of commitment                  |
| Performance Agreement Commitment       | Readiness to sign and comply with the lease, reporting, and quality standards agreements         | Signed onboarding documents                                                   |
| Capacity Building Engagement           | Willing to engage in continuous capacity building, mentoring, and reporting                      | Training attendance, TSP collaboration plan                                   |

***Poultry Slaughter and Processing Facility – Infrastructure, Operations, and PPP Governance Model***

**299. Physical Structure and Functionality of the Poultry Processing Facility:** The poultry slaughter and processing facility will be a district-level hub located near Ibawk Block, Aizawl District, strategically serving urban, peri-urban, and rural poultry markets. It will act as a centralized slaughter, chilling, packaging, and distribution center, ensuring compliance with urban regulations prohibiting live animal slaughter in city areas. The facility will typically include:

- Slaughter Lines: Mechanized or semi-mechanized slaughter lines with a processing capacity of 500 birds per day.
- Chilling and Freezing Units: Blast chillers and freezers to ensure product shelf-life extension up to 72 hours.
- Evisceration and Dressing Areas: Hygienic processing spaces with separation of clean and dirty areas.

- **Waste Management Systems:** Systems for handling offal, blood, feathers, and wastewater for environmental compliance and potential reuse (e.g., composting, feed inputs).
- **Packaging and Storage Areas:** Vacuum/sealed packaging units and cold storage rooms for frozen meat products.
- **Retail and Distribution Dock:** Loading/unloading areas to facilitate efficient dispatch to city retail outlets and distant districts.
- **Basic Ancillary Facilities:** Administrative block, sanitation and water systems, waste treatment systems, power backup.

**300. Operationalization and Management of Slaughterhouses through SPV:** Under Component 1 of FOCUS 2.0, a Special Purpose Vehicle (SPV) will be established to manage and operate the district-level slaughterhouses in a sustainable, transparent, and commercially viable manner. The SPV will function as a legally registered, producer-led enterprise or not-for-profit company, ensuring that livestock value chain actors—particularly pig and goat producers—have access to hygienic, certified, and market-linked slaughtering services. The goal is to promote food safety, traceability, and reduce informal/unregulated slaughtering practices while generating local employment and enterprise opportunities.

**301.** The SPV will be governed by a **Board of Directors** representing:

- Local Producer Organizations (FPOs, M-PACs, SHG Federations),
- District Veterinary Officers or Livestock Department,
- Private investors (where applicable), and
- Technical advisors with expertise in meat processing and public health.

**302.** Day-to-day operations will be overseen by a **full-time Operations Manager**, responsible for:

- Managing slaughter schedules and staff,
- Ensuring compliance with hygiene and safety standards (FSSAI norms),
- Coordinating veterinary checks before and after slaughter,
- Supervising waste disposal, cold storage, and packaging operations.

**303.** The SPV will operate on a service-fee model, generating revenue from:

- Slaughtering charges (per animal),
- Value-added services (cutting, chilling, packaging),
- Rental from cold storage or meat counters (if co-located),
- Potential sale of by-products (e.g., offal, hide, bone meal).

**304.** To ensure effective delivery, the SPV will:

- Sign **formal agreements with producer groups** to ensure steady livestock supply,
- Link with institutional buyers (processors, retailers, hotels),
- Integrate **digital systems** (e.g., traceability, payment tracking, meat health certification),
- Adhere to periodic **performance monitoring** by the DPIU and SPIU, based on KPIs such as utilization rate, cleanliness standards, revenue generated, and number of producers served.

**305.** The SPV model ensures:

- Long-term viability of the slaughterhouse,
- Ownership and participation by local institutions,
- Transparent financial management and reinvestment of surplus into facility upkeep or community benefit,
- Compliance with animal health and food safety regulations, particularly critical for controlling diseases such as African Swine Fever (ASF).

**306.** This approach promotes both commercialization and safety in livestock value chains, while reducing risks of market rejection due to hygiene and traceability failures.

### ***Last-Mile Connectivity for Market Infrastructure***

307. Efficient and affordable transport linkages are critical to the success of the hub-and-spoke model proposed under FOCUS 2.0. To ensure that farmers and rural producers can access Collective Marketing Centres (CMCs), Farmers' Markets, and District Hubs in a timely and cost-effective manner, the project will invest in last-mile connectivity infrastructure. This includes the construction and improvement of farm link roads connecting major production clusters (Zaus) to aggregation and trading points.

**308. Scope and Targets:**

- The project will support the construction of approximately 300 farm link roads, each averaging around 5 km in length, resulting in a total of about 1,500 km of last-mile connectivity.
- These roads will primarily be earthen, gravel, or lightly paved rural roads, depending on terrain and volume needs, ensuring minimal transport disruption during critical marketing seasons.

**309. Selection Criteria for Farm Link Roads:**

- **Production Density:** Roads will be prioritized for areas with high concentration of anchor value chains (e.g., ginger, banana, chilli, livestock aggregation).
- **Connectivity to Markets:** Priority will be given to roads connecting Zaus/production clusters to CMCs, Farmers' Markets, and Hubs.
- **Cost Efficiency:** Preference will be given to routes where minor investments can unlock substantial economic impact (e.g., existing trails needing upgrading rather than expensive new alignments).
- **Topographical Challenges:** In hilly areas or across streams, the project will assess the feasibility of low-cost bridges, culverts, and, where relevant, ropeway systems to address geographical barriers.
- **Climate Resilience:** Basic climate-proofing measures like drainage channels and slope stabilization will be included to minimize monsoon damage.

**310. Implementation Modality:**

- Farm link road projects will be identified through a participatory planning process involving Village Councils, District Level Coordination Units, and technical engineers.
- Works will be executed through community-based contractors, local public works systems, or convergence with relevant line departments (e.g., Rural Development, PWD).
- Alignment with schemes such as PMGSY, RIDF, or state-funded rural connectivity programs will be explored to maximize leverage.
- A preliminary road maintenance model will be developed at project start-up to ensure sustainability of investments. One proposed approach involves assigning routine maintenance responsibilities to Zau groups, thereby fostering community ownership and accountability. This model leverages traditional village institutions and aligns with Mizoram's decentralized practices. Further refinement of road maintenance approaches will occur during start-up, based on an assessment of beneficiary capacities. These assessments will be part of the project baseline and will examine:
  - Average household income of Zau group members
  - Labour allocation (e.g., time spent on agriculture and other livelihoods)
  - Availability of local construction materials
  - Participation in community groups or decision-making structures
  - Knowledge and skills relevant to road maintenance and project themes

**311. Strategic Importance:** By ensuring faster, cheaper, and more reliable movement of produce from farms to aggregation points, the last-mile roads will:

- Reduce post-harvest losses by shortening transit times.
- Enhance farmer bargaining power by increasing their access to multiple buyers and markets.

- Facilitate aggregation volumes at CMCs and Farmers' Markets, improving economies of scale.
- Strengthen backward linkages, as traders and input suppliers will find it easier to service remote villages.
- Promote inclusive development by connecting smaller, hitherto isolated producers into larger value chains.

***Sub-Component 1.1 Infrastructure Location Selection Criteria***

**Table 13: Infrastructure Location Selection Criteria**

| <b>Facility Type</b>                       | <b>Selection Criteria</b>                                                                          |
|--------------------------------------------|----------------------------------------------------------------------------------------------------|
| <b>Collective Marketing Centres (CMCs)</b> | • Close proximity to major production clusters (Zaus, diversified farms)                           |
|                                            | • Minimum 100+ active producers within 3–5 km radius                                               |
|                                            | • Reasonable year-round access (earthen/paved road)                                                |
|                                            | • Village Council/community land availability                                                      |
|                                            | • Good natural drainage and low flood risk                                                         |
|                                            | • Alignment with value chain priority commodities (e.g., ginger, turmeric, Mizo chilli, livestock) |
| <b>Farmers' Markets</b>                    | • Located at strategic block points linking 20–40 CMCs within 10–15 km radius                      |
|                                            | • Good connectivity to district/block roads, highways                                              |
|                                            | • Situated near growing towns, peri-urban clusters, or trading hubs                                |
|                                            | • Minimum 0.5–1 acre land for multi-commodity operations                                           |
|                                            | • No major overlap with existing government/private markets unless justified                       |
|                                            | • Availability of water, sanitation, and basic utilities                                           |
| <b>District-Level Value Addition Hubs</b>  | • Centrally located within the district (preferably near headquarters or nodal town)               |
|                                            | • Close to inter-state highways, main transport corridors                                          |
|                                            | • Capable of consolidating produce from 100+ villages or 5,000+ producers                          |
|                                            | • Minimum 2–3 acres for aggregation, storage, processing, training facilities                      |
|                                            | • Potential for PPP model attraction (private operators, processors)                               |
|                                            | • Secure land with utilities (power, water) and future expansion feasibility                       |

## Sub-Component 1.2: Enterprise Development

312. Sub-component 1.2 of FOCUS 2.0 (Enterprise Development) is designed to build a vibrant and sustainable rural enterprise ecosystem that directly supports and leverages the infrastructure investments made under Component 1.1 (Market Infrastructure Development). While Component 1.1 focuses on creating the physical backbone of market access, including Collective Marketing Centres (CMCs), Farmers' Markets, and District-level Value Addition Hubs, this subcomponent complements it by nurturing the enterprises, community institutions, and private sector actors needed to operationalize, manage, and commercially utilize these facilities. In essence, Component 1.1 lays the "hardware" (structured, tiered infrastructure for aggregation, value addition, and trade) while Component 1.2 develops the "software" (the entrepreneurial capacity, institutional arrangements, and business models that bring these assets to life and ensure their sustainability).

313. The enterprises developed and supported under Component 1.2, whether Farmer Producer Organizations (FPOs), Self-Help Groups (SHGs), rural entrepreneurs, or private operators, will be the primary users, operators, and service providers within the market infrastructure created under Component 1.1. Through a combination of incubation support, technical assistance, and co-investment financing, these enterprises will be capacitated to manage aggregation, processing, logistics, and retail functions that are critical to strengthening agricultural value chains across Mizoram.

314. Component 1.2 is closely linked to Component 2 (Improved Agricultural Productivity), as the productive surpluses generated through Component 2 interventions (e.g. diversified crops, horticulture, livestock, and allied activities) will serve as the supply-base feeding into the aggregation and market infrastructure under Component 1.1, and enterprises nurtured under Component 1.2 will act as the bridge, connecting enhanced production at the farm level with structured aggregation, value addition, and market access systems.

### ***Context & Justification:***

315. While Component 1.1 tackles challenges of inadequate market infrastructure and weak aggregation systems, by investing in the establishment of a structured, tiered market infrastructure system through a hub-and-spoke model to improve aggregation, post-harvest management, value addition, and market access for agricultural and livestock products, infrastructure alone is insufficient to ensure the success of market-led value chain development. The sustainability and effectiveness of these investments depend on building a strong ecosystem of rural enterprises like farmer organizations, SHGs, youth and women entrepreneurs, and private sector actors that can operate, manage, and commercially utilize the infrastructure for aggregation, processing, marketing, and service provision. Component 1.2 responds directly to this need by focusing on the development of enterprises that will drive value chain operations and market participation. This sub-component is designed to equip rural institutions and entrepreneurs with the technical, financial, and managerial capacities needed to capitalize on infrastructure investments, create jobs, and retain greater value within rural communities.

316. The justification for investing in rural enterprise development under Component 1.2 is grounded in several critical considerations:

- **Bridging Infrastructure and Market Use:** Without capable enterprises and operators, the infrastructure developed under Component 1.1 risks underutilization or sub-optimal management. Building enterprise capacity ensures that aggregation centres, farmers' markets, and hubs are not mere physical assets, but dynamic commercial platforms integrated into functioning value chains.
- **Unlocking Value Chain Potential:** Mizoram's production base includes several high-value, GI-tagged, and organic commodities (e.g., Mizo chilli, turmeric, ginger) with strong market demand (please refer to Annex 2 "*Thematic Note on Value Chain Development*" within Appendix 13). However, producers have historically been locked in low-margin, farmgate sales due to the absence of value-adding enterprises. Component 1.2 enables local actors to move up the value chain.
- **Addressing Market Failures and Institutional Gaps:** As outlined in the Theory of Change, rural producers face constraints such as poor aggregation, lack of post-harvest processing, weak

access to finance, and limited entrepreneurial capacity. Enterprise development directly addresses these.

- **Enterprise development strengthens the climate adaptation capacity of farmers** by equipping them with the skills, organizational structures, and business models needed to make effective use of climate-resilient infrastructure and production systems. By fostering entrepreneurial capacity, farmers are better able to diversify their income streams, reduce dependence on climate-sensitive crops, and adopt climate-smart practices that enhance productivity and resource efficiency. Strengthened producer organizations and market linkages enable farmers to access timely information, inputs, and services, which improves their ability to anticipate, absorb, and recover from climate shocks. In turn, viable enterprises built around aggregation, value addition, and trade create incentives for sustainable resource management, reduce post-harvest losses, and generate more stable revenue flows, together reinforcing the long-term resilience of rural livelihoods in the face of a changing climate.

### ***Phase II Improvements:***

317. Lessons Learned from FOCUS, now addressed by Sub-Component 1.2 of FOCUS 2.0, include:

- **Insufficient linkage between infrastructure and enterprise development:** Under FOCUS, while physical infrastructure like farm link roads and market access facilities were developed, a major disconnect remained between production clusters, particularly IFS clusters or Zaus, and the infrastructure created. Effective integration of production and market facilities was lacking.
- **Weakness in structured value chain development:** Although some value chain interventions (e.g., for Mizo Chilli) achieved success, broader value chain development was limited due to fragmented production clusters, the absence of robust aggregation models, and weak business planning and operational capacities at the farmer group and FPO levels.
- **Limited functionality of FIGs without scale:** Many small, village-based Farmer Interest Groups (FIGs) remained at subsistence levels and could not evolve into commercially viable entities. Although the need to consolidate FIGs into larger organizations such as FPOs was recognized, FPO formation was initiated only towards the end of the project.
- **Delayed and insufficient FPO support:** FPOs were initiated late in the project, leaving limited time for institution building. Based on experience, supporting FPOs requires a minimum of 6–7 years of mentorship and technical assistance to build them into sustainable business entities, rather than short-term engagement.
- **Innovation and enterprise support proved promising but underutilized:** The Innovation Fund pilot demonstrated that targeted financial and technical support to rural entrepreneurs (e.g., banana chips making, Mizo chilli processing) can generate strong market linkages and income growth. However, such support was introduced late and remained limited in scale.
- **Need for stronger market-facing rural institutions:** As farmers moved from subsistence (particularly jhum) to settled agriculture and commercial horticulture, the demand for organized marketing, processing, and value addition enterprises became increasingly critical to capture higher value from production.
- **Underdeveloped post-harvest and processing enterprises:** Farmers' income enhancement remained constrained by limited local value addition, weak post-harvest handling systems, and a lack of rural enterprises capable of bridging the gap between raw production and market-ready products.

318. To respond to the above, the following Phase II improvements have been made:

- **Enterprise-Centric Approach:** Sub-component 1.2 of FOCUS II is reoriented to systematically develop and strengthen enterprises — including FPOs, SHGs, and rural entrepreneurs — to

manage, operate, and commercially utilize the market infrastructure created under Component 1.1.

- **Structured Enterprise Support Instruments Co-Riding with Private Sector:**
  - **Blocked grant financing** for FPOs, with a matching contribution requirement, specifically targeted at investments in value addition, aggregation, and processing activities.
  - **Incubation grants** for rural entrepreneurs, particularly youth and women, to support innovations in agri-processing, logistics, and marketing services.
- **Competitive Selection of Entrepreneurs:** A transparent, merit-based process is established for selecting incubatees and enterprise grant recipients, prioritizing commercial viability, innovation, and scalability.
- **Stronger Focus on Value Chain Commodities:** Enterprise support is aligned with the priority value chain commodities identified under Component 1.2 (e.g., ginger, turmeric, broom grass, Mizo chilli, livestock products) and directly linked to Component 2 production activities, particularly through IFS clusters and Zaus.
- **Direct Linkages to Production Clusters:** Enterprises will be responsible for aggregating, processing, and marketing the production surpluses emerging from Component 2-supported production systems, thereby creating an integrated pathway from farm to market.
- **Aggregation and Scale:** Promotion of larger aggregation models through the formation and strengthening of FPOs and cooperative structures, enabling economies of scale for marketing, logistics, and processing.
- **Market Infrastructure Utilization:** Enterprises supported under this sub-component will manage or utilize Collective Marketing Centres (CMCs), Farmers' Markets, and District Value Addition Hubs for aggregation, processing, storage, and marketing activities.
- **Private Sector Partnerships:** Facilitation of partnerships between rural enterprises and private buyers, processors, aggregators, and logistics service providers to strengthen market access, quality standards, and commercial opportunities.

### ***Objectives and Expected Results***

319. The primary objective of Component 1.2 is to foster the development of a vibrant, market-oriented rural enterprise ecosystem that operationalizes and sustains the market infrastructure created under Component 1.1. The sub-component aims to enhance the commercial capacities of Farmer Producer Organizations (FPOs), Self-Help Groups (SHGs), Multi-Purpose Agriculture Cooperatives (MPACs), rural entrepreneurs, and other community institutions to drive aggregation, value addition, processing, and market linkages. Specifically, Component 1.2 will:

- Strengthen the institutional and operational capacity of rural community organizations to manage Collective Marketing Centres (CMCs), Farmers' Markets, and District Hubs under performance-based agreements.
- Support youth- and women-led rural enterprises through structured incubation and co-investment grants, promoting innovations in digital technologies, agri-processing, logistics, and marketing.
- Facilitate the aggregation, processing, and marketing of diversified production surpluses generated under Component 2, ensuring seamless integration between production and markets.
- Promote partnerships between rural enterprises and private sector actors to enhance market penetration, quality standards, and business development.
- Increase the volume and value of agricultural products processed and marketed through structured value chains, leading to enhanced rural incomes and expanded inter-state trade opportunities.

**Outcome:** *Employment opportunities created by project-supported enterprises, with enhanced inclusion of youth, women, and Indigenous Peoples*

**Table 14: Component 1.2 Outputs and Targets**

| Output                                                    | Description                                                                                                                                                             | Target                                                                                       |
|-----------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------|
| Beneficiaries with new jobs/employment opportunities      | Rural jobs created through incubation-supported enterprises and market ecosystem investment                                                                             | 140 new jobs (of which 70 women, 70 youth, 140 Indigenous Peoples)                           |
| Rural producer organizations supported                    | Rural Producer Organizations (FPOs, M-PACs, SHG federations) mobilized for value chain aggregation and commercial activities linked to CMCs, Farmers' Markets, and Hubs | 70 RPOs supported, comprising 10,000 members (50% women; 30% youth; 100% Indigenous Peoples) |
| Rural enterprises accessing business development services | Rural enterprises (MSMEs, youth/women entrepreneurs) accessing business services such as incubation, marketing, and product development                                 | 110 enterprises supported with tailored business development services                        |

320. **Note:** To operationalize and sustain the extensive market infrastructure being developed under Component 1.1—including 300 Collective Marketing Centres (CMCs), 13 Farmers' Markets, and 5 Value Addition Hubs—the project will support approximately 70 Rural Producer Organizations (RPOs) such as Farmer Producer Organizations (FPOs), Multi-Purpose Agricultural Cooperatives (M-PACs), and SHG federations. This estimate is based on a tiered engagement model: each of the 5 hubs will anchor 2–3 commercially-oriented RPOs; each of the 13 Farmers' Markets will involve at least 2 RPOs linked to local value chains; and approximately one RPO will be supported per 10 CMCs to aggregate and supply produce from surrounding clusters.

321. In total, the 70 RPOs are expected to collectively represent over 10,000 rural producers (with an average of 140 members per RPO). At least 50% of the members are expected to be women, reflecting strong SHG participation and inclusive institutional design. Given that 94.4% of Mizoram's population belongs to Indigenous communities (Scheduled Tribes), it is reasonable to assume that the vast majority of RPO members—over 90%—will be Indigenous Peoples.

### ***Description of Activities, Approach, and Modalities of Implementation***

322. Under Component 1.2, the project will invest in building a vibrant rural enterprise ecosystem that operationalizes and sustains the market infrastructure developed under Component 1.1. This will be achieved by supporting the formation and strengthening of Farmer Producer Organizations (FPOs), Self-Help Groups (SHGs), Multi-Purpose Agriculture Cooperatives (MPACs), and rural entrepreneurs engaged in priority value chains. Enterprise support will be closely aligned with the commodity prioritization conducted during project design and further refined through a detailed block-level intercropping and production system study under Component 1.1. Integrated crop-livestock enterprises will be promoted to maximize value capture at the community level.

323. Support will be provided through performance-based blocked grants, incubation funds for entrepreneurs, technical assistance, and facilitation of private sector partnerships to ensure that aggregation, processing, and marketing activities are commercially viable and sustainable. Additionally, promotion of Geographical Indication (GI) branding, eco-certification, and value chain-based packaging initiatives will be introduced after the project mid-term review, supported through specialized Technical Support Providers (TSPs).

**Key activities under Component 1.2 are as follows:**

- **Selection and Performance-Based Engagement of FPOs:** Transparent identification and selection of FPOs and community institutions to manage market infrastructure, based on operational readiness, governance standards, and commodity alignment.

- **Technical Support Providers (TSPs) Deployment:** Engagement of specialized service providers to mentor enterprises on business operations, market development, financial management, and operational sustainability.
- **Enterprise Strengthening and Institutional Development:** Capacity building, business planning, and operational strengthening of FPOs, SHGs, M-PACs, and rural entrepreneurs to manage Collective Marketing Centres (CMCs), Farmers' Markets, and District Hubs.
- **Provision of Blocked Grants for Enterprise Investment:** Performance-linked grants to FPOs and rural enterprises for investment in value addition, primary processing, aggregation, storage, packaging, and logistics infrastructure and services.
- **Incubation Fund for Rural Entrepreneurs:** Competitive selection and grant support for youth- and women-led enterprises engaged in innovative processing, logistics, or market service models linked to priority commodities.
- **Promotion and Facilitation of GI Branding (Post-Midterm):** Through specialized TSPs hired after the midterm review, support enterprises to develop GI-based branding, promote collective branding strategies, and enhance product identity in premium markets.
- **GI-based Branding, Packaging, and Eco-Certification (Post-Midterm):** Following midterm review, provide technical and financial assistance to enterprises for eco-certification, sustainable packaging solutions, and market-driven GI product branding through expert service providers.
- **Facilitation of Private Sector Linkages:** Connecting FPOs and rural enterprises with private buyers, processors, aggregators, and logistics companies to strengthen value chains and ensure market-driven enterprise growth.
- **Enterprise Monitoring and Performance Evaluation:** Setting up a robust monitoring framework to track enterprise turnover, infrastructure usage, value addition volumes, and market penetration, with periodic evaluation against performance criteria.

324. The activities follow an overall path of: Selection → Capacity → Financing → Branding → Market Linkages → Performance Tracking.

#### ***Commodity Identification and Refinement based on Component 1.1 Research***

325. The selection of commodities prioritized under FOCUS 2.0 is based on a structured, evidence-driven process undertaken during project preparation. A comprehensive commodity prioritization exercise, documented in the Thematic Technical Note on Value Chain Development (Appendix 13, Annex 2), guided the identification of anchor commodities across horticulture, livestock, and allied sectors. The commodities were selected using multiple criteria, including production potential, market demand (both local and interstate), shelf life, value addition opportunities, and their relevance to rural livelihood diversification. The initial set of commodities identified under the project includes a mix of crops and livestock products. The Project will support districts in strengthening ODOPs where clear market opportunities exist, based on commodity viability and value chain potential. In districts where the selected ODOPs show limited market alignment, the project will engage in dialogue with district authorities to refine or revise their ODOP choices for better market integration.

**Table 15<sup>17</sup>: Selected Crop Commodities by District**

| District  | Selected Crop Commodities (mostly Long Value Chain) |
|-----------|-----------------------------------------------------|
| Champai   | Grapes, Turmeric, Ginger, (passion fruit)           |
| Hnahthial | Dragon Fruit, Maize, Mizo Chilli (Turmeric)         |
| Kolasib   | Hill Broom, Ginger, Turmeric                        |
| Lawngtlai | Sesame, Honey, Turmeric, (Mango)                    |
| Lunglei   | Turmeric, Ginger, Chilli                            |

<sup>17</sup> Note: Commodities marked in red represent ODOPs, while those listed in brackets were not identified among the top three anchor commodities.

|          |                                             |
|----------|---------------------------------------------|
| Mamit    | Mizo Chilli, Ginger, Broom Grass (Turmeric) |
| Saitual  | Tung, Ginger, Soya bean                     |
| Siaha    | Chilli, Ginger, Mango (Turmeric)            |
| Aizawl   | Broomgrass, Tomato, Mizo Chilli             |
| Khawzawl | Pineapple, Mizo Chilli, Passion Fruit       |
| Serchhip | Sugar Cane, Chilli, Banana, (Pineapple)     |

326. **For livestock and allied products, the following are included under FOCUS 2.0:** Pigs (pork value chain), poultry (meat and eggs), and goatery.

327. Two initial, detailed value chain assessments have been conducted and provided for two prominent commodities: (i) ginger; and (ii) Mizo chilli (Appendix 13, Annex 4: “Value Chain Analysis – Selected Commodities”). In addition, existing value chain studies by Selco Foundation have also been referred to and integrated into the analysis. These commodities have been mapped against their potential to form short value chains (intended for intra-state consumption and regional marketing) and long value chains (targeting inter-state or niche premium markets). For example, perishables such as banana, cabbage, and tomato are best suited for local Farmers' Markets, while durable and high-value commodities like ginger, Mizo chilli, and broom grass are better positioned for aggregation at district hubs for interstate trade.

328. Recognizing that commodity systems are dynamic and vary significantly at micro-geographies, FOCUS 2.0 will further refine the enterprise development strategy through a district- and block-level study to be conducted under Component 1.1 during the early phase of project implementation. This research will allow the project to align enterprise support and infrastructure utilization with actual production patterns and emerging market opportunities. The Component 1.1 study will specifically focus on:

- Mapping intercropping systems at the block level to identify dominant crop combinations and opportunities for integrating livestock with crop production.
- Analyzing production clusters to ensure that aggregation and processing infrastructure is strategically located.
- Identifying short value chains with high perishability and immediate marketability to be prioritized for Farmers' Markets.
- Strengthening livestock integration by mapping piggery, goatery, and poultry, clusters for aggregation and enterprise support.
- Conducting a gap analysis of post-harvest handling, aggregation, and value addition needs to refine targeted interventions.

329. By building on the strategic commodity prioritization undertaken during project design and validating it through granular field research under Component 1.1, FOCUS 2.0 ensures that enterprise support under Component 1.2 is firmly rooted in market realities. This will enable the project to promote demand-driven, commercially viable rural enterprises that leverage both existing and emerging value chain opportunities across Mizoram.

### ***Selection and Performance-Based Engagement of FPOs***

330. The success of Component 1.2 depends heavily on identifying and supporting the right local institutions to manage, operate, and commercially utilize the market infrastructure established under Component 1.1. To achieve this, FOCUS 2.0 will adopt a structured and transparent process for the selection and performance-based engagement of Farmer Producer Organizations (FPOs) and other eligible community institutions.

331. **Definition of Farmer Producer Organizations (FPOs):** For the purposes of this project, a Farmer Producer Organization (FPO) refers to any formal or semi-formal farmer-based institution engaged in aggregation, value addition, or marketing activities. This includes:

- Multi-Purpose Agricultural Cooperatives (MPACs),
- Self-Help Groups (SHGs),
- Farmers Interest Groups (FIGs),
- Farmer Producer Companies (FPCs),
- Other community-led producer groups recognized by local governance systems.

332. The project will adopt a flexible and inclusive approach, working with a range of these institutions across the District Hubs, Farmers' Markets, and Collective Marketing Centres (CMCs), provided they meet the eligibility criteria and demonstrate the capacity to align with project objectives.

#### **Approach to Selection and Engagement:**

333. The approach to selecting institutions for managing market infrastructure will vary depending on the type of infrastructure:

- **For District-level Value Addition Hubs and Block-level Farmers' Markets:** Given the commercial significance and operational complexity of these facilities, the project will use a Call for Proposals (CFP) process to competitively select capable FPOs or other eligible institutions. The CFP will outline eligibility criteria, business plan requirements, operational expectations, and performance targets. Only organizations demonstrating strong governance, business orientation, and commitment to value chain development will be selected to operate these higher-tier facilities.
- **For Collective Marketing Centres (CMCs):** Management of CMCs will follow a localized selection approach, recognizing the smaller, village/cluster-level nature of these centers. Selection will be based on the existing situation, prioritizing active local institutions such as Village Councils, SHGs, FIGs, M-PACs, or emerging FPOs that are well-embedded within the community. These groups will be engaged based on their proximity, willingness, and basic capacity to manage aggregation functions.

334. Further details are available in [Annex C](#).

#### **Eligibility Screening**

335. Across all levels, minimum eligibility criteria will include:

- Legal or recognized registration status.
- Minimum operational membership (e.g., 50–100 active farmer members).
- Active engagement in the production, aggregation, marketing, or value addition of identified commodities.
- Basic financial discipline and governance practices (e.g., meeting records, simple bookkeeping).

#### **Performance-Based Engagement**

336. Selected FPOs or institutions will be engaged through formal performance agreements that will include:

- Operational responsibilities for managing the infrastructure.
- Business plans outlining aggregation, marketing, and value addition strategies.
- Defined performance indicators such as volume handled, turnover generated, maintenance obligations, and reporting compliance.

337. Institutions will be supported through capacity building and technical assistance to strengthen their operations, particularly in early phases.

#### ***Technical Support Providers (TSPs) Deployment***

338. The. Given the scale and complexity of managing integrated value chain operations across the hub-and-spoke market infrastructure system developed under Component 1.1, FOCUS 2.0 will engage specialized Technical Support Providers (TSPs) to build the operational, business, and market capacities of FPOs and rural enterprises selected under Component 1.2. Each District-level Value Addition Hub will be assigned a dedicated Technical Support Provider responsible for delivering intensive handholding and capacity-building

support across its associated network of Collective Marketing Centres (CMCs), Farmers' Markets, and production clusters (Zaus).

339. **Scope of TSP Support:** Each TSP will be responsible for:

- Supporting the lead FPO managing the District Hub.
- Strengthening FPOs and local institutions managing 30–60 CMCs (depending on geographic clustering and commodity flows).
- Supporting FPOs or private operators managing 2–3 Block-level Farmers' Markets linked to the Hub.
- Facilitating aggregation, primary processing, logistics, and market linkages across the network of Zaus (Integrated Farming System clusters and production hubs) feeding into the CMCs and markets.

340. **Core Functions of TSPs:** TSPs will provide the following services:

- **Enterprise Business Development:** Support FPOs and enterprises in preparing operational business plans, financial management systems, aggregation models, and marketing strategies tailored to prioritized commodities.
- **Capacity Building and Mentoring:** Conduct regular training and coaching on governance, leadership, accounting, value addition techniques, quality management, and buyer engagement.
- **Infrastructure Operationalization:** Assist enterprises in setting up standard operating procedures (SOPs) for CMCs, Farmers' Markets, and District Hubs, ensuring efficient and transparent management.
- **Aggregation and Value Chain Coordination:** Facilitate coordination between CMCs, Farmers' Markets, and Hubs to streamline aggregation, bulking, grading, packaging, and onward marketing operations.
- **Market Linkage Facilitation:** Identify and connect enterprises to private sector buyers, processors, logistics providers, and institutional markets (e.g., hospitals, schools, Army procurement).
- **Support for Innovation and Branding (Post-Midterm):** Following the midterm review, TSPs will also lead support for GI-based branding, eco-certification, and value chain-based packaging initiatives linked to high-value commodities.
- **Monitoring and Reporting:** Support enterprises in tracking turnover, volumes aggregated, buyer linkages, and infrastructure utilization, feeding into the project's monitoring system.

341. **Deployment and Management of TSPs**

- One TSP will be engaged per District Hub, covering the full catchment of CMCs, Farmers' Markets, and production clusters attached to that Hub.
- TSPs will be competitively selected based on their technical expertise in enterprise development, agricultural value chains, rural marketing, and capacity building.
- Contracts with TSPs will be performance-based, with deliverables tied to enterprise strengthening outcomes such as operationalized infrastructure, increased turnover, and expanded market access.
- Project will deploy multiple TSP and will refrain from having one TSP managing all the hubs
- Detail Terms of Reference are provided in Appendix 5

### ***Enterprise Strengthening and Institutional Development***

342. Under this activity, FOCUS 2.0 will build the business, operational, and market capacities of Farmer Producer Organizations (FPOs), Self-Help Groups (SHGs), Multi-Purpose Agriculture Cooperatives (MPACs), and rural entrepreneurs managing Collective Marketing Centres (CMCs), Farmers' Markets, and District-level Value Addition Hubs. The Technical Support Providers (TSPs) assigned to each District Hub will be responsible for delivering this capacity building and institutional development support, ensuring that enterprises are commercially viable, operationally capable, and market ready.

343. Enterprise strengthening will focus on the following key areas:

### **1. Governance and Organizational Management**

- Strengthening governance structures (e.g., Boards, Committees, AGMs).
- Enhancing transparency, record-keeping, and compliance practices.
- Clarifying member roles, decision-making processes, and accountability mechanisms.

### **2. Business Planning and Financial Management**

- Preparing detailed business plans linked to identified commodities and market strategies.
- Training on costing, pricing, budgeting, financial reporting, and working capital management.
- Building investment planning capacity to access grants, loans, and private sector partnerships.

### **3. Aggregation, Post-Harvest Handling, and Operations Management**

- Supporting aggregation planning, member mobilization, and collection center operations.
- Standardizing post-harvest handling practices: sorting, grading, basic processing.
- Operationalizing infrastructure management (SOPs for CMCs, Farmers' Markets, Hubs).

### **4. Marketing, Buyer Engagement, and Trade Facilitation**

- Training on market analysis, buyer requirements, product positioning, and quality standards.
- Facilitating direct market linkages with private buyers, traders, processors, and institutional buyers.
- Supporting participation in local trade fairs, buyer-seller meets, and digital promotion activities.

### **5. Digital Enablement and Record-Keeping**

- Introducing basic digital tools for inventory, sales tracking, payment management, and communications.
- Training on mobile applications, WhatsApp marketing, and simple e-commerce platforms where feasible.

### **6. Leadership Development and Member Mobilization**

- Building leadership capacity among enterprise members and management teams.
- Strengthening internal mobilization efforts to sustain aggregation scale and collective marketing.

#### **344. Implementation Approach:**

- TSPs will lead the field-based delivery of all training, mentoring, and capacity building activities.
- TSPs will adopt a “learning by doing” methodology, directly linking training sessions to real operational tasks (e.g., harvest aggregation, buyer negotiations).
- Capacity building efforts will be customized to the maturity level of each enterprise — lighter, practical modules for emerging groups, more sophisticated business planning support for advanced FPOs managing hubs and markets.
- The State Project Implementation Unit (SPIU) and District Project Teams will monitor TSP performance and verify the strengthening outcomes based on enterprise results.

#### ***Blocked Grant Mechanism***

345. The Blocked Grant under Component 1.2 is designed not as a direct subsidy, but as a strategic enabler to strengthen the financial capacity of rural enterprises and crowd in private sector financing. The grant will be used to unlock access to formal credit for Farmer Producer Organizations (FPOs) and rural enterprises managing market infrastructure.

#### **346. Under the blocked grant mechanism:**

- The project will provide a performance-based grant, which will be deposited into a dedicated account at Mizoram Rural Bank (MRB) in the name of the selected FPO or enterprise.
- Prior to the deposit of the grant, MRB will conduct a credit appraisal of the FPO/rural enterprise to assess its financial health, operational capacity, and creditworthiness.

- Only enterprises that meet minimum bank credit standards — including governance compliance, operational viability, and ability to service credit obligations — will be eligible to receive the blocked grant facility.
- Once cleared, the blocked grant will remain in the bank account as a form of collateral/security to support the issuance of:
  - Overdraft facilities to meet working capital needs (e.g., produce procurement, aggregation costs, transport).
  - Term loans for investment in assets (e.g., processing equipment, cold storage, packaging units).

347. FPOs and rural enterprises must also raise their equity contributions and demonstrate their commitment to co-financing operations and investments. Where applicable, the structure may be further enhanced by converging with a Credit Guarantee Scheme (as detailed in Appendix 13, Annex 3 “Technical Note on Rural Finance”), reducing the bank’s exposure risk.

#### 348. **Benefits of the Approach:**

- **Promotes Leverage:** Every rupee of grant financing can leverage multiple rupees of private sector investment into rural enterprise activities.
- **Strengthens Financial Discipline:** Enterprises must undergo a formal credit check and manage real financial obligations, promoting responsible business behaviour.
- **Avoids Grant Dependency:** The grant does not replace private financing but acts as an enabler to crowd in commercial money into rural value chains.
- **Builds Financial Sustainability:** Enterprises begin developing formal credit histories, improving their future bankability for scaling operations beyond the project.
- **Enables Larger Scale:** Through combining grant security with loans, enterprises can access financing much larger than the grant amount alone, enabling investments into aggregation, processing, and marketing.

#### *Incubation Centre*

349. Mizoram's innovation and incubation ecosystem is supported by several government initiatives. The Mizoram Entrepreneurship & Startup Policy, launched in 2019, aims to create a vibrant entrepreneurial environment. The Entrepreneurship Development Scheme (EDS), implemented through the Entrepreneurship Development Centre (EDC), provides microfinance, training, and relaxed regulations to support startups. The Mizoram State Entrepreneurship Development and Monitoring Committee (MEDMOC), established in 2016, oversees the EDS and the startup policy. The Mizoram Startup Mission (MSUM) acts as a state-level agency coordinating entrepreneurship and startup development initiatives across departments. Mizoram has over 100 registered startups, with more than 90 receiving incubation support and over 20 undergoing acceleration programs. Initiatives like the "Mizoram Rahbi" provide micro capital to early-stage entrepreneurs. Mizoram University plays a pivotal role, hosting incubation centers and partnering with institutions like IIM Calcutta Innovation Park to support technology-based enterprises. There are also small scale incubation programmes such as RAFTAAR Agribusiness Incubator (R-ABI), specifically to support agri and allied sectors. Through these, Mizoram is fostering an environment conducive to innovation, entrepreneurship, and sustainable economic growth. This incubation fund and activity will complement existing efforts and is specifically designed to fill critical gaps in targeted sectors such as agri and allied activities including digital solutions and also support the project’s tiered hub-and-spoke model, encouraging private sector engagement at the level of Collective Marketing Centres, Farmers’ Markets, and District-level Hubs.

350. In this context, the vision of this incubation fund is to support develop of a vibrant entrepreneurial ecosystem that leverages local strengths, creates economic opportunities, promotes innovating climate resilient and environmentally sustainable practices, and promotes sustainable development of targeted sectors (agri and livestock).

351. **Key principles for the incubator** include:

- **Contextual Innovation:** support solutions that are specific to Mizoram's unique socio-economic and cultural landscape and focus on a few thematic areas.
- **Local Capacity Building:** Focus on developing local incubation and entrepreneurial skills
- **Sustainable Development:** Prioritize ventures that create long-term economic and social value
- Climate and environmentally sustainable practices: Identify and promote innovative climate and environmental solutions.

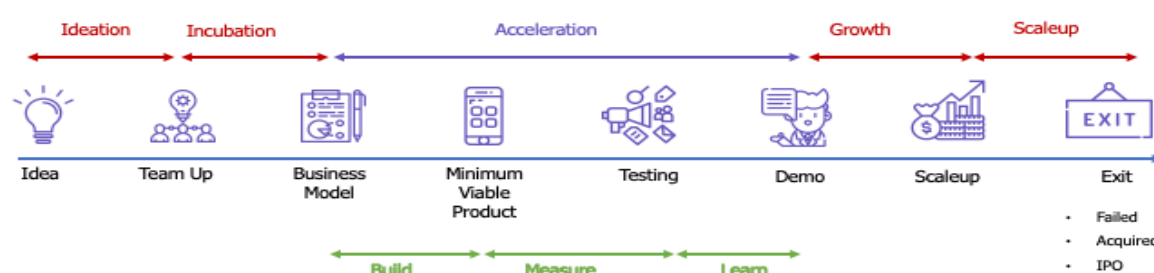

352. **Sector-Specific Incubation Tracks** will include:

- Agriculture and Food Processing -especially focusing on agri logistics, processing and marketing
- Livestock Solutions including logistics, cold chain management among other
- Digital Services and Technology for agri and allied sectors

353. **Expected Outcomes over 5 years** are as follows:

- Launch 40 startups with a capital base of ~9 crores and projected annual revenue by the end of the incubation cycle as 2x of capital base
- Improve local entrepreneurial incubation capacity of partners (potentially MZU)
- This incubator will focus on both the incubation and business model development (refer figure 1) but also support partial testing of solutions within the context of activities supported under FOCUS 2.0 Project

**Figure X: Overall Journey of Startups**

354. **Implementation process:**

- The incubation fund is proposed to be setup under the aegis of an existing incubator such as under Mizoram University. The project will leverage the available infrastructure such as meeting, conferencing, demo labs and other equipment's available as well as the technical faculties in agriculture, engineering and technology among other for capacity building and mentorship.
- A service provider will be engaged to support business and entrepreneurship skills development activities. (Terms of Reference is in Appendix 5)
- Based on discussions, a MoU will be signed with the relevant partners (such as Mizoram University) to take over the day-to-day operations of the incubator. This activity will be overseen by the Manager of the Business Promotion and Incubation unit within the SPIU. The activity will also be supported by seconded positions from ministry of commerce and industry, agri, livestock and SRLM for potential 4P Partnerships.
- The fund will target up to 40 entrepreneurs, supporting co-investment grants structured as follows: up to 50% (maximum INR25 lakh) of the total investment for agri- and livestock-based businesses in line with IFAD matching grant policy, and up to 80% (maximum INR10 lakh) for digital innovations. The remaining financing must be mobilized by the entrepreneur, either through bank loans or equity.

- While the proposed 80% project contribution exceeds the typical matching grant ceiling under IFAD policy, a higher cost-sharing ratio is warranted in this case due to the nature and constraints of digital innovation investments in rural and agri-market systems.
- Digital solutions—such as traceability platforms, e-logistics systems, or agri-fintech pilots—often face significant barriers to private financing. Commercial banks and financial institutions typically do not lend to early-stage digital initiatives due to the intangible nature of assets, lack of proven cash flows, and perceived technology risks. As a result, private entities, particularly MSMEs and tech startups operating in rural areas, are unable to mobilize adequate capital for such investments through conventional credit channels.
- Moreover, the absolute cost of these innovations remains relatively modest compared to physical infrastructure, and the economic value they unlock—through improved transparency, market access, and service efficiency—can be transformational. The grant, therefore, functions as a de-risking instrument and first-loss coverage, enabling proof of concept and crowding in future private investment once viability is demonstrated.
- Given these considerations, the proposed 80:20 grant-to-private contribution ratio is strategically justified and necessary to catalyze scalable digital innovations that align with the project's objectives of enhancing efficiency, inclusion, and resilience in agricultural value chains.
- Further, the matching fund can be in the form of and will be subject to approval by the Selection Committee and shall be accepted only if there is enough proof of funds such as signed shareholder agreement, bank statement, grant agreement, etc.
  - Cash / Revenues
  - Capital Investment
  - Crowdfunding
  - In-kind
- The incubator will facilitate linkages with available government schemes such as Mizoram Rabhhi which offers micro capital to young enterprises and Mizoram Rural bank providing low interest loans to enterprises.
- The incubator is expected to support up to 15 livestock-focused enterprises, 10 digital innovations, and 15 innovations in processing, aggregation, and logistics. By aligning closely with the needs of the hub-and-spoke model, the Incubation Fund will not only foster rural entrepreneurship but also serve as a catalyst for private investment in priority value chains. Where relevant, synergies will be developed with the CM Innovation Fund, Atal innovation Mission, RKVY ensuring convergence, avoiding duplication, and building on the successful implementation experience from FOCUS Phase I.
- Where feasible, the project will also seek convergence with ongoing national and global innovation platforms, such as those operated by SIDBI, NABARD, and IFAD's GAP Fund, to expand the reach, technical support, and financing options available to rural entrepreneurs
- The incubator will follow a phased approach with focus on up to 15 start-ups every 2 years, reaching a maximum of 40 over the 6-year project period. The numbers will be aligning to the overall expected numbers under each track to be supported.
- The incubator will support both product development, business model development, technical mentorship among other support activities to handhold early-stage enterprises.

### 355. Selection Process:

- The fund will be administered via a competitive call-for-proposals, evaluated by a screening panel comprising representatives from selected partner (potentially Mizoram University), private sector mentors, Mizoram Rural Bank, and business incubation specialists (potentially facilitated by a Service provider). Entrepreneurs selected through this process will receive technical mentoring, business planning support, and post-selection handholding to ensure business readiness and integration into the project ecosystem.

- The proposals will be open to individual and teams, NGOs, associations as well as existing private sector looking at introducing new workstream. Young and women entrepreneurs will be especially encouraged to apply.
- The selection process will entail review of applications, followed by review of the proposed product, its viability and fit to the overall targeted track and rural sector issues.
- The call for proposals will be publicised widely using both government websites, university websites and social media channels and supported by cross posting by other incubators and entrepreneurship cells.
- The Incubation Fund will promote innovation in under-served nodes of the value chain, such as processing, livestock marketing, meat processing, cold-chain logistics, digital traceability, retail packaging, and last-mile market linkage.
- While the process is open to all eligible applicants, a preferential scoring system will be applied to youth- and women-led proposals to promote inclusive entrepreneurship.
- The selection process will also consider geographic representation to ensure equitable access to incubation support across rural and remote areas.
- Assessment criteria will also include potential for financial sustainability, rural employment generation, and contribution to environmental or social impact.
- Support will be released in milestone-linked tranches based on business readiness, progress, and achievement of agreed benchmarks.

356. **An example of an incubation track for agriculture and food processing would be:**

- Technology integration for traditional farming
- Value addition to local produce
- Organic farming innovation
- Export-oriented agricultural startups

357. Overall, the programme will track the following KPIs:

- **Incubator Operational Effectiveness**, including: onboarding rate, completion rate, total hours of mentorship provided, programme utilisation.
- **Startup Success and Growth Metrics**: % of startups operational post incubation, rate of growth, new market/customer acquisition
- **Long-term Ecosystem Maturity Indicators**: Number and quality of partnerships, Growth in angel, seed, and VC investments in the region, Sectoral and demographic (e.g., women, rural, tribal) representation in startups.
- **Startup and Incubator Sustainability Metrics**: Proportion of startups achieving break-even or profitability; Percentage of incubator budget supported by earned income (equity, service fees, etc.) versus grants

#### ***Promotion and Facilitation of GI Branding, Packaging, and Eco-Certification (Post-Midterm)***

358. Several key agricultural and allied commodities in Mizoram, like Mizo chilli and ginger, have already obtained Geographical Indication (GI) registration, offering a unique opportunity for value enhancement and market differentiation. Building on these existing GI certifications, FOCUS 2.0 will support rural enterprises to commercialize GI products more effectively through the development of collective branding strategies, sustainable packaging solutions, eco-certification where relevant, and enhanced market positioning in premium markets. These activities will be initiated after the project's midterm review, when enterprises have achieved sufficient operational maturity.

#### **Scope of Activities**

359. The GI branding and eco-certification support will focus on:

- **Commercialization of Existing GI Commodities:** Assisting enterprises to build strong, market-facing collective brand identities around already GI-certified commodities.
- **Development of Collective Branding and Packaging Solutions:** Designing brand narratives, logos, and packaging standards that highlight Mizoram's GI heritage and meet modern market expectations, including eco-friendly and sustainable packaging options.
- **Facilitation of Eco-Certification:** For commodities and enterprises where additional sustainability certification (e.g., organic, eco-labels) is feasible and market-relevant, the project will provide technical and financial support.
- **Market Linkage Enhancement:** Positioning GI-branded and eco-certified products for entry into institutional markets, inter-state trade channels, and premium consumer segments.

### Implementation Approach

360. **Engagement of Specialized Technical Support Providers (TSPs):** Post-midterm, specialized service providers with expertise in branding, certification, marketing, and agri-business development will be engaged.

361. **Targeted Enterprise Support:** Enterprises linked to prioritized GI commodities, showing strong operational performance (e.g., turnover, volumes aggregated), will be selected for branding and certification support.

362. **Phased Implementation:**

- Diagnostic assessments of enterprise readiness for branding and certification.
- Development of brand and packaging materials aligned with commodity market profiles.
- Application for eco-certification where viable.
- Launch of collective branding campaigns and market linkage initiatives.

363. **Cost-Sharing Model:** Enterprises will be encouraged to contribute partially toward branding and certification costs to promote ownership and long-term sustainability.

364. **Coordination with Enterprise Development Activities:** Branding, packaging, and certification support will be integrated into the broader enterprise strengthening and market access strategy of Component 1.2.

365. Appendix 5 provides a detailed Terms of Reference (TOR) of the service provider.

### Sub-Component 1.3: Financial and Digital Ecosystem

366. Component 1.3 of FOCUS 2.0 (Financial and Digital Ecosystem) is designed to strengthen the enabling environment that underpins the enterprise and market development efforts initiated under Components 1.1 (Market Infrastructure) and 1.2 (Enterprise Development). While Components 1.1 and 1.2 focus on building the physical and institutional foundations for value chain growth, Component 1.3 complements these investments by addressing critical barriers related to financial inclusion, digital readiness, and risk management for rural producers and enterprises.

367. In essence, Components 1.1 and 1.2 create the "market and enterprise platforms," while Component 1.3 equips rural actors with the financial tools, credit access, insurance mechanisms, and digital systems needed to operate effectively within those platforms. By unlocking access to finance, promoting financial literacy, profiling beneficiaries through ICT systems, and piloting innovative insurance products, Component 1.3 ensures that rural enterprises and producers are not just physically connected to markets, but also financially and digitally empowered to participate and thrive. By providing farmers and rural enterprises with access to finance, insurance, and digital tools, Component 1.3 enhances their ability to invest in climate-smart practices, manage risks from weather shocks, and build greater resilience to the impacts of climate change.

### ***Context & Justification:***

368. While investments in rural infrastructure and enterprise development are crucial for strengthening agricultural value chains, the sustainability and commercial success of these interventions depend heavily on the ability of producers and rural enterprises to access financial services, manage risks, and participate effectively in market systems. In Mizoram, financial exclusion remains a critical bottleneck to inclusive value chain development. Despite improvements under FOCUS, a significant proportion of rural producers (including Farmer Producer Organizations (FPOs), Self-Help Groups (SHGs), Zaus, and livestock producers) still lack access to timely, affordable credit and insurance services.
